WEST MT. AIRY NEIGHBORS

1968 Annual Report

Eleven years ago, in 1958, West Mt. Airy Neighbors (WMAN) was formed to provide a means by which residents of the West Mt. Airy section of Philadelphia could work to make theirs a better community. In those eleven years, and in 1968 alone, much has been done toward this end.

But -- 1969 and the decade ahead will probably be significantly different. Even now WMAN's priorities are being re-ordered, its goals reconsidered and its purposes re-thought. For the nation and our community, 1968 was a year for a look inward and thoughts about new directions while we were going about our business:

ZONING, LAND USE, HOUSING, REAL ESTATE

------ Zoning changes were supported or opposed with a view solely toward improving the community while preventing it from radically changing its tenor. In 9 out of 10 West Mt. Airy cases handled by the Zoning Board in 1968, decisions were consistent with positions taken by WMAN.

------ In housing, WMAN acted as escrow agent at the request of the Neighborhood Renewal Program of the City's Department of Licenses and Inspections. Tenants whose landlords had not made required repairs to rental properties deposited their rents with WMAN for six months. In cases where repairs were not made within the six months period, WMAN returned the funds to the tenants. Five families in two properties in the community made use of WMAN as escrow agent.

------ Adding a new dimension to West Mt. Airy -- with the firm support of WMAN and local residents -- the now vacant Emlen Arms apartment was slated for redevelopment as public housing for the elderly.

------ Determining the extent of open housing in apartment buildings in the community, WMAN began a survey, the results of which should be available in 1969.

------ Real estate agents have, in the main, cooperated with WMAN in their use of ethical real estate practices. However, through reports from its members, WMAN found one instance of an agency soliciting listings with the intent of inciting "panic sales" of homes. And, in the course of the year, there were numerous reports of agencies neglecting to remove SOLD signs after the legal seven day limit. Existing procedures developed over the years were used by WMAN to correct these problems.

FACE TO FACE

------ Face to Face, a series of six Monday evening meetings held in the late fall, gave residents of the area the opportunity for a bare-faced, and sometimes uncomfortable, look at this community. Conducted by Wellsprings Ecumenical Center and billed as a "Confrontation in Black and White", the sessions stirred the minds and emotions of the several hundred who attended. To many the series raised basic questions about the "openness" of racially integrated communities such as this one, and of organizations such as West Mt. Airy Neighbors.

YOUTH SERVICES

------ Helping to provide part-time employment for area youngsters, WMAN continued to run, and this year advertise, its Youth Employment Service (YES), which offered over 200 jobs in 1968.

------ WMAN and Summit Presbyterian Church jointly sponsored a coffee house for area boys and girls which ran successfully every Saturday evening for several months.

------ Across Community Camp, a summer day-camp co-sponsored by WMAN and four other community organizations, enrolled 125 pre-schoolers (25 from each community), for a month of fun and games on the campus of Chestnut Hill Academy.

------ This was also the year which saw the adoption by WMAN of active Cadette, Junior and Brownie Girl Scout troops.

------ The Rap Room (rap=talk), where teenage youngsters met and talked, was the site for a series of meetings last summer between young black members of the community and their parents, and the police of the 14th District -- a meeting to which WMAN was invited. The meetings were aimed at reducing tensions in the area and allowed all participants to air complaints and to try to understand each other's views a little better.

SCHOOLS

------ One vital concern of our area is public schools -- Henry, Houston, Leeds, Lingelbach, Roosevelt and Germantown High. Because they play such a central part in the lives of so many community residents, they are also a major interest of WMAN.

------ During 1968, with the strong support and cooperation of WMAN and other community groups, Houston School got the new library it so desparately needed.

------ In addition to its organizational support, WMAN continued to urge area residents to offer strong individual support and constructive criticism of schools directly to principals and to the district superintendent in order to keep the quality of education in the community's schools high.

MEMBERSHIP

------ A block by block membership drive last May brought 209 new families into WMAN for a total membership of over 1,000 households -- 20% of those living in the community. The membership drive was part of the celebration of WMAN's 10th Anniversary.

------ Other birthday-membership events included a showing of the film "The Jungle", the highly successful House Tour, the Foreign Students Weekend, a mid-summer picnic, etc., etc., etc.

SERVICE TO GROUPS BEYOND WEST MT. AIRY

------ WMAN offered the use of its facilities and the services of its staff to the West Mt. Airy Support Group of the Poor People's Campaign while the Campaign was organizing in Philadelphia.

------ Office equipment and space was used throughout 1968 by other community groups in Mt. Airy to further their programs.

------ The Sharpnack Art Center was started with the assistance of Allens Lane Art Center and WMAN. The Center is being advised on artistic matters by Allens Lane Art Center, but is developing programs to meet the unique needs of the area served by the Sharpnack Civic Association.

------ WMAN's Speakers Bureau continued to be used in 1968, sending speakers to many communities and community groups who were addressing themselves to subjects such as how to fight panic selling and how to introduce interracial housing into all-white areas.

------ Word of WMAN activities reached beyond the Philadelphia area through WMAN mailings to groups and individuals as far away as California.

RAILROAD STATIONS AND CITY SERVICES

------ The Railroad Station Committee reminded Penn Central that it was keeping a watchful eye on physical conditions at Upsal, Carpenter and Allen Lane stations to prevent hazards from developing. The continuing beautification programs provided planters of flowers at each station in spring, and long range planting programs were begun under the leadership of volunteer gardeners.

------ The City, at the strong urging of WMAN, performed many services in our community. Pot holes were filled, NO TRUCK PARKING and STOP signs were erected at many locations, streets were made one way, sewers were cleaned, dozens of abandoned vehicles and other large objects were removed, etc., etc.

------ While small matters all, these and dozens of other city services performed in the community helped keep West Mt. Airy an attractive, safe and pleasant place.

THE FUTURE

------ Some of the accomplishments of WMAN in 1968 were, perhaps, remote and unimportant to you. But you can probably find areas in which you and WMAN share an interest and a concern.

------ In 1969, WMAN wants to improve its services to West Mt. Airy, by helping the community deal honestly and realistically with itself and all of its residents.

------ To do this, WMAN needs the help and advice of every family ... through participation. If you are not already a member, won't you join WMAN now? We'll be happy to send you information.

West Mt. Airy Neighbors
7139 Cresheim Road
Philadelphia, Pa. 19119

Please send me more information about West Mt. Airy Neighbors. I'd like to think about working for the improvement of my community.

AT HOME OF MR. AND MRS. AUSTIN PERRY
7119 CHESTNUT ST. N.W. 9 PM on COME!

TELLING IT LIKE IT IS IN SCHOOL
Students Confront the Board of Ed

About 100 DC secondary students told the DC Board of Education what the students expected of the Board Members now that they are duly elected representatives of the people. The confrontation took place at the Manresa Conference Center near Annapolis, Maryland, shortly after Christmas.

Two NI residents, Mrs. Barbara Simmons and Mrs. Carol Rende were among the staff at the Conference, and were instrumental in setting up the meeting, which was sponsored jointly by the DC Advisory Committee to the U.S. Commission on Civil Rights, and the Washington Institute or Quality Education.

Michael Blakey and Gerald Sanderson; NI residents and students at Coolidge High, and Robert Simmons of Paul Jr. High played key roles in presenting a list of demands to the Board members present. 25 DC Students, Blakey, Sanderson and Simmons among their leaders, labeled themselves the DC Coalition for Education Now, and made 13 demands on the Board of Education, with a delivery date of September 1, 1969.

The students demands included provision of Courses in African and Afro-American History, American history texts stressing black contributions, sex education designed by the students, elimination of required physical education and closer ties between students and the board of education. Student members of the board were suggested.

Attending the Conference from the Board of Education were John A. Sessions, Julius W. Hobson and Anita Allen, all members at large. Other school board members who made part of the sessions were John Treanor, Nelson Roots and Albert A. Rosenfeld. Ward 4 Board member Mrs. Muriel Alexander was not present.

Speaking about the need for the students to organize, Sanderson said, "People have been talking in small voices for a long time and no one listens." There was much feeling among the students that the Board members were not really willing or able to bring about needed changes. But Sanderson said that Hobson and Sessions "are definitely helping us and the others are going to have to."

The Conference lasted for two days and included general meetings, workshops, closed student caucus sessions, a talent show and a dance; It was financed with money from the DC Public Welfare Foundation, the Stern Foundation and an annonymous donor.

(con'd) Calendar lists your best chance yet. Don't miss this [illegible]

WATTS BENEFIT A GRAND SUCCESS

Mrs. Sylvia Schlitt, co_ chairman of the October Andre Watts benefit concert at Constitution Hall, and Chairman Mrs. William Denham, report that the concert netted $3,176.50, and adds, "We couldn't be more gratified by the results. If we want to analyze the success of this benefit, we'd have to say that lot of people really cared about its success. Not only the dedicated committee workers, Jim Peyton, Mrs. Ruth Stack, Mrs. Karen Wardlaw, Mrs. Barbara Cubam, Mrs. Diana Engel and Mrs. Carolyn Jackson, but those who came through to support the committee: Mrs. Vivian Peyton, Mrs. Evelyn Sellers, Mrs. Nan Mould, Mrs. Barbara Atkinson, and Charles Mark."

Secretary of Labor and Mrs. Willard Wirtz were hosts at a reception for boxholders, sponsors and committee workers, in honor of Mr. Watts, which was held at the Washington Gallery of Modern Art. In addition to this gala party, there were several pre-concert cocktail parties generously given by Mr. & Mrs. Larry Kowitch, Mr. and Mrs. Frank DeStefano, and Mr. and Mrs. Frank Warner, as well as a post-concert wing-ding athMelvin and Dutchess Margerum's. Sylvia And Elma conclude their report saying, "Talk about good food, punch with a punch, music that rocked, dancers that rolled, lively talk and laughter, it was a great evening."

OPEN HOUSE FOR JANUARY SCHEDULED AT MOULDS

The Chris Moulds, of 1423 Hemlock St., N. W., have invited Neighbors to meet Neighbors on Friday Evening, January 31st.

WHAT IS INSTITUTE FOR EDUCATIONAL DEVELOPMENT?

Do you know? Has your PTA representative told about it at your regular general meeting? Did you read about it in the December INK? See PTA Reps list elsewhere in this issue...and Community

PAGE PARTIALLY ILLEGIBLE

PTA REPRESENTATIVES TO INSTITUTE LISTED

The following are parent representatives from our various schools to the Advisory Board of the Institute for Educational Development. Their job is to inform the local school parents group of the progress and activities of the Institute, and to represent local parents on the Institute Board. Don't fail to help these reps live up to their jobs by telling 'em and asking 'em!

Paul	Mr. Marvin Caplan
Rabaut	Mr. John Thurber
Takoma	Mr. Robert Maroney (pro tem)
Whittier	Mr. John Coleman
Shepherd	Mrs. Charlotte Kowitch
Brightwood	Mrs. Ruth Pearl
Coolidge	temporarily vacant

Bob Maroney has recently been named to represent NI to the Advisory Board, and so can no longer represent Takoma School. That PTA will soon choose another representative.

CLEANER STREETS FOR NI PILOT AREA

The pilot project in street cleaning is going well. Police are now giving tickets to illegally parked cars in the special area, so read those bright signs!

Ticket recipients said they didn't mind getting tickets, but it was an insult added to injury to get a ticket when the cleaning crews didn't come through. The response of sanitation department officials to this is conflicting, one saying the trucks went and another saying they don't go if it is too cold.

We need to know! Call the NI office if the cleaning trucks fail to come on the specified days. In this way we can document our criticism when we take it to Mr. William Roeder, Director of the Sanitation Department. This applies, of course, only to that area that is included in the pilot project. If you wonder whether you're included, look for the bright red and white signs along the street. The area is generally north Manor Park between 5th street and Blair Road, Sheridan to Oglethorpe Streets, N.W.

TEACHERS CALL FOR TALENT BANK

Teachers at Paul Jr. High School have made known their need for outside enrichment, and have called upon the wide and rich variety of Neighbors to assist. A Talent Bank is being formed of people who could lecture, advise and give general help and enrich the courses and activities already at the school.

Hobbyists and specialists and craftsmen of many areas are needed. History buffs, scientists, artists, mathematicians, musicians, social scientists are all needed. Professionals in each of the fields who could spare time will be especially helpful. Send your name to Mrs. Joseph Palaia, 1325 Holly St. NW, or phone her at 723-0703.

DEMOCRACY IN ACTION

Paul Jr. High School is the scene of a program which has attracted national interest. The Democracy in Action program, formed in 1962, is designed to assist students to take advantage of the unique resources of our nation's capitol.

Field trips are an integral part of the program, and without transportation the whole project finds itself grounded. Volunteer chaperones and drivers are always needed. If you can devote time and the family car on occassions, contact Mrs. Joseph Palaia by phone; 723-0703

SEQUEL TO 3RD AND RITTENHOUSE EYESORE SUCCESS AT ZONING COMMISSION

Area residents near 3rd and Rittenhouse have long been subjected to the eyesore on that corner. When they finally succeeded in having the building razed (December INK) they were faced with the prospect of a sixty-foot high building on the corner. NI's Neighborhood services committee, headed by Carol Rende opposed the application for the big apartment house, and the Zoning Commission denied the application. Mrs. Mary Monroe backed up Mrs. Rende's Committee by spearheading a petition drive, and worked many long hard hours to mobilize the area residents.

NI stands ready to help any group fight this type of zoning change. A block organization or group of residents is helpful to any such effort. Call the NI office for help in starting such a group.

"We Don't Win 'Em All Department": NI has usually not been successful east of the B&O tracks, and lost the case at 215 Cedar Street. Don't know why.

OPERA COMING TO THE NI AREA

Two evenings of staged scenes from operas will be presented January 27 and 28 at 8:30 p.m. at the Washington Ethical Society Auditorium, 16th and Kalmia Sts, n.w. Presented by "Friends of Opera in Washington", trained singers from the city area will sing a range of music from Mozart to Menotti. $3.00 at the door; $1.50 for students. Musical and stage director for this event is Mr. George Posell. Reservations and further information by phoning Fe8-5891.

SUMMER JOBS FOR COLLEGE STUDENTS

Civil Service Commission is examining college students for summer jobs paying $88 and $99 per week, depending upon qualifications. It is already too late to apply for the Feb. first exam, but applications received at the Commission by February 28, 1969, will allow a student to take the exam on March 29th. An offical "Announcement" is available at CSC's Job Information Center, 1900 E St. N.W. Ask for Announcement No. WAP-818

FAIR HOUSING PROPOSAL SEEKS SUBURBAN HOUSING FOR ALL

In the hopes of alleviating the growing crowding of the city and virtually eliminating "the barriers to suburban residence by sbstantial numbers of economically qualified Negroes who are presently confined to the ghetto," the Metropolitan Washington Fair Housing Council, (of which N.I. is a member) has submitted a proposal to the Ford Foundation for a concentrated effort towards desegregation in the Washington Metropolitan area.

With the legal framework a fact, the agency, once funded, would concentrate its efforts on encouraging and helping Negroes move to the suburbs, obtain construction of more low income housing, and educate community organizations and officials.

Challenging the widely held view that inner-city residents cannot move to the suburbs until low and moderate income housing is constructed, are the Washington Center for Metropolitan Studies findings that over "40% of all non-white families living in the Metropolitan area, amounting to close to 50,000 families, now have incomes in excess of $7,000 per year." Housing pressure within the city could be greatly reduced if the affluent segment of the city could locate in the suburban areas, many of which boast abundant housing well within this income bracket, and in fact often substantially lower than comparable offerings in the city. More low and moderate income housing would be enc ouraged in order to house persons close to sources of employment that are now out of reach for many qualified applicants because transportation to suburban jobs is nonexistant or too costly. Funding for the program is likely to come through soon and the Council will be hiring a staff of eight to run the program; jobs include a director, community workers and secretaries. Any interested NI members should call the Council's chairman, Thomas J. Schwab at his office ST 3-8730.

JUNIOR NEIGHBORS HOLDS SUCCESSFUL BENEFIT

November 30 was the day of the dance for the big benefit put on by Jr. Neighbors under the leadership of their President Ted Hagans III. Of an $840 gross, the group netted $416.96 with which they will buy books for Coolidge High. They are now in the process of selecting and ordering the books.

TICKETS AVAILABLE NOW FOR DANCE

Tickets are now available for NI's Second Annual Cabaret Dance, Saturday, Feb. 22nd. Last year's was a swinging affair and this year it promises to be even better. A ticket order form is enclosed. Music will be by Bob Craig's Jazz Artists. For further info, call Mrs. Sylvia Schlitt, 291-5974.

OUR NEIGHBORS IN THE NEWS

DR. MARTIN R. FELDMAN of Howard U. was awarded a National Science Foundation Science Faculty Fellowship for the academic year 1969-70. He will be a visiting professor of chemistry at the University of California at Irvine.

MRS. RUTH STACK AND MRS. DEBORAH MATORY have been appointed to the D.C. Advisory Committee on the U.S. Commission on Civil Rights.

We regret to report that Mr. GEORGE O'MEALLY died recently. His intense interest in youth programs, and his great contributions to this community and the whole city made him well-known in this area.

CHUCK STONE was present at the Brightwood PTA Book Fair to autograph copies of his recent book, "Black Political Power in America."

LARRY CUBAN has been appointed Director of Staff Development for the D.C. School system. Larry was NI Representative to the Advisory Board of the Institute for Educational Development, but has resigned due to his new post with the school system. The Institute is an NI-area program in our area schools with major emphasis on staff development.

FORREST WARD, SANDYE JOHNSTON, VICKIE WELLS AND PHILIP MILLER, all Coolidge High School students, were featured on the front page of the Teen section of the Washington Star, demonstrating the latest dance steps. Have you tried them? "The Popcorn" and the "Hiccup"!!!

BOBBY MITCHELL, Redskins football player was among the members of the local advisory board of the Black Economic Union who attended the opening of the Anacostia office of the national corporation that promotes Negro businesses. Takoma representative to the NI board, HARVEY BULLOCK, represented NI.

CHAMP CHRISTMAS CARD DESIGNER FROM TAKOMA

Manfield Clement, age 12, of the Takoma Recreation Center, won first prize for his design of a Christmas Card cover. The contest was open to all youth age 11 to 14 in the Washington area, sponsored by the D.C. Department of Recreation.

The card design shows a bright red fireplace, stockings hung with care, and the booted feet of the merry mythical Santa just descending or maybe we should ask Manfield: maybe they are on their way up after filling the stockings. Congratulations, Manfield Clement.

COMMUNITY CALENDAR

Monday, JANUARY 20 - All Day, Downtown and Evening: PRESIDENTIAL INAGURATION.

Monday and Tuesday, JANUARY 27 & 28 - OPERA at Washington Ethical Society, details p.2.

Friday, JANUARY 31,- OPEN HOUSE at Moulds, details p.1.

Monday, FEBRUARY 10 - 8:00 p.m. Shepherd School. INSTITUTE FOR EDUCATIONAL DEVELOPMENT. Shepherd PTA sponsors a public meeting in which we can all learn much more about what the Institute is doing about our children's education. See you there!

NI BOARD MEETING Wednesday, FEBRUARY 12th, 8:30 p.m. at Takoma Park Baptist Church, Piney Branch Road and Aspen St. N.W. Open to all members who are interested in attending.

OVERHEARD from a new resident recently, "Neighbors, Inc. is certainly the right name for this area; it's such a friendly community. In the six months we've lived here we know more people than we ever knew in two years in Bethesda."

WIN TWO ZONING CASES: NURSING HOMES DENIED IN RESIDENTIAL NEIGHBORHOODS

NI opposed two cases before the Board of Zoning Adjustment in December and won them both. In both cases the applicants sought variances from the Zoning Regulations to operate nursing homes in residential neighborhoods. The applications were for 1416 Longfellow St. and 5315 Colorado Ave. N.W. zoned R-1-B which is for single-family houses. NI's testimony was presented at the public hearing by our Executive Director, Ed Hollander. The victories were important ones in NI's continuing battle to preserve the integrity of our neighborhoods.

Our statement pointed out that granting the variances would be permitting the establishment of institutional uses in these residential areas. The homes would become the place of employment for the staff of the homes and that would generate traffic seven days a week. The homes would also have institutional kitchens requiring commercial food deliveries nearly every day and commercial trash disposal service several times a week. Our statement argued that this kind of activity was not desirable in a residential neighborhood and apparently the BZA agreed.

THANKS TO VOLUNTEERS

Despite the rush of holiday activities, our dedicated volunteers found the time to serve NI both in the NI office and in their homes. Many thanks!

Mrs. Yetta Appel
Mrs. Winifred MacNair
Mrs. Inez Smith-Green
Mrs. Beverly McGaughy
Mrs. Bedelia Henderson
Mrs. Sarina Hirshfeld

FORD FOUNDATION AWARDS $300,000 GRANT FOR PROGRAM TO COMBAT SUBURBAN HOUSING SEGREGATION

On January 29th the Fair Housing Council of Metropolitan Washington announced the receipt of a Ford Foundation grant of $300,000 for a two and a half year program to combat housing discrimination and segregation in the Washington, D.C. suburbs. At the same time, the Council changed its name to the Housing Opportunities Council of Metropolitan Washington, Inc. and broadned its Board of Directors to be more widely representative of the D.C. metropolitan area.

Thomas J. Schwab, former president of Suburban Maryland Fair Housing, was elected temporary Chairman and a temporary executive committee was elected to hire an Executive Director and other staff. The program will have a staff of about eight; anyone interested should call Mr. Schwab, ST 3-8730 (office).

The program is planned to have a major impact on suburban housing patterns by breaking down remaining discrimination and providing direct assistance to Negro families seeking to live in the suburbs. The Council also hopes to broaden support for subsidized low and moderate income housing throughout the suburbs. And the Council plans to work with real estate brokers, apartment house owners, developers and lending institutions to have them adopt affirmative marketing practices toward Negroes. The Council will also file suit, to gain enforcement of local or Federal Fair housing laws and, if legal processes prove too cumbersome, more direct action will be used if necessary.

Neighbors, Inc. was one of the organizations instrumental in bringing the Council into existence and NI has one member on the new board. Larry Pearl and Vic Phillips have been serving as our representatives. The INK will report program developments as they occur.

WELCOME TO NEW RESIDENTS

Mrs. Barbara Cuban, chairman of the Membership and Hospitality Committee reports that another special open house for new area residents was held on Sunday evening, February 2nd at the home of Mr. and Mrs. Hays Singletary, 1307 Holly St. N.W. There was an excellent turnout of new residents and it was a very pleasant event. (Con't. at right)

MRS. DESHIELDS APPOINTED TO INSTITUTE STAFF

The Institute for Educational Development has announced the appointement of Mrs. Deshields as the new Coordinator for Secondary Schools. She replaces Mr. Latinee Gullattee who is now the Director of the Institute. Mrs. Alice Butler continues as the Coordinator for Elementary Schools.

Mr. Gullattee addressed a special meeting of the Shepherd PTA on February 10th and explained how the Institute functions and how it will benefit students. He also announced that the Institute is in the process of organizing a series of discussion groups on parent-teacher relationships. This is to be an area-wide program, covering all grade levels.

The Advisory Board of the Institute meets on the second Thursday of each month and their meetings are open to the public. For further information, call the Institute at 291-8118.

NEW COOLIDGE & TAKOMA REPS NAMED TO INSTITUTE

The Coolidge Home & School Assn., Mr. Hosea Taylor President, has announced that their representative to the Institute Advisory Board will be Mr. Cyrus Nero. And the Takoma PTA, Mr. Dan Safran President, reports that their new representative is Ted Trabue.

The other parent representatives on the Advisory Board are:

- Neighbors, Inc. - Dr. Robert Maroney
- Paul Jr. High - Mr. Marvin Caplan
- Rabaut Jr. High - Mr. John Thurber
- Brightwood - Mrs. Ruth Pearl
- Whittier - Mr. John Coleman
- Shepherd - Mrs. Charlotte Kowitch

SEE PAGE 4 FOR NI'S PROPOSALS TO THE INSTITUTE ON COMMUNITY INVOLVEMENT.

Special thanks go to the Singletarys for their gracious hospitality and also to the following committee members who baked some delicious desserts : Mrs. Yetta Appel, Mrs. Hattie Dees, Mrs. Doris DeBoe, Mrs. Janet Feldman, Mrs. Sarina Hirshfeld, Mrs. Dutchess Margerum, Mrs. Bedelia Henderson, Mrs. Mildred Phillips, Mrs. Beth Skinner and Mrs. Nancy Smith.

ZONING VICTORY ON 5th & ASPEN CASE

Under the expert leadership of Mrs. Carol Rende, chairman of NI's neighborhood services committee, residents of Takoma recently opposed successfully a variance requested for the property at 501 Aspen St.

The Czechoslovak Embassy, present owners of the property, sought a variance on behalf of prospective buyers who wanted to establish a preschool center. The buyers are the Investment Research Organization, Inc., which is a group of 22 professionals and businessmen .

More than two dozen residents of the immediate area met together with six members of IRO to discuss the future use of the property. Larry and Willo White were the hosts to the meeting.

In NI's statement of opposition presented to the Board of Zoning Adjustment at the public hearing on February 12th, Mrs. Rende cited various grounds for our opposition, including:

* the fact that the new Takoma Elementary School will have a pre-school program
* the inability of the buyers to provide basic information about their planned preschool, such as how much outdoor play space is available, the projected hours of operation, an estimate of tuition costs, and whether the facility would be a pre-school or a day-care center
* the fact that the Takoma Park Baptist Church has offered the community their facilities for a pre-school
* the dangers of opening the door to further intensified use of residential property and the complete lack of protection to the community if the facility were sold to another operator.

Mrs. Rende presented to the BZA petitions with more than 100 signatures of residents opposed to the variance. Taking an active part in the work on the case were Willo and Larry White, Peachy and Bob Murray, Jo Anne and Austin Scott, Mrs. Elma Denham, Liz and Everett Waldo, Frank DeStephano, Harvey Bullock, Mrs. Green, Mrs. Ruth Jones, and Miss Sandra Harvey of Takoma Park Baptist Church.

BARGAIN FOR FLOWER SHOW FANS

The NI Garden Club has advance sale tickets for the annual Flower Show held in the D.C. Armory, this year March 7-16. These tickets, if purchased before March 1st will be available at reduced rates. Call Mrs. Bradley (TA 9-2918)or Mrs. Coleman (TA 9-7275) or Mrs. Sellers at the NI office (726-3454).

WATER SHOW-OFFS TO SWIM AGAIN - A water show group, currently dormant, is in the stages of regrouping. If your urge to show with skill and style in the water needs fulfillment, call Jim Tompkins, 629-7633.

NEW SECRETARY, BOARD MEMBERS

Mrs. Ethel Cooper is NI's new Board Secretary; she is a former President of Rabaut Home & School Assn., an NI office volunteer, and an active worker in our membership campaigns and other activities.

Mrs. Charlotte Kowitch is the new Shepherd Park Neighborhood Rep to the Board; she was chairman of our Passow Study Group and chairman of the Program Committee for the Art & Book Festival, which she is doing again this year. She is also the Shepherd PTA parent rep to the Institute for Educational Development Advisory Board.

Mr. Benjamin Amos is the new Chairman of the Legislative Committee. Mr. Amos is an attorney in private practice and has been active on a number of neighborhood issues.

Thanks go to the predecessors of these three, respectively, Greg Swanson, Ray Thelwell and Barrington Parker, all of whom resigned recently due to the press of other committments.

WE'VE SAID IT BEFORE AND WE'LL SAY IT AGAIN: THANKS TO OUR OFFICE VOLUNTEERS

We love'm, they do a great job and we couldn't do without them. So, a round of applause for our January volunteers:

Mrs. Yetta Appel	Mrs. Nan Mould
Mrs. Winifred MacNair	Mrs. Laura Arner
Mrs. Raquel Frankel	Mrs. Bet Lashman
Mrs. Beverly McGaughy	Mrs. Joyce Palaia
Mrs. Sarina Hirshfeld	Mrs. Barbara Cuban
Mrs. Shirley Devaris	Mrs. Alice Mark
Mrs. Elise Murray	Mrs. Pauline Merck
Mrs. Henrietta Rowe	Mrs. Joan Thelwell

Mrs. Mayme Coleman

LATE FLASH!!! D.C. YOUTH SYMPHONY CONCERT, Friday Feb. 28, Coolidge High School, 8:30 PM. $1 per family. From all reports, these youngsters are very good and the concerts most enjoyable

NEIGHBORS "INK" STAFF GROWING

Mrs. Janet Feldman and Mrs. Brenda Bell have both joined Everett Waldo to assist in making Neighbors's INK a more useful community organ. Mrs. Feldman will cover activities in the Takoma area and Mrs. Bell will cover Shepherd. Organizations, institutions, service and social clubs are encouraged to make their activities known to these two. Call Mrs. Feldman at 723-1790, and Mrs. Bell at 723-2010.

Brightwood and Manor Park are still without reporters but their respective Neighborhood Representatives will assist in reporting. John Thurber (882-3267) is the Manor Park Rep. and Mrs. Mercedes Botts (882-7399) is the Brightwood Rep. Both of them are looking for volunteers to join the INK staff.

Neighbors' INK seeks to serve all the people and groups in the area. Neighborhood reporters are an essential part of making the INK fully a community organ.

FIRST "COMMUNITY INVENTORY" MEETING HELD

A new project of NI's Board - the Community Inventory - began with an evening discussion meeting with representatives of various organization on Feb. 17. The inventory project, which will take several months to complete, is aimed at taking new soundings of community attitudes on just about all area issues and problems.

A committee of four Board members - NI Pres. Ed Cogen, Ray Hay, Chris Mould and Bill Denham - plans ultimately to prepare a program statement for presentation to the whole NI membership.

NI BACKS DISTRICT ACQUISITION OF REGENCY HOUSE FOR PUBLIC HOUSING FOR ELDERLY

At a public hearing at the District Bldg. on January 30, NI gave testimony supporting the first public housing project west of Rock Creek Park. NI endorsed the plan of the National Capital Housing Authority to purchase the Regency House Apartment building, located at 5201 Connecticut Ave. NW. The purchase has been vigorously opposed by some west-of-the-park citizens groups but has been supported by many city-wide organizations.

NI's statement, given by Mrs. Carol Rende, cited the need for housing for the elderly poor and the suitability of the Regency House for this purpose, as well as the nearby shopping facilities, public transportation and churches. We also noted with approval that medical facilities will be housed within the 171-unit building.

Mrs. Rende attacked opposition arguments that the new residents would not take care of the building or "blend in" with the surrounding community as patronizing and fundamentally racist in nature. She urged Mayor Washington, who must approve the project, to give it his speedy go-ahead.

NI SUBMITS PROPOSALS TO INSTITUTE

Neighbors, Inc. has submitted a set of seven proposals on Community Involvement to the Advisory Board for the Institute for Educational Development. The ideas were developed at a special "brainstorming" meeting of the Education Committee. The Advisory Board has taken the proposals under consideration. They are:

1. Recruiting, training and placing teachers' aides from the community in classrooms. Teachers would also receive training in the use of aides.

2. Workshops involving parents and school personnel on topics of interest to both, such as Making a Non-Graded School, Creating a Community School, Programs for the Gifted, Handicapped, etc. Held on weekends, such workshops would combine social and educational interests and bring parents and school people together to discuss common concerns.

3. Tutorial clinics using local college students and parents on an after-school basis to assist students in need of remedial help, and enrichment.

4. A survey of the area encompassed by the seven schools (Coolidge, Paul, Rabaut, Whittier, Takoma, Brightwood, Shepherd) to seek out the kinds of resources that exist and matching those resources with interests and concerns that teachers have. For example, have chemists, cooks, artists, printers, auto mechanics, architects and persons from foreign countries, etc. speak to or demonstrate their skills for school classes.

5. Create a committee of the Institute Advisory Board to review applicants for teacher openings in the 1969-70 school year.

6. Establish a Big Brother program for weekends and evenings geared toward youngsters who would want male companionship in the area of tutoring and recreation.

7. Hire especially trained community coordinators, familiar with classroom teaching, to develop programs to utilize the resources of the community and increase the schools; sensitivity to the needs of students and the community.

SMALL BUSINESS COURSES OFFERRED, FREE

The Washington Regional Office of the Small Business Administration has announced that free courses in management will be given on Monday evenings at 1405 Eye St. NW. The classes meet from 7:30 - 9PM and will be held until April 7. Further info from the SBA.

JUNIOR NEIGHBORS CONTINUE ACTIVE PROGRAMS

Junior Neighbors started off the New Year with the purchase of 250 paperback copies of several book titles for English classes at Coolidge High School. They raised the money for the purchase at their November dance.

Members of Junior Neighbors feel that it is essential to use books that students really enjoy reading, and which are especially relevant to their world as they perceive it. Both of these reasons underlie the belief that more learning will happen with students who read such books..

Among the titles purchased are, Black Rage, Crime and Punishment, A Farewell to Arms, The Fixer, Black Voices, One Flew Over the Cuckoo's Nest, and Souls of Black Folk. None of these titles was available through the school library.

JUNIOR NEIGHBORS are also planning spring activities with two Maryland Suburban groups, the Dorians and InterAct, whose base is Walt Whitman High School. They met together at a recent mixer at the community center clubhouse where the two suburban groups hold their meetings. The mixer was highlighted by dancing, refreshments, and a lively exchange of views.

Activities discussed were a Gimmick Car Rally, a Barn Dance, and a Semi-Formal.

MRS. DEBORAH MATORY recently presented members of Junior Neighbors with complementary tickets to see the premier of the film, "Up Tight".

The Junior Neighbors group is also considering the possibility of naming a committee to visit the Home and School Assn. to discuss with them current school policies and their effect on student attitudes.

Ted Hagans III, is president of Junior Neighbors, and reported to the Editor of INK along with Miss Dana Ellinger, vice president.

REC PROGRAM AT EMERY CENTER

Director of the Emery Recreation Center has announced continuing and new programs. She is Mrs. Carol Saunders, who may be contacted for further information by calling TA 9-1866.

- Adult Sewing - Mondays 6:30 - 9 PM
- Adult Ceramics - Thursdays 7 - 9 PM
- Teen Center Program - Tuesdays, Wednesdays and Thursdays 7 - 10 PM Includes trips, concerts, bowling, dancing.
- Slimnastics Program - being organized for Wednesdays (maybe) at 7 PM. Call Mrs. Saunders for Info.

YOUR NEIGHBORS IN THE NEWS

SAMUEL J. SIMMONS for 5 years with the U.S. Commission on Civil Rights, has been named Assistant Secretary of HUD for Equal Opportunity.

JOSEPH CARROLL, associate superintendent of D.C. Schools and chief budget officer, has been named superintendent of schools in Los Alamos, New Mexico.

WILLIAM B. PEER, representing the D.C. Democrats, opposed plans for a hearing on a D.C. parking bill, because residents of affected areas and several groups who might oppose the bill were not represented among the witness lists.

ESTHER PETERSON, former assistant secretary of Labor, has been named as legislative representative of the Amalgamated Clothing Workers of America.

THE GHOSTS of Esther and Oliver Peterson's home, the former Shepherd Mansion, were featured in a recent article in Potomac Magazine.

REV. CHANNING PHILLIPS, has been appointed to the Board of the Center for Community Change. This organization will provide technical assistance to community organizations in low-income areas across the country, and is funded by Ford Foundation.

BILL DENHAM received his PhD in Social Planning from Brandeis University on December 23, 1968. A Neat Holiday Season achievement, Bill!

JOHN D. THOMPSON, as president of the Washington Real Estate Brokers Assn., has organized the Association's seminar series which will cover many facets of the industry in Wednesday meetings from now until May.

DR. ROBERT GOOD and wife NANCY have returned to NI area from serving in Zambia as U.S. Ambassador to that country. Dr. Good was NI president when he lived here before.

LT. COL. JULIUS BECTON has returned to the NI area from VietNam. He served as Art and Book Festival Treasurer two years ago, and has returned to that same volunteer job.

DR. HENRY AARON a staff member of the Brookings Institution, has been appointed by Gov. Mandel of Maryland to the Maryland Council of Economic Advisors.

LIFEGUARD REVIEW COURSE BY RED CROSS

A review course for Red Cross Life Guards is being set up for both new and previously certified guards. For details, call Jim Tompkins, D.C. Rec. Dept. Pool Director, 629-7633.

D.C. RECREATION TO SPONSOR ONE-ACT PLAY TOURNAMENT

The Annual One-Act Play tournament sponsored by the D.C. Recreation Department will begin on March 1. The Takoma Recreation Center will hold tryouts for the Tournament. If you're still not 13 years old, you are eligible. Call Mr. Butler, RA 3-8222, Director of the Takoma Recreation Center.

TAKOMA REC CENTER ANNOUNCES PROGRAM

Cooking, Arts, Crafts, Dancing, Athletics, you name it, Takoma Rec. Center has it, under trained leaders. Call the Center, RA 3-8222, for times and details.

NEW BALLET Class will begin at the Center March 1st. Applicants may register during the week of February 24 at the Center, 3rd & Van Buren Sts. N.W. Saturday morning sessions will be at 10, 11, and 12 o'clock. Ten lessons for $5.00. All children, all ages, are eligible.

BASEBALL AND SOFTBALL will be in style before you know it. Get ready now, and sign up for teams anytime at the Takoma Center. Teams will be formed for those 12 years and under, 13-15 years, and 16-18 year olds.

SPREADING THE WORD

NI Executive Director Ed Hollander spoke recently to a meeting of the Neighbors for a Better Community in McLean, Va. He talked about NI, our experience trying to have an integrated community and the future for such efforts. Neighbors for a Better Community is also an integrated organization and has worked to eliminate discrimination in housing, public accommodations and employment.

GROW THEM NOW FOR ART & BOOK FESTIVAL

Cuttings from your favorite plants may be donated to the NI Garden Club for their booth at the Festival. It's time to start the cuttings now, advises Mrs. Blanche Bradley, Club President. For further info, and to make arrangements, call her at TA 9-2918.

BASKETBALL IS THE THING! RIGHT NOW!

The Neighbors Knights who last fall were city champion football players, have formed into a year-round club to run activities for area teenagers. Their first project is a basketball tournament for boys 14-17, approximately. Games are played at Rabaut Junior High on Wednesday evenings at 6 PM. There are still openings for anyone who wants to play. Call Turk Gilmore, 829-2440 for information.

FOOTBALL, ANYONE? That's right! Turk Gilmore advisor of the Woody Bartges Boys Club which NI sponsors, is forming teams of boys who are 120 lbs. and under to play in the league games next fall. He hopes to get a group of about 50 youngsters together in March to begin basic practice. Arrangements have been made to use indoor space until warmer weather comes. Call Turk for further information at 829-2440.

REC DEPT BUDGET HEARINGS FEB. 26 & 27

The Recreation Department budget hearings for Fiscal 1971 will be held on Wednesday, Feb. 26th at 8:00 PM, and Thursday, Feb. 27th at 3:30 PM. On both days the hearings will be held at the Sharpe Health School, 13th & Upshur Sts. N.W. (across from Roosevelt High School).

All citizens are invited to attend. This is an opportunity for everyone to express his ideas and share his opinions in support of the facilities that should be available at our local recreation centers.

Additionally, suggestions and ideas for programs - everything from the conversion of vacant lots into play areas to the outlay of capital for specific programs - should be make in writing and sent to Mr. Howard Harris, D.C. Department of Recreation, 3149 16th St. N.W. For further info, call Mr. Harris, 629-7313.

A CHANCE TO SHOW YOUR CULINARY SKILLS

The refreshments served at the ART & BOOK FESTIVAL last year were a welcome addition. Best of all, they were deliciously prepared --- by you! Yes, all of those tasty dishes and baked desserts were donations. It was so successful that this year we plan to expand and add the novelty of particular ethnic foods for each meal. For instance, we'll have a Mexican Lunch and an Italian Supper, etc. The only way this can be done is with your help. So once, again we are requesting your homemade donations. If we can start early enough this year we should be able to put this idea across and it should be fun. As soon as we receive your form we will contact you to make arrangements to pick it up. Any dish(es) you prepare will be greatly welcomed and much appreciated.

Thanks.

Mrs. Elma Denham (723-5652), and Mrs. Barbara Cuban (882-0986)
Co-Chairmen, Refreshments Committee, 1969 Art and Book Festival

BE SURE TO:

(1) Put your name on your pot or dish
(with masking tape, frosted Scotch tape, etc.)

(2) Attach the name and recipe to your dish
(we're hoping to publish a Neighbors' cook book)

(3) Line your pot or dish with aluminum foil so we can return the utensil as soon as the dish is frozen; otherwise we won't be able to return it until after the Festival.

DETACH FORM ON PREFORATION AND MAIL IT TO: Mrs. Barbara Cuban, 1436 Holly St. N.W.
Washington, D.C. 20012

February, 1969

Dear Member:

Recently I wrote asking you to renew your Neighbors, Inc. membership for the 1968-69 membership year. Our records show that we have not yet received your dues so I'm sending you this reminder in the expectation of your prompt response.

Your generous support in past years has provided us with the means to carry on our program. But we cannot continue to operate and will not succeed in our goals unless our old friends continue to lend us their assistance.

WOULD YOU PLEASE, THEREFORE, SEND US YOUR MEMBERSHIP IN THE ENCLOSED POSTAGE-PAID ENVELOPE TODAY!

Many thanks for your continued help and support.

Sincerely,

Edward S. Cogen

Edward S. Cogen
President

P.S. If you have recently paid your dues please accept our thanks and disregard this notice. Your membership card will be sent shortly.

Sent to Mrs Vick 18 February 69

MARCH, 1969

VOL 11 No. 3

VICTORY ON TAKOMA SCHOOL

Bd. of Ed. VOTES 9-1 TO STOP CONSTRUCTION

At the Board of Education meeting Wednesday, March 19th, More than two hundred angry Takoma parents, their NI supporters, as well as many many others, backed up Muriel Alexander and Julius Hobson as those members led the District Board of Education to recommend to the District Government the stopping of construction at the Takoma school site.

FROM THE BEGINNING: THE TAKOMA STORY.

Takoma Elementary School has now become a revered object symbolizing the need for real citizen participation in local government. It all began back in 1964 when Congress heard the first testimony showing the need for a replacement for our antique building.

Built in 1898, Takoma School was the most up-to-date school house around. Some oldtimers moved here in the teens and twenties so their children could take advantage of it.
The Venerable building has been called Edwardian Split Level, has lofty ceilings, spacious rooms and a large auditorium. But the student population has forced the principal into a hallway, basement space has been converted to classroom use, and the overflow is housed in Trinity Episcopal Church nearby. But even "sub-standard" space has been made pleasant and adequate. In spite of its faults, Takoma is versatile and still useable.

Congress came through with site and planning money in the 1968 budget, and construction funds came through the next year.

Then the shock came: Early in 1967 the plans for the "new" building were shown to Takoma Principal Lucille Rafael who in turn shared them with the PTA. Then President of the PTA Mary Rodgers and Legislative Chairman Everett Waldo gathered a committee, and the visits to "City Hall" began. The many inadequate aspects which we brought to Granville Woodson's attention are too numerous to list here, but the lack of toilets on the first floor for the smallest children is typical!

A long series of correspondence and meetings have taken place over the past two years, and the number of documents in the dossier is now close to 100. Two fundamental issues began to be clear in these
(Continued Page 2, Column 2)

After a series of delaying tactics by Board of Education President Coates, Julius Hobson called for a point of order, and Mattie Taylor moved that the next item of business be Takoma. Shortly after that vote, Muriel Alexander introduced the crucial motion

It reads: "I move, therefore, that all action necessary and appropriate shall be taken to stop immediate construction of the Takoma Elementary School replacement and any addition thereto, and that you appoint a committee to investigate the needs of the citizens to be served by this school, and that we take action on this project after we study this committee's recommendations."

Anita Allen proceeded to amend the motion to distribute the Takoma replacement funds to other school projects, "since these people don't want a school." This attempt at obfuscation was soundly trounced in the discussion and Mrs. Allen withdrew her amendment.

Voting for the motion were Mrs. Alexander, Julius Hobson, John Sessions and Mattie Taylor. Others who joined them were Nelson Roots, Mr. Rosenfield, Mr. Hancock and Mrs. Swaim.

Board President Coates finally cast his vote for the motion after Sessions challenged him to do so. Mr. Treanor refrained from voting. Mrs. Allen's vote was the lone dissenting vote registered.

The meeting began at 7:45, after the room had been filled with spectators for more than a half hour. Before eight o'clock the hallways surrounding the Board Room were filled with latecomers from UPO, Woodson Senior High School, all the NI area schools, and many other PTA's from the city. Before the Board meeting, each Board member was applauded and cheered as he or she arrived, and a special song for the occassion was sung under the sensitive direction of Gail Perry.
(See page 2, column 1)

NEIGHBORS INK is the newsletter of Neighbors, Incorporated (North Washington Neighbors, Incorporated), a private, non-profit community organization.

Contents of NEIGHBORS INK do not necessarily reflect the official position of the Board of Directors where official Board action is being reported. Published monthly, INK is not copyrighted.

Phone: (202) 726-3454

Editor.....Everett Waldo
412 Aspen St. NW Phone 726-0729

NEIGHBORS INK CONTINUES TO GROW

The NI newsletter, Neighbors, Ink, is gaining strength each month. Last month we reported two new assistants on the committee. This current issue is the combined work of a committee of five reporters besides the editor. Additionally, three more persons are signed on to swell the INK staff to a total of 9.

Besides Everett Waldo, editor, the members of INK staff include Mrs. Janet Feldman, Mrs. Brenda Bell, Mrs. Jo Ann Scott, Mrs. Judy Cohen and Mrs. Ethel Cooper. These comprise the group working on this issue. More recent members include Mrs. Hattie Dees, Mrs. Annie Barden and Jim Pope.

At its March meeting the NI Board voted to have the INK printed rather than mimeographed for a three-month pilot period. The pilot project will begin with the April issue, It is expected the printing will allow for local business men to take advantage of the opportunity to advertise, and the community at large will benefit by a wider circulation and readership.

VICTORY (CONTINUED)
Takoma PTA President Dan Safran kept a keen ear on the proceedings and helped direct the response of the supporters. During Board President Coates' delaying tactics, Carolyn Jackson led a chant, "Talk about Takoma, Talk about Takoma." Eash time the photographers aimed their cameras at the crowd, dozens of big signs were lifted up into view castigating Woodon egg-crate and cracker box. Each Board member and administration official found a yellow sign on his desk as he entered demanding "STOP TAKOMA CONSTRUCTION." Now that the Board of Ed has taken action to stop the construction, the recommendation must go to the City Council and Mayor. The Takoma People and their supporters will next be headed for the Mayor's office if he does not act immediately to implement the Bd of Ed's overwhelming mandate to stop construction.

THE SEARCH FOR THE CITY HALL DOOR ***

Over two years ago, Takoma parents, teachers and many supporters including the NI Board and its Education Committee, pointed out how badly conceived and planned was the proposed replacement for the Takoma School. More than SEVENTY (70) communications later, between the leaders of the Takoma struggle and all levels of the District bureaucracy, the issue was brought to the head described on page 1.

In essence, we have been citizens looking for the City Hall door. We have a right to that door and to a response from those within. Up until last night "city hall" seemed to be a collection of insensitive, irresponsible evasive bureaucrats doing what they please, citizens and taxpayers notwithstanding. As long as they continue to act that way, tax money will continue to be wasted. To illustrate, FOUR "NEW" elementary schools identical to the planned Takoma egg crate are now in use in D.C. The staffs using those "educational" instruments have compiled endless lists of their faults. The waste city-wide runs into the millions of dollars and even worse will be the criminal waste of resources and students whose education will take place in those straightjackets.

Apparently, however, the ELECTED Board of Education has intentions to respond to the people, to open to us the "City Hall" door insofar as that is possible to them. We are sure the power of the votes of an aroused electorate, who are not only taxed but also represented, made a difference with the Board of Education.

The Takoma people and their supporters must now go to the City Council and the Mayor, all of whom are political appointees. Although we did not elect them, we don't expect the city hall door to be shut in our faces; these officials have as much responsibility to us as the Board of Education. The city hall door belongs to the people, and we intend to get on the inside.

HISTORY CONTINUED: meetings: the whole system of school planning and design in D.C., and the consequent waste, together with the fundamental rights of citizens participating in decisions such as school planning, which have so great an impact on communities and their citizens.

Until the Board meeting of March 19, 1969, those in this struggle were beginning to despair of correcting the ills or of participating in the decisions.

The action of the school board on Mar. 19, 1969 vindicates the hundreds of hours and the phone calls and all the work of the many citizens who have helped. The Board decision is going to be far reaching, but at this printing the construction is not yet officially stopped. The Takoma parents and NI still have to appeal to the Mayor.

BOARD MEMBERS MARRY

The former MRS. RUTH STACK was married on March 1st to Daniel Jordan. Mrs. Jordan is an At-large Director member of the NI Board. The couple will continue to live in the NI area.

JOHN N. THURBER, Manor Park Neighborhood Representative to the NI Board, and Mrs. Gwendolyn L. Johnson, another NI resident of long standing, were married on January 24. Both are employees of the Labor Department and are members of Local 12 of the American Federation of Government Employees, of which Mr. Thurber is President. The couple thanks their many friends for their expressions of good wishes.

OPEN HOUSE FOR APRIL 11th

Open House for April will be the second Friday, (not the first) --- that is, April 11th. Home of -

Mr. and Mrs. Raymond Hay
517 Cedar St. N.W.
BYOL (of course)
....se y'all there!

GARDEN CLUB MEMBERS WIN 29 RIBBONS

Some of our horticultural Neighbors contributed to the beauty of the National Capital Flower and Garden Show, March 7-16, and reaped a fine harvest of honors. Ribbons won by the Neighbors, Inc. Garden Club totaled 29. Ribbon winners from the club included Mrs. Blanche Bradley, Chairman of the Club, (11 ribbons); Mrs. Bradley's youngsters, Danny and Martha, (5 ribbons); Mrs. Birdia Bush (9); Mr. Carl Booker (1); and Mr. and Mrs. George Coleman (3). The Washington Post took especial note of Neighbors' sprig of Norway spruce which won a blue ribbon. Another prize winner, Mrs. Frances Boyd, member of the Woodridge Garden Club is also a NI resident. Congratulations to all prize winners!

The Neighbors, Inc. Garden Club has room for additional members. The club is affiliated with the D.C. Public School Adult Education Garden Club Program. The instructor is Mr. Haviad Jones. The adult Education Program had five clubs entered in competition at the Flower and Garden Show and won over 50 awards. For further information call Mrs. Bradley at TA 9-2918. And if you want to see what the club members produce, don't miss the 13th Annual Flower Show at the National Arboretum on May 17-19. Admission is free. Hours are Saturday, 2-6; Sunday 10-6.

THE NEIGHBORS INC. ANNUAL ART AND BOOK FESTIVAL will be glad to receive your plant and flower donations (see next column) for sale at the Festival. Those who can contribute grown plants or cut flowers may bring them directly to the Festival. Those who want to give cuttings or who want to dispose of their plants before the June Festival date, may make such arrangements with Mrs. Bradley, TA 9-2918.

CABARET DANCE

When the idea for a cabaret-dance was conceived, it was to be an opportunity for neighbors of Takoma, Manor Park, Brightwood, and Shepherd Park to meet each other in an evening of relaxed socializing and dancing.

The evening of February 22 was just that - Neighbors enjoying themselves in a lovely, spacious room at the Ohev Sholom Synagogue, surrounded by music provided by Jim Peyton and his dance committee.

Since we rented a larger (and therefore more costly) hall this year, the ticket prices had to be raised, making it much harder to sell tickets. Still, about 240 guests attended -a very gratifying response. The net profit to Neighbors, Inc. for the evening was $641.37.

Special thanks to very special people - Jim Peyton, Ethylyn DeStefano, Jack Jacques, Audrey Marcus, Dutchess Margerum, Sylvia Schlitt, and Evelyn Sellers. Also to Phil Marcus and Frank Warner.
Praise to the lovely and talented Ann Kasters for the design of the cabaret leaflet. Thanks also to our neighborhood merchants for supplying the door prizes - Cork and Bottle for the Champagne, Ida's Department Store for the clasp and cufflinks set, and especially Mr. and Mrs. Stafford Appel for the hams.

CABARET-DANCE RESIDUE
or
WE-FOUND-IT-WHO-LOST-IT-COLUMN.....

FOUND: One Green Bowl
One Lady's Kid Glove
LOST: Black Purse containing drivers license, but not money.

Anyone who can help put these articles together with their proper owner, please call the NI office 726-3454.

MEMBERSHIP CANVASSING

The Membership canvassing is being drawn to a close. Any canvassers who have completed their block assignments or won't be able to please contact Barbara Cuban - 882-0986.

Another special open house for new residents will be held in late April. If you have the names of any new residents who are renting or buying, please contact Mrs. Cuban.

NEIGHBORS KNIGHTS PLAY TO 2,000

The Neighbors Knights basketball team played the Ely All Stars, Maryland Champions, in the unlimited division of an independent league. Our Knights played a good game, though losing 106-87, at Lackey Sr. High school, Feb. 21, to a crowd of nearly 2,000. A rematch to be held in the District is under discussion between the Knights and the All Stars.

NEW JERSEYS were recently purchased for the Neighbors Knights basketball team by Neighbors, Inc., as NI did earlier for the Knights football team.

BRIDGET NEEDS YOUR HELP!

And who wouldn't help dear Bridget? But seriously: Specialists are needed to teach in the new DC Recreation Dept. program, OpeRATION BRIDGET. Teams of specialists are being sent into five communities in the District to develop and teach basic skills in dressmaking, grooming, economical homemaking, etc. Teachers are most urgently needed for classes in upholstering, slip cover making and interior decorating. If you would be willing to help, contact Mr. Terrell, Assistant Director of the City-Wide Division of the Adult Education Program at 629-7208.

ONE ACT PLAY TOURNAMENT FOR JUNIORS INCLUDES TAKOMA AND FORT STEVENS GROUPS

"The Shoemaker and the Elves" will be presented by the drama group of the Takoma Recreation Center on March 27. On the following day, Friday the 28th, Ft. Stevens Jr. Dramatic Players will present the play "The Childrens Hour." Further information is available by calling the centers.

BOY VS GIRL

That's the name of the softball game to be held at the Ft. Stevens Rec Center during Easter Week, April 8. Make sure you get signed up for this version of the ancient game!

BOOKS NEEDED!

Used books and records are urgently needed for this year's Seventh Annual Art and Book Festival to be held June 20, 21 and 22. With spring cleaning season here, this should be a good time to clear the shelves and at the same time help Neighbors, Inc. Incidentally, all donations are tax deductible. People to call for free pickup are: Mrs. Martha Freeman - 726-0555; Mrs. Brenda Bell - 723-2010 or Mrs.Anita Blake - 726-7203.

EASTER WEEK PLANS ANNOUNCED BY AREA RECREATION CENTERS

April 7, Monday, through April 11, Friday, the area recreation centers have scheduled a full program of events for people of all ages. The variety (listed below) is almost breathtaking, and there is literally something for everybody.

Detailed schedules are too lengthy for this space, so you are encouraged to check with each center for specific times and ages, etc.

Phone numbers of each are:

Emery	TA 9-1866
Fort Seevens	RA 3-3477
Shepherd	723-6800
Takoma	RA 3-8222

Contests, tournaments, exhibitions, programs and activities include:

- Egg rolling
- Easter Bonnet Contests
- Basketball tournaments
- Bunny Hops
- Pinochle
- Tumbling
- Peanut Hunt
- Bubble Gum Contest (!!!)
- Kite Making
- Table Tennis
- Hop Scotch Tourney
- Kite Flying
- Jelly Bean Guessing
- Balloon Bust

Puzzles, frisbees, carroms, spuds, rope jumping, 20 questions, tissue collage, cooking and even quiet games!

PRE-VOCATIONAL PROGRAM LOOKING FOR VOLUNTEERS

The Volunteer Services Division of UPO is seeking volunteers to work in the Pre-Vocational Center at 2013 14th St. N.W. Volunteers put in about 4 hours a week as (1) Job Developers - contact with businesses; (2) Job Coaches - liaison between employer and program employee; (3) Job Counsellors - prepare program enrolees to meet demands of the labor market. Challenging and rewarding work will be supervised after adequate training. The Center serves primarily young women who want to work and have had difficulty finding jobs or who for various reasons are not eligible for other manpower programs. According to sources, this is the first time in the Washington area that this approach is being tried. To volunteer or for further information, CALL MISS BARBARA WILLIAMS 659-1100, ext. 432.

FAMILY PICNIC IS SCHEDULED at Takoma Rec. Center on Tuesday, April 8, 12 - 1 P.M.

EASTER EGG ROLLING at Emery and Shepherd Rec Centers on Monday, April 7, 11:30 A.M.

JUNIOR NEIGHBORS TO SPONSOR JR. JRS.

Miss Kim Jordan reports that with the encouragement of Junior Neighbors, a Junior Junior Neighbors group is being formed. It will serve grades four through Seven, and interested people in those grades may call Kim at 723-3972. Dana Ellinger of Jr. Neighbors is also available for information, at 726-1226.

WEATHER, ANYONE?

Quoted from Elsewhere: "More snow landed here Monday and Tuesday, with wind Tuesday night to move it around. However, we are, apparently, more fortunate in that regard than some places further south, such as Boston."

And also from the same Elsewhere, one week later: "No real snow fell this last weekend. We don't need any more."

GREEN ACRES ADDS SEVENTH AND EIGHTH GRADES

Green Acres School is one of this area's pioneer coeducational private elementary schools. After long growth, the school will add a seventh grade in the Fall of 1969 and an eighth grade in 1970, Mrs. Anne T. Goodrich, Interim Director, has announced at the school which is located in suburban Rockville at 11701 Danville Dr.

Green Acres was founded in 1934, the first integrated private school in the area, w with seven students. Green Acres has a flexible, innovative program designed to respond to a child's creative interests. Presently 234 students are enrolled. Bus service is provided throughout the NI area.

NI STUDENT ARTISTS CHALK UP HONORS

ANNE MASTERS, 17, created an award-winning fabric design featured in the March issue of Seventeen magazine. Anne's design was picked last year, when she was a Coolidge student. Pantsmaker has used the fabric in a pair of wide-legged pants.

Two Coolidge students won honors in the 1969 Scholastic Art Exihibition, sponsored by Scholastic Magazines, Inc. and the Hecht Co. WENDY WILSON's winning portfolio was selected to compete nationally for scholarships. JENNIFER BOOZER's mixed media work was judged an outstanding entry, for which she was given the Hallmark Award.

DONALD JOHNSON WINS FOOTBALL AWARDS

Donald Johnson, student at Rabaut JHS, won the Pass, Punt and Kick Contest Held in the upper Northwest District. He received an award from the Police Boys Club at ceremonies held at the school and was also given a trophy by the NI-sponsored Neighbors Knights Football Corporation.

DOLLARS NEEDED FOR DEEP SOUTH RIGHTS CAUSE

The Southern Rural Research Project is in danger of going the way of the Southern Courier (which died recently from lack of dollar transfusions). SRRP, with two black co-directors and a white legal counsel is doing significant work in the rural Alabama Black Belt and portions of Mississippi. They were instrumental in publicizing the hunger problem through the CBS documentary, "Hunger in America." Their 1967 summer survey constitutes the best understanding of the problems of really low-income black rural residents as far as hunger conditions and discrimination in farm programs are concerned. They are responsible for important legal suits challenging ASCS programs.

SRRP is indeed desparate for money. If you believe in work such as ARRP is doing send a contribution: Tax-deductible contributions for SRRP should be made out to: "Alabama Council on Human Relations - SRRP" or "ACHR--SRRP" and mailed to Alabama Council on Human Relations, Box 956, Selma, Alabama, 36701.

ACCOUNTING SERVICES NEEDED

Neighbors, Inc. would appreciate the services of a volunteer accountant to aid the Treasurer in preparing certain reports and auditing the books periodically. The work would amount to a couple of hours several times a year. Please call the NI office-RA 6-3454 if you can help in this way, or if you can "volunteer" a friend of yours who could help us. Thank you.

NI REPRESENTED AT HEARINGS OF RECREATION FACILITIES

Neighbors, Inc. was represented at the D.C. Recreation Hearings by Alfred A. Augustus, Chairman of the NI recreation Committee. Neighbors, Inc. has requested that a Community Center be built on the site now occupied by the Takoma Pool. The proposed Center would include an indoor-outdoor pool, (utilizing the present pool), a gym, conference rooms, activities rooms, a bowling alley, and multi-purpose areas for activities such as sewing, crafts, judo and karate, and a library-lounge area.

Additional lighting has been requested for the play area east of Coolidge High School which includes a baseball field, a softball field, hockey filld and a soccer and football field.

Urgent requests were made of the Hearing Board to consider the creation of recreation facilities at the Brightwood School or near-by, and in the area of North Portal Estates, west of 16th St. In both cases, the distance to a recreation area and the physical hazards of crossing streets are prohibitive to youngsters in search of a place to play.

CUB SCOUTS MEETING AT HOLY COMFORTER

Cub Scout Pack #23 now meets at Holy Comforter Church 9 A.M. each first Saturday. Next meeting April 5. Boys ages 8-10 are welcome and should call Willard Poteat, 723-6244 or William Powell, 829-0693 for details.

SAROYAN'S CLASSIC COMES TO THE NI AREA

William Saroyan's "Hello Out There" will be presented by the Holy Comforter Players on Sunday evenings, April 13, 20, and 27. Auditions are now being held to form the cast. Call Sue Riley, 726-2480 for info.

"Hello Out There" deals with the tragedy of existence in a world of violence and hate, but underlines the hope and faith that somewhere in this world people really do love each other.

PASSOW REPORTS AVAILABLE

Copies of the Passow Report - the Columbia University evaluation study of the DC School system - are available in the NI office. These can be borrowed by neighborhood residents. Besides those generally interested in what is going on in our schools in constrast to what OUGHT to be happening, community representatives to the Institute for Educational Development, members of the Budget Review Committees, and PTA members are encouraged to make use of this resource. Call NI Office, 726-3454, or drop in at 6400 Georgia Avenue (second floor).

CITIZEN PARTICIPATION IN POLICE WORK

Sixth Precinct Community Advisory Council has established a program making it possible for citizens to work in the Precinct Station at 1351 Nicholson St. N.W. according to NI representative to the Advisory Council. Community volunteers handle calls concerning non-police activity (housing, financial, legal problems, etc.) keep track of citizen contacts and also help in typing and filing. Volunteers have a chance at the same time to observe the police in action.

Volunteers usually work one evening a month from 7-9 P.M. and police officers will provide rides home after 9 for any who need it. Recruitment Chairman, Mrs. Majora B. Smith can sign you up or provide more information. Call her at 829-8755 after 6 P.M.

CLASSIFIED ADS

MIMEO MACHINE, used Gestetner model 220, good condition; modern silk screen dual cylinder process, $150, call weekdays 726-3454.

PIANO LESSONS for beginners and advanced, in Shepherd Park, Member Washington Music Teachers Assn., BA Brandeis U., Graduate work in musicalogy University of Illinois. Call Mrs. White, 726-1034; weekday mornings call WO 7-2704. Please do not call on Jewish Sabbath.

BABYSITTER SOUGHT for infant while mother works; will bring child to your home, 8 A.M. to 5 P.M.; call 882-1054.

MANY THANKS TO OFFICE VOLUNTEERS

The following volunteers have been of tremendous service in the Neighbors Office and at home during the month of February. Our hats are off to these ladies and to Mrs. Ruth Cogen, for organizing the program.

Mrs. Yetta Appel
Mrs. Gay Sa'adah
Mrs. Val Jenkins
Mrs. Bedelia Henderson
Mrs. Alice Mark
Mrs. Betty Peer
Mrs. Ethylyn DeStefano

A CHANCE TO SHOW YOUR CULINARY SKILLS

The refreshments served at the ART & BOOK FESTIVAL last year were a welcome addition. Best of all, they were deliciously prepared —— by you!! Yes - all of those tasty dishes and baked desserts were donations. It was so successful that this year we plan to expand and add the novelty of particular ethnic foods for each meal. For instance, we'll have a Mexican Lunch and an Italian Supper, etc. The only way this can be done is with your help. So once again we are requesting your homemade donations. If we can start early enough this year we should be able to put this idea across and it should be fun. As soon as we receive your form we will contact you to make arrangements to pick it up. Any dish(es) you prepare will be greatly welcomed and much appreciated. Thanks.....

Mrs. Elma Denham (723-5652), and Mrs. Barbara Cuban (882-0986)
Co-Chairmen, Refreshments Committee, 1969 Art & Book Festival

BE SURE TO:

(1) Put your name on your pot or dish
(with masking tape, frosted Scotch tape, etc.)
(2) Attach the name and recipe to your dish
(we're hoping to publish a Neighbors' cook book)
(3) Line your pot or dish with aluminum foil so we can return the utensil as soon as the dish is frozen; otherwise we won't be able to return it until after the Festival.

DETACH FORM ON PERFORATION AND MAIL IT TO: Mrs. Barbara Cuban, 1436 Holly St., NW, Washington, D.C. 20012

NEIGHBORS, INC. ANNUAL MEETING

Featured speaker CONGRESSMAN JOHN CONYERS

REP. JOHN CONYERS, JR., DEMOCRAT FROM DETROIT, IS A STRONG SUPPORTER OF D.C. HOME RULE, CIVIL RIGHTS, MEDICARE AND CONSUMER PROTECTION LAWS. NI IS PROUD TO HAVE HIM AS OUR SPEAKER.

WEDNESDAY, MAY 21ST, 1969

8 PM

SIXTH PRESBYTERIAN CHURCH
16TH & KENNEDY STS. NW

ALSO MEET WENDY WILSON, COOLIDGE SENIOR WHO IS GOING TO AFRICA THIS SUMMER WITH THE CROSSROADS AFRICA PROGRAM

ELECTION OF 4 AT-LARGE DIRECTORS

At this meeting 4 at-large Directors will be elected for two-year terms on the NI Board. The Nominating Committee will present a slate of candidates but other nominations may be made from the floor, provided the nominee has consented to run. All NI members are eligible to run; all members may vote and both husband and wife may vote if both are present.

ELECTION OF 4 MEMBERS TO NOMINATING COMMITTEE

Four non-director members will be elected to the Nominating Committee for one-year terms; the candidate receiving the most votes will be the chairman of the Committee. All nominations will be from the floor.

ELECTION OF NEIGHBORHOOD REPRESENTATIVES FOR BRIGHTWOOD, TAKOMA AND SHEPHERD PARK

Immediately following the general membership meeting, Brightwood, Takoma and Shepherd Park will hold neighborhood meetings to elect Neighborhood Representatives and Assistant Neighborhood Representatives. The term of office is two years; the Neighborhood Rep is a member of the NI Board. The Neighborhood Nominating Committees have nominated the candidates listed below but other nominations may be made from the floor. The Takoma and Shepherd neighborhoods will also elect one member each to fill vacancies on their respective nominating committees; all nominations for those positions will be from the floor. (The Manor Park neighborhood held its elections in a separate meeting April 29th.)

BRIGHTWOOD	FOR NEIGHBORHOOD REPRESENTATIVE:	Mr. Shirley Foley
	FOR ASSISTANT NEIGHBORHOOD REP:	Mrs. Lois Gant
TAKOMA	FOR NEIGHBORHOOD RPPRESENTATIVE:	Mr. Harvey Bullock
	FOR ASSISTANT NEIGHBORHOOD REP:	Mr. David Register
SHEPHERD	FOR NEIGHBORHOOD REPRESENTATIVE:	Mrs. Charlotte Kowitch
	FOR ASSISTANT NEIGHBORHOOD REP:	Mrs. Beverly McGaughy

!! STILL TIME LEFT TO SHOW YOUR CULINARY SKILLS !!

Yes, there is still time to prepare those tasty dishes for the Art & Book Festival. The food platters were such a success last year we're repeating it and adding a new feature ---- ethnic foods for each meal. It depends on your cooperation - all of the delicious meals are homemade donations. Please fill out and send in the form, as soon as we receive it we'll contact you to pick up your dish. Thanks very much.

WENDY WILSON WILL WALK TO GET TO AFRICA

WILL YOU SPONSOR HER?

"AFRICA TREK" MAY 17 IN ROCK CREEK PARK

WENDY WILSON, A SENIOR AT COOLIDGE HIGH SCHOOL, IS ONE OF 12 D.C. AREA YOUTH WHO HAVE BEEN SELECTED TO WORK IN COMMUNITY DEVELOPMENT PROJECTS IN AFRICA THIS SUMMER WITH THE CROSSROADS AFRICA PROGRAM. NEIGHBORS, INC. IS SERVING AS THE ORGANIZATIONAL SPONSOR FOR WENDY.

THE "AFRICA TREK" IS SPONSORED BY CROSSROADS AFRICA AND THE AMERICAN FREEDOM FROM HUNGER FOUNDATION. THE MONEY RAISED WILL BE USED TO SEND THE D.C. STUDENTS TO AFRICA THIS SUMMER, TO SEND 3 HOWARD UNIVERSITY GRADUATE STUDENTS TO DO A NUTRITION SURVEY IN SEVERAL AFRICAN COUNTRIES, AND TO SUPPORT AN INNER-CITY PROJECT HERE IN D.C., TO BE SELECTED BY THE YOUTH COMMITTEE OF CROSSROADS AFRICA.

THE HONORARY CO-CHAIRMEN OF CROSSROADS AFRICA ARE THE HON. CHESTER BOWLES, THE HON. WILLIAM O. DOUGLAS, AND THE REV. THEODORE M. HESBURGH. DR. JAMES H. ROBINSON IS ITS EXECUTIVE DIRECTOR.

AS THE WALKERS ON THE "TREK" PROCEED ALONG THE 26-MILE ROUTE THEY WILL PASS BY A SERIES OF CHECKPOINTS, LOCATED IN FRONT OF VARIOUS AFRICAN EMBASSIES, TO HAVE THEIR TREK CARDS STAMPED. IN THIS WAY WENDY CAN SHOW YOU THE EXACT DISTANCE SHE HAS WALKED.

AFRICA ®

YES, I'LL SPONSOR WENDY WILSON ON THE "AFRICA TREK"

I pledge ____10¢ ____25¢ ____50¢ ____$1 for each mile she walks on the Trek, May 17, 1969.

NI FAMILIES ARE INVITED TO JOIN THE TREK

IT STARTS AT THE ROCK CREEK PARK NATURE CENTER

IN ROCK CREEK PARK

The hikers will mainly be young people from high schools, prep schools and community youth groups—joined by interested and agile adults. They will all find sponsors from among their friends, family, teachers, doctors, lawyers, pastors and local businessmen, who will promise to pay them a certain sum for each mile they walk.

On Saturday, May 17, starting at about 7 o'clock in the morning, the hikers will walk a 26-mile route through Rock Creek Park, passing by the different African embassies or ambassadors' residences in or near the park. Each embassy will mount a small display giving a bird's-eye view of its country.

At checkpoints along the route, hikers will have cards stamped to show how far they have walked. After the walk, hikers will take these cards to their sponsors and collect the money promised them.

At the end of the day, there will be a ceremony of awards. These awards will be given, for example, to the first hikers to come in, the largest group to walk and the individual who collects the most money.

With the cooperation of the Park Police, the Metropolitan Police and cadets from several schools, there will be adequate provision for security.

There will also be First Aid stations and easily identifiable cars (carrying the emblem of the trek) to pick up tired walkers and take them to these stations or to the finishing point, if necessary.

All hikers will be out of the park before dark.

BRIGHTWOOD PTA DEMANDS DEMOUNTABLE

In a letter to Board of Education President James E. Coates the Brightwood Elementary School PTA has requested immediate assurance that the promised six-room demountable will be ready when school opens in the fall. The letter, signed by 236 parents and the entire faculty, pointed out that the money has been appropriated but actual construction has been continually delayed without explanation.

This year 4 classes (115 children) met in the auditorium and the situation will be even worse in the fall because of a larger enrollment. The PTA stated its readiness to take necessary further action if a firm starting date is not set soon since the construction will take approximately 3 months.

NI GARDEN CLUB RECEIVES AWARD

The Neighbors, Inc. Garden Club received a $25 award from the National Capital Federation of Garden Clubs, Inc. for selling the most tickets to the Flower Show held at the Armory in March for a garden club with less than 35 members.

PURCHASE OF REGENCY HOUSE APPROVED BY HUD

In early May the federal Department of Housing and Urban Development approved the financing for D.C.'s purchase of Regency House but stipulated that $75,000 of the purchase price will have to be privately raised. Mayor Washington has secured the necessary private financing. On upper Connecticut Ave., Regency House will be the first public housing project west of Rock Creek Park; the 10-story, 172-unit will be for the elderly.

The hotly-disputed purchase was being watched by big city housing authorities as a precedent-setting case. Neighbors, Inc. supported the acquisition in testimony and last month joined a large number of organizations in urging affirmative action by HUD.

REMINDER - The Junior Neighbors job agency phone number is 526-7372, manned by Miss Sylvia McRoy. These hard-working area teens do babysitting, yard work, house chores, etc.

SAFETY MEASURES TAKEN NEAR SHEPHERD SCHOOL

As the result of a letter from Mrs. Charlotte Kowitch, NI Shepherd Neighborhood Representative, the Department of Highways and Traffic has announced the following steps to improve traffic and pedestrian safety near the Shepherd Elementary School:

* converting electrical signs on Kalmia Rd. to flash "Pedestrian Crossing" 7 days a week, 7 AM - 8 PM
* painting wide diagonal lines at the 14th St. and Kalmia Rd. crosswalks
* placing speed limit signs (both directions) on Kalmia Rd. between 16th St. and Georgia Ave.
* installing "Stop Ahead" signs for both directions of 14th St. traffic
* prohibiting curb parking on the north side of Kalmia Rd. immediately east of 14th
* replacing "Yield" signs with "Stop" signs on Iris St. at 14th

In a sentence which ought to win a prize for diplomatic wording the letter also stated, "Officials of the Metropolitan Police Department have been contacted in regard to the matter of curbing the tendency on the part of any motorist to employ excessive speed in the area."

D.C. BANS OPEN TRASH, LEAF FIRES

The new D.C. air pollution regulations,which went into effect May 1st, prohibit the open burning of trash and leaves but do not apply to cooking fires such as in picnic grills. All waste material, including trash and leaves, must be burned in approved incinerators or furnaces. The ordinance will be enforced by the Health Department and carries penalties of fines up to $300 and imprisonment up to 90 days, or both.

RABAUT STUDENTS TOUR PUERTO RICO

A group of 48 Rabaut Junior High students had a glorious trip to San Juan, April 7-12. The trip was sponsored by the Spanish Club, under the direction of Mrs. Green and Mr. Fabilos. Accompanying the students were Dr. Graves, Mr. Dixon, Mrs. Saunders and Mrs. Allen.

AN INTOWN, INTERESTING, INTEGRATED COMMUNITY

JUNIOR NEIGHBORS PRESENTS BOOKS TO COOLIDGE

At a ceremony at Coolidge High last month Junior Neighbors presented the school with sets of books bought with the proceeds of the group's November dance. The presentation was made by Ted Hagans, III, and Dana Ellinger, JN's president and vice president, and was received by Principal William Rountree. So that the books may be used in regular classwork, the group bought 35 copies each of the seven titles - Crime and Punishment, A Farewell to Arms, The Fixer, Black Voices, One Flew Over the Cuckoo's Nest, Black Rage, and The Soul of Black Folk. The list is being circulated in the English Department.

MANOR PARK ELECTS WARNER, GRAHAM

At the Manor Park neighborhood meeting, held on April 29th at Albright Methodist Church, Frank Warner was elected Neighborhood Rep to the NI Board, and Mrs. Barbara Graham, Ass't. Rep. Both were elected unanimously and will serve 2-year terms. The candidates were nominated by the neighborhood nominating committee Mr. and Mrs. George Coleman, Wayne Kirk and the Rev. Woodrow Bartges. Along with our congratulations to Mr. Warner and Mrs. Graham, goes our appreciation to the out-going office holders, John N. Thurber and Mrs. Evelyn Sellers for their dedicated service the past two years.

GOING AWAY FOR THE SUMMER?

Like to meet your mortgage payments painlessly? The Housing Information Service has received requests for short-term rentals. If you would consider renting your house for a month, 6 weeks or more, call Mrs. Nancy Smith, 829-9623.

FREEWAY FIGHT CONTINUES

NI Vice President Joe Hairston and Transportation Committee chairman Bill Peer were among the 100 representatives of community groups who met with Deputy/Mayor Fletcher to protest his reported comprimise with Congress on freeways vs. rapid transit. Press reports indicated Fletcher has agreed to modify the city approved limited freeway program in return for Congressional release of rapid transit funds.

The City Council unanimously opposed the deal. The community groups considered it a sell-out. As a result of this opposition, the negotiations were broken off.

PARKING AUTHORITY

The NI Transportation Committee is also keeping a close watch on proposals for a Parking Authority for the District. The current Tydings-Broyhill bill would give an Authority responsibility for providing additional parking facilities downtown and the power of eminent domain. Various community organizations, including the Emergency Committee on the Transportation Crisis, oppose the eminent domain power to take private land and buildings for private parking operators' use. They also oppose anything that would encourage more private automobile commuter traffic into the city.

The city has declined to take a position on the proposed legislation. Citizen groups are demanding City Council hearings before action is taken, but several members of Congress have objected to this as "a limited type of home rule" on the Parking Authority issue.

OPEN HOUSE FOR NEW RESIDENTS HELD

Mrs. Barbara Cuban, chairman of the Membership and Hospitality Committee, held a special open house for new residents at her home on April 20th and reports there was an excellent turnout of new neighbors. She extends her many thanks to the following bakers: Mrs. Janet Feldman, Mrs. Sarina Hirshfeld, Mrs. Mildred Phillips, Mrs. Yetta Appel, Mrs. Sue Swisher, Mrs. Delores Morris and Mrs. Liz Waldo.

PAULA EDWARDS received a big write-up in the Post - not to mention a $3000 scholarship - for taking 3rd prize in the Betty Crocker All-American Homemaker of Tomorrow contest. She will attend Radcliffe College next year.

BOOKS, BOOKS, BOOKS NEEDED

The Art and Book Festival Book Committee reports that it still needs lots of books for the Festival. We take all kinds but especially wanted are children's books. FOR FREE pickup call Mrs. Martha Freeman, 726-0555, or Mrs. Brenda Bell, 723-2010. Also, tell your friends, relatives and co-workers that NI needs books (donations are tax-deductible).

BRIGHTWOOD PTA ELECTS OFFICERS

The Brightwood PTA met on May 12th and elected the following officers for 1969-70:
President ---- Mrs. Ruth Pearl
First Vice President ---- Mr. Burnell Irby
Second Vice President -- Mrs. Sylvia Samenow (Principal)
3rd Vice President --- Mrs. Gloria Dunmore
4th Vice President --- Mrs. Yvonne Malone
Treasurer ---- Mr. Howard Williams
Recording Secretary ---- Mrs. Sheila Betts
Corresponding Secretary --Mrs. JoAnn Harrison

The Brightwood Fair was held May 17th and was a big success. The PTA announces its thanks to the following merchants: Carolina Market, Curtis Chevrolet, Frank the Barber, Warner Washeteria, Colorado Pharmacy, Ida's Department Store and Jacobs Paper Goods.

IT'S S*U*N*D*I*A*L TIME!

Registration for the Sundial program at Takoma, Ft. Stevens and Shepherd Recreation Centers will be held during the week of June 2. The cost is $7.50 for two weeks of the program which will run in sessions from June 23 until August 15. Children must be 3 years old to participate.

TENNIS, ANYONE?

Free lessons will be given at the Ft. Stevens Recreation Center beginning June 16 at 1 PM. Open to everyone 7 years old and over. Registration will begin May 29. Contact the Center for more information.

BASEBALL'S THE THING

Get in the swing! Baseball teams are now forming at the Takoma Rec Center. Get down there now and join the swingers.
ADULT SOFTBALL TEAMS are now playing at the Center from 6 PM 'til dark. The teams meet Mondays & Wednesdays, and Tuesdays &Thursdys.

REMINDER - INSTITUTE DIALOGUE SUNDAY, MAY 25th - Rabaut Jr. High, North Dakota & Kansas Aves. N.W. 2-6 P.M. Parent-teacher communications.

MEETING ON EDUCATIONAL FACILITIES CHARRETTE HELD

On May 12th at Roosevelt High School Walter E. Mylecraine, Ass't U.S. Commissioner for Construction Service, Office of Education, outlined a dynamic, new technique for planning and designing schools. Called an Educational Facilities Charrette, the process consists of intensive, almost non-stop planning sessions held for about 2 weeks among all segments of the community affected by the new school and all public agencies involved in building the school. The process also makes active use of outside consultant-participants such as educators, architects and engineers. Community groups in Ward 4 including Takoma, are considering use of the charrette technique. The meeting was sponsored by Board of Education member Mrs. Muriel M. Alexander.

KENT AMOS has been inducted into the honorary academic fraternity Alpha Kappa Mu - quite an achievement as he is only a junior. Kent is a '64 Coolidge grad and was recently elected student body president for the coming year at Delaware State University.

MRS. MAURICE M. JOHNSON has been awarded an Eugene and Agnes Meyer fellowship for the summer. She will travel in Hawaii and the western part of the U.S.

FRANK DeSTEFANO spoke recently to the Takoma Park (Md) Community Action Forum, urging a str stronger housing code and an application for federal funds to assist homeowners in complying with it.

ANGELA UNDERDUE, Coolidge trumpet player, has been accepted by the Eastern Music Festival to be held this summer in Greensboro, N.C.

BUSY MRS. ESTER PETERSON, former Ass't. Secretary of Labor and Consumer Advisor to President Johnson for three years, has been nominated as president of the Woman's National Democratic Club. She is also writing a book and serving as a part-time consultant to the Amalgamated Clothing Workers Union, AFL-CIO.

MRS. HOWARD JENKINS, was named as acting chairman of the D.C. Republican Committee to fill the vacancy left by the former chairman who was named to the city council. Mrs. Jenkins is the first Negro to head the local party committee.

POLICE BEAT - 6th PRECINCT

In April the police cut back their "extra visibility" foot patrols and special evening-hour patrols. The crime rate dropped, too. It may be that with a larger force and less overtime the Department operates at greater efficiency. For 2 years patrolmen worked one day of overtime per week; now they average one every 3 weeks. It's less expensive to pay one man regular salary for five days than to pay 5 men for a day of overtime each. The larger force has plenty of patrol cars and is considering more scooters.

In reading the figures below remember that the 6th Precinct has about 65,000 people.

6th Precinct	Feb.	March	April
Robberies	76	61	45
Auto theft	25	34	28
Rape	0	1	0
Homocide	3	1	1
Burglary 1 ..... (somebody home)	5	14	11
Burglary 2 ..... (nobody home)	69	63	60
False Fire Alarms	15	33	37

OPENING OF TAKOMA POOL DELAYED

Due to the lack of funds, Takoma Pool along with 31 other pools in the District, will not open on the usual holiday weekend. It is fervently hoped that the end of school will signify the beginning of swimming days at Takoma and the beginning of swim classes for all ages. ages. Classes planned for the summer are as follows:

Tots Class: Children (toilet-trained) to age 6. Classes will be held at 11 A.M. If there is a large enrollment, there is also a possibility of a 10 A.M. class.

Ages 7 - 15: Classes for these ages will be held from 9 A.M. to 11 A.M. depending on swimming ability.

Adult Classes: Classes for adults will be held two nights a week, depending on schedules and number of registrants.

Team Activities: Applications for the Swimming and Diving teams will be taken at the Pool and try-outs will be held. Contact Mr. Cyrus for more information.

THANKS TO RUTH COGEN, WELCOME TO EVELYN WRIN

For more than a year Mrs. Ruth Cogen has quietly and diligently performed a vital function for NI - that of Coordinator of Volunteers. It's a job that never has its big day, it just goes on and on. Ruth has now trained a successor, Mrs. Evelyn Wrin, and, as we welcome her, we also want to let Ruth know how much we appreciate the fine job she has done.

THANKS ALSO GO to our April volunteers:

Mrs. Yetta Appel	Mrs. Frances Feldman
Mrs. Winifred MacNair	Mrs. Nan Mould
Mrs. Beverly McGaughy	Mrs. Laura Arner
Master Daniel McGaughy	Mrs. Bedelia Henderson
Mrs. Mattie Sparkman	Mrs. Mayme Coleman
Mrs. Blanche Bradley	Mrs. Geri Berkman
Mrs. Trica Skidmore	Mrs. Dorothy Duncanson
Mrs. Betty Peer	Mrs. Ann Hairston

1969 SUMMER MUSIC CLASSES - FREE

Free music classes will be held by the D.C. Youth Orchestra Program at Coolidge High this summer from June 24th to August 2nd. The lessons are open to all D.C. students, beginners thru advanced, on all instruments except piano and electric guitar. No previous experience is necessary and students do not have to have their own instruments. The classes will be held Monday thru Friday, 9 A.M. - 1 P.M. For further information call Director Lyn G. McLain at 723-1612 or the Music Office, ST 3-6111, ext 518, or NA 8-6000, ext 2586.

RED CROSS HOSTESSES NEEDED AT WALTER REED

The American Red Cross urgently needs hostesses for dances and parties for patients at Walter Reed. Hostesses must be 18 years of age or older, single or married, and be willing to serve 2 or 3 evenings a month. The activities are held Monday through Thrusday 7:30-9 P.M. If you are interested please call Mrs. Jean Price, Volunteer Chairman of Entertainment and Hostesses, at 929-1933 or 929-3388 anytime, including evenings and weekends.

********** CLASSIFIED ADS **********

FOR SALE: Heathkit GR-24, AM full size, portable radio, 6-4 spkr, $15. 726-7364.

SPRING KNOLLS NURSERY SCHOOL, 7900 Eastern Ave N.W. Now registering for Fall. Morning classes for 3 & 4 yr olds. Integrated, cooperative. Call Kay McNett, 587-5193 or Debra Berger 723-2117.

SAFETY MEASURES NEAR SHEPHERD SCHOOL HELD INADEQUATE; PTA ROLE NOTED

After the printed section of the INK went to press more information was learned about the safety measures which have been taken near the Shepherd Elementary school, reported on page 1. First, we owe an apology to the Shepherd PTA, for it was that group which took the lead in pressing for the safety steps.

We also learned that the PTA and Mrs. Kowitch regard the measures taken thus far as inadequate, though they are improvements. Still needed are effective measures to slow down traffic on 14th St. and Kalmia Road. Possible means of doing this include posting and enforcing a 15 mile-per-hour speed limit, creating a 4-way stop, or the installation of rough pavement, similar to that before highway toll booths.

PLANNING COMMITTEE MEETS, SEEKS MEMBERS

NI's Neighborhood Planning committee met recently and considered a number of possible study and action projects. The committee, chaired by Ray Hay, is concerned with the overall physical development and facilities of the area. Major projects include work to ensure rational, well-planned development in the area of the Takoma subway stop and the possibility of getting a federally assisted housing code enforcement in part of the NI area. The program copules intensive code inspections in a given area with grants and low interest loans to help homeowners make the necessary repairs.

The committee will also be looking into the proposed moves of the 6th Precinct police station and the Cedar Street library. The committee discussed the possibility of obtaining assistance under the new federal anti-crime legislation.

THE NEXT MEETING OF THE COMMITTEE WILL be Tuesday, June 10th, 8:30 PM at the home of Ray Hay, 517 Cedar St. N.W. All NI members and area residents concerned with these or related problems are cordially invited.

CHARLIE BYRD CONCERT TO HIGHLIGHT A&B FESTIVAL

A Saturday evening performance by Ginny and Charlie Byrd will be the highlight of the 1969 Art & Book Festival. They will perform at the International Cafe and Cabaret, a new festival event. Also on the program that evening will be "The Sons of Society" and Roberta Washington and her "Music Makers." The Festival will also feature a group of Haitian dancers, and the Erika Thimey Dance Troupe.

Especially for children there will be a "paint-in," storytelling, a sing-a-long, and a magician's show with audience participation. Also for the younger set will be pony and other rides, and free movies including Pet Elephant, Clay, Whistle for Willie and Family of M'Gumba.

The traditionally excellent craft and art exhibits will be better than ever and will have a number of new features - watch for details later.

UPPER NORTHWEST INTER-AGENCY COMMUNITY COUNCIL

An Upper Northewst Inter-Agency Community Council has been formed by the Community Development Office of the D.C. Government. Sidney A. Shore is the Community Liaison Officer designated to serve as the staff person for the council. The Council will be a clearinghouse body rather than an action agency. All organizations are encouraged to be part of the Council, including civic, business, religious, school, libraries, cultural, youth, police, recreation, or whatever there is.

At the latest (the 3rd) meeting of the Council, Principal Armstead of Paul Jr. High explained the distributive education work-study program to be implemented soon. He also voiced the need for businesses in the area to provide "job stations" to give students work experience.

For further information on the Council call Mr. Shore at the Petworth Library, 723-6157

APRIL 1969

VOL. 11 No. 4

COOLIDGE SENIOR WENDY WILSON OFF TO AFRICA

Contributions Needed for NI Sponsorship

Neighbors, Inc. has undertaken to provide sponsorship of Miss Wendy Wilson, a senior at Coolidge High School, to participate in the Operation Crossroads Africa summer project. Miss Wilson will be among a dozen D.C. area students participating this year.

Miss Wilson has written the Members of Neighbors, saying in part, "I cannot thank you enough for being my sponsor for the Crossroads Africa Program. With the support of my community, I may be able to fulfill not only the dreams that I have had, but perhaps the dreams of my ancestors."

Miss Wilson will live with 12 or 15 other American youths and together with African youths, will build a school, a road or perhaps a small bridge. She will visit three African countries in all, but does not yet know which country she will live and work in.

Miss Wilson first learned of Crossroads Africa through her father's (Ernest J. Wilson, Jr.) acquaintance with Dr. James H. Robinson, originator of Crossroads, and of her father's own visits to several African countries. Miss Wilson has a head start in the use of other languages. Through involvement in a hospitality service for diplomats she is fluent in Spanish, and has conversational ability in French. She also has begun building her vocabulary both in Swahili and Arabic.

INK readers will recall from the last issue that Miss Wilson is a talented artist; her prize-winning portfolio in the 1969 Scholastic Art Exhibition was selected to compete in the national contest.

In order to go on the trip, Miss Wilson must raise $1,000 to pay for part of the expenses involved, and NI has agreed to help her raise that amount. YOU CAN HELP by sending your tax-deductible contribution to Neighbors, Inc., earmarked "Wendy Wilson/Crossroads Africa." An "Africa Trek" through Rock Creek Park will be held on Saturday, May 17 to raise funds for all area participants in this year's program. Watch the papers for further details about the "Trek" or call 638-3314 for additional information.

NEIGHBORHOOD MEETINGS WILL ELECT REPRESENTATIVES

Each of the four Neighborhoods in the NI Area will elect a Neighborhood Representative to serve on the NI Board of Directors, as well as an Assistant Representative. Shepherd, Takoma and Brightwood Neighborhoods will fulfill this function at Neighborhood caucuses following the general meeting in May. Manor Park will hold a special neighborhood meeting for this purpose (see story).

NI ELECTIONS TO BE HELD AT GENERAL MEETING OF NEIGHBORS MEMBERSHIP IN MONTH OF MAY

The specific day has not yet been named, but NI's Annual General Membership meeting will be held in the latter part of May. Four At-Large Directors are to be elected at that meeting. They will each serve two-year terms. A special notice will be mailed reporting the candidates named by the nominating committee, but nominations may also be made from the floor if the nominee has given his consent. Four non-director members will also be elected to serve on the Nominating Committee for the coming year, the person with the most votes becoming Chairman. All nominations for the Nominating Committee will be made on the floor of the meeting.

MANOR PARK NEIGHBORHOOD MEETING ON APRIL 29

Tuesday, April 29th, 8:00 p.m., at Albright United Methodist Church, 4th & Rittenhouse Sts. is the time and scene of the Manor Park spring Neighborhood meeting.

MRS. MURIEL ALEXANDER, D.C. School Board member, and MR. PHILIP DAUGHERTY, D.C. City Councilman, will be the featured speakers. There will also be a report on the pilot street cleaning program, and on plans for expanding it.

The Neighborhood Representative to the NI Board and an assistant will be chosen at this meeting. A special notice reporting the Neighborhood Nominating Committee's Candidates for the two posts will be sent to all Manor Park members in advance of the meeting. Nomination for both posts can also be made at the meeting, if the nominee has already given his consent. The election is for two-year terms.

Manor Park is bounded by Ingraham St., Van Buren St., Georgia Ave., and North Capital St. Any neighborhood issue may be raised at the meeting, so all Manor Park residents are urged to attend. For further information, call Manor Park Neighborhood Representative, John Thurber, 882-3267.

EXCITEMENT COMING TO NI!!

NI Art and Book Festival Promises Good Times!

American Indians, Hatian dancers, International foods, Appalachian arts and crafts, thousands of used books and records at bargain prices, and art work ranging from four and five-year-old Head Starters' efforts to works by such Washington luminaries as Peter Weil, Alexander Russo and Ming Wang - - - all these are in the works for the 1969 Neighbors, Inc. Art & Book Festival. Surely, this year's event is going to be the best ever! Mark your calendar now for June 20, 21 and 22, at Coolidge High School, 5th & Tuckerman Streets. (This month's Art & Book Festival Guessing Game: How many items in this issue can you find, which tell you more about the NI A&B Festival???)

NEIGHBORS, INK is the newsletter of Neighbors Incorporated (North Washington Neighbors, Inc.) a non-profit self-supporting community organization.

Contents of NEIGHBORS INK do not necessarily reflect the official position of the organization except where official action of the Board of Directors is being reported. Published monthly, INK is not copyrighted.

AN INTOWN, INTERESTING, INTEGRATED COMMUNITY

PARTICIPATORY DEMOCRACY - AN EDITORIAL

The guessing game mentioned in the page 1 Art & Book story may be a bit too cute, and not all serious. But it is in all seriousness that the reader is challenged to identify the items in this issue that deal with participatory democracy.

I don't think I can define it, but I certainly can show it to you: The Boston Tea Party, to begin with; the Green Mountain Boys; the still operative New England Town Meetings; and even closer to home, the Takoma PTA.

It may be that new things will happen to shape the life of our communities and nation because people are willing to be counted for justice and free speech.

But "new things" don't "just happen". It takes a lot of work by a lot of people. And not enough of the disenfranchised population of this latter-day plantation called the District of Columbia are willing to risk time and money in order to make things happen.

Black people are teaching the rest of America how to raise an effective voice of power within the deadening halls of bureaucratic government. But a few black people are not enough. A small band of Takoma PTA-types is not enough.

No responsible citizen can sit in his hard-earned comfort of home and security while free speech is being threatened, bureaucratic processes are overwhelming us, and in DC nearly one million people are still disenfranchised. It takes the whole people, responsibly involved in the action. To be sure, each man to his own thing, but each self-respecting citizen must join the action to make the several American dreams come into full reality.

NI AND PLAYBOY

Neighbors, Inc. is mentioned on Page 233 of the April 1969 Playboy magazine in an article by NI resident Phil Meyer. The article is on the law of probability.

NEIGHBORS INK REDESIGNED IN PILOT PROJECT

This issue is the first of INK to be printed. The photo-offset process has been done for NI by Mr. Jerry Smith of The Washington Press on Georgia Avenue. This process will be used for a three-month trial period, authorized by the NI Board at the March meeting. Hopefully we can sell advertisements to serve both the needs of INK and the merchants of the NI area.

The new process has brought about changes in the schedule of volunteer services, and will affect in some measure the mailing date of INK. The comments and suggestions of readers are requested in order to help smooth out the new process and format.

COMMUNITY CALENDAR

Monday, April 28 - FREE RABIES SHOTS, see story for details.

Tuesday, April 29 - MANOR PARK NEIGHBORHOOD MEETING, 8 P.M., Albright U.M. Church

Friday, May 2 - OPEN HOUSE, 9 P.M., 737 Butternut Street, N.W.

Friday, May 9 - OPEN HOUSE, 9 P.M., 1423 Hemlock Street, N.W.

Wednesday, May 14 - NI BOARD OF DIRECTORS - 8:30 PM Emory U.M. Church, Georgia Avenue & Quackenbos Streets, N.W.

Thursday, May 15 - NI EDUCATION COMMITTEE (Call NI Office to Confirm) 8:15 P.M., Takoma Recreation Center, 3rd & Van Buren Streets, N.W.

Friday, May 16, COPY DEADLINE, May Issue of INK.

Saturday, May 17, AFRICA TREK - Rock Creek Park

Saturday & Sunday, May 17/18 - FESTIVAL OF FLOWERS See Story for details.

May ? - NI GENERAL MEMBERSHIP MEETING - Watch for Announcements

Friday, Saturday, Sunday, June 20/21/22 - ART AND BOOK FESTIVAL, Coolidge High School

NI RESIDENTS CHAIR URBAN COALITION FORCES

Robert C. (Bobby) Mitchell, NI resident and flanker back for the Redskins, is co-chairman of the Metropolitan Washington Urban Coalition Task force will study unemployment, under-employment, and job training of inner-city residents. This is only one of many community efforts in which Mitchell participates.

The Rev. Channing Phillips has been named a co-chairman of another Urban Coalition task force on improvement of community living conditions. Emphasis of this task force will be action, not study, on problems of housing, consumer affairs, recreation and citizen-government relations.

*** YOU ARE INVITED - BYOL - MAY 1969 ***

Friday, May 2, 9:00 P.M. - ?
Home of Mr. and Mrs. Harry Schafft
737 Butternut Street, N.W.

Friday, May 9, 9:00 P.M. - ?
Home of Mr. and Mrs. Chris Mould
1423 Hemlock Street, N.W.

*** YOU ARE INVITED - BYOL - MAY 1969 ***

COOLIDGE STUDENT JEAN DOONG WINS $1,000 REGIONAL AWARD

Miss Jean Doreen Doong has been selected from among 62 local winners to receive the Youth Citizenship Award from the South Atlantic region of the Soroptimist Federation of America. Theaward includes a $1,000 prize. Miss Doong, an honor student at Coolidge High School, entered the competition as winner of the Soroptimist Club of Washington's Youth Citizenship Award, which included a $100 savings bond. The 18-year-old Miss Doong was born in China and lives on Kennedy Street, N.W.

FOOD STAMPS IN THE DISTRICT

The District of Columbia ranks second among major cities in the number of non-welfare persons receiving food stamps. 13,741 non-welfare persons receive stamps in D.C. Los Angeles is the only city with greater participation among those not receiving public assistance.

NATIONAL NEIGHBORS GROUP TO BE FORMED
Three from NI participate in conference

The National Committee on Tithing in Investment has announced the establishment of a National Neighbors organization which will be a national agency for multi-racial neighborhoods. The announcement was made by Rep. Donald M. Fraser (D-Minn.), Chairman of NCTI, which is a non-profit, tax exempt organization which promotes investment in open housing.

The National Neighbors proposal resulted from a conference sponsored by NCTI held March 27-30 at Carleton College, Northfield, Minnesota. Neighbors, Inc. Vice President Joe Hairston, Executive Director Ed Hollander, and former Chairman of Real Estate Committee Larry Pearl were in attendance. They were among leaders from 12 integrated communities represented at the conference. Other cities included Philadelphia, Shaker Heights, Ohio; Cincinnati, Indianapolis, Chicago, St. Louis, Oklahoma City, Denver, Los Angeles and New Rochelle, N.Y.

The new organization will operate initially under the sponsorship of NCTI until a national founding convention is held to set up the group as an independent agency. Conference participatns will serve in the interim as an Advisory Board for National Neighbors.

TAKOMA CONTRACT ACTUALLY TERMINATED

The victory on the "new" Takoma School announced in last month's INK was not actually the full victory we really sought, but the first major victory won after a two-year struggle. Careful reading of the March report shows correctly that the School Board vote recommended termination of the contract to the D.C. government and Mayor.

Mayor Washington did come through, however, and the contract was terminated, and the contractor has moved from the site.

The Takoma PTA and citizens, together with other interested people have since been working feverishly toward developing new plans for the Takoma replacement. Two major meetings have been held, the latest on April 17 where ideas for the new school were shared. The community school planning committee, chaired by Carol Rende, has created the following sub-committees: Design and Research, chaired by Loretta Hanes; Architectural Resources, Sterling Ament; Publicity and Community Relations, Carl Fauntleroy; Educational Philosophy, Peachy Murray; and Political Strategy, Frank DeStefano. The Committee and subcommittees are all open to new interested persons, and anyone may pitch in to help by calling Carol Rende at 726 4971. The educational philosophy subcommittee is especially active at the moment and seeks the views of everyone in the Takoma area; those interested should call Peachy Murray at 882-4010.

Citizen Participation with elected government has been proved effective; the follow-through on the part of the citizens will produce unassailable testimony in support of participatory democracy.

NI A&B FESTIVAL CALLS FOR COOKS

Cooks are needed to produce their finest for the NI Art & Book Festival. Have you signed up to provide your specialty? The Festival Food this year will highlight different ethnic and/or national cuisines at specific times on Saturday and Sunday. A large variety of national specialty dishes is needed. Are you from China, Chile, Karachi or Prague? Are your specialties American regional or ethnic delights? Share them at the NI Art & Book Festival. Call Barbara Cuban, 882-0986, NOW.

NI NEEDS YOUR OLD BOOKS

Please start sending those old books and records you won't read or play anymore. The NI Art & Book Festival needs them for sale to the many bargain hunters who always browse our tables. Pick-up is free simply by calling Mrs. Martha Freeman, 726-0555; Mrs. Brenda Bell, 723-2010; or Mrs. Anita Blake at 726-7203.(Call now - don't delay.)

BOOK FLYERS AVAILABLE IN YOUR NEIGHBORHOOD

We would appreciate it tremendously if you would distribute the book appeal flyer to your friends, at your office, at your church or club meeting, etc. You can pick them up at the following places:

Mrs. Mary Averill-1325 Hemlock St.- 723-2765
Mrs. Beverly Slaughter-1427 Montague St.-882-8858
Mrs. Gertie Coleman-6524 8th St.- 882-5877
Mrs. Maija Hay - 517 Cedar St.- 882-2910

HOW SAFE IS THE NI AREA?

The talk about crime in Washington is seldom backed up by figures concerning specific neighborhoods. The NI area is within the 6th Police precinct which is bounded by Buchanan Street, Riggs Road, Eastern Avenue, and Rock Creek. The following are the crime figures for February and March. This reporter believes the robbery figure to be ambiguous since it covers "any theft of property from a person" ranging from purse snatching to an armed hold-up.

6th Precinct	Feb.	March
Robberies	76	61
Auto theft	25	34
Rape	0	1
Homocide	3	1
Burglary 1 (somebody home)	5	14
Burglary 2 (nobody home)	69	63
False Fire alarms	15	33

In late January the precinct started a program of extra visibility patrols, putting foot patrol men in the business districts between 10 A.M. and 6 P.M. They also had more men on during the hours of 6 P.M. to 2 A.M. These programs were staffed by officers working on their days off. Each of the 85 men free for patrol duty would regularly work one off-day each week.

After March 30, money was not appropriated for these special programs, and hence they are being cut back. We will check the statistics for April and report them in the May issue of INK. If there is any discernible change, we will also try to draw reasonable correlations.

(story by Jo Ann Scott)

CLASSIFIED ADS

FOR RENT - Summer house in Pa. 1½ hours. Private swimming. $60 per week. Call Meijer, 726-7364.

MIMEO MACHINE - used Gestetner model 320. Good condition; modern silk screen dual cylinder process, $150. Call weekdays 726-3454.

FREE RABIES SHOTS - APRIL 28 to MAY 3

The D.C. Department of Public Health is providing FREE rabies shots which are required by law for your dog. The schedule is Monday, April 28 through Friday, May 2 between 6 and 8 P.M. On Saturday, May 3rd the hours will be 9 A.M. to 12 Noon. The two clinics in this area are the Whittier School, 5th and Sheridan Sts., N.W. and the Northwest Central Clinic, 14th and Upshur Sts., N.W.

MRS. BRADLEY NAMED CHAIRMAN OF FESTIVAL OF FLOWERS

Mrs. Blanche Bradley, president of NI's Garden Club, has been named city-wide chairman of the 13th Annual Flower Show, the "Festival of Flowers." The show is sponsored by the Adult Education & Summer School Office, D.C. Public Schools. The show will be held at the National Arboretum, 24th & R Sts., N.E. The hours on Saturday, May 17 are 2-6 P.M. and on Sunday, May 18 the hours are 10 A.M. to 6 P.M. Admission is free. The NI Garden Club will be, of course, one of the participating clubs in the Show.

THANKS TO VOLUNTEERS

Many thanks to the following ladies who gave so generously of their time at the Neighbors office and in their own homes last month:

Mrs. Winifred MacNair
Mrs. Sandy Faye
Mrs. Beverly McGaughy
Mrs. Barbara Cuban
Mrs. Ethylyn DeStefano
Mrs. Joyce Palaia
Mrs. Bedelia Henderson
Mrs. Frances Feldman
Mrs. Laura Arner
Mrs. Gerri Berkman
Mrs. Ann Hairston
Mrs. Sue Swisher
Mrs. Yetta Appel
Mrs. Betty Peer
Mrs. Pauline Merck
Mrs. Peachy Murray
Mrs. Henrietta Rowe

NI RESIDENT NAMED TO NEW DC DEPARTMENT

NI resident Lorenzo Jacobs has been named acting Deputy Director of the new Economic Development Department of the DC government under the Mayor's new reorganization plan.

NEWSLETTER
Editor: Gaby Bogoslaw

(We have obtained permission to reprint the following editorial from the Chestnut Hill Local)

CONTEST OF THE YEAR: WMAN vs PENN CENTRAL

The decision of West Mt. Airy Neighbors to force Penn Central to assume its responsibilities in maintaining its station properties has an appealing David and Goliath quality about it. It also makes very good sense.

After reading the sorry story of the history of railroad management in this country in a wise and witty and well documented book called To Hell in a Daycoach, we have lost what sympathy we might have had for the plight of the railroads and their plaintive cries that they are losing their shirt on the commuter. In passing it might be mentioned that there ARE railroads that DO manage to come out in the black even in the business of moving commuters and while managing to give service and comfort, too. Our point here is the disgraceful, wretched neglect of railroad property which brought WMAN and Chestnut Hill to follow the example of Gladwynne, the first to make the twice a day visitations to the station something more than a hasty trip through the slums. As a result of the decision to do the railroad's work for them, St. Martin's station is a veritable park and a decided asset to the community -- and Chestnut Hill is not far behind.

The efforts of the citizens who decided to do something about weeds, trash and dirty waiting rooms is certainly to be applauded. There is something to be said however, for using those same funds to shake the railroad management into assuming that which is their responsibility in the first place. We cannot see why station maintenance could not be a cooperative venture, with the lawns and trash and structural maintenance assumed by the owners, and amenities such as flowers and shrubs added by the public.

... The WMAN case against the Penn Central bears watching. It could have repercussions far beyond Mt. Airy, and it might behoove Chestnut Hill to give them a hand.

WMAN BROWNIE TROOP NEEDS LEADERS

A Brownie Leader and an assistant leader are need for this fall for our troop. This is a vital and rewarding job for those interested and capable. Anyone who would like to learn the qualifications and duties, please call Ruth Steele at CH 2-1196.

SEDGWICK PLAYGROUND SEEKS ADVISORS

Interested parents and neighbors are invited to join the Mt. Airy Advisory Council for the Sedgwick Playground. Help is needed to set up the summer program and special events. All new ideas, suggestions and comments are welcome.

Please call Sedgwick Playground, CH 7-9781 from 2:00 to 10:30 P.M. for notification of meeting dates.

POST CARDS FROM BROKERS LOOM AGAIN

A local real estate office has been soliciting in West Mt. Airy again. We pride ourselves on being able to withstand this kind of pressure, but it is annoying, and illegal.

Please continue to report any solicitations from brokers immediately to the WMAN office, CH 2-1196.

LOCAL LAWYERS AVAILABLE FOR HELP

A team of lawyers, all West Mt. Airy residents, has volunteered on a standby basis, to help anyone who feels he has been mistreated or treated unfairly by the police. A call to the WMAN office, CH 2-1196 will get your message through to one of the lawyers.

SEWING LESSONS AVAILABLE

Mrs. David Dennison will teach sewing this summer to interested girls and boys, 13 years of age or older.

If interested, call Sylvia at CH 7-2932.

WHEELS FOR WELFARE NEEDS HELP

Wheels for Welfare, Inc, is an organization made up of more than 200 men and women from all walks of life, who donate their time and cars to transport infirm people to hospitals and treatment centers, free of charge.

The patients are people on a minimal budget, unable to take public transportation because of their condition and unable to pay for private transportation.

Volunteer drivers are desparately needed. All that is needed is a car, a little spare time and a desire to help others who are less fortunate.

Please call LO 8-4236 to say you can help

CLEANUPS NEEDED

Please continue to send into the office names of blocks which need street cleaning, indicating the block number.

WMAN JOINS ANNP

A new area coalition of groups has been formed whose sole purpose is to make the Federal government aware of the need to change priorities from demands of military and big business to the needs of people.

WMAN joined with other groups including Friends Peace Committee, ADA, NDC, Unitarian Church, etc. to help focus on the needs of people.

CEREBRAL PALSY VICTIM NEEDS HELP

Regina Potts is 3; she has cerebral palsy and must be at the Fuhrman (Easter Seal) Clinic, 59th & City Line every weekday morning by 9 AM. Her mother can collect her, but with other young children, mornings are hectic. A driver pool must be built up.

Call Mrs. Potts, CH 8-1769, 516A Glen Echo Road, if you can give just a bit of your time. Any and all responses will be most appreciated.

ACROSS COMMUNITY CAMP NEARLY FILLED

The successful Across Community Camp, co-sponsored by Wistar Neighborhood Council, West and East Mt. Airy Neighbors, West Side Community Council and the Chestnut Hill Community Association, is open again this summer on the grounds of Chesnut Hill Academy from July 7 - 25, each weekday morning from 9 to Noon.

This camp for 125 pre-first graders is still able to fill a few vacancies, even though the deadline has been reached. According to Miss Catherine C. Dickey, camp director, the greatest number of applications came from interested WMAN parents, and she is willing to find some extra spaces if other parents are interested.

Call the office, CH 2-1196 and Ruth Steele will be glad to send you an application form with more information about the camp.

CITY COOPERATES ON LOCAL PROBLEMS

Over a dozen abandoned cars have been removed in the past month from local streets. A new Police method of placing stickers on junked cars tells residents that the police have been notified and the car will eventually be removed.

Many clogged sewers were reported after heavy spring rains. The cleaning of sewers outlets has been transferred from the Streets Dept. to the Water Dept. which has limited crews for this purpose. Sewers are getting cleaned, but repairs are being backlogged.

Upon investigation, the Traffic Engineers of the Streets Dept. banned all parking on the south side of the Allens Lane bridge over the railroad tracks at Cresheim Road. This has helped an otherwise dangerous problem for cars and pedestrians at Allens Lane and Cresheim Road.

WMAN TAKES POSITION ON "SFAETY" BILL

Ruth Steele, testifying for WMAN at last week's Safety Committee of City Council hearing on a bill giving police broad powers on campuses, etc. said that the bill's terms were so broad as to constitute invasion of privacy.

The original bill was supplanted as the hearings opened with an amended version which made an attempt to clarify the definition of the term "weapons" and the description of public and private places into which police could go without invitation. WMAN's view was that even with rewording, the bill could be interpreted to allow police to enter private homes if they were being used for community meetings, etc.

To date, the bill has not come out of the Safety Committee. WMAN is keeping close watch on the bill's progress and will continue to speak out against this "loaded" weapons bill.

Citizens are urged to keep abreast of such legislation and testify at public hearings.

SUMMER OFFICE HOURS GO INTO EFFECT

The WMAN office will continue to operate throughout the summer, but with different hours.

Phone calls and office visitors (and working volunteers) are welcome from 10 A.M. until 3 P.M. every week day.

THE PENDULUM

by

Jon Blum, WMAN President

One of the most disconcerting trends today is the increasing hue and cry emanating from liberals, moderates, fair minded men and women, honest decent citizens all, that what this country needs is a stronger repressive force to keep "dissidents" in line.

I am getting letters and direct "feedback" that state, in all good faith ..."A good community of which one can be proud is a law-abiding community which cooperates with its police department." On the surface there is nothing wrong with such statements, but we are getting more and more concerned about WMAN's role in police-community relations.

When students and young people challenge authority, demand relevance from institutions, etc., it's much easier to force them into law abiding behavior than to listen to them. It's easier to dismiss misbehavior as "spoiled bratism" or "hoodlumism" than to try to deal with the causes of that behavior.

We get weekly reports of police harrassment and bad judgement. Much of the community has lost faith in the police. For effective law enforcement, the police MUST have solid community support. This is a two-way street. There can't be one set of laws for the black citizens and another for the white; there can't be one set of laws for the poor and another for the middle class; or for the guilty and the innocent. Under the law, Police cannot violate peoples' rights; they can't stop and frisk unjustifiably ; they can't administer justice on street corners or arrest without reasonable cause.

Of course the real enemies of our society are not the little people who misdemeanor, but the corporations who pollute the air, the defense contractors who over-charge, the income tax cheaters, the syndicated criminals, the price fixers. But our law enforcement community seems to expend its energies tracking down the small crimes, harrassing the young street corner enclaves, etc.

Police must earn the respect of all citizens. The other side of the coin is that the community must push for adequate compensation for its public servants, improved police training to make our police ever aware of the dignity of all citizens, awareness of local community problems and education of the public to the problems police face in carrying out their job.

The poor and the black citizens of our town don't cooperate with the police because they have never been given the feeling that policemen are there for their service as well. When a policeman breaks the law he undermines the whole fabric of a society built on law. When he decides what laws he will follow and those he won't, he forces a breakdown of a community's respect for proper law and order.

At WMAN we hear both sides of this relationship. We are not anti-police, but we intend to be ever watchful of the enormous power invested in policemen to insure the legal rights of all our citizens.

These times demand a firm, fair minded citizenry, a community that takes pride in the <u>proper</u> action of <u>all</u> people who walk its streets, shop in its stores, and live in its homes.

MORE BEAUTIFUL MT. AIRY CAMPAIGN

YOU can help WMAN if you will sweep the debris in front of your property into a container or bag so it will not blow about.

It will be collected on regular trash days. Branches and shrubs MUST be tied for regular pcik-up.

Share this information with your neighbors who may not receive the WMAN Newsletter.

Our neighborhood IS beautiful. Let's all help to keep it that way by doing our bit.

HOUSE PRICES AND RACIAL INTEGRATION IN WEST MT. AIRY

A Progress Report

April 1969

The study of house prices and racial integration in West Mt. Airy is divided into two parts. Part I covers trends in house prices during the period 1951-66 when the area became racially integrated. It is based on data covering sales prices of all homes purchased in the area during that period. Collection and tabulation of these data has been completed and the analysis is near completion. Part II covers the process and pattern of integration. It is based on data covering the race of all home purchasers in West Mt. Airy during the same period. Most of the data for this part of the study have been collected but it has not yet been tabulated or analyzed. Some preliminary results should be available by the fall.

This summary covers Part I only. A more complete analysis of house prices, including a description of the statistical techniques employed, will be contained in a forthcoming document.

House prices in West Mt. Airy declined for a number of years following racial integration in 1951. During this same period house prices in the city of Philadelphia generally were rising. This pattern is shown in Chart 1. Beginning about 1958, the downward price trend in West Mt. Airy was reversed and between 1958 and 1966 prices rose more rapidly in West Mt. Airy than in the city as a whole. The reversal probably reflects a shift in expectations regarding the future of West Mt. Airy. As it became evident that racial integration in West Mt. Airy did not portend a rapid transition to all black occupancy, and that the quality of the neighborhood was being maintained, the demand for homes in the area by white families particularly, increased.

Chart II shows price indices compiled separately for homes of high, moderate and low value. The drop in house prices during 1951-58, and the recovery during 1958-66 were much pronounced for homes of high value than for homes of moderate or low value. (The low-value homes actually rose in price for several years following integration, before declining.) While they followed divergent time paths, the three series converged at the end of the period. Roughly similar differences occurred as between detached, semi-detached and row homes; detached homes showed the largest decline during 1951-58 and the greatest recovery during 1958-66.

These divergent patterns probably reflect the different impact of racial integration on the demand for different types of housing. In general the initial impact of intergration was to increase the demand for homes in West Mt. Airy by black households and to reduce the demand by white households. The rise in demand by black households was relatively large in the case of lower valued homes, however, and relatively small in the case of expensive units, which were not within the economic reach of many blacks; hence the prices of expensive units dropped most sharply. When expectations regarding the future of West Mt. Airy shifted around the middle of the period, the recovery of demand by white households was directly mainly toward more expensive units; having previously fallen most in price, these homes had become the best "bargains". Hence, the price recovery during 1958-66 was most pronounced for the higher-valued homes.

JUNE 1969

VOL. 11 No. 6

EXECUTIVE DIRECTOR ED HOLLANDER RESIGNS, NEW DIRECTOR SOUGHT

NI's Executive Director, Ed Hollander, has submitted his resignation to the Board, effective July 20th. He has accepted a position at Urban America where he will be working on a project to evaluate fair housing programs in several cities across the country. Ed has been our Director since April, 1967.

The Personnel Committee, chaired by Bob Skinner, has begun the task of finding a new Director and hopes to fill the position as soon as possible. All interested persons should get in touch with Bob, 723-4892, (home), WO 4-2464 (office); resumes may also be sent to the NI office. A job description and general statement of qualifications can be obtained from the office. It is a challenging and exciting position.

ART & BOOK FESTIVAL OUTSTANDING SUCCESS; SALES & CROWDS LARGEST EVER

NI's Seventh Annual Art & Book Festival proved to be an outstanding success, socially, artistically and financially. Veteran Festival-watchers report that the crowds were the largest ever and many people commented on the good-natured atmosphere that prevailed. Despite the weatherman's repeated predictions of showers, not a drop of rain fell. Gross receipts for the Festival were over $20,000 - by far an all time high. We don't know our net profit yet but it should also be a record.

Hundreds of people worked long and hard to make the Festival the wonderful success that it was. To Mrs. Shirley Devaris, Festival Chairman, all of her committee chairmen and everyone who helped them, we owe a great big "thank you" and congratulations on a job very well done. NI also owes special thanks to Ginny and Charlie Byrd, Roberta Washington and Her Music Makers, and the Sons of Society, all of whom performed at the Saturday evening International Buffet without fee.

A&B FESTIVAL PARTY FRIDAY, JULY 11th

A post-Festival party to celebrate our success and to thank everyone who worked on it, will be held on Friday, July 11th, starting at 9 PM, at the home of Shirley & Dan Devaris, 7125 16th St. N.W. (just north of Alaska Ave.). ALL NI MEMBERS & FRIENDS ARE INVITED. It'll be like a big, summer Open House.

FUNDS FOR TAKOMA "CHARRETTE" APPROVED BY BOARD OF EDUCATION

Funds for an educational facilities charrette - a dynamic school planning technique - to plan the new Takoma elementary school were approved by the D.C. Board of Education on June 24. Equally important as the financial commitment (about $7,500) is the Board's decision to be one of the first school systems in the country to try the charrette technique. An application by the Board for a $5,000 grant from the U.S. Office of Education is expected to be approved soon. The charrette process has recently been adapted from the field of architecture to school planning by the U.S. Office of Education.

A charrette consists of school and government officials, outside consultants from a number of fields, and community representatives all working together in a compressed period of time to arrive at an implementable solution to a school planning problem. The participants devote their full time to the charrette, which usually lasts for a week or two. The community participants are an integral part of a charrette and they are paid, where necessary, so they may devote full time. Baby-sitting service is provided so that mothers can participate fully. Graduate students are also important participants; they produce immediate design sketches, renderings and models and take an active part in the sessions.

The process has been termed a "design-athon" because the sessions are sometimes held on a virtually round-the-clock basis. Whenever possible the charrette is held in the community and the school is designed within the context of total community planning needs. The sessions are held on an open door basis and all members of the community are encouraged to drop in at any time to observe what is going on. Also, built into the charrette process at several points are "community jury" sessions to fully inform the community of the plans as they develop.

AN INTOWN, INTERESTING, INTEGRATED COMMUNITY

LETTER TO EDITOR

"We wish to express our appreciation to NEIGHBOR'S INK which included an announcement of the CISV camp in its May mailing. As a result, our son applied and was selected as one of the delegates."

"Our family has been a Member of NI since we moved to our home at 1775 North Portal Drive in 1964."
----Mrs. Charles H. Epps, Jr.

NI AREA STUDENT HONORED

Eleven-year-old Charles H. Epps III, son of Dr. and Mrs. Charles W. Epps,Jr., is one of four Washington area youngsters who will represent the United States in a Children's International Summer Village In Leeds, England.

Young Epps was selected from more than 60 finalists by the Washington area steering committee of the organization. Charles and his colleagues will spend four weeks in Leeds, beginning July 7, with delegates from Austria, Belgium, Germany, Great Britain, India, Italy, Norway, Sweden, Iran and the Philippines. In addition to the camp in Leeds, the organization will have camps in 12 other sites around the world.

The program has two main objectives: to bring youngsters from many lands together to establish communication and to further global understanding; and to contribute to a science of international relations through research.

NI ELECTION RESULTS

Rep. John Conyers, Jr., was the main speaker at NI's annual general membership meeting May 21 at the Sixth Presbyterian Church. The Detroit congressman praised NI's efforts at building an integrated community. Addressing himself more broadly to the future of U.S.cities, Mr. Conyers was pessimistic about the likelihood of Congress enacting the necessary programs and legislation.

Elections for a number of positions were held with Mrs. Carolyn Jackson, Joseph (Jack) Jacques, John McDermott, and Bob Murray elected to the NI Board in At-large positions. Three neighborhoods elected Neighborhood Representatives to serve on the Board, and Assistant Neighborhood Representatives, who do not serve on the Board. Takoma reelected Harvey Bullock Rep and elected David Register Asst. Rep. Brightwood elected Mr. Shirley Foley as its Rep. and Mrs.Lois Gant as Asst. Rep. Shepherd Park reelected Mrs. Charlotte Kowitch as its Rep. and elected Mrs. Beverly McGaughy as Asst. Rep. They will serve two-year terms.

Shepherd Park and Takoma each filled one vacancy on their Neighborhood Nominating; Julius Becton was elected in Shepherd, and Mrs. Maija Hay was elected in Takoma. They will serve until the fall neighborhood meetings.

The membership also elected four non-Board members to serve on the Nominating Committee. Mrs. Sylvia Schlitt was elected chairman. Others elected were Mrs. Ruth Stack Jordan, Mrs. Ginelle Fry, and Larry Faye. At the June Board meeting three Board members were elected to the committee as provided in NI By-laws-- Jack Jacques, Mrs. Carol Rende, and Bob Bowser. All members of the committee serve one-year terms.

The Board elected a Personnel Committee to serve one year, made up of three Director-members and two non-Director members. The Director members are Bob Skinner, Chairman; Joe Hairston and Harvey Bullock; the non-Director members are Paul Berger and Mrs. Elma Denham.

AUSTIN SCOTT has been awarded a Nieman Fellowship in journalism at Harvard. Mrs. ELMA DENHAM has been appointed Chief of Social Workers at Hillcrest Center.

SUCCESSFULLY OPPOSE LIQUOR STORE AT GA. AVE & TUCKERMAN ST.

An application for a liquor store at 1207 Tuckerman St., N.W. (actually part of the 6400 Georgia ave. Building, at the intersection of Ga. Ave., Piney Branch Rd., and Tuckerman St.) has been defeated. Neighbors, Inc. and the Brightwood Community Association worked together in opposing the granting of the license. the two organizations circulated a joint petition and obtained over 350 signatures of residents who opposed the license-- so many that the Alcoholic Beverage Control Board commented on the "remarkabley high" number and interpreted it correctly as an indication of the strong citizen opposition.

This community owes a special vote of thanks to NI Board member Benjamin Amos who served gratis, as our attorney in the case. Testifying at the public hearing before the ABC Board were BCA President, Henderson L. Walker, and NI Executive Director Edward S. Hollander.

SUPPORT NEEDED FOR DOUGLASS HOME PROJECT

Concerned Americans have been asked to write their congressman in supporting of legistation that would appropriate the funds for the restoration of Cedar Hill in Anacostia, where Frederick Douglass spent the last 17 years of his life.

Senator Philip Hart of Michigan, Congressman Charles Diggs of Michigan, and Congresswoman Shirley Chisholm of New York have sponsored the legislation, which probably will not pass unless there is public pressure.

Spearheading the local movement to get public support for the project is an interracial group called the Friends of Frederick Douglass. Mr. Douglass, an adviser to three presidents, also was a great orator. Born a slave, he died a statesman, leaving Americans a great legacy of faith in the democratic process. He believed in "one nation, undivided" and never ceased striving for "liberty and justice for all".

THE BERKLEY WILLIAMS FAMILY is featured in a film being shown to Lutheran groups throughout the U.S.

CONSTRUCTION UNDER WAY AT BRIGHTWOOD

Mrs. Ruth Pearl, President of the PTA at Brightwood School, reports that work has started on the six-room demountable.

"The bulldozers are at Brightwood," Mrs. Pearl said. "We are very elated. It looks as though we are going to meet the school opening deadline.

Four classes, during the last school year, met in the school auditorium. Partents and faculty, in a letter to Board of Education President James E. Coates, protested the crowded condition of the school and demanded that construction of the demountable begin immediately.

Mrs. Pearl also announced that the Department of Recreation had started an all-day program at the school for vacationing pupils. She suggested that parents stop by the school for details of the recreation program.

COOLIDGE PICKED FOR FIRST DC AFS CHAPTER

The American Field Service is forming its first Washington Chapter at Coolidge High. AFS anually sponsors about 3,000 foreign exchange students who live with American families and attend high school for one year. About 1,400 American students participate annually in the exchange.

Miss Ann Miller, an AFS returnee, spoke to the NI Education committee and the NI Board to explain the program and urge community support. Her group comprising AFS returnees now living in the Washington area, also presented a special convocation to the Coolidge sophomore class this spring. The Coolidge chapter hopes to be in operation by fall. Persons wishing more information should call Miss Miller, 388-4502 (office) or 362-8522 (home).

HOWARD STUDENT HIRED FOR THE SUMMER

If you call the office and are surprised not to hear Evelyn Sellers' voice, it's because she is taking the summer off and we have hired Miss Audrey Wall, a junior at Howard University to fill in for her in July and August. Evelyn will come in on a limited basis during the summer and will resume her normal hours after Labor Day.

POLICE BEAT - SIXTH PRECINCT

For you, it may be vacation time, but for burglers, business has never been better. The Sixth Precenct reports that burglers of empty homes rose in May to 89, up from the reported 60 in April. The Police said most of these cases were in daylight, when families were at work. A word to the wise: If you are going on vacation, inform the Police Department of the exact dates. A watch then will be kept on your residence while you're away.

It seems that burglers are full of confidence these days. Some of them have driven moving vans up to homes and cleaned out the valuable possessions. Be on the lookout for suspicous activity in your neighborhood. If you see furniture being carted out to a truck and have any reason to believe that all is not well, give the police a call (444-1111). The Police Department will check out the situation to make certain that everything is on the up and up.

The crime report for May lists robberies in two separate categories--armed robberies and other robberies, such as purse snatchings. There were 37 armed robberies reported, and 35 in the "other" category.

In evaluating the figures listed below, bear in mind that the Sixth Precinct has about 65,000 persons:

	Feb.	March	Apr.	May
Robberies	76	61	45	72
Auto Theft	25	34	28	37
Rape	0	1	0	0
Homicide	3	1	1	3
Burglary I *	5	14	11	11
Burglary 2 **	69	63	60	89
False alarms	15	33	37	41

* Somebody home ** Nobody home

ART & BOOK PANS & DISHES CAN BE PICKED UP

Did you cook one of those tasty platters for the Art & Book Festival and now missing a casserole or cake tin? Chances are it's at the NI office. We have quite a number of them and would like to see them all returned to their owners. Call the office, 726-3454, to make arrangements. And thanks for cooking for the Festival!

NI VOLUNTEERS - A CREDIT TO THE COMMUNITY

One of the things foreign visitors to the United States really appreciate is the amount of time, energy and effort Americans put into volunteer activities. The residents in the NI area have benefited greatly from the dedicated work of volunteers in many fields, and to these fine citizens go our thanks and deep appreciation for a job well done. Such activities have played an important part in making our neighborhood a nice place to live.

JUNE VOLUNTEERS ----------

Mrs. Yetta Appel
Mrs. Faye Green
Mrs. Virgie Bovelle
Mrs. Lynn Horning
Mrs. Ruth Cogen
Miss Dee Katus
Mrs. Ethylyn DeStefano
Mrs. Nancy Foster
Miss Maria Ashton
Miss Michelle Ashton
Miss Jacqueline Sellers
Miss Stephanie Sellers
Mrs. Ann Hairston
Mrs. Alma Claibourne
Mrs. Fran Snider
Mrs. Laura Arner
Mrs. Trica Skidmore and 2 little Skidmores

------and many, many thanks to the many, many people who worked so hard on the A&B Festival.

HAD COFFEE WITH A NEIGHBOR RECENTLY? Are you up on the latest neighborhood news and gossip? Come and have both at the Neighbors office. Bring a neighbor with you and spend a few pleasant hours in the air-conditioned NI office as you help out on one of the various tasks that needs doing. CALL 726-3454.

CLASSIFIEDS--ADS

NI SEEKS EXECUTIVE DIRECTOR, for further info, call Robert Skinner, NI Personel Committee Chairman, (ho) 723-4892, (of) WO 4-2464.

THREE TEENS SEEK SUMMER WORK, call TU 2-1081 after 6 PM weekdays.

SEEK DAY WORK IN NI AREA, avail except Fri., call Mrs. Crocker, 723-0456

MOTHER'S HELPER, experienced, reliable teenager, avail. afternoons Mon-Fri., call Terry Cornwell, 726-8842

SINGER ELEC. SEWING MACH., excel. cond., all attachments; also shoe rack, blanket box, other household goods. Inquire 829-2511, no reas. offer refused.

WENDY WILSON IN AFRICA

Wendy Wilson, a member of Coolidge High School's Class of '69, is in Africa taking part in a work-study-travel program sponsored by Operation Crossroads Africa.

Mayor Washington wished the local contingent bon voyage before the young men and women left for an orientation session at Rutgers University, led by Dr. James Robinson, founder-director of the youth program.

Wendy, daughter of Mr. and Mrs. Ernest Wilson, Jr. was sponsored by NI. She will enter Howard University in the Fall.

En route to Congo (Kinshasa), Wendy visited several West African countries. While in the Congo, she will be involved in a community work project, bringing together young Americans and their African counterparts. She will have a chance to meet with students and youth leaders, do some traveling in the Congo and to exchange views with Congolese from various walks of life. About 300 young students from the United States and Canada are taking part in the Operation Crossroads Africa program this year.

A & B F REGRETS

The refreshment Committee of the Art & Book Festival wishes to express its sincere regrets to those people who were not served dinner at the International Buffet on Saturday evening. This was the first event of its kind at the Festival and the response was overwhelming. We appreciate your understanding and we hope you enjoyed the Festival despite the inconvenience.

IN-SWIM PROGRAM NEEDS VOLUNTEERS

In-The-Swim is a non profit program which now provides swimming opportunities for more than 1,000 children, most of them poor, in private pools in the metropolitan area. The organization needs adult and teenage (13 and over) volunteers who can swim to accompany groups of kids on the trips to the pools; mothers may take their own children with them. The program is not limited to poor children so if you work with a group of youngsters you'd like to take to a pool, check with In-The-Swim. To volunteer or for further information call 587-4405 or Mrs. Marcus Cohn, 652-7573.

FOSTER AND ADOPTION PARENTS SOUGHT

The Montgomery County Department of Social Services is in constant need of potential adoptive and foster parents who have an interest in caring for inter-racial children. Call Homefinders at 279-1733.

JUNIOR NEIGHBORS ELECT KAREN FREEMAN AND HARDY FONTAINE

Junior Neighbors has elected Karen Freeman as its president for the coming year, and Hardy Fontaine, vice president. They succeed Ted Hagans, III, and Dana Ellinger, respectively. The new officer's first job is a tough one attempting to defeat NI's oldsters in the July 4th softball game. Last year youth did not prevail and the JNs lost the regular game and a rematch.

MORE SUNBEAMS NEEDED FOR SUNDIAL

More pre-schoolers and additional five-year-olders are invited to take part in the Sundial programs at Takoma and Fort Stevens. The fee is still only $7.50 for the two-week sessions.

TENNIS A BIG THING AT TAKOMA REC CENTER

The Tennis Day Camp is an established program now at the Takoma Recreation Center, 3rd & Van Buren Sts NW. More 7-15 year-olds are invited to join. The Camp operates daily from 9:30 AM to 4 PM.

The Center also provides informal swimming lessons and all swimming activities are free. Softball teams for youngsters 10 & under are being organized. Another pleasant activity are the cook-outs every Friday. And on all days, don't forget to bring your lunch when coming to the Center. For more information about the activities call Mr. Butler, RA 3-8222. For swimming pool information call RA3-6281.

VARIED PROGRAM SET AT EMERY REC CENTER

It's outdoor MOVIE TIME again at Emery Recreation Center, Georgia Ave. & Madison St. Exciting westerns, musicals and cartoons every Wednesday night at 8:30 PM. Bring your own popcorn! The outstanding musical production MUSIC WAGON will be presented on July 27th. For more information call Mrs. Sanders at TA9-1866.

CHILDREN'S MOVIES & STORYTIMES AT LIBRARY

The Takoma Branch Library, 5th & Cedar St. NW has announced a series of programs for the summer, through August 26th. Story - time will be held every Thursday at 3:30 PM. Movies will be shown on Tuesdays at 2 P M, schedule below:

JULY 8 - Doughnuts, This is New York, Chairy Tale.
JULY 15 - Golden Fish, Make Way for Ducklings, Boswelle's Bon Voyage
JULY 22 - Giuseppina, pigs, Mike Mulligan and his Steam Shovel
JULY 29 - Andy and the Lion, Time of the Horn, Dick Whittington and his Cat Toccata for Toy Trains
AUGUST 5 - Frog went a-courting
Loon's Necklace
Corral, Music from Oil Drums
AUGUST 12 - Stowaway, Children of the Plains Indians, Five Chinese Brothers
AUGUST 19 - Niok, Curious George Rides a Bike, Scraps of Paper and Piece of String
AUGUST 26 - Salvage Gang

HEADSTART PROGRAM NEEDS CLASSROOMS AIDE AIDES

The Washington Headstart program needs volunteers to serve as classroom aides. The program will run through August 8. The program also invites persons with special skills and abilities to share them during brief classroom visits.. If you can help contact Mrs. Etoile A. Perry, 546-1711.

ARCHERY AT FORT STEVENS REC CENTER

Instruction is offered daily at 10:30 AM at the Center at 13th & Van Buren Sts NW. and is open to all youngsters able to pull a bow. For more info call Mr Console at RA3-3477.

GET INTO THE SWIM OF THINGS AT TAKOMA

The Swimming pool at Takoma is open Monday Through Saturday, from 1 PM to 10:00 PM. Adult swimming lessons are given Tuesday and Thursday evenings from 9 PM to 10 PM. Officials decided that these times were best suited to adult lessons since there would be little or no inconvenience for regular users of the pool. New members are still being accepted for the swimming team. Membership is open only to D.C. residents.

Pool officials have issued a new policy on checking valuables. There are no checking facilities at the pool this year and those who use the pool are cautioned not to bring any valuables with them or any other item they had been able previously to check at the pool.

"Crowd Control" volunteers are needed again at the Takoma pool. If you have the time and are anxious to see an orderly program at the pool, please contact Dr. Dew or Mr. Metzler and join an important volunteer program. To volunteer & for further info call RA3-6281.

Neighbors INK

SEPTEMBER 1969

VOL. 11 No. 7

NEW EXECUTIVE DIRECTOR: DAVID BOGUCKI

Neighbors, Inc. is pleased to announce that David Bogucki is its new Executive Director. David started on Sept. 15th and is quickly being introduced to the NI area and operation.

David comes to us from Grand Rapids, Michigan, where he was Deputy Director of the city's Dept. of Community Relations. He says that his main concern there was "to make local government responsive to the needs of its citizens." Before going to Grand Rapids, the new Executive Director lived in Washington for nearly a year. During this time, he was "searching for a job which had some meaning" for him. "In many ways, my return to Washington is like a homecoming. I like the city and am happy to be back."

David is 26 years old, single, and comes originally from Seattle, Washington. He graduated from Washington State University and did some graduate work at Michigan State University.

GOOD LUCK, ED!

In welcoming the new Executive Director, we also want to wish Ed Hollander, NI's former Executive Director, luck in his new position as Fair Housing Centers Project Coordinator for Urban America here in D.C. Ed was with NI for 2½ years and we'll always consider him part of "our family." Thanks, Ed, for a job well done.

TAKOMA CHARRETTE, PARTICIPATORY DEMOCRACY IN ACTION

The 1897 Takoma Elementary School Building at Dahlia Street and Piney Branch Road, is too small and too old. Downtown proposed, in 1967, a new cell block of classrooms that was also too small and obsolete. Takoma parents fought against the building all the way to Congress. When goofs showed up in the plans, the elected School Board listened to Takoma and Mrs. Muriel Alexander, and asked the Mayor to stop the bull-dozers already at work on the school site. The Mayor did, and that's why the old school still stands, and why there's a two-acre plowed field at Piney Br. Rd. and Highland Avenue.

The School Board also held up $13 million in school plans across the District to begin to respond to community feelings about sites and design. This new precedent is what Takoma parents helped win for D.C.

We told the Board what kind of school building we didn't want; now we ask, what kind of school DO we want for our children, AND what COMMUNITY services do we want in the building? The Board gave $7,565 and received $5,000 more from the U.S. Office of Education to finance the Takoma Charrette to help us discover what we want and need.

It can be more than a school. It can be a center for the WHOLE COMMUNITY! With an after-hour recreation center, a swimming pool, adult education classes, a senior citizen get-together spot, a teen club, a little city hall, and so on.

Mayor Washington wants us in the Takoma community to plan it. So we're having a week-long, around-the-clock planning session called a Charrette from Oct. 20 to 26.

Come plan your new School and Community Center. Call Loretta Hanes at 726-5820, Maija Hay at 882-2910, or Ethylyn DeStefano at 882-4553 to get involved.

SCHEDULE OF EVENTS FOR CHARRETTE

Date for Charrette, October 20-26.
WFAN-TV live programs. Discussion of Charrette and involvement of the community. Channel 14, 8:15 to 10 p.m.
Checkpoint with Norman Ross, Oct. 8 & 15.

RALLY, October 17 (Friday). Rain date, Oct. 18. Mayor Washington as speaker, Bob Murray as master of ceremonies. Roberta Washington will provide ROCK MUSIC, and she's good! Free refreshments. Flyers with school children, stores, and recreation department at Takoma site. ANYONE WILLING TO HELP please call Loretta Hanes, Maija Hay, and Ethylyn DeStefano.

TAKOMA CHARRETTE STEERING COMMITTEE

Dr. Bill Denham was selected by the SC to act as Charrette Coordinator. He has accepted the position. Dr. Denham, a community resident, former professor at Federal City College, now teaching at Howard University, has participated in community activities through NI. The SC made suggestions for consultants to advise on architecture, planning, curriculum, educational philosophy, and community involvement. They agreed that Carol Rende, Tunney Lee, and Tom Dwyer should make

Steering committee con't

final selections & contact from suggestion. A list of consultants (non-paid) of the D.C. school system was also made. Carol Rende accepted position of Charette assistant Coordinator.

Anyone who whishes to contact any of the Steering Committee please call the Takoma Elem. School, Carol Rende at RA 6 4971, Maija Hay-882-2910 Ethylyn DeStefano-882-4553, Loretta Hanes-726-5820.

AREA I NEIGHBORHOOD PLANNING COUNCIL

At 411 Rittenhouse St., N.W.
Mr. Reginald Chase-Director
Mr. Michael Moore-Asst. Director
Miss Joanne Colhoun-Chief Sectary
Phone-829-6108, 829-7353 9-10am.

All of the following are held Mon, Wed, & Thurs from 7:30-10:00pm., all year around excepted as noted. Boys of all ages & girls where appropriate.

Weightlifting, track & field in spring & summer, boxing on Wed., tennis, swimming(indoor pool), Ping Pong (tournaments only), volleyball, football-four teams, with upper weight limits of 105 lbs, 120 lbs, 145 lbs, and unlimited. Basketball-recreational, plus four teams for 12,14,16 & 18 year olds, plus older exhibition team. Judo on Tues. New classes formed every 8 weeks. Baseball for young adults, Interpretive dance, Weight-reducing for adults. Field Trips, frequent, ambitious and open to all ages and are chaperoned by competent, well trained adults.

NI PROTESTS CITY COUNCIL'S FREEWAY VOTE

NI President Ed Cogen sent a letter dated August 14, 1969 to the City Council Chairman Gilbert Hahn registering NI's "very strongest of protests" for the Council's approval of the Three Sisters and North Central Freeway study.

In his letter, Ed stated that he was aware of the "blackmail" pressures that were exerted upon the Council, but noted that these pressures made the dicision "more understandable, not justifiable". He went on to suggest the Council would have earned the respect and support of the vast majority of the City's citizens if the Council members either would have stayed with an earlier vote rejecting the project or resigned their positions on the City Council.

Ed called President Truman's injunction to "get out of the kitchen" if one can't take the heat applicable to the situation in D.C. today.

SUIT BY MEXICAN - AMERICANS TO CHARGE T-V DISCRIMINATION.

A national Mexican-American group says it intends to file discrimination suits against the major television networks.

Monitoring of the media programs in cities across the Nation began this wiik and should be complete by late September, said Domingo Nick Reyes.

Reyes said an attorney from Lufkin, Texas, Joseph L. Gibson, has been retained for counsel for the National Mexican-American Anti-Defamation Committee, Inc., and will help prepare the suits.

The Committee was chartered in June. Reyes and about a dozen other Mexican-Americans operated as an ad-hoc group, publicizing what they consider discriminatory hiring and advertising practices by net-works and their advertisors.

Nick Reyes and his wife Conchita are members of Neighbors, Inc. (6500 Luzon Ave. N.W.) and serves as Executive Director of the National Mexican-American Anti-Defamation Committee, Inc.

ORIGINAL REPORT ON PAUL JR. HI. & COOLIDGE

Anyone wishing to obtain a very good report on what Paul Jr. Hi. & Coolidge School are doing and what they have done can be obtained (free) at NI office.

AMERICANS ABROAD PROGRAMS

An American Field Service International Scholarship leads to understanding & friendship among the peoples of the world. Under this program, students from 61 countries attend American secondary schools in more than 2800 communities for a school year of study, and American teenagers from almost every state study and live with families abroad.

During the year a community sponsors a foreign student, it may nominate that year candidates from the participating high school for the AFS program. These students must be juniors & seniors. From a list of candidates, a regional committe of the AFS makes final selections. For more information call Ruth Ellinger at 726-1226.

TRAFFIC SIGNAL AT 5TH & VAN BUREN

Mr. Hartley has promised us a traffic signal at 5th and Van Buren Street in 1970 instead of 1971 which he first suggested. Our thanks goes to Ethylyn DeStefano, who has been corresponding with Mr. Hartley since April.

WFAN TV

A special thanks is in order for the community people who are appearing on TV to discuss our problems and give their point of view on our school and "community." Recent stars have been Loretta Hanes, Bill Kerewsky, Robert Murray, Frank DeStefano, Sterling Ament, David Register, Mr. Taylor and daughter.

OPEN HOUSES--Takoma-October 3rd, Mr.& Mrs. William Kerewsky at 410 Aspen Street, N.W. SHEPHERD- October 10th, Mr. & Mrs. Ralph Sanderson at 1415 Holly Street, N.W. SHEPHERD--November 14, Mr. & Mrs. Dan Jordan at 1311 Floral St., N.W.

MORE ART & BOOK BRAVOS

The Refreshment Committee of the Art & Book Festival wishes to thank Mr. William Thompson who we've been unable to get in touch with. Mr. Thompson was very helpful in making the lunches and supper a real success. Though he doesn't reside in the NI area, he was kind enough to offer his help which was so much appreciated!

Anyone who still hasn't collected her baking dish, pan or pot please contact the NI Office (726-3454) soon so we can arrange to return it to you.

If you just remembered you lost it, we found it! In addition to the pots and pans, we have a ladies' white sweater, kpurse, eyeglasses and other items. Call the NI office to claim.

A SPECIAL THANKS TO WMAL CHANNEL 7

A special thanks to Mrs. Claire Kleese and director, Joe Brown of the Claire and Coco show for extending every courtesy and consideration in the time arranged for publicity of the Neighbors, Inc. Art and Book Festival.

November 1970

General Membership Meeting: Problems and Prospects For Neighbors, Inc.

= = = =

MAGIC FOR A NEIGHBORS INC. BENEFIT

Jack Adams, actor, magician, mime, storyteller (and a Neighbors, Inc. member) will display his wizardry in our area on Sunday, November 8 at 2:30 p.m. at Tifereth Israel, 7701 16th St. The show is a benefit for Neighbors Inc. and tickets ($1.50 for adults, $1.00 for children) will be sold at the door.

Mr. Adams portrays many different characters through rapid transformations on stage with make-up and costume changes. He begins as Merlin, the classic magician, and assumes varied personalities: Mr. Zump, a tramp with a dancing handkerchief; Yoko, a Japanese farmer who discovers a secret in a grain of rice; Dantini, vaudeville's favorite conjurer.

Mr. Adams uses chemistry, film sequences, music and lighting to exhibit the magic of nature through the magic of sorcerers. Variety says that Jack Adams has "exactly the right flair to hold a kiddie audience enthralled," and Jack Gould of the New York Times says that Mr. Adams' show has "a touch of gentle charm ... fun and suspense ... and an element of totally appealing humor."

See you there?

PHONING PARTY

The Membership Committee is sponsoring a phoning party whose purpose is to call all people who were sent reminders about dues but have not yet paid. The files will be on hand and 20 volunteers are needed. Each volunteer is asked to bring a sandwich to trade. Coffee will be provided. If you are willing to volunteer for the evening of December 6 (5-8 p.m.), call Kitty Clark (829-6882) or Leslie Proctor (291-8811).

EDITORIAL

As You Know, This Paper Is Put Together By People Who Have lots of other things to do, too. If you want it to be useful, interesting, and informative, you must provide the copy. We need articles, ideas for articles, letters to the editor, news about meetings, complaints. It's not just a newsletter for members of NI; it should be a newsletter by members of NI. A real newsletter should be a vehicle for members' ideas and concerns, but that's possible only when the members are willing to express those ideas and concerns. The deadline for the December issue is Monday, November 23. Call or mail information and ideas to Thom Peterson (291-4709) or Cynthia Richardson (291-5318) or the office (726-3454). It's one important way we have of getting together.

INCIDENTAL INFORMATION FOR THE INCORRIGIBLY PREGNANT: To find out about Lamaze technique (Psycho-prophylactic method of childbirth) phone 652-6934 or 759-2546, or write the Washington D.C. Chapter of the American Society For Psycho-Prophylaxis in Obstetrics, 13017 Bluhill Rd. Wheaton, Md. 20906.

SHORT NOTICES AND CLASSIFIEDS

* Wanted: Someone interested in renting their furnished house for the Spring semester (Jan.-June or Aug.). Call Jackie Bernstein, 726-6024.

* Wanted for Neighbors Ink: letters to the editor, suggestions for articles, general announcements. Send to Thom Peterson, 600 Cedar, or Cynthia Richardson, 6815 Sixth.

* Will Babysit for children from 3 mos. up while mother works. Call Mrs. Powell, 882-5706.

* English Plum Pudding (family heirloom recipe): $4.00 (check or m.o.) to Kate's, Box 53, Waterville, N.Y.

* Spring Knoll Coop Nursery School, in the Shepherd Park area, has an immediate opening for a 4 year old girl. A scholarship is available to this economically and racially integrated school. Call Mrs. Dighe, 588-8843.

* Mrs. Jacqueline Bernstein (726-6024) is the new Real Estate Committee Chairman. The committee needs more new listings for incoming neighbors, especially for those seeking to rent.

* If your kids have playground problems, try calling Anna Tatum, 882-1843, at the D.C. Recreation Dept.

* Our area has a theater, The Back Alley Theatre, at Kennedy and Colorado. Let's support it!

* Three Neighbors, Inc. area restaurants made it into The Underground Gourmet: The Warababa, The Crisfield, and Hofberg's.

* Montgomery College is starting a series of community service courses: Solving scientific problems with computers; F.C.C. Licensing: nutrition. Call Mrs. Ann Munson, 587-0415, ext. 35.

* Connie's Direct Contact Advertising: Specializing in small business service. Cleeretta Smiley, 1444 Primrose Rd., N.W. 291-8213.

* Clothing for sale: Nearly new - girls', boys', men, women. Reasonable. 291-8213.

* Are you missing glass mixing bowls, casserole dishes, pans? Metal pans? A blue roasting pan (contained delicious baked beans for the Art & Book Festival)? Plates? These items have been in the Neighbors Office since the Festival last summer and, in some cases, two summers ago. Please pick them up.

* Typing: reports, term papers, resumes. Reasonable, accurate, dependable. IBM Selectric. TU 2-1081 after 6 and weekends.

* Bev McGaughy has two bikes rescued in the Shepherd Park area from bike thieves on September 25. If you think one is yours, call 726-8781.

* Bev McGaughy is compiling a list of renters in the NI area. If you rent, call her at 726-8781

MORE SHORT NOTICES AND CLASSIFIEDS

* Greetings from the owner of DAVIS PAINT STORE, 6127 Georgia Avenue, N.W. 7:00 a.m. to 7:00 p.m. Monday - Saturday, open to serve the community. "See me, the man who knows Paint!"

* The Takoma Library has pictures, journals, records, decorations, friendly personnel, and a meeting room which will accommodate 30 people. (If you're going along to enjoy the library, remember to return the materials that are due.

DECEMBER, 1970

WALTER REED & THE NEIGHBORHOOD TRAFFIC PROBLEM

by Morton Libarkin and Bob Richardson

Things may be looking up for the blocks being used, or more precisely abused, by personnel at Walter Reed Army Medical Center who consistently violate parking and traffic regulations. But major solutions to the problems are still to come.

Although some improvement has been noted on Floral Ave. between 12 and 13 Streets, violations reportedly continue, and even increase, in some other neighborhoods. And while the D.C. Police and Walter Reed are increasing efforts to control the problem, the full effects of their efforts will not be obvious immediately.

Increased enforcement results from an October 29, 1970 meeting of concerned residents, Provost Marshall Col Richnack, Base Public Affairs Officer Major McPherson, and representatives of the 4th District Metropolitan Police, Capt. Nolan and Lt. H. M. Bigelow. The meeting in turn had been triggered by a petition complaining of such unsafe practices as speeding, overparking intersections, and parking in front of private driveways and alleys. The petition, bearing some 60 signatures and addressed to Chief Wilson, stressed the resulting danger to pedestrians, particularly the danger to children.

At the meeting, Col. Richnack described plans to generate new parking spaces over the next five years in order to meet all of WRAMC's needs with on-base facilities. About 1,000 more vehicles enter the area daily than the base can now accommodate. But construction may increase the short-term burden on the area, since contractors' employees need parking too. The WRAMC representatives also promised to try to influence their personnel by publicizing the problem and to investigate the use of lawns as temporary parking areas. Col. Richnack pointed out that Military Police have no jurisdiction over offenses committed on civilian streets, but asked to be informed (in writing) of refusals by base personnel to obey traffic and parking regulations. Complaints should include as much identification as possible (license numbers, make, model, etc. if possible).

Metropolitan Police representatives described the process by which warrants are issued if traffic or parking tickets are not answered. But the whole problem is complicated by the fact that many of the worst offenders are from out-of-state and feel relatively free of any pressure to obey local traffic regulations.

Residents pointed out that while speeding and parking violations are not as dramatic as bank robberies, they create a danger, particularly to children. They also complained that the Fourth District's response to complaints has been less than satisfactory, and that individual officers have been rude or have harassed complainants. They also argued that ticketing alone is insufficient, and that the Police Department should provide tow trucks or should arrange for private towing service, perhaps using garages on Georgia Ave. Towing and storage charges could be paid by the owner, making cost to the city minimal.

It was agreed that daily coverage would be provided and that illegally parked cars be ticketed scrupulously. Capt, Nolan also agreed to try to provide a crane to tow cars creating a hazard. Lt. Bigelow asked that complaints about police response be reported to him (626-2360), and that the officer in question be identified.

Since the October 29 meeting, the situation has improved in the Floral

Ave. area, but has not changed much in other areas, perhaps because attention has been directed to Floral Ave. or because ticketing has forced violators to seek parking elsewhere. In addition, residents report finding discarded tickets written against cars from, e.g. Pennsylvania and Missouri.

Lt. Bigelow of the 4th District told NI that on the Monday following the meeting, policy plans for strict enforcement, including ticketing and towing, were completed. But he also pointed out that impounding a vehicle takes about a month from the date of the first ticket, since the violator has five days to pay. When it becomes clear that the ticket is being ignored, it is entered into the computer record, in effect beginning a record against the vehicle. When it is established that a violator is consistently ignoring tickets, the car in question can be impounded. The 4th District, in addition to ticketing, has been compiling a record of outstanding tickets within its jurisdiction. When told that some residents were still dissatisfied with police handling of alleged violations, Lt. Bigelow promised to look into the matter again, and would call on a complainant in one neighborhood.

At Walter Reed, officials have investigated the possibility of using Carter-Barron or Rock Creek Park facilities, but have found that neither can be used by base personnel. More positive action has resulted, however. Service Stripe, the base newspaper, has run pictures of violations and captions explaining the general problem. MP patrols are being sent out to spot and identify illegally parked vehicles. Letters are then sent to the vehicle owners' superior officers. In addition, base Commanding Officer General Hughes has sent a letter to all base personnel calling their attention to the problem and urging compliance with regulations.

Meanwhile, residents still bothered by problem parkers on their block should continue to report violations to the Fourth District (626-2376). Unless the street is specially marked by the Motor Vehicle Dept., cars must be parked at least 40 feet from an intersection and driveways and alleys must be left clear. Residents should make sure that the violation they are reporting is in fact a violation, then make sure they have the reporting officer's name, and make sure he knows they know his name. Be sure to have as much relevant information about the vehicle as possible, and refer any complaints about police handling of complainants to Lt. Bigelow.

HEALTH CARE PROGRAM, Phase II

We reported in previous issues important plans by the Board on Medicine of the National Academy of Sciences to conduct a health care program for the Neighbors Inc. area. The first phase of this program, a household survey, is now getting under way. The second phase, eye and ear examinations for children, will be reported in the next issue.

Professional interviewers with proper identification will interview a sampling of families in this area about their family medical care and health. The success of this program will depend on the cooperation of every person involved.

****

NEIGHBORS, INC. thanks the following volunteers, who helped out this month:

The editors of NI think a consumers' column might provide members with a useful way to spread the word, good or bad, about their dealings with merchants. We invite written expressions of opinion.

TRAFFIC REPORT

by Charlotte Kowitch

Traffic light installation for 13 St. and Alaska Ave. is stalled for budgetary reasons, reports Mr. John E. Hartley, Ass't. Director of the Dept. of Highways and Traffic. In a recent letter Mr. Hartley states that if additional revenue is made available by Congress, the lights will be requested there as early as possible. These lights will not only help school children, but would establish breaks in the traffic flow on Alaska Ave.

Until this signal is installed the traffic flow can be partially broken by eliminating the right turn signal on Alaska at 16 St. Residents in that area should write to Mr. Hartley at 415 12 St., N.W. reinforcing the need for a traffic light at Alaska and 13 and urgin immediate elimination of the right turn signal at Alaska and 16.

THE NON-VOTING DELEGATE

by Evelyn Wrin

Public Law 91-405. as passed in September of 1970 by Congress, established "a Commission on the Organization of the Government of the District of Columbia" and provided " a Delegate to the House of Representatives from the District of Columbia." On March 23, voters will elect this Delegate.

As stated in the legislation, "The delegate shall have a seat in the House of Representatives, with the right of debate, but not of voting, shall have all the privileges granted a Representative by section 6 of Article I of the Constitution, and shall be subject to the same restrictions and regulations as are imposed by law or rules on Representatives."

There is presently in the House of Representatives one person who functions in a similar capacity. This is Jorge L. Cordova, the "Nonvoting Resident Commissioner" from Puerto Rico. Mr. Cordova can make speeches, join in debates, participate in committee meetings, introduce bills and propose amendments. But he can't vote. In addition, House rules prohibit his voting in committee and also prescribe his committee assignments. It seems that in the 1800's a delegate in a similar position had the right to vote in committee, but this was dropped and has not been permitted since. However, Mr. Cordova does say that his inquiries, requests, etc. among government people receive attention comparable to that of other congressmen and that his position is not distinguished from theirs. He also considers his status here as better than that of two local representatives from Guam and the Virgin Islands. He believes that "a delegate from the District with a congressman's salary, staff and other privileges would be much more effective in Congress than a city hall legislative aide or even the mayor." He further recognizes that a non-voting delegate is a start toward complete rights and says, "That's the way it should be."

As of November 20, some 40 residents of Washington, D.C. had either announced their candidacy for the position of non-voting delegate or had someone else pick up the necessary petitions for them from the Board of Elections. Of these candidates, five plan to run in the Republican primary, and the others in the Democrat primary. Three declared candidates reside within the Neighbors, Inc. area: Chalie J. Black, Maurice Watson, and Goldie Cornelius Johnson. All are listed as Democrats. An undetermined number of announced candidates, although planning to run in party primaries, may choose to run as independent candidates.

If the District were fully and officially represented in in the House, population figures indicate that we would have two representatives, since our population is comparable with that of Hawiai, Idaho, Montana, New Hampshire, North Dakota, Rhode Island, and South Dakota. In addition, of course, full representation would provide two Senators. So if the election on March 23 means that we're making some progress toward <u>real</u> representation, then we certainly welcome it and events to follow.

Further information and comments on candidates, the election, and referendum questions (if any) will be coming in the next monthly issue of NI. A meeting or forum sponsored by Neighbors Inc. had been proposed and considered. However, considering our tax-exempt status, the recommendation was made that we not sponsor this kind of activity. We hope that this type of program will be arranged through other sponsors.

Should any readers have comments about the election, let us hear from you. Deadline for the next newsletter is December 20.

Remember: VOTER REGISTRATION ENDS DECEMBER 12.
PRIMARY IS JANUARY 12.
ELECTION OF DELEGATE IS MARCH 23.

Registration to vote is continuous through December 12 for all persons who are

D.C. residents
over 18
U.S. citizens
unless convicted of a felony, adjudged mentally incompetent, or claiming the right to vote elsewhere.

Persons who have voted in D.C. since Jan., 1968 are already registered.

MRS. LAURA ARNER

We would like to express our sincere sorrow at the tragedy which took the life of Mrs. Laura Arner. As a resident of the Neighobors, Inc. area, Mrs. Arner had long and frequently contributed her services to helping out in the office or at her home or with the Art and Book Festival -- however she was asked. And last summer, when there was going to be no staff person in Neighbors' office for a week or two, Mrs. Arner received in her hom all the telephone calls which were transferred to her number. Her cooperation and participation in the work of Neighbors, Inc. is remembered and appreciated.

Vol 13, No. 1 JANUARY, 1971

BOARD OF DIRECTORS ESTABLISH AD HOC COMMITTEE TO SURVEY SAFETY PROGRAMS

An ad hoc committee will survey public safety programs in the Neighbors, Inc. area. Established at the December 9 meeting of the board, the committee will be chaired by Steve Smith and Beverly McGaughy. "The primary purpose of the committee," according to the motion which created the group, "shall be investigative: they shall obtain and correlate information regarding the nieghborhood public safety and present this information to the Board, its committees, and the general membership for suitable action." Areas of investigation will include crime index offences, traffic accidents and injuries, ambulance service and narcotics offences. The findings of the committee are to be reported no later than the Spring membership meeting.

Neighbors Inc. will not sponsor a meeting of the candidates for the office of Non-Voting Delegate to the House of Representatives primarily because the organization has a tax matter pending with the Internal Revenue Service. Other meetings at which area residents can hear candidates are being planned for January 6 by Tiffereth Israel Synagogue and by several local groups, including Northwest Boundary Civic Organization, for January 10 at Paul Junior High School.

Gretchen Schaft reported that the Capital Hill Spectator, although interested in the possibility of starting a local newspaper in the area, has concluded that they would require more subscribers than they could expect from the Neighbors, Inc. area.

Mrs. Devaris called for more help in the NI office, which is behind in its work schedule. She is there from 9 a.m. to 3 p.m. Monday, Wednesday, and Friday and for a few hours on Thursday afternoon.

Other miscellaneous news from the meeting:

Bill Denham has resigned as chairman of the Social Services Committee.

The Recreation Committee will investigate teen recreation programs in our area to assess their impact and determine the need for others.

Joan Fontaine was named new advisor to Junior Neighbors.

Carol Rende will draft a telegram to the School Board requesting a change in priority of the Takoma School Construction from no. 16 to no. 1. NI Board members were also informed that Congressman Natcher's committee has turned down the request forthe reprogramming of funds for the school construction.

Leonard Tillman resigned as Chairman of the Education Committee. He continues as a representative of the local day care group sponsored by Neighbors, Inc. on the Board of the city wide coalition of groups.

PUBLICITY COMMITTEE, UNDAUNTED, SEEKS NEW IDEAS & PROSPECTS FOR PAPER

As reported above, the NI area may not be able to supply the 5 to 10 thousand subscriptions necessary to attract a new local newspaper. The Publicity Committee will nevertheless canvass other organizations and businesses in the area to determine interest, as well as subscription and

advertising potential. Meanwhile, anyone with any ideas on the subject is asked to call Jean Knight at 291-8721.

WHAT'S THE ANSWER? ----(WHAT WAS THE QUESTION?)

The D.C. Democratic Central Committee is trying to get several questions on its primary ballot for the January 13 election. While NI does not take sides in the election, INK suggests that the voter would do well to ask himself, and any candidate he is considering, the following questions. The reason is obvious: whoever is elected will have to face these issues and his opinion will be taken as representative of the District voters.

"Do you favor:

1. Self government for the District of Columbia?
2. Construction of the Three Sisters Bridge, North Central Freeway, or other freeways within the District?
3. Building more freeways even if Congress then refuses to provide more money for the subway?
4. Public ownership of D.C. TRansit?
5. Creating a consumer protection office in the District government with power to forbid merchants from engaging in unfair or deceptive practices?
6. The District retaining control of the Lorton prison complex?
7. Requiring all D.C. judges and policemen to live in the District?
8. A District commuter tax on persons who live in the suburbs and work in the District?
9. Unconditional withdrawal of all American troops from Indochina within six months?
10. (The District now pays welfare recipients 75% of the income determined by the D.C. government to be required for a minimum standard of living.) Do you favor raising welfare payments to 100%?

An eleventh question asks your first choice for Democrat nominee for President in 1972, and a twelfth question is being considered.

JANUARY CALENDAR

Jan. 10 (Sun.)	Membership Phone-in party, coffee and sandwiches to swap. Call Kitty Clark, 829-6882 for details.
Jan. 13 (Wed.)	NI Board meeting, Albright Mthodist Church, 411 Rittenhouse, 8 p.m.
Jan. 16 (Sat.)	Manor Park area meeting on community-police relations. Captain of the 4th District will attend. Holy Comforter Episcopal Church, 7th and Oglethorpe, 11 a.m.
Jan. 22 (Fri.)	Shepherd Park open house at the home of Mr. and Mrs. Rolly Radloff and Mrs. Marie Fredell, 1716 Holly St., 9 p.m. BYO
Feb. 5 (Fri)	Community Service at Tifereth Israel, Everyone, including children, welcome. Explanation of service, discussion, and refreshments. 8 p.m. 7701 16th St.

*** The Housing Committee wants more Takoma volunteers to show houses and keep listings. Call Jackie Bernstein, 726-6204.

COMING NEXT MONTH: SUGGESTIONS FOR MORE NEIGHBORS GROUPS, WOMEN'S LIB, A FOOD CO-OP. more!

Our motto: All the news that fits, we print.

CALANDAR ADDENDA:

January 4 — beginning of a ten-week (Monday) evening course in "American History - The Black Perspective" at Bethesda-Chevy Chase High School. Sponsored by the Adult Education Department of Montgomery County Schools, the course will examine the role of Negroes in America's past. Bring $10.00 registration fee to the first session. The class runs from 7:30 to 9:30 every Monday night and is open to D.C. and Maryland residents.

January 6 — meet the candidates at Tifereth Israel, 7701 16th St. at Juniper St. Certified candidates for the January primary will speak at 8:00 pm.

January 12 — beginning of 13-week Tuesday afternoon film series presenting Sir Kenneth Clark's Civilisation, 3:30 at the Coolidge High School auditorium, 5th & Tuckerman Sts. NW. This great series is sponsored by the Academic History Club at Coolidge and the Takoma Park Branch of the D.C. Library. Admission is free, call 783-6576, 726-4414, or 726-5569 for further information.

January 16 — please note that the meeting with Capt. Guthridge at Holy Comforter Church is open to all. It promises to be interesting so plan on going.

***

LET'S GET TOGETHER, GROUPS & CO-OPS — by Kitty Clark

THERE are two kinds of groups we need more of in this area, and NI can help form them. They are both specialized; oriented around a specific concern of their members: 1.) Social clubs like the Garden Club, and 2.) Service clubs like the babysitting co-op.

Everyone likes getting together at the Cabaret Dance and the open houses--when they're over we all go away thinking, "I wonder why Neighbors' doesn't do more things that are just friendly and not so much work?" But then perhaps we say, "Well, what else can such a big group do?" Small groups, more specialized and personal are the answer. We have a Garden Club (for info call Blanche Bradley, 829-2918 or Ada Coleman 829-7275); why not a chef club, a group that cooks gourmet dinners once a month for each other. What about a sewing club; the members could teach each other the skills they're strong on; they could copy and trade patterns. Tifereth Israel has facilities for a theater group, and has asked us whether we're interested in forming one. For those who can't wait, how about a theater-going club? Or a HiFi club? Anyone for jogging or hiking, bicycling, yoga, or modern dance?

On the educational side, what about a painting club with lessons, or foreign language clubs with conversations and entertainment exclusively in each language? Would you like to learn silk-screen or linoleum block printing, rug hooking, or some other craft that requires an investment? Let's form a craft club and pool our resources to learn several. Some of the members of the old chess club are still looking for new members to get the club going again. There's always bridge and poker. Let's get a Women's Liberation discussion group going, too.

Co-ops are not quite so traditional as social clubs, but they are springing up all over these days, and the babysitting co-op certainly shows how successful they can be. It's a much more vital way of getting things done than a committee. It works on a basis of credits paid, like money, for babysitting time. The only reason you have to sit is to get more credit chips so you can afford to pay your sitters. Call Bev McGaughy, 726-8781, for more info. Grocery co-ops have been started in the area (and INK will report some info next month): go to St. Stephens Episcopal Church or call the Washington Food Artel --Jim, 462-2818 or Tom or Dan, 234-6288. There are probably many co-ops that we could start, like a magazine subscription co-op or a home services co-op. Call 829-9246. Tell Ann Meyer what kind of group you're interested in. She will be the catalyst for organizing and communicating. If you have an idea for a group not mentioned, she'll see it is mentioned in the next issue of Neighbors' INK.

PAGE PARTIALLY ILLEGIBLE

VOLUNTEERS: The Ink staff says thanks to November Helpers Ann Hairston, Bobbie Barrett, Barbara Libarkin, Blanche Bradley, Eloise Roseboro, and Judy Smith. The NI office also thanks December volunteers Tennessee Ford, Francis Snider, Julie Shepherd, Audrey Marcus, Sue Swisher, Ann Hairston, and Leslie Proctor. Thanks to all!

For Sale: One pair of girls' ice-skates - one small washing machine (for infants wear or lingerie) - one Stauffer Exercise Machine Call RA 6-0246.

Notice: Tell your friends about our thing--subscriptions to Neighbors' INK are only $2.00/year. Write to NI, 6400 Ga. Ave NW 20012; make checks payable to Neighbors', Incorporated.

Also Note: Phone information for The February INK to Thom Peterson, 291-4709, before January 25, but after 6pm.

PARTICIPANTS IN NATIONAL ACADEMY OF SCIENCES HEALTH CARE RESEARCH PROJECT: Beginning in mid-January, the Board of Medicine of NAS will provide eye and ear exams to your children 4 to 11 years of age by physician specialists and trained technicians. These kids will also have their hearing tested in a soundproof room by hearing specialists. Children 3 and under will receive ear exams conducted by physicians and, in addition, a drop of blood will be obtained from the finger to test for anemia.

These examinations will be provided without cost to you. The time required for the regular screening exam will be approximately one hour. For children who are found to have hearing problems and require further tests, an additional hour will be needed to complete the exam. A second examination at another time will be needed for children requiring further testing for vision problems.

CORRECTION- The meeting on January 10 Sponsored by the Northwest Civic Association jointly with South Manor Neighborhood Association and the Shepherd Park Civic Association will be held at Rabaut Jr. High School (Peabody St. and Kansas Ave., N.W.) at 3pm. for presentations by all candidates dor D.C. delegate.

A bi-monthly publication on interracial living

January–February 1971
Vol. 1 No. 2

IN THIS ISSUE. . .

NATIONAL NEIGHBORS TO REPORT RESULTS OF NATIONWIDE SURVEY OF HOUSING PRACTICES AT ANNUAL CONFERENCE IN JUNE, p.1 . . . CHICAGO BLACK WELFARE MOTHERS ALIVE AND WELL AFTER MOVE TO WHITE MIDDLE-CLASS TOWN OF VALPARAISO, INDIANA, p. 2 . . . NADER ZOOMS IN ON TAX ASSESSMENT PRACTICES, p.2 . . .NATIONAL URBAN LEAGUE REPORTS ON CLEVELAND'S OPERATION EQUALITY, p. 3 . . . FAIR HOUSING GROUPS BEGIN OVER AGAIN IN LOS ANGELES, p. 5 . . . REAL ESTATE BOARD IN BALTIMORE SPEAKS OUT FOR OPEN NEIGHBORHOODS, p. 6.

NATIONAL NEIGHBORS TOGETHER AGAIN

The results of a nationwide study of housing practices will be the focus of the 2nd Annual Conference of the National Neighb ors Council of Delegates scheduled for June, 1971 in Oberlin, Ohio. In attendance will be representatives from the organization's policy-making member groups, as well as those associate members and other interested persons who can be accommodated. Resource people from housing industries will be invited to share their expertise. Strategy will be planned to follow up the housing practices study now under way.

HOUSING PRACTICES UNDER SCRUTINY

National Neighbors' 37 member organizations across the country are zeroing in on the nation's current housing practices as they relate to race. Under the 1866 Civil Rights Act and the 1968 federal fair housing law, all racial discrimination in the rental or sale of housing is illegal. The consensus, however, of those involved in open housing is that blacks and other minorities have yet to achieve full access to available housing within their financial means.

Beverly Latif

When existing laws are evaded, enforcement is generally found to be slow and time-consuming at best. The question is whether traditional practices of housing agencies and institutions are still so unchanged that they continue to perpetuate segregated housing patterns, despite a significant decrease in blatant discrimination, and the general observation that some formerly unyielding brokers and property managers have recently demonstrated a tendency to cave in early rather than confronting minority homeseekers willing to utilize legal avenues to secure housing.

To determine the extent to which institutional housing practices now promote and encourage segregated housing patterns, NN has distributed to its member groups a 5-part questionnaire on practices in their local areas. Information will be researched by each group through their membership and housing committees working in conjunction with sympathetic brokers, fair housing councils, human relations commissions, etc.

The questionnaire deals with tangible facts which lend themselves to counting and to yes/no answers. It covers the following areas: real estate firms and brokers, boards of realtors (these are private local trade associations affiliated with the National Association of Real Estate Boards), real estate licensing agencies, property management firms, and builders and developers. Questions cover segregation within the industry, exclusionary practices, employment practices, advertising practices, and degree of support for enforcement of and compliance with fair housing laws. Copies of the questionnaire may be obtained by writing National Neighbors, 5 Longford St., Philadelphia, PA 19136.

Neighbors is published bi-monthly by National Neighbors, an organization of interracial neighborhoods. Organizational memberships are $25 a year; individual associate memberships are $10 a year. Memberships include copies of all publications. Subscriptions to Neighbors, 6 issues a year, are $5 for 12 issues. Material from this newsletter may be used as long as NN is credited. Co-editors: Phyllis Insull and Jean Bullock. National Neighbors, 5 Longford St., Philadelphia, PA. 19136 (215) 338-2905.

WAYS AND MEANS TO DEVELOP OPEN COMMUNITIES. . .

Neighbors is always on the look-out for techniques that may be helpful to our readers. Below are some ideas gleaned from our mail.

Be a tattle-tale

Notifying investors in apartment complexes of complaints of racial discrimination by the management of their property has been found very effective in bringing immediate attention to problems, according to Denis J. Murphy of the Housing Opportunity Center of Columbus, Ohio. Ohio law requires that limited partnership agreements be filed and made available to the public, and the Housing Center made use of this information to send individual letters to each investor.

Run your own ad and tell it like it is

The Columbus housing center has also secured outside funds to run a prominent display ad for a year in the Dispatch. The ad, located near the real estate classified ads, reads "All properties advertised for rent or sale in Central Ohio are available under the law on a FAIR HOUSING BASIS. If you believe you have been discriminated against because of race, creed, color, or national origin, contact the Housing Opportunity Center, 115 Miami Avenue, Columbus, Ohio, Telephone 228-0851."

Make suburban homeseeking easier for blacks

"The Homeseekers Guide to Fairfax County" presents in careful detail listings of some 600 sub-divisions and 200 apartment and townhouse developments, giving average age of unit, predominant architectural style, distance from Washington, and price range. Included is a large map color-coded by price range. "The Homeseekers Guide" is the work of Joel Miller, a consultant to both the Washington Center for Metropolitan Studies and the Housing Opportunities Council of Metropolitan Washington (DC), and is intended to give black homeseekers information formerly available only through real estate brokers in almost exclusively white Fairfax County, Virginia. (see Publications.)

No black people in your town? Import!

A unique approach to achieving economic and racial integration of an all-white middle-class community comes from Valparaiso, Ind., 50 miles southwest of Chicago's Loop, where a corporation has been formed to buy older houses and lease them to ADC mothers and their children from the Chicago ghetto. A non-profit organization, the Valparaiso Builders Association, began the project and plans to absorb the repairs and upkeep on all properties acquired. Three ADC mothers have moved to Valparaiso, and a spin-off organization has been formed to help them break the poverty cycle with college training for all three mothers and all the supportive aid this requires. The effects on Valparaiso so far: some tension, some publicity, six schools with their first black child, two middle-class black families who have moved on their own into the no longer all-white town, and a waiting list of 15 other families asking help in leaving Chicago slums. The mothers, at last report, find adjustments often difficult but consider the program worthwhile.

TO RAISE FUNDS. . .

Neighbors, Inc. in Washington, DC held a magic show for the entertainment of children and adults . . . Crenshaw Neighbors in L.A. gave a "Funky Blues" cocktail party in honor of their "Red Heart" members, who contribute monthly to the organization's support.

AND TO GET OUTSIDE HELP

Gordon Sherman, president of Businessmen for the Public Interest, told a conference of Suburban Action Institute in New York that his organization uses the techniques of both Nader and Alinsky to combine the leverage of interested community groups with the know-how of BPI professionals. Professionals alone, he said, lack credibility as representatives of the public interest and community groups alone are organized for futility - "the first thing they do is create by-laws' - but "for the period the two are joined they are invulnerable."

How about Nader . . .

Ralph Nader has set up a national clearing house to encourage reform of local assessment practices. Anyone with evidence of a discernible pattern of inequitable property tax assessment practices should write to Sam Simon, Public Interest Research Group, 1025 15th St. NW, No. 601, Washington, DC 20005.

or the Legal Defense Fund

Jeffry Mintz of the Legal Defense Fund, 10 Columbus Circle, NYC 10019, writes NN, "This office is generally available to work on any major cases of housing discrimination, either direct or indirect, as for example, dislocation of persons by highway construction. We, of course, do not have the manpower to handle individual housing discrimination cases."

NOTICE

The federal Internal Revenue Service has issued guidelines for tax-exempt organizations involved in litigation which can reasonably be accepted as being in the broad public interest. Any tax-exempt National Neighbors member group that may fall in this category should contact their local IRS office with questions.

"SOCKING IT TO (AND WITH) CLEVELAND'S ESTABLISHMENT"

The Joe Battle story from the National Urban League Housing News

In an unusual departure from form, the National Urban League publication Housing News devoted three pages of its 6-page October-November issue to the Cleveland "Operation Equality" Urban League program headed by National Neighbors president Joseph H. Battle. We assume the reasons for their giving this program so much attention were similar to those of the National Neighbors Council of Delegates who, in conference last May, elected Joe Battle president and adopted a program of housing action which very clearly had Cleveland's OE program as a model. The reasoning is simple: Joe Battle has a clear-cut program based on a logical and convincing analysis of the current situation in housing, and it is working. There is more to it than that, of course. Part of the rest is Joe's indefatigable zest for his cause and his work. Another part is sheer hindsight - Joe's belief in the feasibility of a program to stimulate the "enlightened self-interest" of the Establishment is more convincing now that his program has demonstrated it than it might have been before the fact. The all-important thing now, however, is that great things are happening in Cleveland, and more people should know about it. We know of no better way to communicate it than to excerpt from the Urban League's excellent article:

"Cleveland OE, like a few other programs around the nation, has decided that a case-by-case approach to serving minority housing needs is like trying to sweep the seashore clean of sand. What is needed instead, they contend, is basic change in the system of housing supply and allocation.

"Joe Battle puts it this way, . . . 'We were getting nowhere trying to go around the system, so we decided to drop the intermediary role and start fighting for breakthroughs for whole classes of homeseekers.'

"As a result, in the past year Cleveland OE has: Obtained a statement of policy by the Cleveland bar association in support of lawyers' actively working for open housing that . . .in one case moved a leading law firm to decline to defend a leading real estate outfit against a charge of discrimination; Obtained, through vigorous prosecution... agreements from several large Cleveland area apartment operators (including the largest) with more than 10,000 units under their control, to train staff in open housing attitudes and the law, open rental rolls to blacks, and to have a black person review all rejected applications, and all eviction actions against blacks; Developed a relationship with big business through the Cleveland Businessmen's Interracial Committee that will soon lead more than a dozen of the largest employers in the area (who spend up to $200,000 a year apiece in real estate commissions to find homes for relocating employees) to refuse to deal with agents who do not practice open housing; Brought actions against a brace of leading real estate firms on charges of discrimination, that seek permanent Federal injunctions barring such practices by them in the future.

"The approach signals an abandonment of traditional fair housing philosophy. 'The traditional arguments were moral preachments,' says Battle. 'We say now that enlightened self-interest is a much more persuasive tool . . . The Bar Association came around out of recognition that since equal opportunity is the law, lawyers could hardly duck the question. We have been able to show the businessmen that it costs them plenty to bring in black employees and then lose them because suitable housing can't be found. . .' As another example, Battle cites the Cleveland area's largest rental management firm, which signed a consent decree. 'The motive in discriminating was business a one,' he says. 'The fear that being open to blacks would lose white tenants. An economic motive. Once we made it clear that we were willing to make the cost of defending suit after suit greater than any conceivable tenant loss, the business decision went the other way. And in implementing it, he was just as thorough as if he were implementing any other business decision.'. . .

"Battle makes it perfectly clear that he considers the real key to final success the program's ability to work with and through major elements of the establishment - the Bar, the business community, other agencies . . . But the ultimate target for Battle (who is a licensed broker and Realtor on leave from his own firm) is the Real Estate Board. He hopes it will ultimately follow the Bar's lead with a strong policy statement. 'We have to soften up the brokers with legal action,' he says. 'But if that's all we do it will be a long, hard pull. We can't just take a promise to be a good boy. We need an affirmative expression of intent. That's why the Bar's statement, and the consent decrees, and the policy statement we hope for from business are vital. In the same way, if we can ever get these guys to say as a profession that they will obey the law, it will make a difference in the individual members' attitudes. And that is the opening we need.' "

COMMUNITY NEWS

Interracial communities as seen by the press

Washington, DC

Neighbors, Inc., short for North Washington Neighbors, Inc., is an interracial community organization in the District of Columbia. During its twelve-year existence, it has received considerable notice in Washington papers, mostly laudatory. But times change, and recently two highly critical articles appeared about NI. The Dec. 6 Washington Post headed one "Neighbors, Inc. no longer cares what color the neighbors are" and one Dec. 20th in the Washington Star was headed "Race Differences Still Impede Neighbors, Inc. Operations".

The gist of both was that NI is an organization dominated by white liberals whose relevance to the problems of their community is dubious. One reporter put it, "(there are) nine-tenths of the 50,000 Neighbors residents who do not hold memberships in the organization and who are never heard from. It may be hard for the leadership of the organization to understand why. But then they are generally not poor, and not black, and do not fully appreciate the day-to-day." The other article acknowledges the "host of accomplishments to its (NI's) credit" ranging from securing a $110,000 grant for area schools to successful fights against zone changes and current plans for a day care center, but added, "But there are still a lot of problems to be dealt with... the group plans to set up a committee to decide what to do about crime and dope," and ends, "For Neighbors, Inc., a group dedicated to maintaining a neighborhood where 'persons of different ethnic and economic backgrounds can live together as good neighbors', the question may no longer be 'Are we relevant to the '70's?' but 'Are we relevant?' "

Larry Pearl, president of NI, was given space by the Post to respond: "I think we know we have some tough problems. . . The problems of crime, education, race and class are complex, staggering, and possibly insoluble. But there are those of us, black and white, who try 'because it's there.' We may 'win' or 'lose', whatever that may mean - and it does not mean keeping a certain percentage of whites in the area - but we will never be the same again as when we came to this neighborhood."

Willingboro, NJ

The headlines of a major story in the Dec. 28 Wall Street Journal read, "Living Together - How one Suburb Acted to Integrate Smoothly, Avoid Major Incidents - The Property Values Increase and Friendliness Prevails In City of Willingboro, NJ".

Ten years ago the New Jersey Supreme Court ordered the Levitt organization in Willingboro to sell to a black family in the development it was building. Today blacks comprise 12% of the population in Willingboro, property values have risen 8% a year with prices now ranging from $18,000 to $40,000 and, according to the Wall Street Journal, harmony prevails.

The secret of middle-class Willingboro's success, as described in the Journal, was Levitt's policy of spacing black families to avoid a ghetto and offering inducements, such as free appliances, to white families to buy next door to blacks. The Journal also gives credit to the low-key efforts of blacks to make integration work through opposing NAACP plans to boycott local merchants who did not employ blacks and successfully using quiet discussion instead.

Judging from the different tenor of the articles on DC and Willingboro, the best measure of the success of an interracial area is economic - if property values go up, you're a success - if the poor move in, you've had it.

An expensive suburb opens up

Cherry Hill, NJ, a 20 minute commute from Philadelphia, has grown from a village to a population of 66,000 in the last few years. Prices of new custom homes range from $25,000 to $60,000. Non-white families number about 300. A young black executive who moved in within the past year reports, "Minority families moving into the community did and still do experience some minor harassment. However, since a real estate broker had his license suspended last year, outright discrimination has ceased. The only practice that is continued by a small number of brokers is the 'guiding' of ethnic groups to certain developments, where they predominate . . . Builders, however, have followed the letter of the law. As a matter of fact, one builder recently filed a complaint against a civic association charging they tried to 'coerce' him and his real estate broker into not selling homes to Negroes. Although some of the residents of Cherry Hill would prefer to live in a 'sterile' community, outright hostile action would usually falter because of a lack of support. Accordingly, purchasing a home is, for the most part, no problem for minorities. As for living in Cherry Hill, a minority family can expect friendliness, indifference, or coolness from neighbors."

COMMUNITY NEWS (cont'd)

Los Angeles

The Fair Housing Congress of Southern California is a new umbrella group set up in the Los Angeles area by community organizations concerned with achieving an open housing market. Fair housing councils and interracial neighborhood associations were faced with the termination of fair housing work by the Housing Opportunities Center whose OEO funds have been restricted to the area of low-cost housing and redevelopment. Supporters of open housing have thus come full circle, since it was fair housing councils who were instrumental in organizing the Housing Opportunities Center in the first place. Among the groups working to build a new organization from scratch are NN members Crenshaw Neighbors, Inglewood Neighbors, and the West Side Fair Housing Council.

East Cleveland

East Cleveland is a bi-racial town on the edge of a city, and suddenly last summer it became a town without a community newspaper. Bruce Melville was one of a "handful" of residents who reacted to this by making the "rash commitment" to start a new newspaper. He reports that the demise of the previous paper "has racial overtones, but that is a whole story in itself. Almost immediately we felt the disintegrating effect of the absence of a community-wide news medium. It seemed as if any kind of organization encountered more obstacles to getting itself together and inspiring people to act in any community-minded way. . . The third issue of the EAST CLEVELAND CITIZEN came out last Thursday (Dec. 17th) . . The paper is guided by a community steering committee, which will hopefully become formalized as its Board of Trustees and help give the publication a kind of community legitimacy rare among newspapers . . . We hope that the CITIZEN can help create the kind of spirit that makes of our bi-racial city a truly integrated community."

SCHOOLS

A two-way busing program works in Shaker Heights

A new school busing program has gone into effect this school term in the affluent Cleveland suburb of Shaker Heights - but not without some emotion-packed negotiations. The problems did not come so much from the white citizens who disliked busing for school integration (though these existed and were vocal) as from the parents of the town's one predominantly black school. The original plan proposed by the school administrative staff in early 1970 was to close the 90% black Moreland School as a neighborhood school and revamp it to be an enrichment center for the entire district, with Moreland children being bused to the six all-white schools in the city (two, Ludlow and Lomond, whose community associations are NN members, were already satisfactorily mixed racially and were unaffected by the plan.)

When the Moreland community association met to discuss the proposal, parents objected strongly to the one-way policy of busing only black children. School integration, they felt, should be a two-way street; Moreland School should stay open and receive white children bused to it as well as send its students out.

The School Board agreed to try. They accepted a proposal to leave Moreland those students whose parents requested in writing that they not be bused to another school. And, the School Board said, the superintendent was prepared to receive requests from parents in the six white schools that their offspring be bused to Moreland. If Moreland could be racially balanced in this way, the School Board promised it would stay open. Otherwise, all Moreland children would be bused, since their relatively lower achievement scores had convinced the Board that integration was essential.

The unconventional plan succeeded. By last fall enough white parents had signed up that Moreland opened its doors as a racially mixed school, and six other schools have adjusted smoothly to their new integrated status.

"Rainbow Power"

When a young black girl was a fifth-grade student at integrated Ludlow School in Shaker Heights, she wrote a poem. It has since been included in "The World from My Window" by George Mendoza, a collection of poems intended to show what children see and feel deeply.

RAINBOW POWER

by Rosalind Franklin

Races are the colors of people's skin. Well, the kind I'm talking about.
Races are many different colors, red, white, brown and yellow.
I think races should stay together.
Some people think differently, but I think we should stay together
As rainbow power.
Colors put together.
Do you like how I put in the saying 'rainbow power'?"

HOUSING ACTION NEWS

As this issue of Neighbors is being prepared, news comes of the landmark decision of the U.S. Court of Appeals for the Third Circuit in Philadelphia that federal civil rights and housing laws require HUD to affirmatively promote fair housing. Specifically, the court held that federal housing funds could not be spent on projects that would increase or maintain segregation without an over-riding reason. Ripples from this decision will spread far and wide; we suspect it marks at long last the end, or at least the beginning of the end, of an era in which the federal government, no matter where it has put its mouth, has put its money on segregated housing.

Community real estate corporation sues realty board

Suburban Fair Housing, Inc. of Ardmore, Pa. describes itself in bold print on its brochure as "a licensed real estate firm dedicated to overcoming discrimination in housing." Organized in 1956 by suburban property owners who hold shares in the business, SFH has made over 160 integration sales in more than 40 suburban communities. At the beginning, brokers refused to cooperate with the new real estate office but as time went on, they became more willing to make their listings available. SFH continued to be excluded, however, from the multiple listing service controlled by the Main Line Board of Realtors. After three unsuccessful attempts to gain membership, the crusading real estate corporation has filed suit against the realty board, charging restraint of trade.

Realtors react to fair housing laws with support in Baltimore

"Equal Opportunity in Housing, a Guide for Buyers, Sellers, Landlords, Tenants, Community and Neighborhood Associations" has been published as a public service by the Real Estate Board of Greater Baltimore. Some excerpts: "All buyers and renters are entitled, by law, to equal treatment. The Real Estate Board of Greater Baltimore is committed to this standard and pledged to uphold it. . . The presence of a minority group member in your neighborhood is not the reason for declining values. Decreasing values are caused by panic on the part of a few individuals who act alone in an ill-advised and short-sighted manner. . . If you plan to sell, consult your Realtor about pricing, financing, and the use of a 'For Sale' sign. A large number of 'For Sale' signs in one neighborhood can make buyers apprehensive. . . Local neighborhood associations help preserve a neighborhood's standards and handle its problems. Urge all old and new neighbors to join and play an active role in your association... . Promptly report all rumors to your association and encourage all qualified prospective residents to consider your neighborhood for their new home."

Project FREE finds discrimination laws easy to test, hard to enforce

In March, 1969, Project FREE in southern New Jersey tested 20 apartment complexes during 2 days and found 12 violations. A year later, they made 14 tests and found 5 violations. All violations they have followed with complaints. Hearings on the twelve 1969 violations were still not complete when they made the 1970 test, and of the five 1970 cases, as of January, 1971, one has come to a hearing, two hearings are due in the very near future, and two others are still pending. As a result of these experiences, FREE has recommended to state legislative committees several procedures for improving law enforcement in this area, including expanding the staff of the Division on Civil Rights, increasing their salaries, providing the Division with its own attorney, and increasing the number of Hearing Examiners. In addition, FREE recommended the licensing of owners and managers of large apartment complexes and making legal provision for punitive damages in discrimination cases.

SOHI ad gets wide distribution

"Your heart may be in the right place, but are you?", an ad placed by Sponsors of Open Housing Investment in the NY Times urging Americans who support open communities to avoid one-race neighborhoods in making their own housing choices, has been reprinted in full in The American Teacher, AFT publication, and in The Cooperator, published by United Housing Federation.

Interracial neighborhoods form coalition to fight brokers

Four Philadelphia neighborhood associations, including NN member Northwest Neighbors, Inc., have formed a coalition to combat the practices of real estate brokers which they say are destroying the interracial character of their communities. The groups have previously worked individually and together to bring charges under Philadelphia's antisolicitation law, which forbids brokers to solicit sales from homeowners who have notified them they do not wish to be solicited, to picket offending realty firms, and to protest misrepresentation in advertising and discriminatory advertising practices. The new coalition has been formed to take legal action.

PUBLICATIONS

"A Guide to Housing Problems", a manual of laws affecting tenant-landlord relations in Baltimore, Sept, 1970. Provides a model for useful tool for organizations concerned with helping tenant problems - Baltimore Neighborhoods sold 600 copies in first month of publication. Available at 25 ¢ plus 15 ¢ handling from Baltimore Neighborhoods, 32 W. 25th St., Baltimore, MD 21218.

"Homeseekers Guide to Fairfax County, Va." (See p.2) Order from Housing Opportunities Council, 711 14th St., NW., Washington DC 20005. $1.50 per copy; $13 for 10 copies; 25 copies for $30.

"Racial Integration in American Neighborhoods: A Comparative Survey", by Norman M. Bradburn, Seymour Sudman, and Galen L. Gockel, 1970, National Opinion Research Center, 6030 S. Ellis Ave., Chicago, IL 60637. Final complete report of NORC research study conducted in spring 1967, and formerly partially reported in The Journal of Business of the University of Chicago. "On the basis of our data, we estimate that 36 million Americans, or 19% of the population, lived in racially integrated neighborhoods in the spring of 1967. . . We estimate that the proportion of households living in integrated neighborhoods will rise slowly to about 35% over the next decade." Includes a wealth of data on socio-economic characteristics, attitudes, housing conditions, life styles, historical development, etc. of "white-segregated, open, moderately integrated, substantially integrated, and Negro-segregated" neighborhoods, whose "process definitions" a reader must keep firmly in mind to avoid hopeless confusion. NORC's statistics, which seemed incredible to many when first released in Jan, 1969, forecast the 1970 census figures of suburban increase in black population.

"The Anxious Majority" by Lois Wille. Reprint of a 1970 feature series in The Chicago Daily News on the problems of the white ethnic neighborhoods of Chicago faced with incoming black residents and the beginnings of a tendency toward interracial collaboration on "common gut issues" - upgrading schools, fighting crime, keeping city services. Reprints available from American Jewish Committee, 165 E. 56 St., NYC 10022.

"Small Urban Spaces" by Whitney North Seymour, Jr., ed., $4.75 from the Parks Council, 80 Central Park West, NYC 10023. "Useful and specific facts for anyone interested in getting a small park for his neighborhood. . . with concrete examples from some of our large cities."

"The Social Consequences of Residential Segregation of the Urban American Negro" by Stephen D. Berger, 1970. Reprint of material included in amici curiae brief submitted to U.S. Supreme Court in Jones v Mayer in 1968, by NAACP et al, which resulted in opinion that all housing discrimination violates 1866 Civil Rights Act. Appendix gives Supreme Court opinions in famous case, which make use of social consequences arguments presented here. Available at 50 ¢ from Metropolitan Applied Research Center, 60 E. 86th St., NYC 10028.

PUBLICATIONS (cont'd)

Intergroup Relations Newsletter, formerly the "Lou Jones Newsletter". Published each month by the Institute of Race & Community Relations, Univ. of Calif., 2543 Channing Way, Berkeley, CA 94720 to help provide "communication and understanding across racial, ethnic, religious, and cultural communities". Subscription, $4.

"Housing Discrimination and the Maryland Real Estate Commission", Public Information Document #3, released June 9, 1970 by the State of Maryland Commission on Human Relations. Must reading for anyone concerned with role of real estate commissions in enforcing and supporting fair housing law. Write Baltimore Neighbors, Inc., 32 W. 25th St., Baltimore, Md. 21218 for information on securing a copy.

"Deerfield Impromptu", a children's play with music, by Marquita Platov. Children in a dramatic school explore, with use of dialogue, songs, and masks, the meaning to them of the historical Deerfield, Ill. housing case in which the then all-white town prevented the building of a new interracial community. Today there are as many black families living in Deerfield as the builders planned for over a decade ago, and the play depicts the story as one of the slow but sure triumphs of justice by nonviolent means. Cast is eleven children and two adults. Order from Peace Creativity, c/o Community Market, 849 Edkin St., West Chester, Pa. 19280. Copies of "Deerfield Impromptu" script, $1.00 each; music separately $1.00 each.

Season's Greetings . . .

"Gee! It's Mr. Whitney Young. Remember? He's the one who first introduced us"

. . .in the spirit of Whitney Young's unswerving confidence in the eventual brotherhood of man. He once wrote some words that can serve us well in this new year:

> "And after trying one approach after another, it gets clearer and clearer that whether we are talking about education, health, welfare, employment, or any other element of community stability, the central factor – the key – is housing. And this means more than the quality of housing, although that is very important. It is also where the housing is."

May the coming year bring more of us together in neighborhoods which have replaced racism with the beginnings of a community of man.

Joseph H. Battle

President, National Neighbors

Neighbors is published bi-monthly by National Neighbors, an organization of interracial neighborhoods. Organizational memberships are $25 a year; individual associate memberships are $10 a year. Memberships include copies of all publications. Subscriptions to Neighbors, 6 issues a year, are $5 for 12 issues. Material from this newsletter may be used as long as NN is credited. Co-editors: Phyllis Insull and Jean Bullock. National Neighbors, 5 Longford St., Philadelphia PA 19136. (215) 338-2905.

LOVE, HOPE, PROGRESS, LAUGHTER – A SEASONAL POT-POURRI:

A Black-Controlled Foundation. . .

The Interreligious Foundation for Community Organization is a coalition of national religious agencies and minority community groups. Its executive director is Lucius Walker, Jr., its president is Earl E. Allen; and both of them are black. IFCO's purpose is to fund community organizations on projects "which meet criteria geared to self-determining efforts of the poor to better enable their participation in all aspects of American life." Since IFCO began operations in 1967, it has allocated grants totalling more than $2.7 million, and ranks among the top 200 American foundations in terms of total grants made. Criteria for judging projects for funding are: need, indigenous participation, creative ideas, potential for self-support (should have exhausted local resources to raise developmental funds), leadership development, and ability to implement. Among the community organizations funded in fiscal 1970 were Capitol East Community Organization in Washington, DC, which received $26,950 for its program on issues of land redevelopment, hospital policies and crime control in a declining neighborhood of some 115,000 people; the Committee for a Unified Newark with $20,000 for educational, cultural and citizenship programs; the Garfield Organization in Chicago with $11,250 for its economic development program; and the Woodlawn Organization with $40,000. Organization for a Better Austin, an interracial community association in Chicago, received $1,100 for a training program. Abundant information on the foundation can be obtained by writing IFCO, 475 Riverside Drive., Room 560, New York, NY 10027.

Classification Complexity. . .

The Metis Association of Alberta, Canada presumably promotes the cause of Indians, and its by-laws specifically restrict membership to persons who are half-Indian and half-white. At a conference of 500 Metis, David Adams, whose father was Black and whose mother was Indian, demanded to know why he should be excluded, stating "I'm just as much Indian as any of you!" The Association president promised to personally seek a change in the by-laws, since it is the Indian blood with which the group is concerned. And, anyone who is half-Indian should be recognized as whole-Metis!

Lasting Learning. . .

Two days out of every year, a teacher in rural Iowa divides her classes into two groups -- the blue eyes and the brown eyes. Next, she alternates giving one group praise and privileges while the other is downgraded through fault finding and denial of provileges. Her method of teaching about the effect of discrimination is the subject of a book entitled A Class Divided by William Peters, who also wrote and directed an ABC TV production of "The Eye of the Storm" about the project.

Mrs. Jane Elliott of Riceville, Iowa, says that the project is the most difficult thing she does all year, but well worth it because the students experience the effects of discrimination directly. "After being accused of being stupid and clumsy, the children really begin to act that way. Children who normally had no learning problems couldn't learn. Those in the superior group became superior students. You can't believe it unless you see it."

A recent study showed Mrs. Elliott's previous students exhibited much less racism than others from the same school, and that Riceville children in general showed much less racism than their counterparts in two comparable nearby communities.

Love Power. . .

While the concept of "transracial adoption" is not startlingly new in most interracial neighborhoods, national publicity has drawn attention to local areas. Larry Grisvold, an active member of the Irvington Community Association in Portland, Oregon, was featured as "Model Cities Citizen of the Month" in Portland's Model Cities News. The Los Angeles Times featured the family of Larry Gluck, president of Crenshaw Neighbors. Both are white couples who have adopted black children. Color them love.

and a Scoop!

It all began in the Town of Nutley, New Jersey, last February when the local dog ordinance was amended to require that a person curbing his dog "shall immediately remove all feces deposited by such dog by any sanitary method approved by the local Health Authority." Pretty soon the town's leading official was on television, as was a citizen who sued the Town when he was convicted twice for failing to clean up after his Great Dane, Snoopy. When the court not only approved the ordinance but broadened its scope, municipalities everywhere began to pass similar ordinances. The Dec. 20 issue of TIME shows a Shaker Heights resident armed with scoop and shovel as she takes her dog for a walk. In every interracial community, dogs and expressways seem to be major issues. . .so here is a suggestion for alleviating at least one of those!

NN NEWS

An organization needs meetings, but for a national group on a limited budget, this can present problems. Two of NN's committees recently met the problem with a week-end "retreat" - packing into two days enough substance to fill months of the weekly two-hour meetings that a local organization would schedule.

Planning Ahead

The long range planning committee of National Neighbors, appointed by the Board at the Oberlin conference and chaired by vice-president Ruth Steele, met at her home in Philadelphia the week-end of December 3. By farming out children, packing the freezer with home-cooked meals, and appropriating Phyllis Insull's Japanese bed, Ruth housed and fed everyone for two days and nights. Discussion followed a rigorous schedule and was far-ranging, spirited, and very productive. The committee will travel again to Philadelphia in the spring to complete a final report on their recommendations for National Neighbors' long-term plans — to be presented at the annual conference in Baltimore next June.

Open Housing Committee Meets

The new open housing committee of National Neighbors, chaired by president Joe Battle, met the week-end of December 10 in an Adirondacks retreat. Present were Joe Battle, Jim Harvey, Betty Hoeber, Howard Lewis, Jean Milgram, and Ruth Steele. Their mission — to come up with a detailed plan for implementing NN's commitment to achieve an open housing market in this country. The committee recommended that NN seek funding and support for a single-purpose national project with the aim of eliminating racial discrimination from the housing market. Following approval by NN's Board a proposal will be circulated widely among fair housing supporters. Further details will be printed in the next issue of NEIGHBORS.

League of Women Voters Publicizes NN

In its Nov. 1971 issue, The National Voter, bimonthly publication of the League of Women Voters of the United States, suggested to "League members moving to another city and interested in living in interracial neighborhoods" that they contact National Neighbors for help. Letters from League women have been coming in to the NN office ever since — some are moving and want information on interracial neighborhoods, and some already live in an interracial neighborhood and want to know more about National Neighbors.

And So Does the NAACP

"The Story of National Neighbors" by Jean Milgram, executive director of NN, appears in the December, 1971 issue of The Crisis, official organ of the National Association for the Advancement of Colored People. Thank you, Henry Lee Moon, editor, for helping to spread the word so far and wide among the half a million members of the NAACP.

Views on Racial Problems

Last spring NN sent out a small ballot to a selected list of individuals who support integrated housing. We commented that there seems to be widespread disagreement about current trends in meeting racial problems and asked them to check whether they thought racial problems were getting better, worse, or cannot be evaluated, and asked their comments. We had 75 replies: 36 said "better"; 20 said "worse"; 13 said "cannot evaluate"; and 6 checked "better" and "worse." The comments make it even clearer that the ambivalent feelings are very real. Some of them:

"Seem better but really getting worse. We seem to be in a period of peace, but I find the old racists are still around and many people supporting them. Not enough have changed."

"The reality about discrimination is clearly better. But due to rising expectations and frustrations, the problem has increased."

"What I hear and see are not parallel; what is said is frequently inconsistent with what is being done. Result — I'm bewildered."

"Better. We no longer seem to ignore our problems as we used to do. A more open atmosphere may be helpful in the end, even if it causes clashes now."

"Worse. While the issues are clearly defined for the first time, subtle resistance to the solution to the problem is increasing."

"None of these. Our racial problems seem to be getting neither better nor worse — only different."

COMMUNITY NEWS

Washington, DC: No Way For Roadway!

The latest attempt by Congress to eliminate community opposition to the proposed North Central Freeway in the District didn't work. It seems that a PR firm, New Wave Communications, was hired to "verify" citizens' feelings, but members of Neighbors, Inc. felt the company was really hired to do a selling job. NEIGHBORS INK, reporting on one meeting, commented: "After about an hour of spirited dialogue, they decided to give up on us! Mr. Mitchell (from New Wave) said, 'I don't feel we're getting the kind of response we're looking for.' A word of advice to any future salesmen Congress may try to send us. The people in this community are too sophisticated and knowledgeable to fall for those tactics."

Baltimore, MD: If at First You Don't Succeed. . .

When 450 members of the Real Estate Board of Greater Baltimore met for their annual luncheon, they were entertained by more than Muzak. The usual speeches and chicken ala king on toast points shared the occasion with about 30 members of the Northeast Community Organization, who lined up in front of the head table chanting "We want a meeting!" and periodically trying to speak into the microphone. NECO was protesting the refusal of the Real Estate Board to meet with them to discuss ouster of a Realtor accused of block busting and steering. The Baltimore Sun reported that when one Realtor shouted, "Throw the bums out," a NECO woman responded, "You're the bums! You're in our neighborhoods. Don't call me a bum or I'll bust you with an umbrella!" Finally, at the request of the restaurant owner, backed up by several policemen, the NECO members retired, and the shaken President of the Board told the press that a meeting with the group would be arranged.

Philadelphia, PA: Reviving a Lost Art

Concerned residents in West Mt. Airy got together to talk about how rising crime in the area was eroding the sense of community once prevalent everywhere. People had become so frightened by all the "could happens" that they went about their individual business barely speaking to each other, and seldom went back out through the maze of locks and security devices once they reached home. Someone threw out the idea of "Walk & Talk," a specified time in the evening when everyone could circulate in his block, chatting with persons on the street and on porches. Along with conversation and exercise, residents planned activities which varied with each block — refreshments, a talent show, a smorgasbord, and a plant swapping, to name a few. Now, West Mt. Airy has an annual event everyone looks forward to.

Stop Talking and Do Something

Community organizations in Northwest Philadelphia have had a long history of trying to work out an agreement with the real estate board that would put an end to illegal and unethical practices in the area. For a time things looked better — the Board had designated the area as "non-solicitation" area and banned the practice of soliciting listings by member brokers as well as limiting the number of For Sale signs. But after 3 months the Realty Board declared the area "stabilized" and removed all restrictions. Now nine community groups have decided to take matters into their own hands. They have jointly formed the Northwest Community Housing Association which will work, with a full-time staff person, to encourage whites to stay and to work to channel all real estate transactions through brokers that have agreed to abide by the neighborhood's criteria of: 1) not soliciting listings, 2) not advertising selectively, 3) following a fair mortgaging policy, and 4) never disparaging the neighborhood on race.

Rochester, NY: You Tell 'em!

It was a blistering summer day. Heat waves radiated from the asphalt. The downtown bridge across the river was closed for interstate highway construction, and hundreds of frustrated, sweating motorists crawled stop-and-go along city streets enroute to their distant suburban homes. Some cheerful people walked down the line of cars passing out bright yellow flyers: "IF YOU LIVED IN THE 19th WARD, YOU WOULD BE HOME NOW! THINK ABOUT IT!! CALL 328-4708 FOR 19th WARD COMMUNITY ASSOCIATION FREE REAL ESTATE LISTING SERVICE." Incidentally, the Listing Service isn't all smugness -- not by a long shot. Volunteers manning it over the past three years have successfully preempted a total of $69,789 in commissions from "professional" real estate salesmen!

Hartford, CT: . . .Another Way!

There has been a groundswell reaction to the Blue Hills Housing Service Corporation's efforts to attract new residents to its interracial neighborhood. Several faculty members from a suburban private school simultaneously moved their families to Blue Hills, which sparked community interest in promoting the idea. Aimed at suburbanites and featuring the advantages of living in town, a well planned campaign has included tours, a fact sheet, and an ad in the local newspaper headed "WHY HAVE 500 SUBURBANITES MOVED BACK TO HARTFORD?" With local media commenting favorably on the project, it's no wonder that the number of prospective and actual buyers has grown impressively. Says the Blue Hills News ". . .most people responding to promotional literature are interested in the real estate values offered in the neighborhood and reduced commuting time, which is also an economy. . .integrated living patterns are a plus."

COMMUNITY NEWS (Cont'd)

Indianapolis, IN: A Re-Do Co-op!

Anyone living in the Meridian-Kessler area is in luck if he is planning to renovate, paint or redecorate his home. Why? Because the M-K Neighborhood Association is offering the experience and advice of area architects and interior designers to its residents. The unique service, along with pointers on landscaping and yard care, is provided on an appointment basis through the M-K office. A really great idea, sure to go over big!

Columbus, OH: Consumer Campaign

In what it calls the "most important campaign in its history," the Northwest Area Council for Human Relations in Columbus, OH is undertaking to get residents to sign a pledge that they will only use real estate professionals who have committed themselves to fair housing practices. Approved Realtors and apartment owners and managers must sign a pledge not only to obey the law against racial discrimination but to make affirmative efforts to market and advertise their properties to as many potential interested people as possible without regard to race, creed, or national origin. The NACHR office will make the list of approved real estate professionals available to all pledge signers, who also agree to recommend these professionals to friends or relatives who need these services.

Detroit, MI: Block Power

According to an article in the Detroit Free Press, block clubs in the city are becoming a political power to be reckoned with. The news story hazards a guess that the number lies between 2,000 and 6,000. Said one councilman, "I believe we have more block clubs and community organizations proportionately than any other large city." Waymon Dunn, President of the Community Improvement Association of Block Clubs says the functions of the clubs are "creating a bridge of understanding between black and white; having communication with kids; urging people to keep their property up and maintain a high standard of living." Mr. Dunn adds, "We've got to go to the political parties, to the labor organizations who control what's going on, and get them to see the problems. We're at the brink now -- not of partisan politics -- but of effective politics."

LEGAL ACTION

How About Freedom of Association?

In Trafficante, et al v. Metropolitan Life Ins. Co., white residents of an apartment complex in San Francisco brought suit in federal district court against the owner and operator of the complex, alleging that they were engaged in discriminatory housing practices in violation of the 1968 fair housing act and were thus denying plaintiffs their right to live in a racially integrated community. The defendants argued that the plaintiffs were not "persons aggrieved", since their right to purchase or rent real estate was not claimed to be violated, and therefore they had no standing to sue. The court upheld the defendants' contention, ruling that "the enforcement of the public interest" and "the creation of integrated communities" was entrusted by Congress to the Attorney General under the Act "and not to private litigants such as those before the Court." An appellate court upheld the district court's decision.

Warnings to Realtors:

One of the obvious functions of reporting services for people in the housing and real estate industries -- judging from those we see -- is to warn their clients of possible danger areas posed by the Civil Rights Act of 1968. Apparently these publications view the Act as a real booby-trap which executives should pay good money to learn how to avoid. Some samples:

Don't Mention It

The Real Estate Law Report headlines its main story in the December issue: "Caution: Civil Rights Act of 1968 Being Broadly Construed." The article goes on to report on court cases where defendants were held to have violated anti-block busting laws by making any reference to Negroes entering a neighborhood, even if in response to a question or in an indirect manner through reference to "a changing neighborhood."

Appraisers Under Scrutiny

The Mortgage and Real Estate Executive Report of December 1 heads an article: "Caution: Appraisal Reports May Violate Civil Rights Act," and states that the Act "contains a time bomb that may go off at any minute." According to this latter report, the Department of Justice holds that a real estate appraiser may violate the law if he states that property values have declined as a result of change in the racial composition of the residents, even if that is a true statement "if it is made for profit and if its contents controvene these statutory provisions."

HOUSING NEWS

A New Tool For Those Community-Realtor Confrontations

Faced with the need for communication with real estate brokers and boards, Baltimore Neighborhoods, Inc. found that everything frequently bogged down in semantic difficulties. Often-used terms like "block-busting" didn't always mean the same thing to brokers and community people. John Michener, chairman of BNI's integrated neighborhoods committee, took on the task of developing some rigorous definitions. Herewith the results:

Racial Steering: There is "racial steering" whenever the following elements exist:

(1) A buyer has described (or the broker has determined) the type of housing the buyer wants and can afford; (2) the buyer has not specifically requested that he not be shown homes in areas of designated racial composition; (3) the broker shows homes meeting the buyer's needs in an area of a particular racial composition while not showing other homes also meeting the buyer's needs but which are located in an area of a different racial composition; (4) the causative factor in the different pattern of showing homes is the race of the buyer. It is immaterial whether the broker is trying to anticipate "probable" or "typical" buyer reactions to the neighborhoods not being shown; is anticipating that a sale to the buyer will be quicker or easier in the area shown than a sale in the area not shown; does or does not consciously realize the difference in his actions. The controlling factor for "racial steering" is a difference in treatment of buyers or areas shown based on racial factors.

Blockbusting: There is "blockbusting" when an activity (or group of activities) is undertaken in an area, usually by a broker, with the effect of inducing the residents (owners or renters) to leave by inculcating belief (or fear) of impending change. Typical fears include the pressence of prospects of: (1) a disproportionately large number of homes for sale; (2) a massive change in the racial character of the neighborhood; (3) new neighborhood residents of a different racial background and with such conflicting lifestyles and attitudes that neighborhood peace and harmony will be impossible. It is immaterial with respect to "blockbusting" whether the activity is undertaken with the deliberate intent of generating sales volume for brokers or to create new housing opportunities for minority persons. (Note: Sale of a house in a previously all white block to a qualified bona fide black buyer is not blockbusting. On the contrary, refusal to show or sell a house to such a buyer is either overt illegal discrimination or illegal steering.)

Neighborhood Integration: Four different requirements must be met for neighborhood integration. These are: (1) physical - different races must be present in the neighborhood as residents; (2) social - the persons of different races must live in separate households, must not be in an employee-employer relationship with each other, and must have co-equal status as residents of the neighborhood; (3) knowledge - there must be a general awareness of factors (1) and (2) . . a neighborhood is not integrated if the presence of the persons of different racial backgrounds is hidden or unknown; and (4) time - the multiracial residency must be continuing. . .generally it is not continuing if it exists on a day-to-day basis, such as transient hotel or motel rentals; it will end on a definite date, such as a college semester; it will end in the immediate future, even though there is no exact date. (A neighborhood where all occupants of one race have made definite or near-definite arrangements to leave in the near future cannot be regarded as integrated. Such a neighborhood is transitional with a temporary multiracial composition. Believers in integration often will not regard multiracial neighborhoods as integrated if those neighborhoods do not value their multiracial character. Without such valuation the multiracial character is of short duration and the neighborhood is transitional - the durational requirement will not be met.)

HUD OPENS DOORS

Discriminated Against?

Dial 800-424-8590

Since last June, the Department of Housing and Urban Development has been trying out an Equal Housing Opportunity Campaign in the Philadelphia Region. Its success has led HUD to expand the service to the entire area east of the Mississippi. TV public service commercials tell the listener, "Discrimination in housing is against the law. If you're having trouble, call HUD toll free." HUD seeks the support of fair housing and human rights groups to make the campaign a success.

PUBLICATIONS AND FILMS

On Race

"Attitudes Toward Racial Integration", by A. M. Greeley and P. B. Sheatsley. In Scientific American, Dec., 1971. Report on a 1970 study that is the latest in a series beginning in 1942. Shows pro-integration attitudes have steadily increased, with large majority of whites favorable to integration of public facilities, schools, and transportation. Only neighborhood integration and mixed marriages still divide white Americans about equally.

"The Black Mystique Pitfall" by William H. Hastie. In Crisis, October, 1971. Text of Judge Hastie's electrifying address to the NAACP Annual Convention in July. "Racial mystique. . is destructive of our common humanity and that willingness to make common cause for human betterment which whites and blacks so badly need."

"Blaming the Victim", by William Ryan. Pantheon Books, NY, 1971. A fascinating exposition of the process by which those whose actions create a social problem blame the victim of the action for the existence of the problem. Dr. Ryan, a psychologist, relates this mechanism to today's urban and racial problems with wit and compelling logic.

"Colors Around Me". Afro-Am Publishing Co., 1727 S. Indiana Ave., Chicago IL 60616. A readiness picture book for kindergarten and first grade, relating skin colors to other child-appeal objects. . .e.g., "Stuart is brown like a copper penny." Very attractive drawings. Larger "Colors of Man" kit includes spirit masters, skin color crayons, study prints, booklets, and teachers' guide. Book, $4.95; kit, $21.00.

"Federal Civil Rights Enforcement". U.S.Commission on Civil Rights, Clearinghouse Publication #31, U. S. Govt. Printing Office, 50 cents. Also, "Federal Civil Rights Enforcement - Seven Months Later", available free from the Commission, Washington, DC. Landmark reports.

"Hanging Together" by William Taylor. Simon & Schuster, NY. A trenchant analysis of the whole range of urban problems and their effect on equal opportunity for all citizens. Of particular interest are the chapters on various solutions to housing problems and Mr. Taylor's analysis of what is needed to achieve equal opportunity in housing.

Periodicals

Akwesasne Notes Published by the Mohawk Nation, via Rooseveltown, NY 13683. Lively monthly newsletter about American Indians by American Indians. Free to those requesting it.

Civil Rights Digest. Published by the U.S. Civil Rights Commission, Washington, DC 20425. Quarterly magazine with articles "offered to stimulate ideas and interest on the various current issues concerning civil rights."

Journal of Intergroup Relations. A quarterly publication of the National Association of Human Rights Workers, 230 Heyburn Bldg., Louisville, KY 40202. $6.00 a year; free to members of NAHRW. A practitioner's publication for those working in field of human rights.

PUBLICATIONS (Cont'd)

On Housing

"Behind Ghetto Walls", by Lee Rainwater. Aldine Publishing Co., Chicago, 1970. Subtitled, "Black family life in a federal slum", this is a report on a research project in the infamous Pruitt-Igoe public housing project in St. Louis. Includes many transcriptions of recorded personal histories. Major conclusion: "The problem of poverty (and its sub-culture) is a problem of relative deprivation. . .effective poverty strategies have to change the income situation before requiring changes in behavior and attitudes."

"The Challenge of Multiracial Living", by John Michener. In Friends Journal, Oct. 15, 1971. "We can put into practice our beliefs in the brotherhood of man and help to attain a healthy society simply by living in a multiracial community." Available free from National Neighbors.

"A Decent Place to Live". Ford Foundation, Office of Reports, 320 E. 43 St., NYC, NY 10017. A report describing the major efforts by the nation's largest foundation in the areas of increasing housing supply, supporting open housing, and inner-city renewal. An excellent source of concise information on some of the country's most important projects in these areas.

"Equal Housing Opportunities in the South". Southern Regional Council, 5 Forsyth St., NW., Atlanta, GA 30303, July, 1971. 50 cents. Reports on action by HUD, the Justice Dept., and community organizations and its impact, or lack of it, on housing discrimination in the South.

"Factors Affecting Housing Choice for Black Families in Chicago". Leadership Council for Metropolitan Open Communities, 155 N. Wacker Dr., Chicago IL 60606. $2.00. Report on a study that found that inner city residents fear discrimination, violence, and isolation when considering a suburban move. Black suburbanites confirm that isolation is a problem.

"Far Out! Federal Agency Relocation". Housing Opportunities Council of Metropolitan Washington, 1522 K St. NW., Washington DC 20005. August, 1971. Recommendations for federal policy in locating federal agencies so as to ensure adequate and non-discriminatory housing for employees. Especially pertinent now, since HUD and GSA have issued guidelines on this subject and invite comment and suggestions.

"Homeownership for Lower Income Families, a Report on the Racial and Ethnic Impact of the Section 235 Program". U.S. Civil Rights Commission, Washington DC 20425, June, 1971. The report on the U.S. Civil Rights Commission's findings that the federal program subsidizing home ownership for poor families is being used to perpetuate racial segregation.

"Our Failure to Gain Compliance with Fair Housing Laws", by Joseph Battle. Published by National Neighbors, 5 Longford Street, Philadelphia PA 19136. 10 cents, 12 for $1.00. The text of a speech by the president of National Neighbors to the 19th Ward Community Association in Rochester, NY. A closely reasoned analysis of the reasons for the continued, if illegal, exclusion of racial minorities from the housing market, and the need to focus on the real estate system as the controlling force in perpetuating segregated housing patterns.

Film

Many TV documentary films are available for rent from Audio-Visual Services, the Pennsylvania State University, 6 Willard Building, University Park, PA 16802. (814) 865-6315. Among these are "The Cities, Dilemma in Black and White", 1968, 54 minutes color, $18.90, which features Bedford-Stuyvesant and Crenshaw Neighbors in Los Angeles, and "Segregation Northern Style", 1965, 33 minutes, $6.60, featuring Glenwood Lake in New Rochelle, NY.

FACTS ABOUT NATIONAL Neighbors

WHAT IS NATIONAL NEIGHBORS?

A national non-profit, tax-exempt organization of interracial neighborhoods, founded in May, 1970. Its purpose is "to foster and encourage successfully integrated neighborhoods."

WHO ARE ITS MEMBERS?

The voting members are 37 community associations of residents of interracial neighborhoods of 25 cities in 17 states and the District of Columbia. These groups have a total membership approximating 20,000 and their communities include hundreds of thousands. NN also has over a hundred associate members, individuals and organizations, who support its goals.

WHO RUNS THE ORGANIZATION?

Representatives of its member groups. A council of Delegates, made up of a black and a white delegate from each association, elects the officers and the Board of Directors, and is the policy making body. The members of the Board implement that policy. Day to day business is handled by a staff headed by an executive.

WHAT ARE YOUR IMMEDIATE PLANS?

Our program for 1971 includes:

- a major challenge to the real estate industries to promote open housing;
- publication of a directory of interracial communities;

a monthly newsletter;

development of publications useful to interracial neighborhoods (now available at 25 cents each, "Maintaining an Integrated Community").

The next annual conference of our Council of Delegates, planned for Oberlin, Ohio in the June of 1971, will survey our program and make further plans.

WHERE WILL THE MONEY COME FROM?

Dues, contributions, sales of publications, and grants. While NN will seek help in fund raising from its member groups, appeals will go to those everywhere who support equality within a pluralistic society as a goal for America. All contributions to NN are deductible from federal income tax.

WHY ANOTHER NATIONAL ORGANIZATION?

Our member groups exist because people in many different interracial neighborhoods independently felt the need to organize. They have also long felt the need to communicate with each other, to learn from each other, and to join together in broader efforts. No existing organization offered this opportunity. So when SOHI (Sponsors of Open Housing Investment) brought leaders of 12 such communities together in March, 1969, to ask what help was most needed, a new national organization was proposed. SOHI agreed to underwrite the cost of organizing and within 14 months, NN was born.

WHY SHOULD NN GET OUTSIDE SUPPORT?

The keystone that supports institutional racism in America is segregated housing patterns. Schools, jobs, urban crises—all have housing patterns as the basic problem. But successful interracial communities do not just happen, even with laws prohibiting housing discrimination. They require much work. National Neigh-

bors can strengthen all those local efforts that will build new patterns.

WHO CAN JOIN?

Any individual or group supporting NN's purpose can become an associate member. Voting membership is restricted to associations of residents of interracial neighborhoods. Dues for organizations are $25 a year, dues for individuals are $10 a year. All categories of membership include copies of NN publications.

NEIGHBORHOOD STABILIZATION:

A PROGRAM

May, 1966
Revised

With the aid of recent legislation, increasing education and greater financial security Negro Americans are restive at being confined to areas of old and poor housing. Negroes are moving more frequently into formerly all-white neighborhoods or using their newly-found political power to demand municipal services and aid in upgrading their present dwellings. Community groups formed to articulate these demands or to resist exploitation by unscrupulous real estate speculators have become units with great political potential. So the pressure by Negroes for better housing may lead to a real revitalization in America of local democratic processes as an extremely important by-product.

All over the country newspapers are reporting the effects of local initiative on communities, local governments and federal agencies. This country's social development has been based on action by concerned and dedicated local citizens. At the turn of the century there were numerous groups in our cities applying the fabled American organizing genius to social justice causes. In the last decade this same energy has been expended imaginatively in cities and towns, north and south, in the campaign for recognition of equal rights for all Americans.

An organized local group can make its case known to the public and become the basic unit in instituting, directing and implementing public policy. With cohesiveness, effort and dedication, such groups exert pressure on lawmakers.

and law enforcers, who, yielding to this expression of grass roots wishes, support those measures advocated by them. This interplay can continue in such a way as to make the democratic process a reality in a populous and highly technical country.

Neighborhoods are particularly apt units in which to foster a strong community voice; common problems create common bonds. Neighborhood associations have developed in neighborhoods facing the fact or possibility of their first Negro family; neighborhoods which have been short-changed or ignored by city governments or federal agencies; neighborhoods which want to expand equal opportunity to include housing in their own areas.

. . . . .

Suppose we examine a neighborhood where a strong neighborhood association will be a necessity if the neighborhood is to survive. In an older section of town, rather near the city's center, stand pleasant, spacious single-family dwellings. The average age of the owners is about 55; these have been family homes and the children have grown up, moved away and established themselves in other cities or other neighborhoods. There are some new families moving in, but property taxes are high, and the down payment required to buy a house here is more than most young families feel they can afford. But the community has many advantages - wide, quiet streets lined with tall trees, houses with large, high-ceilinged rooms, proximity to activities in the city, better

public transportation facilities and shorter commuting time for the wage earner. The neighborhood is near a cramped area inhabited by Negro citizens, cramped because the city's lack of fair housing laws combined with prejudice or governmental inertia has allowed housing discrimination to operate for years offering Negroes little possibility of escape into more comfortable, less crowded sections of the city.

This neighborhood with its many advantages is marked. Real estate dealers view it as speculative property; they hope to buy very low and sell high. And they will accomplish their ends if the neighborhood isn't careful. A middle-income Negro family perhaps will purchase one of the houses owned by an old resident who wants to move to an apartment. When this occurs, or simply by suggesting it might occur, real estate speculators "block bust"; they attempt by scare tactics, constant harassment and circulation of rumors about property value decline to frighten other residents into selling fast. Their aim is to change a block from Negro to white within a few weeks and to realize a large profit from the rapid change. So a house properly assessed at $20,000 may be sold for $14,000. This house will be resold at $25,000 to a Negro family desperate for housing. If the residents don't scare easily then the speculator may sell a house to a Negro with low income and convince him that he can make the payments of several hundred dollars a month by turning the property into a rooming house for other Negro families. Thus, the speculator makes his profit and assures neighborhood devaluation by changing in this

manner the character of the neighborhood from single-family, owner-occupied property to multiple-resident rooming houses. But the realtor probably won't have to resort to this system, for white residents have been told for years that Negroes cause property decline,[1] that Negro residents won't take care of their homes,[2] that schools cannot maintain standards with many Negro children enrolled.[3] These are all myths, but unless facts are forcefully presented to old residents they will be victims of the "self-fulfilling prophecy" - people will act in a manner to assure that their prediction will come true. All the panicky owners throw their houses on the market at the same time, this sudden oversupply naturally depresses prices, and therefore, it is apparently shown once again that the entrance of Negroes into a community lowers housing values. Negroes? White property owners have managed to cheat themselves by their fright and foolishness. And neither does this aid Negroes, for they are victimized by the real estate brokers. All that is produced is another "instant ghetto." Everyone loses except the speculators.

This is the picture, as dark as it can be made. There is hope - but only if the community will take action itself. No one else is going to save it; no one else is directly concerned about stabilizing the neighborhood. What can be done must be

3 Neighbors, Inc., Washington, D. C., Fifth Annual Report, 1963.

done quickly. It is extremely difficult to organize against neighborhood self-destruction once the panicky rush to sell is well along.

Pioneering has been done by a number of communities. Their experiences, varying in success, furnish encouragement and guides to those who would emulate them. There is now a literature on neighborhood reclamation and a great deal of interest by individuals, groups, foundations and government in local efforts at stabilization. No community need feel they stand alone even though the will and effort must be theirs. A formula for self-help follows.

. . . . .

ORGANIZE

If the area has an old neighborhood association, reactivate it if possible to form the basis of organization for the new fight. Contact the local clergy; they can supply great support and sustaining moral force. Find among various acquaintances those people in the community interested enough in their homes and neighborhood to make the long, tedious and sometimes unpleasant struggle required. These willing, dedicated and persistent ones are the core of the resistance. If there is one such person for each block or two blocks, he can talk with others in the block to find out what their feelings are without

arousing distrust and suspicion. Block by block, person by person, is the best way to confront and confound the rumors and myths. Here is where the worker can point out that Negroes do not depress housing values, but that the opposite appears to be true from the data.[4] At the same time people can be located who are thinking of moving for reasons other than racial prejudice, whose homes are too large now with family grown, who have been transferred out of the area or who genuinely want to move into a suburb. If these residents are responsive to arguments of self-interest, ask them to be careful in placing their homes on the market and to do so when they can obtain a fair price. Finally, those who will allow racial prejudice to defeat every argument can also be identified and thenceforth avoided.

MOBILIZE

The next step will be to increase the cadre with all who want to be part of the neighborhood stabilization action. Notify residents by

---

4 See Laurenti, Property Values and Race. After an investigation of 10,000 real estate transactions in seven cities, The Commission on Race and Housing reported that in 85% of the cases, prices in areas entered by non-whites kept up with or exceeded those in all-white areas. In 15% of the cases, there were declines of from 5 to 9% which were usually short term and followed by rises to or above former prices.

circulars or letters of the purposes of the neighborhood action and when meetings will be held. Put all volunteers to work - there will be plenty to do. Every successful neighborhood organization has stressed this point. They emphatically say an unused volunteer is a lost volunteer.

STABILIZE

To stabilize the neighborhood new white buyers must move into the area while older residents stand pat. All over the country in case after case, once a Negro has moved into a formerly all-white neighborhood, this community has been written off as being of no interest to whites.[5] In most cities real estate agents have refused to review their decisions. This means that although the neighborhood is the same as before Negro families moved in, and the advantages it offers are identical, no new white family will be shown it. In the South it may even be listed for "colored only" if the local newspapers still have faced this same problem, and a few have

---

5 MacGregor Estates, Houston, Texas; Hyde Park-Kenwood, Chicago, Illinois.

found after long convassing a few agents who would show to Negro and white home-seekers. If such men can be found, urge residents who must move to list their homes with these real estate agents. In most cases, however, the neighborhoods themselves have had to set up their own offices with lists of neighborhood property available for sale on an equal opportunity basis. These offices usually have been non-profit and operated by volunteers.

UNIFY

Prospective buyers respond to confident neighborhoods where old residents are determined to remain and aren't abandoning their homes to move to lily-white suburbs which will themselves be integrated inevitably. Groups emphasized their faith in their neighborhood and determination to remain there in various ways. With great success several besieged neighborhoods urged residents to place signs in their front yards declaring THIS PROPERTY IS NOT FOR SALE.

PUBLICIZE

To lure stable buyers into the area the neighborhood association must see that the

neighborhood receives favorable publicity. Often newspapers have been prevailed upon to write complimentary stories on the community and its activities. Other ways neighborhoods have gained valuable exposure are through art and book fairs, open houses and garden tours, and the distribution of their own literature to universities, government agencies and other groups to whom they felt their neighborhood might appeal.

FINANCE

Once interested persons are ready to buy in the area, another hurdle is reached. In city after city where associations fought to revitalize their neighborhoods, they have found homes in the area could not get mortgages nor would bankers lend for buying or housing improvements in the newly integrated community. The only recourse has been to pressure bankers and savings and loan people until one or two agreed to finance homes.

. . . . .

In our example we find our neighborhood is determined to resist exploitation. A local housewife is the first to become aware of real estate speculation, and she determines to do something about it. Over coffee with several friends from

near-by streets she decides to organize the neighborhood by blocks and to question people about their feelings toward the five or six new Negro families resident in the community. The group finds that most home owners do not object to the new neighbors but are frightened by the old myths and the scare propaganda of the real estate men. At block meetings these fears are dispelled by facts, and literature about neighborhoods successful at stabilization is distributed (neighborhoods like Hyde Park-Kenwood in Chicago, Neighbors, Inc. in Washington, D. C., and MacGregor Estates in Houston). The few who evidence real racial prejudice are not argued with but ignored.

The neighborhood begins to feel that it too can save itself. The people make plans to show their renewed confidence in their community as an exceptional place to live. A publicity group is formed which produces an attractive brochure advertising the many advantages of their neighborhood, and this is distributed to local colleges, universities and businesses. The neighborhood association which now numbers 200 families holds a spring home and garden tour to entice people into the neighborhood to look at the houses and community. This gains favorable publicity in the local newspapers.

New white families begin to take an interest in the area. They contact the non-profit brokerage office operated by the neighborhood association, and several eventually find houses that fit their needs. After some difficulties the first family receives financing for their house, but the

families who follow have less trouble. Financing institutions begin to realize that our community still has plenty of appeal to whites as well as to Negroes, and that such a vital neighborhood is not going to die. Gradually the neighborhood regains its confidence and relaxes. Panic is no longer the reaction when a resident must move, for the neighborhood feels sure that whether a white family or a Negro family decides to purchase the vacated house the neighborhood will be able to assimilate the newcomers and give them welcome.

. . . . .

Communities which have succeeded in stabilization efforts emphasize the need to sell to white families. At first glance this may seem discriminatory in emphasis if not in fact, for each neighborhood sold willingly to Negro families. The truth is that until open occupancy is a reality in each city and each state, Negroes locked into restricted areas will be forced by severe need to take advantage of any additional housing. If whites abandon a neighborhood because one or two Negro families have bought there, then, of course, that neighborhood will become just another all-Negro block in the Negro section. If all areas were equally open to occupancy for all with the means and desire to live there, then no one area would be under more or less pressure than the next. Until that time, however, communities seeking to remain stable and integrated must exert extra effort to maintain racial balance; that is, they <u>must</u> interest new white families in living there. If

they do not, then brokerage agents will continue to list or show for colored only, and mortgages and loans will be ever more difficult to obtain. This emphasis on the necessity of new white home owners may sound harsh, but the reality of the situation is too obvious to be denied - ask neighborhoods in Chicago, Denver, Washington, Philadelphia, Baltimore or Houston.

With all the plans, suggestions and work, the prime ingredient for neighborhood stabilization is dedicated, tireless, committed people. Leaders will arise and be worn out in the struggle, but new leaders must be ready to take their places. Sometimes leadership has been entirely voluntary from the beginning through many years. Some communities hired a professional worker after local initiative organized and began the association. One association with its permanent salaries employee has expanded activities to include many useful community and educational functions, creating a real "esprit de corps," a sense of pride and unity, in the neighborhood.

One point is very certain; there is no one simple formula for all beleaguered neighborhoods. Each must adapt from previous efforts those methods which appeal to it and which will fit the community, and each must use imagination and ingenuity to solve its own problems in its own way. But the hope is this general outline first may awaken neighborhoods to the need for stabilization and secondly show them that with honest effort and hard work it can be done for it has been done.

EPILOGUE

This pamphlet really treats only some symptoms of the larger problem of minority housing. One cannot escape the fact that the overwhelming factor that creates the problem is discrimination. Thus, even if meaningful efforts are undertaken at stabilization in one or two neighborhoods in a city, they can only be effective to the extent that the whole market or increasing elements of that market are open to non-whites. The point is that a stabilization program must be tied, hand-in-glove, with metropolitan-wide efforts to establish equal opportunity in housing. In order to create neighborhood stability, the non-white demand must be dispersed over a wider geographic area. Without activity to establish this condition neighborhood stabilization efforts can only be delaying actions, slowing down the rate of change or creating relatively stable but isolated integrated islands within the city.

Movements

Giving ghetto high school graduates the help they need to take the crucial next steps

If a Presidential adviser were to say that the reason most inner-city high school graduates don't find jobs is that they don't know what's available or how to get it, he might be accused of simplistic reasoning. Yet this is precisely the assumption behind the new and so far successful Volunteer Placement Corps, a shoestring operation in Detroit and Memphis soon to be unveiled in three other cities. The idea is simple: to get *every* graduating senior in a given high school either into college or into a job with chances for upward mobility. It was designed by Douglas Ross, an energetic, 26-year-old former high school social studies teacher in the Detroit public school system, now legislative assistant to Sen. Joseph Tydings (D., Md.).

The Volunteer Placement Corps operates like this: A member of the corps meets the graduating class of a ghetto high school, telling the students that unless they don't wish to participate, they are automatically enrolled in the placement program. "We come on tough and businesslike. We try not to build up any expectations we can't fulfill. We promise the kids nothing but that we will try to help them get into college, or get a good job," explained Ross.

At the same time, black and white middle-class professionals, either active or retired, are recruited to work intensively with the graduating seniors. To be a volunteer involves a commitment of two years, working with approximately five students the year they graduate and the following year when they are placed. His job is essentially to lay out alternatives, help a student make a tentative plan for his future (college, an apprenticeship program, business school, a job), and use all of his resources and contacts to help the student get what he wants. "The volunteer has to be there all the time, to counsel, encourage, and reinforce," said Ross. "But one of the most valuable things he can do for his kids is simply to make suggestions on different kinds of things they can do. Eighty per cent of the girls in the senior class in a Detroit ghetto high school, for instance, said they wanted to be secretaries. They just didn't know anything else existed. They didn't know the labor market, they didn't know how much you can earn, how you became anyone.

"And furthermore, the guidance counselors had given them a sense that unless you had a high average you couldn't go to college. Since only two students in this senior class had over a B-plus, a lot of them didn't think of trying."

One of the key reasons an inner-city student has such difficulty finding either college or a job is lack of thoughtful counseling. This is, therefore, one of the most important gaps a volunteer fills. A guidance counselor in an inner-city school, even with best intentions, scarcely has the time and energy to work effectively with an average load of 250 to 400 students. Some, Ross pointed out, "feel no real commitment to their students and don't care what happens to them when they leave school."

The volunteers don't need any special training. The whole program is based on the supposition that if you're middle class you have access to all kinds of knowledge, about jobs, colleges, careers; that you know how to deal with people and large institutions; that you have an intricate network of personal contacts. "This is the birthright of the middle class," said Ross. "The lower class doesn't have it."

While the volunteers work with the students, two or three corps staff members pursue corporations, businesses, and colleges, persuading them to modify their hiring and admissions policies. At the same time, the corps identifies skills that their students might need—often at the request of the students—and places them in training programs; or if none exist, it attempts to establish them. "The training program is the only service we charge for," said Ross, "partly because it means more to a student if he has to pay for it, and partly just to cover expenses. But if he enrolls in a program and finishes, we guarantee placement."

What distinguishes the Volunteer Placement Corps from a host of government programs like the Job Corps and state skills centers, in addition to its intensive counseling and individual care over a two-year period, is its emphasis on the high school graduate rather than the dropout. The bulk of the government programs have aimed at the dropout or older hard-core unemployed.

"But, ironically, it is the dropout between the ages of 18 and 19 who has a *lower* rate of unemployment than the high school graduate," Ross said.

"In other words," he continued, "the high school graduates—the more than 50 per cent of Detroit's kids who 'played it cool and stayed in school'—find themselves without a place to go, without a job. The Michigan Employment Commission can't place them; they have no more skills than the dropouts. But they still have aspirations, they aren't defeated yet. We say let's take the 'easy' kids first, not the dope shooters. People are always talking about the hard-core unemployed, but they are very tough to work with. Take the cream of an inner-city high school; many are already motivated, they just don't know what's available and how to get it. That's why working with them requires minimum resources and has a good chance for success."

The corps began in 1967. After graduating from the University of Michigan in 1965, Ross worked as legislative assistant for Rep. John D. Dingell (D., Mich.), returning to Detroit in 1966 to teach civics in McMichaels Junior High School. There he met social studies teachers Carole Williams and Christine McGhee and they began to talk about the need for helping students get into college.

But it was Regina Black, a senior in

PAGE PARTIALLY ILLEGIBLE

Ross's practice teaching class, who inadvertently brought the problem into focus. Ross said, "In the late spring, I asked Regina, who was one of the brightest girls in my class—she had an A-minus average—what she was doing after school was over. She said she didn't know. I asked if she planned to go to college, and she said she didn't think she could. I called the University of Michigan—this was one month before graduation—and they accepted her over the phone with full scholarship."

By fall, the three teachers had chartered the Volunteer Placement Corps Corporation. Jamming 15 desks into a donated office in a former Masonic temple across the street from Northwestern High School in Detroit's riot area, the corps set up shop.

Early success

Although Mrs. Williams, who is the current director, was teaching full-time, she gave it up and devoted herself to the corps. She contacted the Board of Education and received permission to register in the corps all of the 171 graduating seniors in Northwestern's January class. Ross, Mrs. Williams, and Mrs. McGhee all felt that, ideally, seniors should be contacted a full year in advance of graduation, but they were anxious to see what could be done. By early October, 35 adult volunteers, mostly black, had been recruited. In late fall, the corps received its first funds, a donation from Ford Motor Co., and in January, 1968, its budget was fattened by $5,000 from Chrysler Corp. and another $5,000 from Michigan Bell. In spring, the New Detroit Committee, chaired by department store magnate J. L. Hudson, voted the corps an annual budget of $100,000.

By April, just two months after the students had received their diplomas, 100 per cent of the class was placed. Working with the school, in a relatively short time, 28 per cent of the graduates entered college, 21 per cent post-graduate training programs, and the remaining 51 per cent jobs.

Even the corps's initial results provide a sharp contrast to placement histories in the rest of Detroit. According to an NAACP study released in 1967, as many as 85 per cent of the graduates of some Detroit high schools are still unemployed three to six months after graduation, Ross said.

By late spring, the corps began to work intensively on June graduates interested in going to college. Fifteen young lawyers joined the corps, forming Project Admissions. They collected college board exam and admission information, and sat down with each student and his volunteer. They went over the student's record, explaining what kinds of colleges were available and what he had to do to get in. The regular volunteer would be there to help the student draft an autobiography, locate scholarship aid, and nudge him to meet application deadlines.

"We found," said Ross, "that 25 per cent of the kids accepted to college don't show up. They don't know where to report. If there's money, they don't know where to get it.

"We have been trying to open up the universities, to get them to set realistic standards for inner-city kids, to give them remedial help when necessary. Last fall, for instance, a center-city high school put 13 of its kids in Michigan State, and by January, 12 were on probation. That's typical. The standards must be re-evaluated," he said.

On the job front, the staff found that one of the biggest stumbling blocks was inadequate education. Almost all jobs above the menial level require some sort of examination, and most ghetto graduates can't pass them. For instance, 50 per cent of a group of graduates from ghetto high schools in Detroit, who recently took the Michigan Bell telephone operator exam, failed the subtraction part ($3.75 minus $1.58). Not only is education inadequate, it is not geared to the current labor market. Chrysler Corp., for example, adopted a high school and gave its graduates jobs. Chrysler particularly needed draftsmen, and after looking at the skills of the graduates, the plant told the school that it was 20 years out of date. "This kind of feedback is invaluable," said Ross. "It helps the school to readjust its curriculum."

Even if a ghetto youth gets a job, he often doesn't keep it. His work habits, like his education, have not been geared to the labor market. "The schools, ironically, are often destructive," said Ross. "They give the kids part-time work, but it is really makework. They often waste a lot of time. Then they carry over the same sloppy work habits when they get a job, and so they are released, and don't always know why. The employers watched them, but they were not used to explaining to employees what they were doing wrong.

"We try to get our kids into our office for an interview to give them an idea of how it works. We tell them to dress like you're going to a funeral—no fishnets, no dangly earrings. The employers were impressed."

The staff on the corps realized that only a limited amount could be learned from one small graduating class, so in November, 1967, it requested permission from the Board of Education to include in the program an additional 1,400 students scheduled to graduate in June, 1968, from five inner-city schools. Of the 1,400 registered students, 85 per cent were placed within two months of commencement—and 96 per cent by the end of September. Even more significant, 41 per cent of the 1,400 graduates were accepted in universities and colleges, a three-to-four-fold increase over the college acceptance figures of a year ago from the five schools.

Although neither Mrs. Williams nor Douglas Ross have pushed the idea of the Placement Corps, it has attracted a good deal of attention. In Memphis, a black school teacher and a Jewish jeweler read a clipping from a Detroit newspaper and interested the Chamber of Commerce in the corps. It was established immediately. In Chicago, VISTA is beginning to organize a corps. In the middle of January, the Department of Community Affairs in Newark funded a corps for Newark. In Baltimore, through the efforts of the Rev. Andrew France at the Church of the Good Shepherd and the Human Relations Task Force Inc., 45 volunteers have just been recruited, and permission has been obtained to move into Frederick Douglass High School to work with the senior class of 500 black students. Like most who have been hooked on the idea of the corps, Mr. France wants to move fast: "We've set ourselves a target of $10,000 in 30 days. We have everything else, the school's permission, the volunteers, and a good, committed man who would leave his job tomorrow to become director, if we could pay him." Ross said he had found much interest in Washington in forming a National Placement Corps.

"The trick is not to get too big and bureaucratic," he said. "One of the reasons for our success is that we knew all the kids personally, and well."—*Lisa Hirsh*

HOUSING IN THE YEAR 2000

Charles Abrams
August 1, 1967

Prophecies usually make sad reading when the time for judging them arrives, and prophecies on what housing will be like in the year 2000 should prove no exception. The predictions of population decline that colored the economic tomes of the 1930's were nullified by the post-war baby boom and forecasts of housing needs have too often suffered similar disappointments. The human animal being what he is, there is no sure way of predicting the outcome of the battle between pills and passions or the vagaries of man's capabilities for building or destroying.

Despite its shortcomings, however, forecasting has become a respectable trade. Its practitioners include the pessimists who gamble on a downward trend and the optimists who venture on an upward one. The forecasting game is being played in housing as it has been played in the stock market and roulette.

If the forecaster takes the grim view of housing's future, he can muster ample support for the claim that man's shelter will be little different in the year 2000 from what it is today. Of all the commodities that have been touched by the industrial revolutions, the house has remained the most impervious to change. It has resisted the assembly line and the organization

of a building industry capable of producing homes most of the world's people can afford. American technicians can show the less developed nations how to put up a steel mill or a dam, but even in their own country they have failed to mass-produce a cheap shelter. In the United States, a quarter of the population still live in slums while people in the less developed nations build with their own hands as they did 5000 years ago.* With urban populations in Asia, Africa, and Latin America expected to rise five or six times their present numbers by the year 2000 and with building industries unprepared to meet even a small fraction of the need, it is a safe bet that slums, bustees, street-sleeping, and squatments will be the retreats of most of the world's human beings three decades hence.

Under this grim view of the future, the disparity between house cost and income will show no sign of abating even in the United

---

* Bernard Spring comments that our slums would be considered rather good housing by the poor urban population of Asia, Africa and Latin America and that the two types of slums should not be lumped together. "The slum of the underdeveloped areas is much more serious than ours,..... qualitatively quite different" he says. All slums are of course different even in our own country. But contrary to current thinking, I believe a slum should be viewed as a condition rather than simply as a deficient building. If it prevents the functioning of a decent family life, it is a slum even if physically sound. In that sense, a room in a New York City sixth floor tenement occupied by a whole family may have worse impact on family life than a one story house in a squatter community set in a clement climate. Slums are as "qualitatively different" in Asia as they are in America but they may be more serious in their over-all implications in some of the Negro areas of the United States than they might be in the squatter areas of Turkey, Venezuela or Peru. At the same time, no comparison can be made between the average American slum and some of the slums, say in Calcutta. It is the impact on the people in the slums that should be the measure of a slum's banefulness in all cases and qualitative comparisons give only a fragmentary picture.

States. * Improvements in construction will continue to be held back by land speculation, and the stubborn handicraft of the building industry. A generation ago, the United States, the most technologically advanced of nations, was "experimenting" and "demonstrating" how to lick the slum; today it still experiments and demonstrates. It has, in fact, resigned itself to reclaiming its older housing stock which only a few years back, had been consigned to the wrecking crews. If present trends are any guide to the future, the United States should have put houses on the moon long before it has given all its families decent houses in decent communities on its own soil.

The housing optimists can make an equally good case for a technological revolution in housing. They point to the new uses of plywood, steel curtain walls, plastic panels and foams as well as concrete and dry-wall construction. Though little progress was made in plumbing from ancient Rome to the 19th century, the Western World has now acquired the flushing apparatus to dispose of its wastes and builders have adopted the radiant heating used by the Romans in their baths. Though four walls and a roof are still much the same as they were

---

* As I point out later, there are already a number of cities in which perfectly good houses in Negro areas are purchaseable at prices well within the means of low income Negro families. A sharp drop in prices has occurred in slum areas due to the continuing exodus of white families, the low purchasing power of Negroes, the undesirability of these properties as investments (particularly since the recent rioting) and the absence of mortgage money and fire insurance in these areas. But the average Negro family could not afford a house in a good suburb where he might find a better school for his children. In short, where the bulk of good neighborhoods are located, the disparity between house cost and income persists.

in the Stone Age, we have discovered the elevator and learned how to pile units atop one another to conserve ground space. After continuing failures, the optimists also see the beginnings of apartment house prefabrication in Europe as well as mass on-site building and mobile housing in American suburbs, all of which they contend are sure-fire harbingers of the long overdue assembly-line homestead.

Both optimism and pessimism have their gradations, and among the optimists may be found the more exuberant optimists who anticipate discoveries far more significant than those that ushered in the revolutions in iron, steam and electricity. As automation and nuclear power forge ahead, these and other innovations are seen as spilling off gains on the sluggish housing economy. In their estimates, the fall-out from these technological advances will bring thousands of self-contained new towns to our countrysides; modular, fully equipped rooms will be bought in department stores; sonic cleaning devices and air-filtering systems will be banishing dirt; computerized microwave ovens will automatically mix ingredients from pre-selected recipes that will make Julia Childs the relic of a forgotten age. Everything will be "instant" as it is today in rehabilitation and oatmeal. Kitchen equipment will produce disposable dishes of powdered plastics and electronic devices will make the housewife work-free so that after her husband leaves his three-dimensional TV set for his three hour work day, he will be whisked to his destination on an unmanned tube in a split second. A glance at the sky will reveal helicopters transporting geodesic domes to distant places where they will be tacked to the ground complete with utilities while compact sewage

systems will be turning dishwater into drinkwater as pure as from a mountain spring.

From Plato's republic to our own day, the dream has been a propelling force in the march of progress and there should indeed be considerable advances in public utility and transportation techniques as well as in the production of those housing appliances which can be produced in quantity and mass-marketed through TV. The latter include new variations of electric irons, toasters, percolators and kitchen grills; more and more of the nation's rooms will probably be heated by dust-free electricity which may even power-drive a kitchen computer that will ring an alarm when the bank account is overdrawn.

The main trouble with the dream house and the dream world as with the age of gadgetry has been that despite miracle discoveries in almost every field, technological advance in housing has never been able to bridge the gap between income and shelter cost. A low income family will own a vacuum cleaner but must live in a slum; an Alaskan Eskimo family will have a kerosene washing machine but its ten members must huddle around a tiny stove in a 7 by 10 foot hut to keep from freezing. The more an underdeveloped nation industrializes, the more intense its housing problem becomes; the greater the descent of people upon the world's cities, the tougher are the housing challenges they must face. Even in the United States which has experienced the greatest industrial expansion of all, good new housing is still a luxury product, and despite the blessing of the assembly line, the gap between shelter cost and income persists. What hope then,

in countries where annual per capita income is under $100?

Whether one be bull or bear about the future of man's shelter, one thing seems certain -- there is a widening pressure upon governments to improve man's environment and provide housing where private effort defaults. Whether the country be capitalist, communist or socialist, there is a growing commitment to meet housing need by direct operations through subsidies to entrepreneurs or by underwriting risks. In Europe and North America as well as in Japan, Singapore and Hong Kong, the firm commitment to government-assisted housing has already been made while in less developed countries, massive squatter invasions of urban land as well as political collapse are seen as inevitable unless these nations provide the shelter their people are demanding. In short, it is probable that the world's future housing revolution will be political rather than technological. If it is partly technological as well, the gains will be incorporated into long-range government-assisted programs.

This view of political inevitability sees two divergent trends manifesting themselves in the more and the less developed countries. In the former, the commitment to better housing is taking form both in the provision of publicly-assisted housing for lower income families and in the renewal of its slums. On the other hand, in most of Asia, Africa and Latin America, where urban population is rising 400 per cent higher than population as a whole, no end of housing assistance can stay the onrush of squatterdom and slum life. With hundreds of thousands of families already sleeping in the streets or hallways, with millions

seizing land in the desperate effort to get roofs over their heads, and with half the people in these continents living in housing described by the United Nations as an "affront to human dignity," it is doubtful that people in these places can ever be sheltered decently, at least by the year 2000. These countries should therefore be providing land for controlled slum formations and stop demolishing what exists. They should be currently planning not for short term urban renewal but for long term urban renewability. This means a greater concern for lay-outs and for provision of utilities than for the standards of the houses themselves. A gradual improvement of the initially substandard houses can be expected if tenure is assured to the settlers and financing is made available for improving their houses.

Irrespective of whether they are more developed or less developed, all countries are feverishly looking to each other for the magic formula that will transform castles in the air into houses on the ground. One reason for this growing interdependency is that there appears to be a similarity of symptoms among all countries -- population increase, mass migration into cities, housing shortage, a disparity between shelter cost and income, racial and class frictions, a growing competition for land, growing social problems due to housing distortion and the universal backwardness of building techniques. This similarity in symptoms is putting a particular highlight on the policies and programs of the more industrially advanced nations who are thought to have the answers. Though many of their policies are still unproven experiments, they are nevertheless being embraced as

though they were sure-fire solvents. *

It is the United States in particular that is being looked to for the example and many of its devices have been adopted with little or no change. Unfortunately its housing aids are little more than a mixed bag of tricks, experiments and often inconsistent devices contrived over three decades of Congressional improvisation and compromise. If the United States is to be the example of what a great democracy can achieve, it must produce something more promising than the promise of "a decent home and a decent environment for every American family" and the way to begin is with a statement of objectives, backed by a program to implement them. The first objective should be a realistic land deployment program.

Both in the more and the less developed nations the factor that will condition man's future homes and environment will be the control and disposition of the world's urban land resources. Fortunately urban land represents only a tiny fraction of the world's surface and whatever may be the need for more foodlands, the fact is that there is and never should be a quantitative urban land shortage. (Such places as Malta, Gibraltar and Hong Kong may be exceptions). There will be, however, a steadily intensifying competition for the land radiating from the

---

* FHA mortgage insurance has been adopted in the Philippines, parts of Latin America, Barbados, Trinidad and other places. Our mutual savings and loan prototype has spread throughout Latin America. New Towns have been called one of Britain's "main exports." Zoning and building regulations as well as planning laws are being copied and enacted in one country after another without change of a comma.

world's urban cores.

As more and more people move into the metropolitan regions, the competition for land will stiffen, the traffic flow slow to a halt and the general problem of getting around, finding a bit of open space, breathing good air and getting enough drinking water will move up as public conerns. The land currently harnessed into use and the services and utilities being presently placed on the land will, moreover, condition the environment a century ahead just as man's first cities continue to condition his envi ronment today. As urbanization continues to confine people to small and compact agglomerations of land and as houses are built closer together and to greater and greater heights, they will also be more costly to demolish as well as more difficult to displace the growing number of occupants.

What is built in 1970 will thus have an impact on what can be built in 1980 and what is built in 1980 will condition what can be built in the years 2000 and 2020. In short, urban development is a continuum, its product the archive of misjudgements and masterworks competing for influence on the shape of things to come.

Assuming continuity of present trends, the United States will have some 350 million people a generation hence. To meet their needs, we shall have to build as many structures of all kinds as we have built since our earliest immigrants first moved from their hillside dug-outs. These structures will be consuming at least

a million additional metropolitan acres each year and it is this land that must somehow be brought under constructive control if decent homes and environments are to be more than promises. The land to be converted to urban use accounts for only a small fraction of the total cost of the houses and public improvements that will be placed on it -- 5 to 15 per cent at most. The land currently in urban use represents only about 1 per cent of the nation's total space and by the year 2000 should be no more than two or three times that.* But how the land is deployed will condition the height, cost and types of houses and shops; how and whether man will use his feet for negotiating distance; the length of his work journey; the expenditures for roads and throughways; the proximity to friends and recreation; the future appearance of our cities and how people will be functioning in them.

Land regulation with nothing more has proven of limited value. If we are really concerned about the future of the American environment, direct acquisition of the land needed for homes, factories and services is an imperative. The land could then be planned, the schools, water, drainage and open spaces provided, and the improved lots sold for private investment subject to suitable conditions governing its future development. This procedure would be no more than an extension of the urban renewal program to vacant land -- it

---

* It is also probable, as family formations grow, that the free-standing house will give way to the semi-detached, the semi-detached to the row house, and the row house to more and more multiple dwellings. This will vary between small and large cities.

the current version of encompasses slum prevention instead of clearance. Unlike/urban renewal, it enforces no mass displacements; it would entail no lesser role for the private builder than he has under existing land development operations; only the sequence of the public and private efforts are reversed. By making the improved land available for private home building, contiguous land would be assembled and planned, waste and shrapnel development avoided, more convenient journeys to work would be assured, and substantial economies in road building would be achieved. Local autonomy would be subordinated at first but he restored thereafter, since upon completion of each development, the public land would be turned over to the existing city or county, to a newly incorporated local government, or to a federally-chartered regional agency. Land would be sold for the homes of the rich and the middle class while federal low-interest programs and family subsidies would provide for the lower-paid workers as well. Proper enforcement of the expanded federal nondiscrimination order would bar exclusion because of race or color. What would be built would fulfill the concept of a regional city -- a place in which people of all walks of life could work and live with comfort and dignity.

To accomplish this objective, a federal Urban Space Agency -- URSA -- comparable in organization to NASA -- should be chartered by Congress and funded for the purpose. It would operate through the states where possible, but have superior jurisdiction where regions cross state lines. It would be empowered to buy land to round out the development of existing neighborhoods, to acquire and release land for new neighborhoods, to acquire or finance the

acquisition of land in central cities for redevelopment and to facilitate the proper planning of land for housing, commerce, industry and recreation.* Its annual requirements would probably not be greater than its astronomical counterpart.

A second objective should be to make our existing suburbs better places in which to live. Since the suburb will be the next generation's main encampment, its proper development should be a prime national concern. Only a generation old, however, the suburban structure is already exhibiting serious fissures. One problem is that by 1980, a quarter of a billion people may be weaving in and out of our urban and suburban areas in some 90 million automobiles, making it virtually impossible to negotiate the work journey. As the years go on, we shall either have to earmark enormous sums and great swathes of precious space to road building, or replan our future neighborhoods into tall, compact centers, negotiated by foot, elevator and mass transportation.

It is also probable that many of our people relegated to suburban formations that are simply more of the same, will have found life increasingly dull - at least some of our younger folk will. Suburban development programs however, have demonstrated little capacity for dealing with the human aspects of community

---

* It has been estimated that by 1985, the New York region alone will have 5 to 6 million additional people and that the region's capital requirements for transportation, communications and utilities, recreation, education and other public and social services will be $75 billion for housing, $12 billion for private utilities, $40 billion for commercial and industrial structures. The total required capital investment will be $175 billion.
Harvey S. Perloff and Henry Cohen, "Urban Research and Education in the New York Metropolitan Region," Regional Plan Association, July 31, 1963.

life, and programs like FHA have found little room in their manuals for such commonplace things as meeting and mating, or walking and browsing, or giving people a sense of belonging, or adding something of ourselves to the pre- packaged community, or expanding the opportunities for adult education, or providing escape hatches from the sameness of living. In the creation of our environments, we are becoming a nation of real-estate men warped toward mortar instead of mortals and concerned about house values more than about those human values that make life tolerable. By the year 2000, we shall therefore be paying the price of our omissions in a massive program of suburban renewal with no guarantee that the new will be any better than the old.

Many of our suburbs are already feeling increasing pressure to provide apartment sites for industries, their menial workers, and the aging. With the shift of industry to the suburbs, the movement of Negroes suburbanward in quest of jobs will bring challenges to suburbia no less serious than the central cities have had to face. Simultaneously, the existing stock of suburban houses is beginning to look so worn and seedy that it is taking on the appearance of some of our older cities but with less of their resiliency and staying power. These developments may not all be preventable, but some are.

Instead of permitting sprawl, skip-over subdivisions and the wanton destruction of green spaces and orchards to make way for small speculative subdivisions, we can preserve what open lands or green spaces should be preserved for our future settlements while simultaneously acquiring and planning land for new

downtowns with room for apartment dwellers, workers, industries, commerce and all the other services that any working urban settlement requires.

We can also merge or bring under planning controls the thousands of disparate little governments that surround the central cities and keep their regions from growing sensibly. These little governmental units have common problems in water, transport, sanitation, education, parks, air pollution and hospitals. Yet they compete with each other for industries, revenues and people as though they were no part of the main. A single hamlet in the constellation can veto an improvement affecting the whole region. Workable units must be created out of these conflicting jurisdictions so that they can function more efficiently in their own, the regional and the national interest. The 19th century shibboleth of local home rule which has been sheltering these little autonomies should no longer be permitted to forestall the emergence of decent, functioning urban environments for the generations to come.

A third objective is to make our central cities sound. There are those who look upon the old central city as passe and who would let it die. But the urban civilization for which the United States is irrevocably destined requires these central cities to play a vital part in it. Most of the 160 million people who will be added to the nation's population by the year 2000 will be carving out niches for themselves in the burgeoning suburbs, but a sound national environment is more than simply a stockpile of houses on well-cropped lawns. Our central cities are the buttresses of our new urban civilization, the cores around which the

suburban communities will be polarized. These cities will educate and shape the future recruits for the suburbs. They will provide the essential contrast to suburban life; they will be the frontiers of the young in search of new horizons, the escapes to anonymity, the refuges of the immigrant, the poor and oppressed. They will be the main forums of civil rights and the crucibles in which our democratic faith will be getting its critical tests. If these cities will no longer be the exclusive centers of commerce, they will continue to hold an important share of it. If they will not suit the tastes of all, they may satisfy the desires of many. If the central city will no longer be the only type of environment by the year 2000, it must still be preserved as one of the options in a society of diverse environments in which to live and love, work and play.

Many of these cities however, will undergo major racial and social changes. Disorder and insecurity as well as economic considerations will not only speed white emigration to the fringes but industrial emigration as well, making more of these cities the beleaguered cores of swelling metropolitan formations. Already in 1967, the loss of the city's more affluent taxpayers has made the cost of servicing impossible to bear. A generation ago, municipalities were collecting more taxes than the national and state governments combined but their revenues which were 52 per cent of total as recently as 1932 had dropped to 7.3 per cent by 1962. Unable to finance their requirements from taxation, the cities have resorted to borrowing and between 1946 and 1964, when federal debt per capita actually declined, local debt per capita more than trebled. The federal government

has failed to share the growing costs of education and safety and when it has proffered new forms of aid in housing, urban renewal or welfare, it has always required its cities to contribute a share, thereby increasing the burden of already sagging local treasuries. When the cities have tried to meet the costs of these new services (or of existing services) by raising taxes, they have simply accelerated the flight to the suburbs. We have not yet learned that the housing problem is more than houses -- it is also a safe and solvent community, the existence of good schools, the proximity to the better jobs, social services and transportation. If the Congressional goal of decent houses in decent environments for everyone is to be realized, the federal government will have to assume the consequences of the shift to an urban society with all the economic and social distortions it has brought with it.

A fourth objective is a housing inventory in both city and suburb providing a variety of electives to every family. Neither family composition nor housing needs are constants. They vary with the life cycle, with the health, age and changing fortunes of families and with the births and deaths of people. They change with the decisions of industry and with job locations, building costs, and incomes. They depend on mortal whims and human restlessness, on the desires for change by a people, 35 million of whom shift annually within, from and into cities, farms, villages, suburbs, mobile parks, warm and cold climates, mountain and sea-level terrains -- these people require every variety of house and environment in which to make their choices.

There are those who believe in a stabilization of human movements and they proffer scores of "self-contained" new towns of 35,000 to 50,000 people as the new design for life. The towns would be independent of the city and would have their own built-in shops and industries for their own built-in residents. The proposals would bring us stability -- and sterility as well. "Perfect order" can be the prelude to tyranny. New towns should be part of the new environment, but the notion of a nation of ten thousand grooves into which our future generations will all be neatly fitted is consonant neither with a "Great Society" nor even with a middling one. A nation composed entirely of New Lanarks and New Harmonies would be as dull as a nation that is just one big Texas. A sprinkling of the unordered and unorganized would help keep us from becoming just that.

Between now and the year 2000, the number of people will increase in every age grouping, * and there will be a growing demand for housing of every variety. Most of our older and more of our younger folk would like apartments, if they were something more than the vertical caves they are today.

The economics of apartment house investment, however,

---

* Projections by the Hudson Institute show comparative U.S.population by age as follows:

	1965	2000
20-24	13,623,000	26,430,000
25-34	22,374,000	44,480,000
35-44	24,462,000	41,390,000
45-54	22,067,000	35,141,000
55-64	16,973,000	22,260,000
65+	18,102,000	28,200,000

dictates provision of an absolute minimum in space, height and amenity. Yet with projects set to grow larger in the years to come, it is at least physically possible to supply the same amenities in apartment projects that resort hotels provide for their guests, i.e., swimming pools, exterior and interior playgrounds, club-rooms, etc. Since this aspect of the operation cannot always be profitably provided by the entrepreneur, it should be supplied at public expense. The concept that parks and playgrounds must always be on separate publicly-owned lots or that they must always be open to the sky is obsolete. Leasing interior space to the public for these purposes or dedicating the yard space to public use are some of the possible arrangements that could make apartment living more tolerable.

A fifth objective should be to provide variety and security in the forms of home tenure. The generation to come will still have many among them who will not want to sink lasting roots into a given community. At least twice as many families as there are today will prefer owning a mobile or demountable home (set either on its own lot or in a vertical structure). Still others will choose a furnished unit in an apartment motel from which they can check out on an hour's notice. Freedom of opportunity implies mobility to seek that opportunity and this in turn calls for an inventory of houses that can be rented, owned, leased, co-oped, or held under any one of a number of other arrangements.

The 90-100 per cent mortgage effected a major revolution in the system of mortgage finance. By reducing the stake in ownership, it simultaneously cut down the buyer's risk. It also gave the American home owner a unilateral

opportunity either to surrender possession or cash in on a price rise.

One of the main troubles with our 90-100 per cent mortgage system, however, has been that its opportunities have been withheld from America's poorer folk. They have not only been looked upon as bad risks but the fiction has been officially created that they deserve only tenancy in a public housing project. Yet if the exodus to suburbia continues and the poorer folk are the principal candidates for central city homes, prices of houses in many central cities will drop to a level that will afford a signal opportunity for ownership by these families. A recent Philadelphia study made by the writer showed that thousands of row houses in move-in condition could be purchased at $1,500 - $5,000 per house and carried at as little as $40 to $60 a month. All that was needed was a mortgage fund to facilitate a flood of purchases.* Similar conditions are indicated in St. Louis and other cities in which low income families are now the only potential bidders for houses.

The risks of such ownership could be minimized by requiring only a nominal downpayment. Such a program would be far less costly than public housing. While home ownership can be no cure for poverty, it would diminish vandalism, give a stake to many families, a roof they can call their own, and perhaps even give them an opportunity to become members of the next generation's middle class.**

---

* Charles Abrams. Equal Opportunity in Housing, Philadelphia Redevelopment Authority. December 1966.

** Indeed millions of white families are now members of the middle class because the houses they had bought in the 1940's for $5000 with a few hundred dollars down payment are now worth $20,000 or more.

Public housing should be simultaneously built for those who prefer rental but it should never be the only type of housing available to the less privileged. The units should also be sold to the occupant when earnings permit.

Nor should home ownership any longer continue to be precarious -- either for the poor or for any other group. Many a family has built up a seasoned equity only to face loss of it because the breadwinner's unemployment, illness or death disabled it from making a single mortgage payment. An insurance scheme providing insurance against such hazards is long overdue. *

A sixth objective should be a national building industry capable of producing efficiently at low cost. Home-building (including home repair) is one of the nation's key industries, not only because of its dollar volume, but also because it spurs construction of schools, streets, roads, utilities and shops. It was not a concern for the poor that first prompted federal support of housing programs but concern for the economy. And it is the same concern that is responsible for the huge commitments now being made to the federal mortgage agencies and to savings and loan associations.

The home-building industry however, is important to the nation for other reasons as well. It shapes the nation's physical environment; a fifth or more of a family's income is required to maintain every home that is sold;

---

* For an amplification of the proposal, see The City is the Frontier, 1965 Harper & Row, p.262.

the taxes levied on houses are the main support of local governments; the failure to provide houses for minorities is one of the main causes of social conflict in the nation; finally, how much the home-builder charges for his product determ ines whether the house remains a luxury product or whether it becomes available to every American family.

Despite its importance, however, the industry is small, fragmented, undercapitalized and victimized by all sorts of obstructions. A California study in 1963 showed 85 per cent of the builders with less than 9 persons on their staff.* A survey by the National Association of Home Builders a few years ago showed three fifths of their members building only 25 or fewer houses a year; no more than 1.5 per cent built 500 or more houses. They undertake little research, carry no land inventories for continuous operations and make little effort to reach a mass market.

The industry will be more vital to the economy in the years to come. Assuming current trends in the rate of household formation, about 1.2 million houses will be required annually between today and the year 2000, not allowing for vacancies and the needs of the two house family.** If the average durability

* Housing in California. Appendix to Governor's Advisory Commission on Housing Problems. p 521.

** Plato's Utopia called for everyone having one house in the city and another in the country, and though few have been able to attain the ancient prosperity of Cicero who had six houses scattered about Rome, there are a growing number of American families to whom Plato's dream is now a reality.

of houses is calculated at 30 years and if we allow for the ravages of age, obsolescence and disaster, some 10 million additional units will have to be replaced in the next decade, rising to 16.5 million units by the 1990's.* Based on these assumptions, we will be needing 2.4 million new housing starts by 1970, rising to 4.2 million by the century's end. By 1980, expenditure for residential construction should be $55 billion, or $32 billion more than in 1960, rising about 2 1/3 times more between the years 1980 and 2000.**

Despite the massiveness of the nation's social and financial stake in the industry, there is little prospect of an early mutation in the nature of building entrepreneuring. Big industry continues to supply the materials that go into the house -- steel, cement, wood, plumbing, glass, gypsum, etc. -- but shuns the actual home-building. The trend in industry is to look for smaller profits per unit in large volume, not large profits per unit in small volume, but in supplying materials to the homebuilder, the materials industry often wants big profits as well as big volume.

A few symptoms of big-line entrepreneurial interest in house-building have recently appeared. Alcoa has been unwittingly lured into some urban renewal investments; General Electric, Westinghouse and a few oil and insurance companies have given backing to some new towns entrepreneurs. U.S. Gypsum has made a well-publicized start at remodelling a few tenements in Manhattan's slums. These examples are claimed to be the forerunners of a take-over by the Leviathans of capital.

---

* These estimates are based on the study by the Resource for the Future, Hans H. Landsberg, Natural Resources for U.S. Growth, The Johns Hopkins Press, 1964, p. 44.

**Ibid., p. 46.

But a similar spurt in interest was manifested by them before (Metropolitan's Stuyvesant Town and Parkchester in New York City, the Rockefeller's Carver Houses in Harlem, New York Life's investment in Chicago). After reams of publicity that promised billions in investment, their interest petered out.

The evidence today is that Alcoa's interest is surfeited; Westinghouse, which bought out a Fort Lauderdale builder, including his 11,000 acres on which it hopes to build a new town, has still to cut its eye teeth on the building business (its executives say the investment was prompted partly by a desire to get closer to the consumer); Columbia, the new town between Baltimore and Washington, will smartly sell off land to small builders instead of mass producing and retailing its own units; Reston, Virginia, has still to demonstrate that building a new town provides bonanza profits to its oil company backer -- or any profit at all.

Among the reasons for the hesitancy of big business are that land and land improvements (representing 15-25 per cent of cost) cannot be standardized; local zoning and archaic building codes and the vested interests of their protectors frustrate the venturesome; vested labor interests will oppose introduction of new materials. We can probably expect some additional standardization, a few more Levitts and a few joint ventures with these Levitts by those with more capital but less know-how; more mass on-site production and more mobile housing manufacture participated in or taken over by the big-timers. But more than this in the next decade or two would be a welcome surprise.

A bigger interest by the capital pools could come with a national land policy and the organization of an USA. The release of land in large parcels could

provide enough good sites to make more wholesale operations profitable, manageable and cheaper. Zoning and other local impediments would be removed and better deals might be negotiated with unions looking for year round employment.

A seventh objective should be to guarantee freedom of movement by eliminating all restrictive barriers preventing people from living in areas of their choice. An apartheid threatens the United States, and unless it acts now, it may be irreparable by the century's turn. The difference between the South African variety and our own will be that our Negroes will be confined to the cities instead of the outskirts: the threat to democratic principles will probably be no less.

If current trends continue, Negroes by the year 2000 will outnumber whites in 8 of the nation's 10 largest cities.* Such predictions can be nullified by labor shortages in other areas, by unanticipated breakthroughs into suburban enclaves, or by a cessation of the northward migration as the Negro, having obtained the vote, decides to stay put in the South. But Negroes are already a majority in Washington, D.C., and Newark while their numbers range from 25 to 35 per cent of the population in Philadelphia, Cleveland, Detroit and Baltimore.

Although a nation-wide division into black and white communities will firm segregation for a time in schools and public facilities, it need not be the disaster some people fear, provided the cities are given top-flight schools and services and provided the channels of opportunity and escape from the ghetto are kept free and open.

The indications, however, are that the cities will not get such schools and services and that the channels of opportunity will not be kept free and open.

---

* U.S. News and World Report, February 21, 1966.

In the nation's most liberal era, i.e., from 1935 to 1950, exclusion of minorities from neighborhoods was not only sanctioned by federal manuals and judicial decisions, but was exhorted by officialdom; withdrawal of government mortgage assistance was threatened unless exclusion was practiced* and some of our most respectable national leaders wrote restrictive covenants into their title deeds.** The covenant was finally struck down by the courts but the public attitudes that gave them support survive.

As more and more all-white suburbs are developed, the proportion of voters with a stake in exclusion will grow and it will need only the right kind of demagogy to spur a mass descent into prejudice, bringing with it a collapse of all the gains laboriously won in the last two decades.

There are already ominous political signs that this is happening. In Berkeley, the center of California's intellectual liberalism, an anti-bias law for housing was voted down decisively and soon thereafter, "Proposition 14," a constitutional amendment to bar adoption of any law that would outlaw housing discrimination was passed by the state itself. It rolled up a surprising 4.5 million votes in its favor to less than 2.4 million opposed, and the votes for the proposition exceeded those polled by President Johnson by more than 350,000.

Nor is California the aberrant exception -- the signs are increasing that the nation's largest state only expressed what is now the going national trend in attitudes. This

---

* Charles Abrams, Forbidden Neighbors, Harper & Row, 1946, p. 227.

**Charles Abrams, The City is the Frontier, Harper & Row, 1965, p. 62.

was indicated in 1966 when Congress decisively turned down a law to bar private housing discrimination, and though inroads have been made by Negroes into a few suburbs, the evidence is overwhelming that suburban opposition to Negro entry is firming. The Negro riots of 1967 did little to relax white fears. If in fact the right to exclude were to be made a national issue in 1972, it is by no means improbable that the housing backlash that made its initial swing in California could complete its course in metropolitan New York and the whole eastern seaboard.

To halt the spread of prejudice that is sweeping steadily through the nation's burgeoning suburbs, a mighty effort must be made to sustain the gains and maintain the moral climate that made them possible. This calls for continued leadership by the President; for an expansion of the President's Executive Order to ban exclusionary practices in housing by all mortgage lending agencies benefitting from government assistance; for continued pressure on state legislatures to enact state anti-bias laws. Above all, it requires the sensible support not only of the Negro community, but also of the churches, civic associations and other groups to whom equal access to shelter is the indispensable link to the democratic faith.

Anti-discrimination laws, however, will not bring the millenium to America's minorities, for even if all suburban homes were opened to them, most could not afford them. The most subtle and most effective form of discrimination, in fact, has been government's failure to provide realistic subsidy programs and ample mortgage facilities to enable minorities to buy or rent homes within their means.

If private builders or the state refuse to build or the local governments persist in maintaining their exclusionary practices, the federal government must be

prepared to go in and build the housing itself; only then can one of the most stubborn links to poverty and discrimination be disengaged and access to shelter be maintained as a civil right.

An eighth objective should be the assumption of leadership by the United States in the improvement of urban settlements in the world's less developed areas. The world in the year 2000 will be a predominantly urban world. The urban population of Africa will probably grow from 58 million in 1960 to 294 million by the year 2000; that of Asia from 559 million to 3444 million; and that of Latin America from 144 million to 650 million. In that world, all areas will be no more than two or three hours distance from each other, so that no nation can remain insensitive to the problems of its ever-encroaching neighbors.

The American indifference to the world's emerging urban problems changed abruptly with the rise of Fidel Castro after which appropriations for mortgage aid and home building swelled. But it was confined to Latin America and little money for urban development has found its way into the rest of the world from the United States, the other more advanced nations or the international aid agencies.

As masses of people keep pouring into the cities, they are seizing public and private land, threatening the rule of law. Industrialization, urbanization and political change have all arrived precipitously in nations lacking the experience, traditions and capital with which to cope with their surging problems. Their industrial, urban, social and political revolutions have all come at once, and are taking place in an arena in which three great ideologies are competing for pre-eminence -- the

American predicated on the theory of private enterprise, individual land ownership and individual choice, the other two based on summary revolution, state hegemony and subordination of the personal freedoms.

In this contest of ideologies, the underdeveloped countries are trying to carve out their own values while resolving the sensitive relationships between government and property, between the public and private spheres of interest and between central and local controls, all of which will determine the kind of political systems under which their people will live. It is in the urban sector, particularly in the housing sector and in the laws governing the ownership of houses and real property, that the nature of the emerging political systems will manifest itself. But by 1967 there was no evidence that the older democracies had even sensed either the dangers or the potentials for rescuing democratic norms out of the gathering chaos.

The emerging urban world is the frontier for new ideas -- in the building of new communities, in the creation of a democratic land policy, in the development of savings mechanisms for home ownership, in the production of international financing schemes for urban development, in the standardization of building parts, in the provisions of land and utility projects and core housing techniques, and in the conversion of tribal relationships into cooperative tenures. What is lacking, however, is the essential international concern with urban development * as well as the existence of the

---

* The report of the Delos Symposion of 1967 urged that the rich Atlantic powers should contribute annually at least 1 per cent of their gross national product to the urgent tasks of world development. As one of the signers, I considered this a minimum as did others signing the report.

international and local skills with which to bring sensible urban development into being. The field requires people who have a grasp of multiple disciplines -- economics, housing and land policy, public administration, sociology, city planning, finance, law and legislation, transportation, architecture, building and building materials, and public relations -- plus a large gift of common sense. Finding the proper candidates and training them will not be easy. The challenge is to the world's universities and to the whole field of education which has become too specialized to qualify. It cries for a new discipline, for the integration of disciplines and for the initiation of new varieties of research, for the training of the right kind of personnel and for the development of a new type of leadership and responsibility that can not only see the emerging urban world from its new, broad and challenging perspective but which can generate progress with limited tools and resources toward making the world a safer and a better place in which to live.

A personal postscript for the year 2000 .

By January 1, 2000, I shall be 98 years old, an age in which my hindsight will be better than my eye-sight. I shall be watching the celebration of the second millenium of the birth of Christ, delivered in a stable during a housing shortage.

I suspect that there will still be a housing shortage in most parts of the world and that more nations, not yet ready to heed the sermon on the mount, will have the capacity to clear areas far more effectively than any urban renewal program.

Fortunately, the tendency of world urbanization to confine people to

concentrated settlements will make all nations vulnerable to destruction and therefore more reluctant to employ their awesome prerogatives. At least this is my hope.

World urbanization will bring another blessing. One of the main forces making for war in the past has been the necessity for expansion on the part of increasing populations -- war was simply one of the special manifestations of the biological struggle for existence. This manifestation spurred conquests since early times, underlay Malthusian doctrine and Hitler's more recent drive for lebensraum.

Yet logically, while world urbanization is no insurance against either cupidity or stupidity, it should bring with it a subsidence of some of man's compulsions to conquer and kill, for in an urban world, his drives for space will be inward and intensive rather than outward and extensive. It is not the land of a neighboring nation that is needed for urban expansion but the land within a nation's own borders. The competition for this land will be intense but it will be mostly internal, not external.

This, of course, will not dispense with the competition for the foodlands or the need for birth controls. It will, above all, not dispense with the necessity for the most intelligent planning of the urban cores and the land around them. In this respect, the present and future concentrations of people and industry should be highlighting the overriding need for rationalizing the world's urban land resources.

If the rule of law is to survive, if rebellion is to be avoided and a measure of human happiness secured for the urban society to come, it is this resource

and its proper planning that should be engaging universal concern. In this sense, resolving the mysteries of the space problem on earth is, I believe, at least as important as resolving the mysteries of space in the outer regions of the universe.

THE NECESSITY AND DIFFICULTY OF PLANNING THE FUTURE SOCIETY

By: Karl Gunnar Myrdal: sociologist-Professor, Institute for International Economic Studies. Wenner-Gren Center, Stockholm. Best known as a sociologist, Dr. Mrydal's basic discipline is economics. His AMERICAN DILEMMA, a searching work on the Negro problem, is the classic treatise on the subject. Recipient of hundreds of international honors and degrees, he has authored many books and articles on economics and money. Former member, Swedish Senate; executive secretary, U.N. Economic Commission for Europe; member, Swedish Royal Academy of Science.

October 3, 1967

Gunnar Myrdal, the Swedish economist, planner, and sociologist, pointed to the almost complete absence of meaningful planning in the U. S. on both national and international matters. Myrdal, whose book on the U. S. Negro, THE AMERICAN DILEMMA, is considered by many to be the most comprehensive analysis of the racial situation in this country ever written, criticized this country's handling of racial matters. His strongest criticism, however, was of this country's involvement in Viet Nam.

According to Myrdal, the most flagrant example of the total absence of planning in the U. S. is in regard to international relations. And our present situation in Viet Nam proves this. As a Swede, living in a country that remained neutral in both World Wars and furthermore, a country that has no colonial involvement, he could, from his vantage point, look at the rest of the world as an outsider, and see many things wrong with the world. As a social scientist and social reformer, Myrdal's orientation and spiritual heritage were toward achieving (through planning) a Utopia. But the world didn't share his ideals. It was too busy fighting wars and engaging in nationalistic pursuits. And he has lost much of his hope and enthusiasm that his ideals can come about.

Praising the AIP for conducting the Conference, which he thinks is in the great American tradition, he is nevertheless impressed by the staggering difficulties that must be overcome to translate these American ideals into reality. In his opening remarks he said: "I feel a little out of place at this Conference. I tried to escape this duty, but nevertheless I am here. I am here because I am assuming that you have enough of what George Kennan once called 'the great American capacity for enthusiasm and self-hypnosis' not to become discouraged by the difficulties I will find it my intellectual duty to point out, so that in facing these difficulties you instead will perhaps feel a greater urge to overcome them."

Myrdal then went on to spell out what planning should be, what it should aim at, and how it has failed. Planning should be foresight and planning the kind of action to shape future events, particularly to avert the dangers ahead. What we mean by planning-- and what even those in America who are allergic to planning also mean--is a determined effort, through democratic means, to make intensive, comprehensive, long-range forecasts of future trends than have been customary, and thereafter, through collective decisions, to formulate and execute a system of coordinated policies framed to have the effect of bending the foreseen trends toward realizing our ideals. All this should be spelled out in advance as definite goals for planning. This does not mean more detailed government controls or a larger beauracracy. As a matter of fact, if this country had more successful planning, it would free the citizens from a lot of irritating public intervention of which there is an astonishing amount in the U. S. Mostly this public intervention is a consequence of too little planning.

In international affairs, this is most evident. In one lifetime, the world has drifted into two world wars, planned by no one. The world now seems to be following an uncharted course toward a third (and possibly final) war. Incidentally, if it comes, the U. S. will not escape destruction and slaughter of civilians as it did in the past two. In this precarious situation, the world is spending today as much or more on minor wars as the sum total of the national incomes of all the underdeveloped countries.

Thus far, the protracted attempts to negotiate international agreements on disarmament have failed. Each country goes its own way trying to assure itself of security and increasing the danger to all. Every true planner must decry this situation. Every planner must recognize how different things could be if the opportunity to plan ahead had been seized; how different things could be, if at the beginning of the century, the rich countries could have seen the handwriting on the wall-could have foreseen the collapse of the colonial system--and set out to prepare the colonial peoples for the responsibilities of independence.

The income gap between the rich and poor countries is widening. The economies of the poor countries has slackened. The inflow of capital from the rich countries has decreased (percentagewise, based on the rich countries' national output) and the quality of "aid" has fallen, because more and more of it is tied to exports from donor countries.

And there is a race angle to the relations between the rich and poor countries. All the rich countries are white (or predominantly so) and the poor countries are colored. There is reason to fear that the race issue will infuse the international class struggle. This is evidenced

by the inclusion of the word "racialism" in resolutions adopted against "colonialism" and "imperialism" by protesting groups in the poorer countries.

There is no justification for criticizing international organizations, such as the United Nations, for failure to solve international conflicts, such as the recent Middle East episode. The UN is not a world government; it can be nothing more than an instrument for international diplomacy. Its failure, if such be the case, is the failure of the member states to agree.

So, it is national, not international bodies that must move toward correcting the disastrous unplanned drift of world affairs. Planning must be undertaken at the national level. And the nations must enunciate and follow clearly defined policies in international affairs. The American government has expressed moving but noncommital declarations about the horrifying dangers involved in the armaments race. But, when it comes to agreeing on even a small practical step in that direction, it looks anxiously over its shoulder.

The long course of events that led to the present large-scale warfare in Viet Nam developed in a compl tely unplanned way. There was no responsible sharing of decisions during the years leading up to the present situation. Even when a particular policy was decided on, evenif it was wise and benevolent, it was not a coordinated planned decision. Other policies pursued at the same time frequently wrenched and twisted the basic decision. It is strange that a country that directs so much effort toward systematic research would have a foreign policy so unplanned, so irrational in its means, and so irresponsible toward declared ideals and goals.

It is obvious that the democratic system does not guarantee that persons elected or appointed to direct foreign policy will have the moral and intellectual qualities that are required. But dictatorships given even less of such a guarantee of competence.

And apart from the insufficiencies in planning in the foreign policy field, successful planning on the national scale is inadequate. Planners have every reason to be disheartened that most of the time we are overwhelmed by events which we should have foreseen and have had planned policy measures to cope with them. One example is the Negro rebellion that has had forebodings for several years and flared up so dramatically this past summer. Apparently, this Negro rebellion came as a surprise not only to the American people at large, but also to those responsible for policy. From a planner's point of view, there is still a bewildering uncertainty of how to use police power to suppress violence and also what remedial actions should be taken to improve the social and economic conditions that are the root causes of the rebellion.

Though poverty, and all that it implies, has a major incidence in the Negro population, Negroes are only a third or a quarter of all the desperately poor in America. So that measures to correct or ameliorate poverty must necessarily provide for all groups and the various actions taken should be appropriate for each.

The various actions which were improvised under the "poverty program" were spurious, not always well administered, and certainly not carefully planned as a long-range national effort to meet certain goals. We planners were naturally sympathetic to the program and could have helped shape a rationally coordinated, effective program. What actually happened, as we all know, is that under the influence of the large scale war in Viet Nam, the air has gone out of the "poverty program." Least of all has it opened up the new opportunities for real planning that we could have hoped for.

In the field of national economic planning, we have been equally remiss. The U. S. has finally accepted the Keynsian idea that economic trends can be planned and balanced But while these great advances in accepting the idea that measures to stabilize the econ my were desirable, and that stimulating a stagnant economy should be undertaken, the planning did not happen. One cannot just want economic growth. The question planning could raise: growth of what and for what? Merely taxes and money flow can't do it. The long-term "poverty program" should be included in any satisfactorily planned economic program.

Among all the fields of planners, the city planners have for decades enjoyed much prestige and have generally escaped the animosity against planning that has been so prevalent in America. But their efforts have been mostly in bits and pieces of cities. I am impressed by many examples of city planning I have seen, but we have made progress only on a small scale and in individual cases. National planning for the "creative development of our environment," the theme of this Conference, has rarely occurred. Full-scale planning of our cities and urban areas is essential in the next fifty years. And it must cover all aspects of human life in communities. Schools are not getting better--in some places they are worse. Transportation must be radically redirected. Houses, streets, parks, playgrounds, public facilities, all must be developed with rational planning policies.

And these policies must be broadly arrived at to meet the need of all people--not just the ppor or the Negro. Moreover, we know that the toughest problem will be to rehabilitate the human inside the slums, to lift the people out of cultural impoverishment and their slum-mindedness.

In improving planning for our urban environment, there are financial and political issues to be solved. More functional administrative units must be created and provision made for their financing. State, local and Federal governments must provide larger financial contributions to

planning activities. Such reforms will meet with resistance from certain vested interest, but they must come about.

There are all kinds of estimates of the huge sums that are required to rebuild American cities and rehabilitate their slum populations. But there is no detailed plan on a national scale for what needs to be done, or how much it will cost. Such calculations should be made. They are needed in order to educate the American people to the magnitude of the task. And, said Myrdal, "I would permit myself the observation that while at this conference you should take up the national problem of what America should do to "cause a creative development of our environment, our society, and our people."

The common idea that America is immensely rich and affluent is an exaggeration. American affluence is heavily mortgaged. America carries a tremendous burden of debt to its poor people. No investment is more remunerative than "investment in man." And the American majority that is well off should make the necessary sacrifices to "cause a creative development of our environment, our society, and our people."

But Congress seems more willing to spend money on wars and the preparation for wars than for home needs. Congress probably reflects how the American electorate feels about national priorities. Most Americans do not feel the pinch of misery of the slum dweller. And generally, the lower strata of American society has remained relatively inarticulate about their plight. This passivity (with the exception of the recent Negro rebellion) is responsible for the neglect of the needs of the submerged underclass--the world's least revolutionary proletariat.

Concluding, Myrdal said:

"This conference is based on the conception that ideals and goals for planning should be spelled out in clear terms. The first condition for planning in a democracy like the U. S. is to reach the people and enlighten them in regard to social and economic facts and policy needs. Unless the popular level is enlightened, all planning is nothing more than an intellectual exercise among a small sect of devoted planners, who will, moreover, be under constant temptation to compromise their planning in order to have something accomplished, however inadequate and perverted as to real needs. Planners must spare time from their scientific work to speak to the people in simple terms that laymen can understand."

"There are staggering difficulties, and we need the will to grapple with these difficulties. We need not the courage of illusory optimism but the courage of almost desperation."

The Next Fifty Years*

by

William H. Stewart, M.D.
Surgeon General, Public Health Service
U. S. Department of Health, Education, and Welfare

Fifty years ago we were engaged in fighting the war to end wars, a war that would, among other things, make the world safe for democracy. Crumbling, along with many of the cities of Europe, was the cool Victorian certainty that everything was evolving for the best. Man was not as sure in 1917 as he had been in 1910 that science, guided by enlightened hands, would shape a world of eternal abundance and order.

Looking backward with the divine clarity of hindsight, we can now read some of the handwriting that was then on the wall. Listening with all the static screened out, we can hear a few authentic voices of prophecy coming at us across the years.

One was the voice of Albert Einstein who, twelve years before had written an equation that put new dimensions of potential for self-improvement or self-immolation into man's hands. Another was the voice of Pablo Picasso who was turning from the artistic glorification of the individual human being to the presentation of man as form and fragment.

Symbolically at least, it is possible to derive much of what has happened over the past half century from these two sources. Einstein overturned man's vision of the external world around him. Picasso turned man's vision of himself inside out. Today we find

---

* Delivered at American Institute of Planning, October 5, 1967, Washington, D.C.

fragmented, formalized man the uneasy master of overwhelming science and technology.

And so we come together in 1967 to view the next half century. It is most appropriate that we do so, and I am impressed by the company assembled. I hope, though, that we shall be listening not only to ourselves and to each other. I very much doubt that a similar group, had it been assembled in 1917, would have included the right voices. I have parallel doubts about us. The trouble with us is that we have prospered by the present and are probably, therefore, shackled to it. We may well be akin to the Roman sage of the fourth century, described by Lewis Mumford, who confidently predicted an endless proliferation of good public baths and better public roads while the Visigoths were gathering at the gates.

Whose are the authentic voices? Do they come from those who are doing the planning, or from those who are being planned at?

What, for example, are the op artists, the beat poets, the flower children trying to tell us? What can we learn from them, or from the fact of their existence?

Obviously a considerable portion of the youth of this country feels an estrangement from our society. These kids have opted out. Basically, I think they are disenchanted with impersonal institutions, with superhuman technology--with what appears to them to be the irrelevance of our society to humanity and human values.

We can call them immature and wish they would wash. But we can't ignore their expression of a deep hurt. They are suffering a wound that calls for treatment. That treatment somehow must be

built into our thinking about the next fifty years.

Meanwhile another group clamors still more loudly for our attention--the dispossessed in our urban ghettos and in the rural wastelands. What are the rioters trying to tell us? What should we be learning from them and from others like them who suffer in silence?

The root of their malady is painfully clear. While the majority of our society reaps the benefits of technology, they are reaping nothing but frustration. In the midst of incredible productivity, they are jobless. In the midst of abundance, they are wanting. In the midst of health, they are sick.

This vast disparity occurs in a negative social environment which is self-sustaining and self-perpetuating. Lack of jobs, lack of education, lack of access to the rudiments of health combine to harden the stratification of society. The pressures of fragmentation which weigh upon all of us weigh heaviest on the poor. This severe illness of our society demands immediate medical attention. In fact, equity of opportunity must be established as a prerequisite to all other treatment.

Neither the disenchanted nor the dispossessed is a new phenomenon. Both have been with us always. In years and centuries gone by, they have been dealt with largely by lamentations and platitudes--which is to say that they have not been dealt with at all. Or they have been suppressed and contained--which passes the problem on to the future in intensified form.

The exciting thing--the new phenomenon--at this moment is that they can be dealt with if we decide to do so. Professor Jerome Frank has said it this way:

> "In the past, men could shrug their shoulders in the face of most of the evils of life because they were powerless to prevent them.....Now there is no one to blame but ourselves. Nothing is any longer inevitable. Since everything can be accomplished, everything must be deliberately chosen. It is in human power for the first time to achieve a level of human welfare exceeding our wildest imaginings or to commit race suicide, slowly or rapidly. The choice rests only with us."

This, I take it, is what this conference is all about. Each of us views this awesome choice through his own special lens--mine is the lens of health, Dr. Hutchins' the lens of education, and so on. My objective for the year 2017 is the healthy man; his is the educated man. I think we are looking at the same fellow--the integral man.

Moreover, it is clear that the health system and the educational system and a great many other systems are going to have to work together to produce him, and that all these systems will have to change substantially if this healthy, educated man is to be typical of his time.

What is this healthy man toward which we aspire?

First, he is as free of disease and disability and the imminence of premature death as medical science of the 21st century can make him. Projecting the pace of recent progress across the next five decades, he should be in pretty good shape. He should look forward with confidence to a longer lifespan than we do today. He should be free of the presence or threat of most of the communicable diseases. He should have at his disposal a remarkable battery of curative and rehabilitative skills when chronic illness threatens to limit him in his activities. He, or at least his children, should be comparatively free of the menace of congenital defects.

Second, he lives in an environment that is free of specific, preventable hazard to his health. He is not compelled to place his life or health in jeopardy as a condition of his employment, or as a condition of urban living.

In short, he is the beneficiary of excellent medical care--preventive, curative and restorative--and of environmental health protection. But this is only the beginning, not the end of the story.

For the truly healthy individual is not simply un-sick. He is not merely an aggregate of undiseased organs existing in sterilized and de-carcinogenated surroundings.

Rather he is not only strong but conscious of his powers and eager to use them. His environment is not just protective but positively conducive to productive and stimulating living. The

healthy human being of the year 2017 is equipped for self-fulfillment physically, emotionally and socially.

How do we get there from here? Obviously no amount of adjustment in the health system alone can take us there. But there are a number of changes within the health system that will move us in that direction.

In my view, the fundamental and revolutionary change needed in the health system is to re-orient it to the human being. The individual person should be the center around which the health service system revolves. His total state of health should be its measure of success or failure. This radically different orientation would rid us of a great many prevalent absurdities typified by the classic statement, "The surgery was a success but the patient died."

The fact is that we in medicine are suffering from fragmentation of the human being just as society is suffering from fragmentation of the body politic. With the application of science to medicine has come specialization. With increasing technology has come depersonalization. As a result, we seem to have greater concern for a specific gene or lobe than for the human being it belongs to. Within the medical microcosm the ultimate object of the enterprise--the person--is lost in a swarm of preoccupations with the technique, with the professional subgroup, with the efficiency of the facility, and so on.

This, I submit, is a very special irony in medicine, which has the most humantarian purpose of all the disciplines stemming from

science. How can health possibly be seen as irrelevant to people? In this situation, the physician must heal his own art.

Historically, across the long span of the centuries back to Hippocrates, the practice of medicine consisted largely of an unequal struggle to prolong life and reduce misery. The struggle was unequal because available knowledge was unsystematic and tools were rudimentary at best. The doctor almost always lost. The good doctor was "good" because, lacking the ability to cure a specific ill, he gave "care" to the whole patient and made him feel better, temporarily at least. He was a skillful, an artistic comforter.

Then, beginning in the late 18th century and continuing into the 20th came a period when the tide of the long battle began to turn not so much by curing diseases as by keeping them from happening to large groups of people. Some of these gains were external to medicine--a general rise in living standards and levels of acceptance brought better nutrition and cleaner surroundings for most of the people. We learned how to treat public water supplies. We learned how to immunize against some diseases. In most of these instances society was the patient and the individual benefited as a member of the community.

Now for the past few decades, and especially since World War II, we have been in a third historical period--the therapeutic age. Primacy has been given to diagnosis, treatment and cure--through the "wonder drugs", through "wonder surgery", and other applications

of biomedical science and technology. During this same period we have also made important advances in medical rehabilitation. The accent has been on the specific disease or disability, the focus on the diseased organ or tissue.

This surge of emphasis on the therapeutic aspects of medicine will undoubtedly continue for awhile as technology is further exploited. But this further exploitation will demand further specialization of professional performance, and it contains the seeds of further fragmentation of the individual. It will also result in further de-personalization of the circumstances of health service unless we take positive steps to counteract this tendency.

The shift that must take place over the next half century is the emergence, once again, of the individual as the central purpose of medical science. This will place a much higher priority on prevention--not only of disability and death but of deviations from the norm that interfere with individual fulfillment. It will, in fact, alter and enlarge upon the traditional concept of prevention--which is essentially a negative concept--into a concept of health maintenance and health advancement.

The traditional concept of prevention has been to create conditions in which disease and premature death will not happen. The concept I am looking toward in the 21st century is to create conditions in which the healthy individual, as we have envisioned him, <u>will</u> happen and will be the norm.

Such a transition will involve new health strategies on a large scale. All of these strategies entail picking up the pieces of our fragmented present and putting them together as an integrated whole. We are concerned with the body and mind of every individual and with the social and physical environment in which these many individuals will be living.

As a first step we shall need to overcome our tunnel vision of death prevention as the primary object of health endeavor. We need to be concerned with not only the number but also the quality of man's years.

Part of this process will require a new economic orientation. We shall be shifting from today's sickness insurance to genuine health insurance. We shall be building incentives into the system for prevention, for maintenance of optimum health, for serving the individual rather than his diseased parts. These incentives will need to be apparent to both the provider and the consumer of health services.

A major strategy for immediate implementation will be a massive emphasis on and investment in developing health systems that meet the needs of today's dispossessed. Our goal of the healthy individual must apply to all our people--no lesser aspiration would be conceivable today. Yet for great numbers of the poor the wonder cures of our therapeutic age and even the basic preventive measures of 50 years ago are still out of reach. This imbalance must be redressed before

we can hope to soar higher toward 2017.

We shall have to devise and put into practice new systems of organizing health services, including the facilities and institutions that provide them. Heretofore, the hospital--the great citadel of cure--has been considered the heart of the system. But if we envision a system which emphasizes health protection and advancement, admission to the hospital will be an admission of failure. The hospital will be the place of last resort--essential but no longer dominant. Rather we shall need to invest heavily in ways of getting preventive and health maintenance services out where the people live--related to home and school and workplace. We need to build flexibility into both the structure and the operation of health care facilities. In planning such facilities we need to consider first of all the people to be served, and the patterns of flow of community life.

Perhaps most important of all, we shall have to re-orient our education of health professionals to the new goal of optimum health. If their highest object is service to the healthy individual, they will need an understanding in depth of society and the humanities. Only thus will the technical specializations, built on top of this base, be fully useful. To accomplish this transition, we shall have to start quickly. For medical education is a long-time process; it must chart a course that intersects the trajectory of practice a full decade in the future.

Our strategy of environmental health must begin, but not end, with removal of specific hazard. The first step is to understand

that the environment is the habitat of man. We need to appreciate both the potential and the limitations of our air, land and water, and relate these to satisfying living. While we are worrying about pollution we need also to worry about noise and light, stress and speed, and their impact on the healthy man. We need to build new partnerships, based on new incentives, among governmental bodies in many fields at many levels and between these and the full range of private enterprise.

For it is very clear that no single element of society can bring the healthy man into being. To accomplish all or part of this great transition, medicine and the health disciplines will have to develop new working inter-relationships with virtually all of the other fields of knowledge that impinge upon the human being and help to bring out the best in him. Health, broadly conceived, must be a determinant in housing and city planning, for example, just as spatial patterns of living must be among the determinants of health programs. Happily, the beginnings of these interlocks are becoming visible in conferences like this one, and in the broader concepts of planning that are being applied to problems of the city and also to problems of health.

I am convinced that realizing this vision will be well within our technical capability by the year 2017. Whether it is within our societal capability remains to be seen. I think we must try.

All the planning we do must be polarized toward the goal

of human fulfillment--the integral man. However sophisticated the apparatus of our planning process may be, it must ultimately be accountable to the individual human being for the critical choices. And these choices must always be evaluated against a yardstick of human values.

Given this goal, this accountability and this measure, we shall proceed full speed ahead on those courses of action which promise to advance the quality of living. That which is irrelevant to this purpose will be subordinated or cast aside. We shall have no time in these 50 years for irrelevancy.

FOR IMMEDIATE RELEASE

ANATOMY OF A PLANNER

THE NEXT FIFTY YEARS / 1967-2017

The nation's consultation on the future environment of a democracy

Who are planners? These men whose decisions may completely transform our patterns of living in the future belong to a new profession that is still unknown to most Americans.

The American Institute of Planners in Washington, DC, a national professional society of local, state and regional planners, recently surveyed its membership to determine the anatomy of a planner.

From this study emerged a portrait of a typical community planner. He is under forty years of age, has entered the field since 1955 and earns between $7,500 and $12,000 annually from salary and professional fees. He holds an undergraduate degree and is interested in continuing his education in planning and related fields.

Eighty one per cent of all AIP members reported they want to take additional college courses although 94% already have undergraduate degrees, over 40% hold Master's degrees in planning and over 10% have Master's in other fields.

Planners are a relatively young group -- 17% were born since 1937 which makes them less than 29 years old. Fifty-six per cent were born since 1929 and are under 37 years of age.

As the problems of modern cities have grown in the past decade, the number of planners has swelled. Between 1955 and 1965, 67% of the planners in the

-more-

United States took their first full-time job in the field. Since 1960, 37% have begun their initial jobs as planners.

Planners have been defined as professionals who develop comprehensive programs and regulations for the orderly physical growth and renewal of cities, suburbs, counties, states and regions

Their work includes consideration of population and economic trends, social problems and objectives, development costs, public finances, intergovernmental relationships and urban design goals.

Planners also evaluate existing and future needs for land use, public utilities, community facilities, housing and transportation.

This year marks the fiftieth anniversary of the American Institute of Planners. Looking ahead to the next half century, the Institute will be host October 1-6 to a consultation on The Next Fifty Years/1967-2017: The Future Environment of a Democracy to be held at the Shoreham Hotel, Washington, DC.

This multi-disciplinary conference is Part II of a major three year effort, sponsored by AIP, to begin a nationwide discussion on the philosophy and values which could produce guidelines for the future development of American society. Other sponsors include foundations, national church groups, industries, universities and government agencies.

The American Institute of Planners was established in Kansas City in 1917. Its membership has grown from 24 members at its inception to 4700 in 1967. The organization maintains high standards for the profession and promotes better communications between planners and professionals in related disciplines through its Journal, Newsletter, 24 chapters and annual national conferences.

The Institute often advises government agencies and national public interest groups on matters affecting the practice of planning. It presents the professional position on legislation to Congressional committees, and encourages education programs and interdisciplinary studies for planners.

"NEW NEIGHBORS"

By Hans Knight

Local intergroup agencies often call on us to produce inexpensive material that could be used on a large distribution scale to help educate whites toward accepting Negroes as neighbors, especially in situations where tensions exist or can be expected.

Such material is hard to come by. But we think that in this reprint from the Philadelphia Sunday Bulletin we have a true story that may prove to be very helpful. We wish you would try it out and let us know.

It concerns the quest of a Negro family for a home in the suburbs, the all too familiar problems they encounter, their eventual success in finding a place and subsequent integration (not all "sweetness and light," which lends a realistic note).

Cost is 10¢ each with a 50% discount for quantities of a hundred and over.

NEW

NEIGHBORS

The Quiet Integration of a Suburban Neighborhood, and the Long, Painful Quest That Led a Family to It

By HANS KNIGHT

IT was a nice neighborhood.

It was Saturday afternoon. Kids splashed in plastic pools under the warm sun. Lawn mowers buzzed a symphony of suburbia.

They walked up the gravel path to the house, man and boy. They rang the bell.

The man who answered the ring spoke through the screen door without opening it. He looked at them and listened. He said:

"You may not come in and see my house."

Tony Robinson was six and he didn't understand. He looked up into his father's face and he saw the jaw muscles flutter under the brown skin and then he felt the big hand tighten around his own and they walked back to their car at the curb.

All the way from the Bucks County community to the narrow North Philadelphia street they rode in silence. The questions crowded in Tony's mouth but he didn't let them out.

Why was the man at the door so unfriendly? His father had spoken politely. He had introduced himself as the man who had made an appointment to see the house.

Why hadn't the man let them in? Why hadn't he even returned his father's greeting?

And why had his father turned and walked away without another word? Was he afraid of the man behind the screen? But his father had been in the Air Force and wasn't afraid of anything.

Had his father lost his speech? But he was a teacher and teachers knew more words than most anybody.

So Tony didn't understand.

They reached home in the narrow North Philadelphia street and Tony's mother, handsome and resolute, was waiting in the door-

way of the row house and asked, "Well, how did it go?" and his father said with a strange smile, "It didn't," and Tony found the courage to ask the questions and his parents sat down with him in the small, hot kitchen and explained to him how it was when Negroes try to move into a white neighborhood.

It was the worst moment in the Negro family Robinson's quest for the home in which they wanted to live.

TODAY, three years after the incident, Harold Robinson's pride still makes it hard for him to talk about it.

"It was a matter of your son seeing you humiliated and taking it," he said. "That day I felt like giving up."

But the Robinsons didn't give up.

"We talked it over into the night," Julia said. "And we decided we owed it to ourselves and to our sons—Steven was only two at the time—to keep on trying."

Julia had had the dream since she was a little girl. When she married Harold, twelve years ago, she found he shared the dream.

"We wanted to live in a good community with good schools. We wanted to give our children a better life than we had had."

Harold and Julia were born and raised in Philadelphia. He came from a small family, finished high school and worked his way through Cheyney State Teachers College with an intervening four-year spell in the Air Force. Julia came from a large family. She never went to college.

"We were rather disadvantaged," Julia said.

"In fact, we were plain poor," Harold said, smiling.

After their marriage they bought the row house in the North Philadelphia neighborhood in which they had grown up.

"It was a pretty good house," Julia said. "But the area was all built up. There was no room for kids to play. We wanted something different."

Julia had been working as a bookkeeper and teller in a bank ever since she left school. It was supposed to be difficult for a Negro to get a job in a bank in 1953 but Julia saw the ad in the paper, walked in and got the job.

Harold, his studies interrupted by his military service, had another year to go to get his degree at college.

"It was tough," he said. "We lived on Julia's pay and I didn't like it. It didn't seem right having my wife keep me. But things got better."

SIX YEARS ago, Harold began teaching in a North Philadelphia elementary school. After Tony's birth, Julia had switched to night work in the bank. Two salaries coming in enabled the Robinsons to save.

One day, in the fall of 1962, Julia decided they were ready to move. Harold agreed.

"We were making enough money to afford a better place," Julia said. "We thought that was all we needed. We were pretty naive."

They scanned the newspaper ads for houses that seemed promising and they found plenty. Julia made most of the phone calls.

One of the encouraging replies came from that nice neighborhood in Bucks County.

"Until then," Julia said, "we had just called up like any other American couple looking for a house. We didn't mention that we were Negro. I guess we were idealistic enough to think it wasn't important. We kept that up even after we had been turned down many times when the people saw us. We were also stubborn.

"But when Harold took Tony along that day and my son had to see the thing, we decided we would tell the people we were Negro, in advance."

The Robinsons were treated to a variety of excuses.

"Sorry, the house you're interested in was just sold."

"Sorry, the owner isn't home. No, I don't know when he'll be back."

"Sorry, the salesman handling the property is on vacation."

"Well, we'll call you back . . ."

When the salesman didn't call Julia, she called the salesman.

"I just wanted to take them at their word. It didn't do any good. The salesman simply was never there. But our phone bill was astronomical."

The Robinsons decided to change tactics.

"We turned to new housing developments because we thought those deceitful practices couldn't be used," Julia said. "After all, anybody can walk into a development and look around, and that's what we did."

It didn't help.

Sometimes the Robinsons found that the salesman in the model home had suddenly disappeared. Sometimes the salesman materialized and was very rude. Sometimes he refused to give out simple information.

"It was almost funny to see a salesman suddenly run out the back door as soon as he spotted us pulling over to the curb," Julia said.

"Once we did catch a nice young man willing to talk to us. He spent all his time telling us how terrible his houses were, how much it would

almost cried. This is heaven, I thought.

"Later, much later, I learned the truth about the wonderful welcome. All those people were members of the Fair Housing Council who lived nearby. And the reason they kept coming to the house was that they wanted to be on hand in case of trouble. As one gentleman told me, 'Mrs. Robinson, we saw what happened to the Baker family in Folcroft, how the neighbors hounded them. We just wanted to make sure that wasn't going to happen here.' "

Although the welcome was less than spontaneous, there was a minimum of trouble. Nobody threw rocks at the Robinsons. Nobody burned fiery crosses on their lawn. Nobody picketed.

Still, the King of Prussia neighborhood was all-white and it considered the Family Robinson something of a foreign body.

Some neighbors pointedly averted their faces when Harold Robinson walked the street. Occasionally, children would cross to the other side of the street to avoid coming near the Robinsons' lawn.

"I don't know what their parents had told them about Negroes," Harold said. "Maybe they told them we were something evil. Don't ask me how I felt."

Tony Robinson, who once saw his father humiliated, this time felt prejudice first-hand when some of the neighborhood kids chased him and called him a chocolate boy.

The Robinsons were saddened but not angry.

"One thing we had to remember —most of these white people had never met a Negro except in a menial capacity," Julia said. "They had never lived next to one, nor talked to a Negro except to tell him what to do, what to lift, what to clean up."

ONE FACTOR that helped the Robinsons face down the neighborhood's fear and resentment was that they never expected to be loved.

"We didn't look for red carpets and brass bands," Harold said. "All we wanted was to exercise our rights as Americans to live where we chose. We never asked for affection—but we never made excuses. We don't apologize for being Negroes."

One Sunday morning, Harold recalled, he was painting a section of his house.

"It looked a bit shabby," he smiled. "Well, I wasn't going to let the white people think the neighborhood was falling apart because of me. So, I got out the bucket and brush. The next Sunday, I noticed that two fellows nearby also were painting their houses. Maybe it was coincidence, but . . ."

While Harold was hosing down his car, six weeks after they'd moved in, a man who lived across the street strolled by.

"Hi," said Harold.

"Hi yourself," said the man.

"When you and your wife have nothing better to do one of these days," Harold told him, "why don't you drop in for a beer?"

Half an hour later, the Robinsons' phone rang. The neighbors wanted to know if that night was okay to visit.

"Sure," said Julia, "come right over."

It broke the ice.

"It became a regular routine," Julia said. "One Sunday they'd come to us, the next we'd go over to their house. And we talked. We talked into the wee hours of the morning. They were frank and open and so were we.

"They told us they'd thought of moving out when they heard we were coming because they were afraid. They didn't and they were glad, they told us. We discussed just about everything. We told them that some of our friends had worried that somebody might hurt our sons. They told us, frankly, that they had always thought of a Negro as quite inferior. We discussed all the myths that divide people. We didn't always agree but we always parted friends. We realized that you can't challenge a myth unless you pin down exactly what the myth is."

Some time ago, the neighbor was transferred to Ohio.

But the Robinsons plan to visit them, and the neighbors promised to visit the Robinsons.

"We think we gave each other an education," Julia said. "You can talk about integration and fellowship till doomsday and you won't know what it is until you have lived it."

It was this truth that caused Julia recently to quit her job at the bank and become a field worker with the Metropolitan Philadelphia Housing Program of the American Friends Service Committee. Her job is to provide a bridge between Negro American families who want to move into better houses and agencies which help them do so. She has set up information programs in Philadelphia and Camden.

"I feel very strongly about this," she said. "Perhaps it's partly because I was never interested in fair housing before except as it affected us personally. I feel I owe something."

Julia paused and glanced around the living room.

"This is what I always wanted. A good house. A house with a little foyer and a back entrance so the kids wouldn't have to come charging through the living room when they wanted a dime for the ice

cost us to fix them up, how inferior the materials were. He was very nervous—and so relieved when we pretended to believe him and walked away."

Also, some realtors and owners told the Robinsons they'd be willing to sell—but they were afraid of being boycotted by their neighbors and customers.

The Robinsons' determination began to flag.

"We were getting tired of looking, tired of the evasions, the hypocrisy, the insults," Julia said. "One evening Harold and I reviewed our whole position and concluded we would have to compromise. So we wouldn't have exactly what we wanted, we told each other. So what? But the more we talked, the more we realized that we were not being true to ourselves. We were, in fact, chickening out, we were betraying our dream. And suddenly we knew we had to go on trying.

"Now, one thing has to be understood. I never had my mind set on living in a white neighborhood, regardless. We never thought of ourselves as crusaders. But it so happened that the houses which *were* offered to us were not exactly right for us. Sometimes the school was too far away. Sometimes the street traffic was too heavy. Sometimes the price was too high. We felt it was our right to live where we wanted to live. And when we looked at our two sons, we were ashamed that we even considered backing down."

Photographs by Don Pasquarella

"How wonderful to meet some friendly people . . . " like Scott Krasner, 10, a basketball buddy of Harold Robinson and son Tony, 8.

AND THEN the Robinsons' luck changed.

They are members of the Zion Baptist Church at Broad and Venango Streets. One Sunday, they heard Richard K. Taylor, executive director of the Delaware Valley Fair Housing Council, present a program for those interested in moving to traditionally non-Negro areas.

"We were told about the work of Delaware Valley Fair Housing Council, the many fair housing councils surrounding the Delaware Valley, and the Housing Information Service in Germantown," Julia said. "The council workers are a group of volunteers. Essentially, they scout around for Negroes who want to move and for owners who want to sell properties."

(The Fair Housing Council has since become part of "Project Free," a new coalition of groups dedicated to open housing on the Main Line.)

The Robinsons met with a Fair Housing representative and told her exactly what kind of home they were looking for.

One day, a Fair Housing volunteer, walking through the King of Prussia neighborhood where she lived, spotted an empty split-level house. It had a front lawn and a back yard. It was close to a school. It was within easy distance of a shopping center. It might be what the Robinsons wanted.

It was.

"We drove up to look at the

Mrs. Robinson Told Her Son: "Some Won't Like You Because You're Brown. Tough. But Others Will. . ."

Challenging the myths: Neighbors Benjamin Love and Harold Robinson.

"You don't know integration until you live it." Children start with picnics on the patio. Mrs. Robinson serves sons Tony and Steven, 3, and Scott Krasner and his sisters: Jill, 7, and Karen, 4.

house on a Saturday afternoon," Julia said. "And I clearly remember thinking to myself, 'How wonderful to know that for once we'll meet some friendly people.' "

There followed an anxious week during which the Robinsons' broker and the broker representing the seller discussed the family's case.

The home's previous owner had been transferred out of the state and his employers had bought the house. Now, the company was eager to sell.

And so, having agreed to the full asking price of $18,500, the Robinsons got set to move into their dream house.

"It sounds simple," Julia said. "But it wasn't."

When word spread that a Negro family was moving in, one neighbor sold his house and fled at once. Some residents went into worried huddles on their well-kept lawns. The rumor got around that the Robinsons were being subsidized by the NAACP to bust the block, that they couldn't really afford the house and would let it run down to the embarrassment of the community.

Quietly, the Fair Housing volunteers went into action. Without preaching, they calmly answered some neighbors' questions about the Robinsons. Meanwhile, several ministers informally soothed jittery parishioners. And various residents of good will urged their friends over barbecued hamburgers to give the Robinsons a chance.

One day last September, the Robinson family moved in.

"The very first day," Julia recalled, "a fantastic thing happened. People called on us in one long procession—white people. One lady asked if she could help us unpack. Another lady wondered if she could do some shopping for me. A middle-aged man came in and said he just wanted to chat. I was so moved, I

cream man. We've got plenty of room — seven rooms in all, and one and a half bathrooms. Steve's bedroom was an awful pink, but Harold painted it green, which looks much better,"

It was a signal accomplishment, Julia said, because Harold was really all thumbs when it came to fixing things around the house.

"Well," said Harold, "you don't mind doing it if it's your own."

They are happy in the house, Harold said. But he has no illusions. Some neighbors have not accepted them and perhaps never will.

"The myth is too deep. They look at a Negro and they don't see anything. They look through you, like an invisible man. And some of them see you all right, but they see you as not quite human. This kind of thing is hard to break down because it was instilled in them when they were kids."

Yet, the Robinsons are not bitter. They have made friends and have seen some suspicions dissolve.

Tony has won several playmates. He is a third baseman on the midget team, and he has done well in school, where he is the only Negro in class. At the end of the last term, his teacher told the Robinsons she wished she had more students like him. "He tries hard for an A, but he doesn't cry in his milk if he gets a B or a C," she said.

From the outset, Julia guarded against the temptation of being overly protective toward her sons.

"I don't want them to hang around the house merely because they might encounter some unpleasantness outside. I want them to face the world openly, the good and the bad."

Once, Tony came home looking downcast because some of the kids in the block had refused to play with him.

"Remember," Julia asked him, "when we lived in North Philadelphia in the old house—did all the kids on that block like you?"

"No," said Tony.

"Did you like all the kids on the block?"

"No."

"Well," said Julia, "it's the same here. It's a fact of life. Some people won't like you, no matter what you do. And some you won't like, for this reason or that. Some people won't like you because your skin is brown. Tough. But others will . . ."

SHE ALWAYS remembered the song in *South Pacific,* the one that says a child has to be taught to hate . . . before he's six or seven or eight.

Harold nodded agreement. Then he chuckled.

"The other day, Steve, our four-year-old, came home blazing mad. He said, 'Aw, Dad, I had a fist fight with Johnny. He's just a colored kid.' "

(Johnny, a neighbor boy, is actually white.)

"But Steve wanted to get back at him, wanted to call him something bad. So he called him a colored kid. He had no idea what it meant. But he must have heard it somewhere."

It would be tragic, said Harold Robinson, if it weren't so funny. ■

Introduction

file

Newburke Housing Corporation is a not-for-profit corporation chartered under the laws of the State of Georgia. Its purpose is to engage in the development and construction of a housing project in Burke County, on land provided by the United Presbyterian Church of the U.S.A. The housing project, when completed, will contain rental homes, contractor-built and self-help low-cost housing, recreation facilities, a shopping center, a day care center, and an industrial park, in a low-income, rural county in Eastern Georgia. Newburke Housing Corporation draws its membership from all socioeconomic groups in Burke County, as well as from all voluntary associations concerned with civic improvement in the area.

Sponsor

Newburke Housing Corporation is a not-for-profit corporation with a 25-member board composed of low-income community members, professional persons and elected leaders from the community at large, representatives of the Eastern Georgia Farmers Cooperative, representatives of the Burke County Improvement Association, representatives of the United Presbyterian Church of the U.S.A., and representatives of Boggs Academy.

Boggs Academy, sponsored by the National Missions Board of the United Presbyterian Church of the U.S.A., has continuously provided quality education for the financially and culturally deprived students of the Black Belt area, as well as involving itself in the social, economic, and political development of Burke County. Traditionally, Boggs Academy has been an innovator and leader in educational and noneducational affairs, and has now committed its resources not only to the building of homes in Burke County but to the development of a better life style for the residents of these new homes, by its participation in Newburke.

The purpose of Newburke Housing Corporation is to develop land, provided by the United Presbyterian Church of the U.S.A. National Missions Board, in the following ways: private housing for low-income persons; public rental housing for low-income persons; a shopping center and clinic; a day care center and facility for the aged; a central water and disposal system; recreation areas; streets, gutters and sidewalks; an industrial park; and similar projects desireable to community residents.

Newburke will recieve and administer funds, as may be donated by any private or governmental agency, and will contract and subcontract with any other corporation for the conduct or administration of all or any portion of the activities to be carried on by the corporation.

Southern Rural Project has gained a commitment of $30,000.00 in technical assistance funds from OEO, to be used for this development. Technical assistance has been promised by the following organizations: Georgia State Economic Opportunity Office, Georgia Institute of Technology, Rural Housing Alliance, Southern Rural Project, the United Presbyterian Church of the U.S.A. National Missions Board, and General Electric Economic Development Office for the Southeast Region (Huntsville, Ala.).

Contact with technical assistance groups will be made by the six-member Newburke Planning Committee, the working arm of the Board of Directors. The committee will be intimately involved in the total planning of the whole project, and will make recommendations to the Board of Directors after reviewing the whole program, as well as developing information on the feasibility of each stage of the project.

The Area

Burke County, its 831-square-mile area the largest of any county in Georgia, is located immediately south of the metropolitan area of Augusta/Richmond County. Physical assets of gently rolling land and fertile soil led toward the early establishment of a row-crop agricultural economy, principally in cotton, peanuts and tobacco. The present physical development pattern is still tied to agriculture, though Waynesboro, the county seat, has become a center of non-agricultural employment.

In the county proper, the estimated total population for 1966 was 20,200 persons, with a black population of 66.4 per cent. An estimated 25.9 per cent of these persons resided within urban areas, with populations of 2,5.. or more. The remaining 74.3 per cent of Burke County people-- some 15,000 at least-- lived in rural areas. Burke County is more highly rural than the rest of the U.S.; nationally, only 29.4 per cent of the population resides in rural areas.

Most of the land in Burke County-- 63.3 per cent-- is used for agriculture, primarily cotton, corn, peanuts and truck vegetables. But agricultural employment is declining, as large plantations are mechanized and sharecroppers are displaced. Between 1959 and 1964, 474 farms in the county were merged, abandoned, or put to non-farm use; almost 474 families were out of steady work immediately. Some 31 per cent of the population is still employed in agriculture, as opposed to over 60 per cent ten years ago. White collar employment is 20 per cent; manufacturing employs 15.9 per cent of the total working population, but almost 70 per cent of those working in manufacturing

are women. There is an urgent need for jobs for young workers and male heads of households. The 30 per cent of the work force uncounted has either outmigrated, found jobs in other counties, or is unemployed, with some marginal connection to agriculture.

Of the 4,317 families in the county, 67.4 per cent had annual incomes of less than $3,000.00. Median income per family, not per capita, was $1,855.00. The median income per family for those employed in agriculture is $697.00 per year.

Until the Fall of 1970, Burke County schools had been almost totally segregated; the schools attended by almost all black pupils remained unaccredited, although they were public schools. The median level of education in the county is 6.5 years of schooling, with 39.8 per cent of the population having less than five years, and only 16.8 per cent graduating from high school. Those who do graduate are generally counted among the number who leave the county for good.

Of all the housing units in the county, only 35.6 per cent are owner occupied, and the remainder rent at a median rental of $30.00 per month. Sound housing is somewhat of a rarity: only 27.4 per cent of all homes are considered sound. Sound housing is housing with intact windows, floors, walls and roofs; with electricity, indoor toilets and running water; with heat coming from other than a fireplace or wood cook stove. 72.6 per cent of the housing in Burke County is not sound.

In November, 1969, SRP took a housing survey in the western part of the county, including only those houses classified as deteriorated or dilapidated. A total of 386 families living

in non-houses were surveyed; of that number 147 families were willing to relocate to another area within the county. All families surveyed are of low-income status.

The PLAN

The 271 acre plot of land provided by the United Presbyterian Church of the U.S.A. for this project is eight miles from Waynesboro, and two miles from Boggs Academy. It is about thirty-three miles from Augusta, and six miles from the rural community of Keysville. Newburke Housing Corporation plans to utilize Farmers Home Administration (FmHA) loans to finance the building of approximately 200 homes on the land. Homes will be three or four bedroom models, of concrete block construction or of brick veneer on a wood frame. Houses will sit on lots of approximately one-half acre.

The development will include:

Private housing for low-income families
Rental housing for low-income families
Central water and disposal systems
Streets, gutters, sidewalks and street lighting
Parklands and playgrounds
A shopping center with medical referral clinic and job development center
A day care center
A home for the aged and community recreation center
An industrial park
Land set aside for building churches in the future

Because of the size of the development and the limited cash resources of the Corporation, the work will be accomplished

in phases. The Planning Committee will direct all studies to be made and will present its recommendations to the board before construction begins on each phase.

PHASE I

Phase I will include the preliminary preparation of 10 to 11 acres of land and the building of 15 to 20 homes. The Planning Committee will commence the following studies, and approve the following operations.

. Complete survey work on boundaries. Lay out primary and secondary streets, mark lot subdivisions of about one-half acre each.

. Dig well for central water system, install storage tank, and lay water pipes for first homes. Dig septic tanks for first homes.

. Run in electricity from cooperative rural electric company (lines are about one-quarter mile away).

. Lay out and begin development of playground and park area.

. Begin building the first group of 15 to 20 homes. Some will be contractor-built rental homes, some will be contractor-built private homes.

. Put in streets, gutters and sidewalks. Primary streets will have traffic islands with green planting separating lanes.

. Begin feasibility studies for day care center, shopping center and transportation system.

PHASE II

Phase II will include feasibility studies for further expansion, as well as the building of 40 to 60 new houses. The Planning Committee will commence the following studies, and approve the following operations.

. Complete survey work and make topographical map of 50 to 60 acre area. Lay primary and secondary streets, mark lot subdivisions of about one-half acre each.

. Set aside four plots of land for churches of various denominations, to be built later by the congregations.

. Begin feasibility studies for 60-acre industrial park adjoining; Georgia Institute of Technology and General Electric Economic Development Office have agreed to assist in this development.

. Begin feasibility study for home for the aged and a community recreation center.

. Begin feasibility study of sewerage system and nw water system.

. Run in electricity and water to this area.

. Lay out and develop three playgrounds and park areas for this group of houses. Lay out and develop central ball park.

. Start building the second group of 40 to 60 homes, both private and public-rental.

. Begin construction of day care center.

. Begin construction of shopping center.

. Begin public and private transportation services. School buses are provided by the county, and can be rerouted to serve relocated population.

. Put in streets, gutters and sidewalks.

PHASE III

Phase III will add 80 to 100 houses, and feasibility studies for further expansion. The Planning Committee will commence the following studies, and approve the following operations:

. Complete survey work and make topographical map of remaining acreage. Lay out primary and secondary streets, mark lot subdivisions of about one-half acre each.

. Begin construction of industrial park.

. Build new water and sewage system, incorporating fire protection service.

. Lay out and develop four to five playgrounds and park areas for this group of houses.

. Extend electricity to this area.

. Start building the third group of houses, 80 to 100, both private and rental.

. Complete day care center.

. Put in streets, gutters and sidewalks.

. Put in street lighting throughout total development.

. Extend transportation system.

. Complete shopping center, which will include the following facilities: supermarket, eating places, drug/sundry store, clothing shop, hardware store, ice cream parlor, dry cleaners, laundromat. No bars will be allowed. Facilities will also include a medical and dental referral clinic, tied in with Medical College of Georgia's Comprehensive Rural Health Services Program, with a fulltime R.N. on duty whose salary will be paid by tenants of the industrial park, and also a job referral center working in conjunction with a job training/job orientation program at Boggs Academy. Local entrapreneurs will be encouraged to open the shops [illegible].

in the center.

. Begin construction of home for the aged/community recreation facility.

PHASE IV

By the end of Phase III, all homes will have been completed. Work to be done during Phase IV, with the approval of the Board of Directors, will include the following:

. Complete industrial park.

. Complete home for the aged/community recreation facility.

. Begin paperwork for incorporation of the housing development as a new town.

. Begin and implement plans and feasibility studies for expansion of the community.

RECRUITMENT

Because of the low-income pattern of rural farm and non-farm workers in Burke County, it is almost impossible for low-income residents to build and finance homes, or, improve existing dwellings. However, through financing by Farmers Home Administration, plus the technical assistance of the groups mentioned previously, there will be a positive alternative to living in sub-standard housing. This project will also demonstrate to other areas of Eastern Georgia that such housing projects can raise the self-esteem and self-reliance of the rural poor, and establish positive new relationships between them and the rest of the community.

The typical family participating in the project will have a total annual income of between $3,000.00 and $4,000.00, and a family nucleus of from three to five children still living at home. Preference will be given to families who reside in Burke County, have agricultural employment, have incomes of $3,000.00 or less, have children at home, and hold membership in the Eastern Georgia Farmers Cooperative and/or the Burke County Improvement Association. Families must also be able to meet qualifications for a FmHA or other rural housing loan of a maximum of $7,000.00. A family with an annual income of from $3,000.00 to $1,200.00 will also be eligible for a FmHA loan with a cosigner.

Families will be actively recruited through the Co-op and the Association. A survey of families living in dilapidated housing in the county shows 147 families already willing and eager to move to new homes. With a projected total of 200 new homes, no great difficulty is foresean in filling the project.

Three types of housing will be offered. Public (rental) housing will be built under FmHA 236 rental construction loans, and managed by a non-profit corporation. Private homes will be built under FmHA 502 contractor and FmHA 502 self-help loans, which are "interest credit" loans, to keep purchase prices low. Homes will range in cost from $7,000.00 to $5,000.00 for materials, with monthly mortgage,payments of from $40.00 to $26.00, including taxes, insurance, and principle.

ORIENTATION AND SUPPORTIVE SERVICES

All families moving into the development will have the opportunity to participate in workshops on such topics as the financial obligations of home ownership, FmHA loan requirements, home maintenance, landscaping, and so forth. Those families who will be building self-help housing will meet weekly at Boggs Academy for three months prior to beginning construction for workshop sessions. Families will meet in groups of ten to discuss and accomplish the following:

1) Hold a general meeting to become acquainted with each other and the idea of self-help housing.

2) Discuss and select lots.

3) Discuss financial obligations of home ownership, such as mortgages, interest, taxes and insurance, with a banker.

4) Discuss loan requirements with a FmHA official. Set up group bank account for savings.

5) Consider factors in planning a home, with assistance from the Georgia Institute of Technology Architecture Department. Time will also be available for planning individual homes.

6) Discuss building code requirements with county building inspector.

7) Discuss labor sharing agreements, and decide such matters as hourly value of labor contributions, minimum age of children permitted to contribute labor, and so on. Decide on recording methods.

8) Learn the use of tools and job safety. Classes will be led by a licensed electrician, a licensed plumber, a mason, and a carpenter, and students will all have opportunities to handle tools and demonstrate safety techniques before construction work begins.

9) Discuss maintenance and care of homes, including landscaping

10) Organize the work: select homes to begin first and determine at what point others will be started; line up special talents/skills in each group; determine times each person will be available.

Working in groups of ten families, each family will contribute approximately 1,500 hours of labor, which will be spread over each group of ten houses. Labor exchange agreements will be secured by a second mortgage on the property, with an arbitrary dollar value assigned to the labor of each participant. When construction starts each group of ten families will be under the direction of a job-site supervisor. Skilled craftsmen will be available for special supervision as each group of houses enters a particular phase of construction. Consultants from self-help housing groups such as the Rural Housing Alliance will also be utilized at this stage.

Supportive services may also be available to local businessmen wishing to set up shops in the development shopping center. It is hoped that negotiations will make it possible for such persons to

gain business loans from the Citizens and Southern Bank, and enter the bank's management training program, to develop managerial skills.

The medical service in the center will be open to all residents, and staffed by a R.N. whose salary is paid by those industries located in the industrial park. Services will be mostly of a referral nature, though it is hoped that through the Medical College of Georgia Comprehensive Rural Health Services Program, soon to be funded, regular medical and dental services will be available on a limited basis to project residents, with fees based on ability to pay.

Job development programs, especially keyed to those industries leasing space in the industrial park, will also be available in the shopping center. Services will also include referral to job development/training programs to be held at Boggs Academy.

Other supportive services will be developed and offered as the community becomes organized and residents agree on their needs and how they wish to meet them.

RECORDS, RESEARCH & EVALUATION

Detailed records will be kept of all developmental and research work, in the hope that this project will become a model which can be replicated throughout Georgia and the Southeast. The Planning Committee and the project supervisor will work out methods and means of accomplishing this.

Research to be done will consist in the main of the feasibility studies to be conducted for each phase of project development. After the project is completed, enough data should have

been gathered to make possible the publication of a detailed study on the project. Feasibility studies will be conducted by technical assistance groups and organizations listed earlier, under the direction of and with the approval of the Planning Committee.

An outside agency will be asked to evaluate the project at each stage of development, in an effort to maintain the most efficient allocation of energy and funds. The reports of such an agency will be presented to the board as a whole after the completion of each phase of development, and the Board of Directors and the Planning Committee in particular will discuss trends and methodology noted with the project supervisor. The project supervisor shall be responsible for implementing the recommendations of the evaluating agency and the Board of Directors.

Instant New Careers

by Frank Riessman

There appears to be some impatience now concerning new careers. Evaluators seem perturbed that full blown new careers programs have not arisen overnight; that teacher aides have not become school principals in less than a year.

Arthur Pearl accurately observes that no real new careers programs exist anywhere; that rather there are only new careers "development" programs. This would seem to be the heart of the question. If there are genuine new careers development programs arising, they should be supported, and an analysis should be made regarding what is required to have them developed fully. If on the other hand the new careers design is being distorted, or simply used as a slogan, this should be exposed.

What is the source of the confusion regarding the advance of the new careers program? Three factors stand out:

(1) There has been no developmental strategy for measuring accomplishments from period to period. Is it sufficient to have obtained legislation in the first year and good administrative guidelines in the second year? Is it meaningful to have established an education and work training structure in several cities whereby nonprofessionals gain necessary education during work time, even though the curriculum may be traditional? Is the development of career ladders in several major institutions, however poorly defined some of the career steps may be, a reasonable advance in the first year of operation? In other words, what is our timetable and what forces are helping us reach our objectives and what forces are preventing it?

(2) The second factor—perhaps a cause of the misunderstanding of the first—is the complexity of new careers systems. Not only must agencies accept the idea of employing untrained workers, but they must develop new job descriptions, career ladders, intra-agency adjustments, and training capability. In addition, educational and training components must be developed, personnel and civil service requirements modified, supportive services provided, funding expedited, new curriculum prepared, and union and pro-

Cont. p.2 col. 1

MOVEMENT

N.C. National Organization

A preliminary conference was held in New York, December 1967, to discuss the possibility of a national organization dedicated to the promotion, protection and support of meaningful new careers in the human services. Conferees were drawn from unions, colleges, federal and local government agencies, voluntary agencies, churches, and emerging organizations of new careerists.

The group heard a discussion of legislative prospects from Peter Edelman, assistant to Sen. Robert Kennedy who has strongly backed the new careers concept. In working sessions the groups hammered out some of the implications of the new careers idea and some of the obstacles which must be dealt with in the future. Those present endorsed a national organization which would propagate and protect quality new careers programs.

A larger meeting is scheduled for June 1968, in Detroit.

The new organization will foster effective collaboration among those employed in new careers, either through existing organizations or in new ones. Over the long run, however, the protection of the interests of new careerists will be in their own hands, not in those of self-appointed protectors.

Careerists Seek Bargaining Power

Support for new careerists comes at an important time. The concern of Social Work Assistants in the Family and Child Services of Washington, D.C. is typical of nonprofessionals who received training without job guarantees under early program guidelines. In a letter dated October 23, 1967 they protest that:

> "Throughout the Nation there are hundreds of job training programs which have come into existence through federal legislation as a commitment to fight the War on Poverty ....It seems totally inconceivable that this War on Poverty has not included....the opening of private and public labor markets

NEWSLETTER

Vol. II, No. 2, Summer, 1968

Kansas Psychiatric Aides Move For Better Service and New Careers

On Sunday, June 20, as the newly created National Council for New Careers was winding up its business in Detroit, an urgent telegram was received from aides of the state mental hospital system in Topeka, Kansas, who were waging a campaign for upgrading, training, and higher wages, all "necessary to decent patient care."

The telegram stated that forty-eight aides had just been suspended from their jobs for staging a "Hospital Improvement Action." To dramatize the state hospital system's failure to provide proper patient care by failing to meet their demands, the recently unionized aides, instead of striking, quietly took over "administrative and clinical control" of eight wards of three Topeka State Hospital buildings. Where one psychiatric aide had previously had charge of from 20 to 67 patients, they now put 60 aides, adjunctive therapists and

Continued on Page 18

New Careerist National Organization

A national organization of new careerists is being organized. Growing out of the New Careers National Council meeting in Detroit in June, the Ad Hoc Committee to Form a National Association of New Careerists, has already made contact with new careerists in over twenty-two cities.

The Ad Hoc Committee has taken on as its first priority the establishment of a national communications system, and the organizing of new careerists throughout the country. Preliminary meetings have been held; organizing efforts have begun in several cities; officers elected -- Edmund Lester, Washington, D.C., Chairman, Heloyes ("Jackie") McKinney, New York City, Administrative Assistant, Mike James, Chicago, Secretary, and Joe Mason, Detroit, Treasurer; and a group of professional advisors appointed.

The Committee's mailing address is P.O. Box 2355, Washington, D.C., 20013, and it is anxious to be in touch with new careerists throughout the country.

New Careers

NEWSLETTER

Vol. II, No. 3

SPECIAL EDITION
FALL 1968

New Careers in Motion

We are publishing a special issue of the newsletter to share the news of the heightening activity - organizational, movement, and programmatic - of new careers.

In the past several months there has been a sharpening of issues and a broadening of concerns within the entire area of new careers.

Three sets of issues seem to stand out:

- New careers as a strategy for change useful to those both inside the system as well as to groups pressing from the outside.
- New careers as a yardstick and catalyst for other programs.
- Specific demands raised by new careerists as well as a broader population putting forth these demands.

Within the system, the use of paraprofessionals (with built-in training and upgrading) is gaining increased prominence:

- OEO-CAP at the national level is establishing a task force to implement the new grant application requirement for career advancement built into all CAP programs.
- The Employment Service to hire 1,300 "preprofessionals" - their word.
- The National League of Cities, the key nationwide municipal agency, is developing on a citywide basis the feasibility of introducing new careers programs, and the Institute for Local Government has just held a seven state conference to plan for implementing new careers programs.
- The advancement of the new careers legislative and funding base: new sections in the Higher Education, Vocational Education, Housing, Health Manpower, and Vocational Rehabilitiation Acts.

Outside the system, the organizing, use and expansion of the role of paraprofessionals is dominant. Articles below describe new organizing activities of several unions, and the development of local as well as a national new careerist association. In the New York area alone, community education groups are giving paraprofessionals a prominent role - the three decentralized school districts all have extensive paraprofessional program (viz., three paraprofessionals to each teacher in some of the schools in the IS 201 complex). The Title I ESEA program demanded - and won - by the Black Action Committee of Jersey City emphasizes the use of paraprofessionals, and Mayor Lindsay offered money for more paraprofessionals to the Ocean Hill-Brownsville Governing Board if they would settle the conflict in New York's schools.

The essential components of a new careers system - a meaningful job, training built into the work situation, college credit education geared to a career and supportive services to assure work success, all as part of the employer's responsibility - are a powerful yardstick, useful to workers, administrators, and critics alike, to measure and guide other programs. The JOBS Program, for example, incorporates the new careers concept of "job first, training built in," and recognizes the value of varied supportive services, but there has been little apparent planning for anything above the largely entry-level jobs. In the public sector much remains to be done in work with professionals, and the incorporation of new careers in Model Cities, Job Corps, Neighborhood Youth Corps, police agencies etc.

Those already in new careers programs are now, in addition to "bread and butter," demanding meaningful jobs, relevant training, college education while on the job and quickly moving to a degree. Others, not part of so-called "new careers" programs, want in, too - plans to organize all 7,000 antipoverty workers in Los Angeles, the 1% of the total salary package earmarked for training and upgrading in the recent contract won by New York's Local 1199 of the Hospital Workers, and the inclusion of that 1% demand by the Hotel and Motel Workers in their present contract negotiations.

The attention over the past year or two given to the introduction of new careers programs, while by no means to be discarded, is now shifting to the quality of the programs, the character of the service provided to the community, as well as the immediate advantage to the new careerists.

New Careers Leap

A new leap in the level of jobs available to para-professional administrators, administrators of neighborhood health programs, and the New Careers Training Laboratory, NYU, will begin training para-professional Career Development Officers for anti-poverty programs. *Express elevators to new careers might be the theme for today.*

California Programs Implement Careers

In response to Governor Reagan's Executive Order of last July (See Summer, 1968, "Newsletter"), the State Department of Public Health has developed several innovative programs. They have developed new job descriptions, career ladders and prepared a budget to implement the program in the Department's laboratories, health education program, and vector control. Among the many innovative ideas is a non-written entrance examination for the Health Education Aide position, the waiver of college credit requirements in the vector control program in favor of credit for experience, and the proposal in the laboratory program which gives greater weight to on-the-job experience and training, as compared with formal credentials obtained outside of the department.

Dayton Forms Association and Builds Program

As a result of its confrontation with CEP, which it accused of insufficient orientation training, failure to secure jobs, and failure to consult trainees as to what kind of work and program they wanted, the Dayton New Careers program has wrested control of the screening and orientation from CEP. (See Vol. II, No. 6, "Newsletter")

The Black Peoples Employment Committee, formed to deal with CEP's inadequacy, was made up of all CEP trainees, not just new careerists. The Committee succeeded in freezing the CEP program until the problems could be worked out. Now that autonomy in selection and orientation has been established, the new careerists have formed their own group, the Dayton New Careerist Association.

The Association has the full support of two of the new careers project staff, Ron Bailey and Bill Holly, both of whom were actively involved in the negotiations with CEP, and who consider themselves "new professionals," in that they are strongly committed to the new careers idea and the Black community of Dayton.

Bailey, Holly and the Association are creating ways of dealing with typical problems of new careers, both within the hiring agencies and the new careers staff itself.

In dealing with the agencies, the most serious problems have been professional recalcitrance and a lack of adequate preparation of line supervisors in their relationship with the new careerists. In some cases it was found that supervisors had never been given new careerist job descriptions by agency management. Accurate and precise job descriptions have now been written and distributed for every trainee and staff person in the program. The Association has also dealt with the failure of new careerists to be assigned appropriate work. For example, trainees in Housing Inspection were not being taught the housing codes but were doing clerical work. After a few meetings with the Association, they are now doing the work of housing inspectors.

Bailey and Holly are concerned with developing and maintaining the trainees' identification and commitment to the community, a key problem in new careers, since once accepted into the program with the understanding that they can aspire to professional status, new careerists may be more concerned with "making it" and thus lose their identity with the community. Weekly "self-image" sessions are beginning to deal with this problem.

Bill Holly is also working on a proposal for the funding of a neighborhood day care center operated entirely by para-professionals which would have the triple function of providing care for children of new careerists, cultural enrichment and preparation for entrance into the school system, and providing new opportunities for meaningful employment for para-pros. It looks like Bill Holly, Ron Bailey, and the Dayton New Careerist Association have taken the new careers ball and run with it.

In an interview with the Christian Science Monitor, Secretary of Labor George Shultz identified the department's top priority as answering the question, "How can the large number of black citizens and others who have not shared in the bounty of America be brought more effectively into jobs that are useful to society and that have a potential for personal and economic growth?"

Vol. III, No. 2 Spring, 1969

THE POLITICS OF MENTAL HEALTH

The shutdown of the Lincoln Hospital Mental Health Services brought about by para-professional and professional workers on March 3rd brought to the fore central questions of human services.

** The role of the community as program governors, a source of workers, as well as the recipients of services.

** Just what is community mental health? Who is qualified to practice it? How should such a service spend its funds, staff its program? What should be the ratio of psychiatrists, psychologists, community workers?

** What are the politics of change? Can power be given over to a community or must it be taken? Can change be planned with a timetable and recipe or once begun does it take on a momentum of its own?

More than one hundred and fifty workers at Lincoln have joined together, initially protesting the firing of four workers, the arbitrary and unresponsive administration, the lack of meaningful community involvement. A para-professional led "work-in," provided services to the community. After two weeks, however, twenty-three people -- faculty, students, professionals and para-professionals -- were arrested and then seventy suspended. Quickly the struggle moved to broader issues, and came to involve those outside of Lincoln.

** The entire freshman class at Einstein Medical School left their classes to support the action.

** The National Council on New Careers gave support with a public statement, contact with public officials, and financial assistance.

** Local 1199, at first viewing the actions as beyond their area of concern, gave assistance to the action.

** Lincoln workers gained support from and gave assistance to the struggle at Harlem Hospital.

As this issue goes to press the final resolution of the struggle is not yet clear but several things have happened that are unlikely to be turned around.

** The discharged workers will be given a fair hearing.

** The operation of the Lincoln Hospital service will be investigated by city, state and federal officials.

** Community participation, on its own terms, will become a reality at Lincoln and likely throughout the entire Einstein medical complex.

** New working relations among the various members of the program staff will be hammered out, with a new level of participation developed.

** The para-professional workers have taken on the role of the vanguard in this struggle -- pushing the community to take on new responsibility, and the professional service to new responsiveness.

What began at Lincoln as an experiment in controlled change has been caught up in the politics of social action.

NEW IDEOLOGY OF NEW CAREERS

Some striking developments are taking place in the New Careers movement today. **These developments are being powered largely by the new careerists themselves and are being influenced heavily by their relationships to the community and the community control movement.** In essence, they combine a number of elements:

** A radical interpretation of new careers.

** A deep critique of professionalism and credentialism.

** A strong identification with the community and the poor who the para-professionals are seen to reflect and represent.

** A thoroughgoing rejection of racism combined with black identification and pride.

** An egalitarian orientation which rejects many of the ideas of hierarchy.

** A strong criticism of the training systems and general bureaucratic lethargy.

The new para-professionals and their professional advocates are saying:

1) *Don't think of the para-professional as the first step on a ladder toward becoming a professional,* particularly like professionals are now.

2) *Para-professionals offer meaningful service in their own*

NEWSLETTER

Vol. 111, No. 6 Fall, 1969

THE NEW RIGHT -- WHY NO RESPONSE?

There is a new rightism in America, and a strange lack of response.

- Anti-inflationary policies which increase unemployment and place the burden on the poor.
- Welfare reforms which demand that clients work but provide no jobs.
- The Justice Department's anti-integration policies.
- The thinly veiled warnings of the Vice-President of a backlash including prospects to "separate out from society" the dissidents.
- The downgrading of OEO, and the shift away from community action agencies in favor of the state employment service.
- The apparently calculated harrassment of the Black Panthers.
- The punitive approach to peace demonstrators and political commentators in the media.
- No "peace" or "growth dividend" for social investment.
- A "human services recession" with the administration urging Congress to cut funding of programs such as education.
- The continuing failure to execute a massive disengagement from Vietnam.

Despite these and other developments, there has been little vocal and organized opposition. A "divide and conquer" strategy seems to be working. Of course much attention and energy is being devoted to the Moratorium effort but one must seek other possible answers to the absence of an organized opposition -- the Administration's approach to the "silent majority" with appeals to consumerism, the working poor, and the middle-class tax payers revolt; the failures of old coalitions; the distraction from national issues to localism with each group "doing its own thing;" the "low profile" stance of the President which avoids sharpening of issues. (Ed.)

THE TRAINED UNEMPLOYED

Labor Secretary Shultz in his testimony on the administration's new welfare proposals, made clear his commitment AGAINST A PROGRAM WHICH DEVELOPS PUBLIC SECTOR JOBS for those on welfare who will be required to go to work. The following are excerpts from the Secretary's testimony, October 15, 1969, before the House Ways and Means Committee.

> It is not our intent to create jobs in the public sector especially for the hard-core unemployed as a way of solving manpower problems.
>
> It is a fact that our economy has a lot of jobs that pay low wages. We are not going to be remaking the economy in this program. We have to relate to the labor market. We can only put people in the jobs that exist.

NEW PROFESSIONALS: MANY VERSIONS

Human service workers at different levels -- paraprofessionals, young professionals, and students -- are each groping toward a new definition of human service work, and often are ascribing to themselves a new label, "new professional."

In Philadelphia, at the American Public Health Association annual convention, more than 500 persons attended a work session on paraprofessionals in health. The group proposed a series of resolutions (see below) but their central demand was for the nomenclature of "new professional."

At the same time, young professionals -- sharply at odds with the norms of their disciplines -- are challenging the institutions where they work, the professional associations which dominate the field, indeed the very basis of their discipline. *Look* magazine (October 21, 1969), under the title "New Professionals," noted developments in the field of architecture, mental health, the law, city planning, medicine, and -- the clergy. Similar efforts are underway in social work (see story below), higher education, sociology, psychology, political science, and history. Indeed, there are few fields in which challenges are not being made.

And, professionals in training, the students, are not only questioning the training which they are receiving -- how it is done and what it is for -- but they are also demanding that the institution where they are being trained take on new roles and practices. At Columbia University, for example, medical students are supporting efforts of Local 1199 to organize the school's employees. And at Columbia, other medical schools and other professional schools, students (and the community) are insisting that the schools serve the communities where they too often have been isolated islands.

SENATE COMMITTEE SEEKS AGENCY RESTRUCTURING

In its report on the Economic Opportunity Act, the Senate Committee on Labor and Public Welfare gave strong warning to the Department of Labor that it wanted the new careers program to "become the vehicle for the overdue restructuring of the human service agencies." In particular, the Committee Report emphasized the importance of "upward and lateral mobility for the new careerist, and making a new careers program the vehicle for substantial institutional change."

MAY 13 REC'D

New HDC Advisory Group Scores Restrictive Suburban Zoning

HDC executive directors at national parley.

Over 60 executive directors of housing development corporations from throughout the United States met on March 17th in Washington, D.C. to discuss strategies to open the suburbs for low- and moderate-income housing. It was the first meeting of the HDC advisory committee, which was formed by NPHC, to encourage HDCs to discuss their common problems and work together on solutions.

Richard Bellman, attorney for the National Committee Against Discrimination in Housing, and Herbert Franklin, executive associate of the National Urban Coalition presented an overview of open zoning law. The group then focused on the cities of Stoughton, Massachusetts, and Black Jack, Missouri, where moderate-income townhouses sponsored by nonprofit groups, have been blocked by zoning.

In the case of Black Jack, the community incorporated itself as a city in order to gain the zoning power necessary to block the development. Shortly afterwards, HUD Secretary George Romney called the town's use of zoning unconstitutional, and said that the Justice Department ought to challenge it. But according to Paul Mittlestadt, director of housing for the Interreligious Center for Urban Affairs, the developer of the apartments, the White House said that nothing should be done until an entire "suburban strategy had been developed."

Because Black Jack's reaction is mirrored in many cities throughout the country whenever low- or moderate-income housing is proposed for suburbs, the group felt it was critical for President Nixon to respond to the problem. They drafted a telegram urging the President to authorize the Department of Justice to file suit against Black Jack.

"This will reaffirm the stand of your Administration that blatant cases of housing discrimination will not go unchallenged. . . . We feel that the federal government, not only in the Black Jack case, but in subsequent situations must take forceful and affirmative action, both

Regional Seminar Program Opens In Albuquerque and Birmingham

More than 150 representatives of nonprofits attended two regional seminars in Albuquerque, New Mexico, and Birmingham, Alabama, the first of a series of six, sponsored by the Center.

In addition to the Center's staff, featured speakers included: Lt. Governor of New Mexico, Robert Mondragon, Rex Allender, Director of Community Development for Albuquerque, Q. V. Williamson of the Real Estate Management Brokers Institute.

Theodore R. Britton, Jr.

Theodore L. Fleming, Director of Operations of the Minority Contractors Assistance Project told local contractors in the Albuquerque area about bidding procedures, coding and joint ventures. Theodore R. Britton, Jr. HUD Deputy Assistant Secretary for Research and Technology, reminded conference participants that housing managers must be prepared to provide services to specialized groups within public housing, including the elderly, youth, children from broken homes. □

Burt Jackson Appointed Head of The Housing Development Specialist Program

Burt E. Jackson

Burt E. Jackson, former Management and Training Officer of Howard University's Small Business Guidance and Development Center, was appointed Director of the Housing Development Specialist Program on May 7. The three-year old program, partially funded by the Ford Foundation, and co-sponsored by the Center and the Foundation for Cooperative Housing, is designed to train specialists to develop the full range of low- and moderate-income housing: from nonprofit sales and rentals to co-operative and limited dividend ventures.

On June 21, the seventh class of the 1971 program will get underway at Catholic University in Washington, D. C. The six-month course consists of intensive eight-week academic training in Washington, with lectures and case studies led by private and governmental housing experts. Students are then assigned to housing organiza-

Nonprofit Groups Press For Increased Housing Funding

As the House appropriations hearings on housing opened again in May, witnesses ranging from mayors to individual homeowners strongly urged that low- and moderate-income housing programs be funded at their authorized amount—$400 million for fiscal year 1972. HUD has requested $175 million, each, for Section 235 and 236 for FY 1972. Sixty million dollars were requested for rent supplements, $20 million short of the authorization. The counseling services part of Section 237, established under the 1968 Housing Act has never been funded, and no money was requested this year.

Invited to testify before the Subcommittee on HUD-Space-Science of the House Committee on Appropriations, was Center Executive Vice President, James P. Twomey, who arranged for spokesmen from housing development corporations and counseling groups to accompany him. Because so many of the earlier witnesses had testified on behalf of Section 235 and 236 programs, Twomey concentrated on three other programs designed for nonprofits, which have received little or no budgeting from Congress and HUD.

Twomey endorsed HUD's request of $3 million for Section 106(b), the Low and Moderate Income Sponsor Fund, which grants seed money loans to nonprofits to cover 80 percent of their front-end costs. He also asked for $5 million for Section 903(a), which would allow HUD to subcontract to housing development corporations and other groups to educate potential sponsors on what housing programs are available, and how they work. Section 903(a) was written into the 1970 Housing Act, but has never been funded, and HUD has requested no money for fiscal year 1972.

Marilyn Melkonian, General Counsel of the Washington (D. C.) Housing Development Corporation, told the subcommittee that the federal investment in technical assistance was one of the best ways of getting the most for the housing dollar. Miss Melkonian pointed out that the Washington HDC is now seeding approximately $33 million worth of federally assisted housing, which has generated over $5 million of economic development in the minority community.

Watson Stresses Housing As Part Of Broad Social Program

Norman V. Watson, HUD assistant secretary for management, makes a point at a meeting of the Center's HDC Advisory Committee to (from left) Alan S. Maremont, Palo Alto, Calif., executive director of the Mid-Peninsula Coalition Housing Fund; Eugene Bowman, president of Interfaith Housing, Inc., Atlanta, Ga.; James P. Twomey, Center executive vice president; and ArDee Ames, executive assistant to Mr. Watson.

"Our problem isn't housing, it's people," Norman V. Watson, HUD assistant secretary for housing management, told 60 HDC directors at the June 25 meeting of the Center's HDC Advisory Committee.

Echoing a concern of the HDC directors that housing programs are increasingly expected to fulfill social needs, Watson said:

"We've been augmenting the housing programs which are already overburdened when what we really need to do is design and fund an environment of social programs, of which housing is only a part."

Many in the group urged more funds for management. As Roland S. Larsen, director of the Interfaith Housing Corp., Springfield, Mass., said:

"Vast numbers of FHA-insured buildings are environmental and management disasters. It isn't a matter of rewriting guidelines or adapting luxury regulations to low-income housing; we're going to need major funds."

Watson acknowledged the cost squeeze nonprofit sponsors face when operating costs rise much faster than incomes, and they cannot raise rents to cover the increase without engendering hostility among tenants.

"We're building for one market and serving another," he said, pointing out that incomes of residents in 236 and rent supplement projects are nearly the same as those living in public housing.

Watson praised the Center and the HDC advisory group's efforts to get the Section 237 counseling program funded in HUD's 1972 appropriations. (Both the House and Senate have approved appropriations for Section 237 counseling. The House-Senate Conference Committee has recommended $3.250 million for the previously unfunded credit counseling part of the program).

Emphasizing the importance of counseling and management, Watson urged the group to plan for them in the earliest stages of the housing project. Good management starts with the setting of realistic rents, and not underestimating taxes, utilities, and maintenance costs, he said. □

Special Conference Summary

Nonprofits Oppose Block Grants, State/Metro Housing Agencies

Exhibit area proves popular for "corridor" conferences among delegates.

National Conference Recommends Direct Housing Allowance

—Opposition to proposed block grants for community development and to state and metro housing agencies.

—A debate on an old problem: eliminating racism vs. providing housing now.

—A startling call to make tenant education in the use of housing as important as the provision of housing itself.

These were some of the highlights of the National Conference on Low- and Moderate-Income Housing, October 17-20 in Washington.

Some 600 delegates heard authorities speak on broad problems and considered other issues. But they gave primary attention to HR 9688, the bill introduced by the Democratic members of the Housing Subcommittee on Banking and Currency.

In the end, they voted to oppose some of its key provisions and came up with an alternative of their own.

Rep. Leonor K. Sullivan (D. Mo.), ranking majority member of the Subcommittee on Housing, who headed one of the panels responsible for drafting HR 9688, told the conference that "irresponsible tenants" and deteriorating social patterns are helping to destroy housing for many families. In part she blamed programs which emphasize brick and mortar rather than people and their needs.

"People need to be taught to respect the rights of others, and the sacrifices being made to provide housing," she said in her keynote address to the conference. "If a person doesn't show respect for his neighbor and his shared environment, he should be put out. Until people accept these responsibilities as tenants, we will not solve the housing problem."

The answer, she suggested, lies in effective counseling of tenants. "It seems to me," she said, "that education in the use of housing is equally as important to the disadvantaged family entering a new home as the provision of the housing itself."

Sen. John Sparkman (D. Ala.), chairman of the Senate Subcommittee on Housing, described the bill he is sponsoring, which emphasizes the "building of communities, and not just homes" and taking better care of current housing and community resources. While commending nonprofit sponsors for producing "more than one-third of subsidized multi-family housing," he ex-

SECTION I - INTRODUCTION

A DEFINITION OF HOUSING

A house is more than a structure with four walls and a roof. In its humane and broadest sense it is a home for a family located in a safe, sanitary and pleasant living environment. The home consists not only of the structure but the space around it, the neighborhood, and the social and economic community of which it is a part. The home also includes, and is affected by, related public utilities, facilities, and services, open space, transportation, recreation areas and a host of other items.

The home is only one facet or component of an individual's life, but it is intricately linked with other aspects such as employment, education, recreation, health, religion, etc. It directly affects worker productivity and therefore has economic, health and social ramifications. Thus housing is a component of and affects the economic-social condition of the community as well as the individual.

Governor McNair, in an April, 1969 speech before the Carolinas' Council of Housing and Redevelopment Officials, aptly and vividly summarized this when he said

> Housing, of course is more than brick and mortar.
>
> Housing is community and neighborhood, and total environment.
>
> Housing relates to the productivity of the individual, and the overall welfare of the community.

THE STATE'S ROLE IN HOUSING

State Government occupies an essential and unique position in seeking the solution to housing problems and improving the housing situation. In the State rests the authority to provide the legal framework necessary for successful housing and related programs. Its financial and technical resources are greater than that of any local community. It alone has the ability, even mandate, to coordinate and concentrate programs and resources. The State must serve as the catalyst to direct Federal efforts and enlist the abilities and potential of private enterprise in the struggle for better housing.

State Government alone, of course, cannot assume the entire responsibility for the tremendous task of providing a suitable home for every family. Private business as well as Federal and local government also have an essential role and must be utilized to the fullest

extent of their capabilities. The prime responsibility of the State is considered to be twofold: providing the leadership to direct the task and establishing the proper framework in order to structure the task. This responsibility can be achieved by defining the housing situation, specifying the role of State government and its relationship to the responsibilities of the other participants, providing the essential legal authority, assisting in financial matters and stimulating local government and private industry to attack the problems.

As a first step in this housing improvement process, Governor McNair appointed the Governor's Advisory Committee on Housing. This Committee, listed in the Appendix, is chaired by the Lieutenant Governor, John C. West. It includes members from local government, the financial industry, the academic community, the homebuilding industry, and the minority community. The purposes of this committee, which to date has met one time, are to (1) study the housing situation and needs in the State; (2) evaluate the resources of Federal, State and local government as well as that of the private sector of the economy; (3) recommend to the Governor goals and objectives in the area of housing; and (4) suggest an effective program to improve the housing situation. The Committee will be assisted by technical personnel from the Governor's Office, various State agencies and Federal agencies as appropriate.

A more detailed discussion of the State's role in housing and related activities, as well as alternative types of actions which the State may wish to pursue, is presented in a later section of this Housing Element.

HOUSING GOALS AND OBJECTIVES

The Housing Act of 1949 set forth a national goal of "a decent home and a suitable environment for every American family." The State of South Carolina also feels strongly about the achievement of this goal. Governor McNair, in the speech to the Carolinas' Council of Housing and Redevelopment Officials, stated that "basic to the needs of everyone is a decent place to live." As an expansion of this concept, he said,

> we must provide our people with the type of social, educational and health environments which will permit every individual to achieve his fullest potential.

He continued by emphasizing that the State is

> looking beyond simply the construction of houses for those who cannot afford them.

> We are looking at the total housing needs of our people, and how it must be coordinated with the growth planning of a community.

The State Government to this date, however, has not attempted to precisely define or quantify its role and its goals in housing matters. This can only be done intelligently after a more thorough analysis of the existing situation in housing in the State and the evaluation of the resources available to combat the multitudinous problems affecting housing. A prime responsibility of the Governor's Housing Committee will be to recommend to the Governor meaningful housing goals as well as a realistic quantification of how and when these goals can be attained.

THE DISADVANTAGED

State housing goals and objectives, as well as programs to improve the quality and increase the supply of housing, must of necessity be appropriate and of assistance to all individuals in the State. However, special emphasis in the development of programs to meet the goals and objectives must be given to those segments of the population which, because of various factors, find it difficult to secure adequate housing in the open market. These disadvantaged include the black, low income, handicapped, aged, and lower middle income. Particular attention and emphasis in the preparation of this Housing Element has been -- and later in the implementation stages will be -- given to defining and meeting the needs of these segments of the population.

Those who cannot afford a suitable home are primarily families whose incomes are insufficient. Insufficient income can be caused by, or be the result of, no source of income because of the inability to work or unemployment; or, low or insufficient income due to underemployment, seasonal employment, insufficient retirement, disability and/or unemployment compensation and welfare assistance. The inescapable fact is that those persons and families who have insufficient incomes, for whatever reasons, cannot usually afford a suitable home. Thus, suitable housing for low-income families will almost surely require a certain amount of financial and technical subsidy.

There are also factors other than income which frequently make it difficult for some families to obtain suitable housing. The most significant of these factors include discrimination because of racial or other characteristics. Families with special or unusual age and size characteristics are also frequently at a disadvantage in the open housing market. Persons with handicaps also find it difficult to secure suitable housing at a price they can afford. In addition, there is generally an inadequate selection of housing choices, including number, types and styles, available to these disadvantaged

families.

In most instances, families with sufficient income can secure suitable housing. However, it is evident that even these families have a limited selection of housing types and choices from which to select.

SECTION II - THE HOUSING SITUATION

QUANTITATIVE AND QUALITATIVE FACTORS

A tentative definition and quantification of the current housing situation in South Carolina must of necessity begin with the 1960 Census of Housing. Even though it is admitted by those who prepared the Census that it was somewhat inadequate and arbitrary, it is the best -- perhaps sole -- base on which to begin. The following discussion briefly summarizes the major quantitative and qualitative aspects of the State's population and housing situation in 1960. A detailed picture of the 1960 population and housing data by multi-county districts is included in the Appendix.

The following discussion is for background purposes and is not a detailed market analysis. Rather, it presents a general picture of the housing situation as it existed nearly ten years ago. A more up-to-date and definitive analysis of the market situation must be undertaken and is included as a part of the State's housing program recommended by this Housing Element.

Population

In 1960, the State had a total population of approximately 2,382,000, of which a large majority, 1,401,111, resided in rural areas, or places with less than 2,500 population. The 1967 estimate of total population was 2,640,000, with 1,091,000 in urban areas and 1,549,000 in rural. This population represented 603,551 households in 1960 and 661,000 in 1967. The average population per household in 1960 was 3.45 in urban areas and 4.12 in rural areas. The percentage of non-white population changed little between 1960 and 1967, representing 34.9 percent in 1960 and 33.0 in 1967. There was, however, a substantial shift from rural to urban places during this period among the non-white segment of the population. The percentage of non-white population residing in urban areas in 1960 was 28.6 percent, whereas in 1967 it was estimated at 35 percent.

Income

Per capita and household incomes increased considerably during the 1960 to 1967 period. The average per capita income for the State as a whole in 1960 was $1,377, whereas in 1967 it was $2,167. The percentage of households with annual incomes of $10,000 or more increased sharply from 3.2% in 1960 to 18.2% in 1967. Much of the apparent increase in income was due to inflationary factors, although there were bona fide purchasing power gains.

Housing Characteristics

The 1960 Census of Housing reported a total of 678,379 housing

units in the State, with 300,146 located in urban areas and 378,233 in rural places. Of this total, 603,551, or 88.9% were occupied; 275,032 in urban areas of the State and 328,519 in rural places. Whites were living in 71 percent of the occupied dwellings, and non-whites in 29 percent. The large majority of this total, 583,185 housing units, were in the form of single-family detachted structures. This percentage was higher in rural places (93.3%) than in urban areas (89.2%). Multi-family units (three or more) in urban areas measured a scant 4.3% of the total units in the State. Rural multi-family units were even less, 0.295 percent of the total units. Trailers, both those on permanent foundations and mobile, numbered 11,072. The median number of rooms in all housing units was 4.8 for the State as a whole, with the large majority of units having four, five and six rooms.

Housing Condition, Ownership and Occupancy

Fifty-four percent (368,200) of the State's housing units were classified as sound with all plumbing in 1960. This means that more than 310,000 housing units lacked some plumbing facility or were conditionally not sound. The urban percentage of sound housing was much higher, 68.0%, than the rural figure of 43.4%. The large majority of these units were owned by whites. Over eighty-eight thousand of the total housing units (13.0% of the total) were classified as dilapidated; 61,874 of these were in rural places, while 26,635 units were located in urban areas. The major defects found in dilapidated units were no piped water, lack of flush toilet and no bathtub or shower.

Almost twenty-one percent of the State's occupied housing units were classified as overcrowded, that is, an average of 1.01 or more persons resided in each room. This percentage figure amounted to more than 125,000 housing units. The Census of Housing revealed that more than thirty-six percent, or 246,037, of the housing units were built in 1929 or earlier; thus were more than thirty years old in 1960. The majority, 141,580, of these older units were located in rural places. Another 134,512 housing units were constructed between 1940 and 1949. More than 100,000 of the structures built prior to 1939 were occupied by non-whites.

Housing Value and Rentals

Slightly over fifty-seven percent of 345,756, of the State's 603,551 occupied housing units were owned by the occupant. The figure ranged from 60.4% in rural places to 53.5% in urban areas. More than half, 165,732, of the States total 258,476 owner-occupied dwelling units surveyed in the Census, were valued at less than $10,000 in 1960. Of that total, 81,048 were valued at less than $5,000. Median dollar value of all housing units in the State was $7,500; $9,400 in urban areas and $5,800 in rural places. Median

gross rent for the State's 226,882 renter occupied units was $49 a month. The median contract rent in 1960 was $32.

Recent Rural Housing Study Results

In 1966, approximately 1,000 families in ten of the State's northeastern counties were surveyed in an attempt to obtain more information about their economic, social and housing characteristics. The study was prepared by the South Carolina Agricultural Experiment Station, Clemson Unviersity and the results published by the U. S. Department of Agriculture. The major findings of this study, "Characteristics of Human Resources in the Rural Southeast Coastal Plain... with Emphasis on the Poor" are presented below for general comparison purposes with the previous 1960 State data. It is essential to realize, however, that this was a limited sample conducted in only the rural areas of ten of the State's poorest counties. Thus, the study is not representative of the State as a whole and is not intended to portray what has transpired throughout the State since 1960. However, it does present more recent data than is available through the Census of Housing.

The Northeast Coastal Plain of South Carolina is highly rural, with an economy dependent largely on agriculture. Comprising a fifth of the land area of South Carolina, it accounted for more than two-fifths of the total agricultural production in 1966. The area had a 1960 population of 464,000, nearly a fifth of the State total. Florence and Sumter, each with 1960 populations of around 25,000, are the largest towns in the area. Other towns, principally county seats, range from 3,000 to 8,000 in population. These are typically local trade centers that provide farm supplies and services.

Some 254,000 persons lived in rural areas of the ten Coastal Plain counties included in the 1966 study. The estimated number of households was 58,000. About 50,000 households were located in the open country and 8,000 resided in towns and villages of less than 2,500 population. Of the total households, 55 percent were white and 45 percent were non-white. The size of the household, however, was in the reverse proportion. This was due to the larger size of non-white families--an average of 5.4 non-white persons, compared with 3.6 for whites.

Information was obtained from each household on the total income of all members from all sources in 1965, the year preceding the survey. The median family income was $2,733. The 1960 Census of Population reported a median rural family income for the area of $2,346. Thus there has been some income improvement. Even so, family incomes were considerably below the $3,800 median for urban families in South Carolina in 1959.

The median income of $1,748 for non-white survey households was far below the average for the area or any rural residential sector; it was only two-fifths the median of $4,500 for white households. The 1959 median income for all non-white households (both urban and rural) in the Coastal Plain, however, was $1,338. This suggests a substantial improvement in non-white incomes. Much of the indicated improvement was the reduction in non-white households with incomes below $1,000 -- from 40 percent in 1959, down to 27 percent in 1965. Four-fifths of non-white survey households, however, had incomes below $3,000 in 1965.

Nearly all families in the lower income categories lived in single-family detached housing, mostly located in neighborhoods of mixed racial composition. About a third owned their homes; nearly half occupied housing rent free or for services usually associated with sharecropping or farm labor. Less than a fifth paid cash rent; of these, most paid less than $20 a month. Housing was generally poor. Two-fifths of all dwellings were rated dilapidated and an additional two-fifths were deteriorating. Less than a fourth had hot and cold running water, a flush toilet, or a bath or shower.

Most housing in the Coastal Plain study area ranged from 4 to 6 rooms in size. Dwellings occupied by the poor averaged 4.8 rooms, only slightly smaller than the average of 5.2 rooms per dwelling for the area. Due to the larger size of the families, however, a relative overcrowding of population was apparent among households in the lower income groups. Here, the average of 1.3 persons per room was one-half greater than the area average of .8 persons per room.

Summary

Even from this brief analysis, it is evident that South Carolina faces a housing problem of major proportions. The State's housing resources are markedly poorer in quality, quantity and variety than that of neighboring States and the nation as a whole. The problem is closely related to the poverty which afflicts a large number and proportion of the State's population. Non-white families particularly, because they generally have less formal education and lower incomes, are acutely and adversely affected by poor housing. The housing problem is noticeably worse in rural areas. Governor McNair, in the speech before the Carolinas' Council of Housing and Redevelopment Officials, stated that half of the families in the Coastal Plains area of the State lived in sub-standard housing. He continued by saying

> Many of these homes are in the rural, or small-town communities, a far cry from the concentrated urban slums which characterize the national problem.

Our problems are no less serious, however, and perhaps a little more difficult to solve.

LEGAL FRAMEWORK

The General Assembly of South Carolina over the years has passed considerable legislation pertaining to housing and permitting a wide range of activities relating to the creation of new homes and the elimination of slum housing. Virtually all of the legislation is permissive and not mandatory in nature. It is not known at this time how many or what types of groups have been created as a result of this legislaton or what activities they have undertaken.

The following comments are intended to provide a brief resume of the principal segment of this legislation. It does not include, however, a review of the law dealing with numerous related aspects of the home development process such as zoning, subdivision regulations, public utilities, and sanitary facilities, etc. This is not intended to be a complete legal analysis. A thorough legal analysis, as well as investigation of what activities have been taken by various groups, will be required at a later date. This more detailed analysis and investigation is included in the State housing program described in this Housing Element.

Title 36 of the Code of Laws of South Carolina, 1962 is devoted to Housing and Redevelopment. The majority and substantive portions of this legislation were passed during the 1930's. It contains seven general divisions: (1) State Housing Law; (2) The Housing Authorities Law; (3) the Housing Cooperation Law; (4) The Redevelopment Law; (5) Dwelling Unfit for Human Habitation in Municipalities of Over Five Thousand; (6) Investments in Housing Obligations; and (7) Local Provision.

State Housing Law

The State Housing Law specifies that

> it is necessary in the public interest to make provision for housing families of low income and to provide for the elimination of congested and unsanitary housing conditions which exist in certain areas of the State and which are a menace to the health, safety, morals, welfare and reasonable comfort of the citizens of the State. The providing of such housing for families of low incomes and the correction of these conditions in such areas being now otherwise impossible, it

> is essential that provision be made for the investment of private funds at low interest rates, the acquisition at fair prices of adequate parcels of land, the construction of new housing facilities under public supervision in accord with proper standards of sanitation and at a cost which will permit monthly rentals which wage earners can afford to pay and for the gradual demolition of existing unsanitary and unsafe housing.

This section also charges the State Development Board with the responsibility for analyzing housing conditions and cooperating with local officials in the development of housing and related projects. The Housing Law also provides for the incorporation and regulation of limited dividend housing corporations. The purposes of a housing corporation, which may be formed by any three or more citizens of the United States, are "to acquire, construct, maintain and operate housing projects..."

Housing Authorities Law

The Housing Authorities Law provides for the creation of housing authorities and confers upon them numerous powers. Specifically, the law reads:

> (a) in order to promote and protect the health, safety, morals and welfare of the public, it is necessary in the public interest to provide for the creation of public corporate bodies to be known as housing authorities and to confer upon and vest in such housing authorities all powers necessary or appropriate in order that they may engage in low-cost housing and slum clearance projects and (b) the powers herein conferred upon the housing authorities, including the power to acquire property, to remove unsanitary or substandard conditions, to construct and operate housing accommodations and to borrow, expend, lend and repay moneys for the purposes herein set forth, are public objects essential to the public interest.

Provision is made for the establishment of City, County, and Regional Housing Authorities under the Housing Authorities Law. Essentially, all of the authorities have the same powers. The powers of these Authorities broadly include, but are not necessarily limited to (1) investigation of living and housing conditions; (2) acquiring title to real or personal property by gift, grant, purchase, lease

or eminent domain; (3) selling, exchanging, transfering, encumbering and otherwise disposing of any real or personal property; (4) purchasing, acquiring, leasing, constructing, altering, repairing and operating of low-cost housing or slum clearance projects; (5) borrowing of money upon its bonds and the investment of its funds; (6) lending of money to private individuals, firms, governments for the purpose of making repairs or improvements to the borrowers' properties, provided the housing authority shall regulate the rentals, charges, profits and income from the properties to be improved; and (7) assumtion of the duties of planning and zoning commissions if such duties are delegated to them by any government.

Housing Cooperation Law

The Housing Cooperation Law provides the authority for State public bodies to

> do any and all things necessary or convenient to aid and cooperate in the planning, undertaking, construction or operation of housing projects.

Redevelopment Law

The Redevelopment Law reiterates that the existence of blighted areas constitute a serious and growing menace which is injurious to the public health, safety, morals and welfare of the State's citizens. It further provides that the elimination of conditions of blight is a desirable end and that the sale or lease of blighted land for development or redevelopment in accordance with redevelopment plans is a public purpose for which public money may be expended and private property acquired. The legislation also stipulates that "the [Housing] authority may make land in a redevelopment project available for use by private enterprise or public agencies..."

It should be noted that without the power of eminent domain, the purposes of the Redevelopment Law cannot be carried out. In the case *Edens v. Columbia, 228, S. C. 563, 91 S. E. (2d) 280 (1956)* the South Carolina Supreme Court reiterated that eminent domain may be utilized to acquire property for a public use. In defining public use it stated that

> public use implies possession, occupation and enjoyment of the land by the public at large and by public agencies...

However, the Court ruled that private property may not be condemned and then re-sold for private use and development. The Court said

> the due protection of the rights of private property

> will preclude the government from seizing it in the hands of the owner, and turning it over to another on vague grounds of public benefit to spring from a more profitable use to which the latter will devote it.

Thus the precedent set by *Edens v. Columbia* has prohibited the use of condemnation of property for private reuse in South Carolina. "Urban Renewal" in its broadest use, therefore, has not been extensively utilized in the State. However, a State-wide consitutional referendum in 1966 was approved by the voters and appropriate legislation passed to permit individual counties, after a majority vote in favor, to use eminent domain for slum clearance and private redevelopment and to permit condemned land to be resold to private individuals. The counties of Greenville, Spartanburg and York have had special local provisions passed based upon the 1966 amendment to the Constitution which permits them to acquire private property for slum clearance and redevelopment purposes and resell the property to private individuals under certain conditions.

Dwelling Unfit for Human Habitation...

The section of the law on Dwellings Unfit for Human Habitation... states that whenever a municipality determines that dwellings exist which are unfit for human habitation due to dilapidation, lack of ventilation, light and sanitary facilities or other defects and conditions, the municipality may exercise its police power to repair, close or demolish the structures.

Housing Obligations

The Housing Obligations section specifies that financial institutions in the State may make loans and investments eligible for Federal housing insurance, including the Federal Housing Administration, Serviceman's Readjustment Act of 1944 and the Home Owners' Loan Corporation.

Local Provisions

This section on Local Provisions contains local, special acts permitting counties to undertake slum clearance, urban renewal and redevelopment projects in Greenville, Spartanburg and York Counties.

SECTION III - HOUSING PROBLEMS AND OBSTACLES

Any listing and discussion of the primary problems and obstacles relating to housing must at this point in time of necessity be incomplete and preliminary in nature. Very little work of a comprehensive nature at the State level has been done in the area of housing and related subjects. Thus, a major part of the problem and obstacle facing the State Government as it moves into an action program in housing is that the State does not yet know, has not yet defined and simply is not thoroughly informed on the specifics of the housing issue. The specific problems and obstacles inhibiting the provision of a sound and suitable home for all South Carolina citizens can become evident only after a thorough and detailed study and analysis of the issue. Therefore, a major portion of the State Government's initial program as described in this Housing Element is devoted to a description of the studies which can provide a comprehensive definition of the problems and obstacles in and related to housing.

The following paragraphs, then, provide only general perspectives on the housing situation in South Carolina.

HOUSING PROBLEMS

Substandard Housing

In 1960, 310,000 housing units in South Carolina (about 46% of the total units in the State) were classified as substandard. These units lacked one or more essential plumbing facility or were not structurally sound. Of this total, 88,509 were dilapidated and another 144,537 were deteriorating. Substandard housing was a universal problem found in every geographic area of the State. However, there was a close association between improved or better housing conditions and the processes of urbanization and industrialization. Counties in which the State's three largest cities are located all had greater than 65 percent of their total housing units classified as sound with all plumbing facilities in 1960. The following rural counties, by contrast, had about thirty or less percent of their housing units classified as substandard: Lee, Clarendon, Williamsburg, Jasper, Calhoun, and McCormick.

It is estimated that in 1969 there were still approximately 300,000 housing units in the State which could be classified as substandard or undesirable homes in which to reside. This estimate is not based on any study or analysis which has been conducted, but rather on the assumption that as many homes have become unsuitable between 1960 and 1969 as have been newly constructed or rehabilitated. Thus, numerically at least, the State's substandard housing situation has probably remained virtually unchanged during the past decade. A detailed study must, of course, be made to determine exactly how many

units are substandard.

Based upon this estimated number of substandard housing units, it can be assumed that there are approximately 1,020,000 individuals, or about 40 percent of the State's estimated 1969 total population, who are affected, adversely, by substandard homes.

Low-income Families Who Cannot Afford Suitable Housing

There are numerous families and individuals in the State who, because of low incomes, cannot afford to rent or purchase sound housing suitable for their needs. The exact cost of housing, of course, varies considerably based upon the characteristics of the family, the quality of the housing unit, the location, etc. Therefore, it is not possible to stipulate a specific income group who do not earn enough to afford suitable housing. However, it is safe to estimate that this is a real problem for a sizable segment of the State's population. Estimates of effective buying income in 1968 listed 27.2 percent of the State's total households with an annual income of less than $2,999. The State has an estimated 691,300 households with an average size of 3.84 persons. Therefore, approximately 723,000 persons are in households in which less than $3,000 is earned each year. Based on these figures, it is safe to estimate that a large majority of this population cannot afford sound housing at current market prices. In addition, 446,000 persons are in households with incomes of less than $4,999 a year. Undoubtedly many of these people also cannot afford suitable housing. A majority of these households with low incomes live in the rural counties which have a high percentage of substandard homes.

Poor Home Environmental Conditions

It is known that there are numerous standard as well as substandard homes in the State that are located in environments which are not safe, sanitary, and healthy. Census information is available on the structural condition and plumbing facilities in housing units, but no data is compiled that indicates how many homes are not in a suitable environment and are not adequately served with public utilities and facilities and therefore may not be healthful. Therefore, it is not possible to make any numerical estimates. Data relating to these conditions is badly needed.

Poor environmental conditions are especially prevalent for mobile homes or trailers. Many of the mobile homes in the State are semi-permanently located in parks, but others are found in small numbers clustered together or individually. The presence of mobile homes is especially common near the State's military institutions in Columbia, Sumter, Charleston, Beaufort and Myrtle Beach.

Inadequate environmental conditions in the State are a problem from both the quantitative and financial aspects. It can be very costly in many situations to correct poor environmental conditions. Frequently, the moral, legal and financial obligation for improving these conditions rests with the local governmental entity. This can often present serious financial problems because of the burden it places on the resources of the local community.

Unavailable Housing for the Low Income

In addition to the fact that many low-income families cannot afford sound housing, it is evident that in many localities of the State there is simply not enough sound housing available for low-income families.

It is especially difficult for the private sector of the economy to provide housing for the low-income. Therefore, public or semi-public bodies frequently attempt to fulfill this role. However, neither the private nor public sector of the economy has been able to construct or rehabilitate sufficient sound housing units to meet the needs of all or perhaps even a majority of the low-income families in the State. Thus, there is a drastic shortage of suitable housing available to low-income families in the State and sufficient new or rehabilitated low cost housing is not being built by either private developers or public and non-profit entities.

A recent check indicated that there were about 8,000 public housing units in the State available to low and moderate-income families. These 8,000 units represent slightly more than 1 percent of the total estimated number of housing units in the State. Public housing, more often than not, is not available to the very low-income families or those who have unusual family characteristics such as the elderly and the large family. The City of Columbia's Housing Authority has a waiting list for public housing of approximately 3,000. A knowledgeable Federal Housing Administration official familiar with the area claims that if there are 3,000 families who know the procedure for getting on the waiting list, there are at least that many more eligible families who do not know how to apply but need low cost housing accommodations. Non-profit housing corporations have not provided very many housing units for low and moderate income families either.

Housing Removals

No accurate data is available to quantify the extent and location of housing removals in the State. However, this is considered a problem of considerable proportions. As might be expected, housing removals have particular impact on low-income families who find it difficult to secure housing of any description after being evicted.

Some housing removal occurs as a result of natural causes such as fires and structural deterioration. However, public actions dictate the removal of numerous homes. These public actions include highway construction and improvements, urban renewal projects for both public and private re-use, and police power actions such as demolition or condemnation of houses in poor condition. The majority of "Urban Renewal" under Federal legislation which has been undertaken in this State has resulted in the condemnation of low cost homes and replacement by non-residential uses. Numerous low-income families have been affected by these public projects because the location for projects is frequently based on the joint criteria of acquiring low cost land and accomplishing slum clearance in one action.

These statements, of course, are not meant to condemn public projects or the rationale on which they are based, but rather, to illustrate that they frequently have an impact on removing the supply of housing available to the low-income.

Household Formations Have Outstripped Available Housing Supply

There has been a rapid and significant increase in household formations since 1960 in the nation as well as South Carolina. Nationally, and in South Carolina, this has been the result of the "war babies" coming of age and establishing families. In addition, in South Carolina there has been a significant amount of population in-migration, especially among young couples, which has also increased the rate of household formations.

The growth in household formations in the State has probably not been matched by a corresponding increase in housing units. This has made competition for available homes particularly keen and perhaps artificially raised the price of housing. This situation has a particularly adverse effect upon the State's low-income and black families.

Migration to the State's Urban Areas

There has been considerable population migration to the State's urban areas in recent years, particularly since the early 1960's. This migration has been the result of both in-migration to the State and the movement within the State from rural to urban areas. It has particularly affected the cities of Columbia, Greenville, Charleston, Spartanburg, Florence and Darlington and has resulted in the concentration of much of the demand for housing in these urban areas. This has probably resulted in an artificial increase in the cost of housing in urban areas. This has particularly and adversely affected the low-income segment of the population. The migration to urban

areas may create a surplus of sound housing units in rural areas that will not be filled because there is no effective demand or low-income families cannot afford the sound housing. Conversely, it probably serves to create a shortage of housing in urban areas.

This migration phenomenon often distorts State-wide housing statistics and creates unusual situations in some geographic portions of the State. Thus State-wide statistics cannot be totally relied upon to present a complete picture of the housing situation.

Limited Choice of Housing

There is a very limited choice of housing types and environments for both the low-income disadvantaged and those who can afford sound housing. Although this is certainly not as serious a problem as some of the others mentioned, it does create personal dissatisfaction and related community problems. Related problems may include expensive and time-consuming transportation between home and job, expensive installation -- or in some instances lack of -- public utilities and services, lack of proper open space and commercial facilities, etc.

Even for those who can afford to pay for good housing, the following types of housing and home environments are scarce or non-existant in the State: group, garden apartment, or bona fide town-house developments for rent or purchase under co-operative or condominium arrangements; "downtown" single-family or group living accomodations; second-home, vacation or retirement housing.

It is estimated that only 50 percent of the State's population could be described as the "typical" four or five member family in the child-rearing ages. Thus only about half of the population have need of or desire the "typical" majority of homes which are being built in the State: single-family, detached home in the suburbs.

HOUSING OBSTACLES

Inadequate Information About Housing and the Housing Market

There is a serious scarcity of information about the trends in housing since 1960 and the current housing market situation in the State and its subdivisions. Accurate information about the present status of housing and historical trends must be matched with current population statistics quantifying the demand for housing and the expendable housing income. This quantification of the housing and population situation is a prerequisite to the development of a realistic and meaningful program to improve housing in the State.

Authority, Limitations and Results of Legislation Relating to Housing Is Not Known

Considerable legislation pertaining to housing has been enacted by the State General Assembly. The exact authority and limitations of these laws, however, are not known at this time. In addition, the extent and nature of organizations and activities which have occurred as a result of the State's laws is not known.

A thorough understanding of the existing laws, organizations and activities is essential in order to properly formulate legislation comprehensive enough to permit the accomplishment of objectives established by the State. In some instances, not only the legislation but the judicial interpretation of the statutes will also be required.

State Goals and Objectives for Housing Have Not Yet Been Established

A concerted effort by State Government to correct the existing housing problem and improve the housing situation is only in the initial, embryonic stages. As a result of the commitment recently announced by Governor McNair, the newly appointed Governor's Committee on Housing chaired by Lt. Governor West and this Housing Element, an approach designed to improve housing conditions in the State is being formulated. As a part of this process, goals and objectives will be established in their proper timing and procedural sequence.

At this point in time, goals and objectives of only the broadest nature have been established because of the lack of considerable basic information. However, as the results of studies relating to other elements of the housing program -- particularly quantitative data about the current housing and market situation -- become available, more specific goals, objectives and timetables can be delineated.

Existing Legislation is Probably a Barrier to Improving the Housing Situation

Although a thorough examiniation and analysis of the State's legislation and court interpretations pertaining to housing has not yet been made, it is felt that they present some serious obstacles to meeting the housing goals of the State. Perhaps the most obvious shortcoming eminating from the lack of legislation is the very limited use which can be made of "Urban Renewal" for redevelopment of publically condemned property by private individuals. So far as known, South Carolina is the only State which has such a narrow interpretation of the urban renewal condemnation process. The lack of comprehensive urban renewal authority restricts many localities in the State from participating in numerous Federal financial assistance

programs such as Model Cities, etc.

Lack of Information About and Sparse Use of Available Federal Programs and Funds

There is a surprising lack of information about and a resultant sparse use of available Federal programs and funds in the State. This lack of information exists in the public, semi-public and private sectors of the economy.

Numberous local public officials in the State are unaware of existing programs and where to obtain information about them. Semi-public groups such as churches and other non-profit associations probably have not extensively participated in 221-D-3 and similar programs because they do not have essential information. Many groups such as this are anxious to assist in furnishing suitable housing for low and moderate-income families but need information and other assistance. Much of the private sector of the economy engaged in developing housing is also unaware of programs to develop low cost housing for the low-income. This is unfortunate because housing builders and developers usually can make about the same amount of profit on their projects even though it is for occupancy by low-income citizens. Low-income citizens themselves rarely are aware of programs which would assist them in obtaining or developing housing for their needs.

The unavailability of information and assistance on low cost housing is partially due to the fact that State Government heretofore has not given this a very high priority. The State has neither developed sufficient expertise nor adequate personnel to promote low cost housing programs and stimulate groups to take appropriate action.

Lack of Programs and Funds for Rehabilitating Housing for the Low-Income

Frequently, it is more economical and socially practical to rehabilitate substandard homes rather than demolish the existing structures and attempt to build new ones. Families living in substandard homes and poor residential environments frequently prefer to remain in their familiar surroundings and improve their house and neighborhood rather than move -- even if the move is to a new house. It is often more satisfactory to rehabilitate existing housing and improve the neighborhood by installing paved streets, public utilities such as water, sewer and gas, creating open space and providing better public services.

Unfortunately, however, it is frequently difficult, if not impossible, to properly rehabilitate housing and neighborhoods because of

the lack of either public or private programs and/or funds for this purpose. Some communities in other States have been able to convince private financiers that investments for rehabilitating houses and neighborhoods are both desirable and attractive. This has been done primarily in middle or high income neighborhoods. More programs and/or funds to make possible rehabilitation in low and moderate-income neighborhoods are needed.

Relatively High Cost of Construction and Financing

The higher interest rates and construction costs which have occurred during the past few years as a result of inflationary trends, have made it extremely difficult for low and moderate-income families to secure suitable housing. Because housing is one of the most sensitive segments of the economy, it is one of the first to be adversely affected by inflation and a "tight money" situation. In addition, low cost housing is normally the most vulnerable and hence first hit by any decline in new housing starts. Financiers have also restricted their investments in housing during the past few years and sought more attractive and stable markets. Also, interest rates on money which is available have been much higher; resulting in much higher and in some instances prohibitive housing payments. All of this combined has resulted in fewer housing starts for the low income during the past few years. Thus the numerical gap between low-income family housing needs and the available amount of suitable housing is probably widening.

Measures must be developed at the Federal, State and local governmental levels, as well as by private industry and enterprise, which will alleviate the problems caused by these inflationary measures and permit housing for the low-income to be financed more economically.

Private Enterprise Has Not Extensively Participated in Improving Housing

Private enterprise probably holds the key to any success in providing a sufficient number of low cost homes. It is only with their assistance and cooperation that this task can be accomplished. It is unfortunate that the private sector of the economy has not more extensively participated in activities to finance and construct low cost housing and provide a livable home environment. This absence has generally been true -- with the exception of the recent "Operation Breakthrough" proposal by the Department of Housing and Urban Development -- at the national, State and local governmental levels.

The reason private enterprise has not adequately participated is probably twofold: they have not seen the need in this area because government has failed to solicit their assistance and they have been

somewhat negligent in not recognizing the housing needs of the low and moderate income. Methods must be developed by government to more adequately enlist private enterprise in the struggle to improve housing conditions. And private enterprise must develop a conscience which responds to the needs of the disadvantaged as well as to profits.

Inappropriate Local Regulations and Taxation Policies

In many instances inappropriate regulations and/or taxation policies at the local level restrict or hamper the provision and maintenance of suitable housing. These regulations and policies most frequently and drastically affect low-income families. Frequently, land development regulations require unnecessarily high standards which prohibit the economical provision of housing for the low income. Taxation policies are often such that they discourage land owners from making essential improvements to their houses for fear that their taxes will increase. Regulations and taxation policies of this nature often preclude the construction and rehabilitation of homes for the disadvantaged segment of the population.

These comments, of course, are not meant to criticize the development or use of land development regulations and ad valorem taxes, or to infer that they are purposely designed to exclude the low income from the community. Rather, it is to point out the fact that these local governmental policies are very often real obstacles to the provision of suitable housing to every citizen.

Conversely, the absence or failure to enforce building and housing codes frequently serves to diminish the supply of standard homes in a community. If these codes or their enforcement are not present, home owners often permit their houses to deteriorate to such an extent that they are not suitable for habitation. Landlords and individual home owners are frequently negligent in this manner. Enforcement of proper housing codes would improve this situation.

Lack of Prerequisite Programs

Frequently, an obstacle to the provision of adequate housing at the local level is the inability to participate in financial programs for increasing the supply of housing. The local governmental entity, non-profit groups and the private sector of the economy are sometimes restricted in their efforts to construct and rehabilitate housing because certain prerequisite requirements have not been met. Generally, these requirements are specified by some agency of the federal government and are designed to provide sufficient analysis of the situation before moving into the construction stage. This is desirable, even essential, if federal funds are to be wisely utilized.

The absence of a Workable Program and the inability to undertake urban renewal for private re-use are serious problems for some communities in South Carolina. Many communities in the State have a certified Workable Program. But others, who are in need of housing have not met the requirements for the Program or have let their Program lapse. The urban renewal situation in the State has been discussed in an earlier section of this report.

Lack of Personnel

There is a dire need in all areas of the State for qualified personnel to work at the local and multi-county district level in the area of housing and related activities. Securing these types of personnel is a particular problem for the small community with limited financial and personnel resources. Many communities simply cannot afford able town managers, planners, housing and building officials. Thus the community is not able, without outside assistance, to develop and administer essential programs and codes in order to qualify them for federal financial assistance and improve their housing situation. This situation often presents serious obstacles and impediments to communities attempting to improve their housing.

SECTION IV - HOUSING ACTIVITIES BY STATE GOVERNMENT

There are innumerable methods and an infinite variety of means by which State Government can act to improve the housing situation. However, all of these methods and means must ultimately be tested in light of the existing political, economic and social tradition and objectives of the State. Thus, there is no ideal or model actions or programs which would necessarily be appropriate for every State to adopt. And what one State has adopted may not necessarily be desirable for another.

This portion of the Housing Element presents a number of housing programs and activities which have been tried by various States throughout the nation. It is included herein in order to inform State Government leaders and assist them in formulating and structuring an action housing program and approach for this State. The alternatives listed here are by no means definitive, but an attempt has been made to list the major or what is envisioned might be the most productive options available to this State.

Advisory Group on Housing and Related Matters

An advisory group or committee is desirable in order to apprise State executive and legislative leaders of the current status and trends in housing development as well as the housing needs of all its citizens. Ideally, such a committee should consist of professionals and citizens representing the major facets of the housing supply and demand picture situation: financial, home building and development organizations; State, multi-county district and local governments; and various citizen and minority groups.

State Housing Goals and Objectives

Many State Governments have formally or informally articulated or adopted a comprehensive set of goals and objectives pertaining to housing. These goals and objectives, in addition to broad, overall statements such as that made in the Housing Act of 1949, should also incorporate specific definitions of public, particularly State Government's responsibilities. Some State's programs specify timetables for the accomplishment of stated goals.

A statement of goals and objectives, regardless of their degree of specificity, is essential in order to serve as a formal commitment on the part of State government and structure an action housing program.

Legal and Legislative Program for Housing

Many States have established special committees to develop and recommend a comprehensive legal and legislative program for housing

and related development. Some of the committees have been dismissed after preparing the initial program; while others have continued to exist on an informal basis in an attempt to keep up to date with the latest legislation being proposed by other States and various "model" legislative proposals.

Other States have taken a less formal approach in developing a legislative housing program. One approach has been to have the program proposed by the Governor's Office or an appropriate State agency or department. Or, the State's legislative body might develop and propose a housing legislative program.

Regardless of the approach taken, if a State's existing legislative enactments are not comprehensive enough to permit it to achieve its goals, a legal program should be developed.

Technical Assistance About Housing

The State might want to consider the establishment of an office, department or function within the framework of State Government which would provide information and technical assistance to other State departments and the chief executive as well as local governments and interested organizations, groups and citizens. Numerous States have established some form of administrative machinery to deal with problems of housing and community development in a coordinated and continuing manner. Some States have chosen to create cabinet-level departments reporting directly to the Governor to bring housing and development needs to the highest level of their government.

The range of activities and services such a department could perform and the groups it could serve would be almost unlimited. It could serve as the administrative and technical link with local governments in matters of housing and related types of improvements. The department could be the State repository and information center for Federal and all other programs and funds available pertaining to housing and related community development. It could also have the personnel and capabilities to perform market analysis studies of both a state-wide nature and also regional and community analyses. Community planning and administrative services of the broadest nature could also be available in this office.

The above listed functions, of course, are not a complete list of services which could be available in a department or office of housing and development, but they would probably serve as the core upon which others could be added. Some of these additional services might include assistance on related programs such as: Model Cities and Urban Renewal programs; local and regional economic development assistance; multi-State regional development commissions; etc.

Promotional-Education Activities

Formal promotional-education meetings sponsored or conducted by State Government can help in exploring the problems and opportunities in housing with the general public and private enterprise. Such meetings, dealing with all aspects of the housing situation, have been conducted by numerous States. They have served to enlighten and enlist non-governmental and as well as local community leadership in the States' housing programs. The numerous accomplishments acclaimed by North Carolina in this area are considered significant and are included as Appendix III of this report.

Any meetings held should be of a cross-pollination nature. That is, they should serve to benefit both the speakers and the intended audience. In this manner a variety of insights can be gained and the nature of impediments will become evident.

Non-Governmental Participation

In order to overcome housing problems, private enterprise and non-profit groups must be enlisted in this task. These segments of the economy have considerable resources, time, concern and expertise not available in State Government. It should be utilitized to the fullest extent possible. Some States have been able to design their housing programs in a manner which make private enterprise and non-profit groups partners in an action program to improve housing. Usually financiers are an integral part of the State program. One State Government requested that their State brick and concrete masonry associations design and build a permanent demonstration house with at least 1,000 square feet of floor space to sell for less than $10,000. The effort was successful and more than 500 of these homes for low-income families have now been built throughout the State. Other States have made concerted efforts to educate and solicit non-profit groups and institutions to participate in available programs designed to construct and administer housing for low-income families.

Currently, the Federal government is attempting to enlist private enterprise in its "Operation Breakthrough" program to improve housing. This program is concentrating on the development by private industry of model, low cost housing units to be located throughout the nation.

Educational-Training Programs

The educational institutions in most, if not all, States have developed programs for educating and training persons to be employed in the construction, rehabilitation and administration of housing

and related developments. This, of course, is an indirect method of improving the housing situation, but nevertheless an important one.

The educational-training programs designed to improve housing conditions run the gamut; from graduate, university programs in city administration, urban planning, housing and urban renewal and redevelopment to trade programs supplying carpenters, brick layers, painters, etc. A State can be of great assistance to insure that there are a sufficient number of persons in the housing industry by developing programs and training persons for jobs in critical demand. In many instances, the existence of a trained supply of persons to work in the housing and related construction fields will serve to attract industry into the State and raise the income of residents.

Model Building and Housing Codes

Communities in most States adopt and enforce differing, and frequently inappropriate, building and housing codes and ordinances. Some States have contemplated and at least one State has adopted a model building code embodying performance standards for permissive adoption by communities. A state-wide model housing code might also be desirable.

In most States, communities enforce differing and sometimes outdated building codes. This profusion of codes has tended to raise building costs by perpetuating the outmoded and uneconomic use of building materials and building techniques and by restricting the natural play of economies of scale in the construction industry. Higher building costs, in turn, unnecessarily restrict the availability of decent housing for low and moderate-income families.

It might also be desirable for States to assist local communities with the enforcement of building and housing codes by offering or providing inspection services for those who are not able or do not wish to maintain their own inspection departments.

Financial Assistance for Housing and Related Activities

Some States, in order to stimulate housing and related type development, have provided a wide range and variety of direct and/or indirect financial assistance to local communities, public housing authorities and non-profit groups, developers and, in some instances, low-income families. The majority of State assistance programs have been designed to improve housing conditions for its low-income citizens.

An excellent analysis of some of these "financial assistance

programs" is found in the booklet "Agenda for Positive Action: State Programs in Housing and Community Development" prepared by the Housing Staff of the National Urban Coalition. A brief summary of the major programs is presented below.

1. Seed money loans or advances from a State revolving loan fund to cover the cost of the non-profit developers initial, pre-construction activities.

2. Grants for administrative services necessary to the success of the project.

3. Interim financing on construction loans when private construction loans are not available.

4. Below-market-interest-rate mortgage loans using the State's tax-exempt bond status and credit rating to secure funds for financing the loans.

5. Interest free loans to enable non-profit developers to fall within federal cost limitations on low and moderate-income housing.

6. Construction loans to non-profit developers of low and moderate-income housing during periods of tight money.

7. Financial assistance for acquisition and sale or lease of sites at or less than market value when intended for housing for the low and moderate income.

8. Assistance for acquisition and rehabilitation of substandard housing when intended for sale or lease at or less than market value for the benefit of low and moderate-income individuals.

9. Assistance to local communities in order to provide a portion of the required non-federal financial share of federally aided community development programs as well as non-federally assisted projects. Eligible projects in which some States will participate are: urban renewal, demolition of unsafe buildings, neighborhood facilities, open-space land acquisition and day care centers.

10. Rent subsidy programs to pay the difference be-

tween the amount a low-income family can afford to pay and the rents on federally assisted projects.

11. Reimbursement to communities for waiving, in part or whole, real property taxes on housing solely for low or moderate-income families if the abatement makes it possible to reduce rents or provide necessary related facilities and services.

12. The formation by the State of a public corporation designed to: (1) provide down-payment, direct loans and and other assistance to low-income families; and (2) make loans for pre-construction, land development, construction and other costs to developers constructing housing for the low income.

Development Entity with Comprehensive Powers

At least one State, New York, has created a tax-exempt public benefit corporation empowered to initiate and participate in a wide range of community development and housing activities. It is designed to utilize to the fullest extent possible the financial and intellectual resources of private enterprise.

The New York State Urban Development Corporation (SUDS) has the power to undertake residential, industrial, commercial, and urban renewal types of projects, either for sale, lease or other disposition to private investors. It may also construct educational, recreational, and other civic projects for disposition to localities and public authorities. The Corporation has the power of condemnation and, under certain circumstances, may also bypass local planning ordinances and code restrictions. The principal limitation imposed on the Corporation is the statutory criterion which specifies that all projects must fulfill an appropriate and specifically unmet need. The need may be related to an unfilled demand for low-cost housing, a high level of unemployment, or substandard area conditions.

New York has also created another state-wide urban development corporation, CUDNY, with an almost identical mission to that of SUDS. However, its methods are more in keeping with the traditional concepts of the non profit, non-governmental developer.

SECTION V - A STATE HOUSING PROGRAM

This section of the Housing Element is devoted to the development of a comprehensive housing program which should be undertaken and implemented in South Carolina during the next four to five year period. It is, of necessity, preliminary in nature because sufficient factual data is not now available to permit the determination of all the planning activities, implementation actions and coordination measures which should be undertaken. However, this section does stipulate what at this point in time appears to be the essential core programs, activities and actions in housing which must be pursued in order to improve the housing situation.

This section is divided into five parts: background, objectives, planning activities, implementation actions and coordination measures. The background portion presents a brief historical perspective of what has transpired in State Government relative to housing. The objectives sub-section lists some of the specific housing goals the State desires to accomplish based upon the previously identified problems. The planning activities part details those activities which should be undertaken to accomplish the specified objectives and achieve the State's commitments. In the next portion of this section, suggested future implementation actions designed to implement housing programs and ameliorate housing problems are listed. This is followed by a discussion of future coordination and updating measures.

BACKGROUND

State Government in South Carolina has only recently become aware of its role in and obligation for improving the poor housing conditions of its citizens. Although a considerable amount of legislation pertaining to housing in general, and meeting the housing needs of the low income in particular, was passed in the 1930's, very little -- certainly an insufficient amount -- of action has been taken as a result of these laws.

Only in recent years, and specifically within the past year, has the leadership of State Government become sufficiently concerned about the housing situation to begin to analyze the problem and make serious commitments. Governor McNair's speech to the Carolinas' Council of Housing and Re-development Officials in which he declared that "basic to the needs of everyone is a decent place to live" and his subsequent appointment of a Committee on Housing must be considered the initial steps in the journey to improve housing conditions in the State.

Prior to these actions, little work of a substantive nature on housing had been done in State Government. Concurrent with the Governor's actions, however, the State Planning and Grants Division of the Governor's Office was charged with the responsibility of

providing technical assistance to the Housing Committee and for developing the State Housing Element as a part of the overall, comprehensive State planning process.

OBJECTIVES

The following listed objectives must be attained if South Carolina is to mount a substantive attack on its housing and housing-related problems. These objectives are a direct outgrowth of the previous sections of this report, specifically the Housing Situation and Housing Problems and Obstacles sections. Little elaboration on these objectives is made here because subsequent statements in the planning activities and implementation actions portion of this chapter will further exemplify these objectives.

1. Comprehend the past trends and current housing and housing market situation in the State.

A preliminary analysis should be accomplished during the next six months however, a complete understanding may have to wait until after the results of the 1970 Census of Housing.

2. Decipher the existing legislation pertaining to housing and related activities which has been passed by the General Assembly.

This should be accomplished during the next six months.

3. Obtain an understanding of the total home-building process and determine the primary impediments to the provision of sound housing for all the State's citizens.

This should be accomplished during the next ten to twelve month period.

4. Assess the needs and desires of the State's citizens with regards to housing, with particular emphasis on the disadvantaged.

This can be initiated in the near future and will be a continuing process.

5. Determine the role of governmental regulations, codes, ordinances and tax policies in the home-building process. Analyze these governmental policies and actions, as well as possible discriminatory practices, to determine if they are preventing the accomplishment of housing goals and objectives.

This is rather complex in nature and will take an estimated ten to twelve months to accomplish.

6. Prepare a set of comprehensive goals and objectives pertaining to housing and related development in the State. This should be as detailed as possible and adopted by State Government and based upon the previously listed objectives.

This objective should also be completed within the next year.

7. Formulate an exhaustive State housing legislative package for adoption by the General Assembly. This will be designed to stimulate implementation of the State's housing goals and objectives.

This may take from a year to a year and a half to properly prepare and coordinate with legislative members.

8. Establish, within the framework of State Government, the essential expertise and knowledge required to provide technical assistance on housing to local governments, non-profit groups, and private enterprise and the general public.

This will require a period of approximately one year to obtain the required personnel and competence.

9. Formulate a package of State housing aids and programs consistent with a State Development Policy designed to alleviate the identified impediments in the home-building process and stimulate construction of suitable housing for the disadvantaged.

This will require approximately a year to a year and a half to complete.

10. Focus attention on the housing needs, problems and opportunities of the State on a continuing basis by varying methods.

This is a continuing process which will be initiated as soon as practical.

11. Enlist private industry in efforts to improve the housing situation and create a healthy environment for all the State's citizens.

This is a continuing process which will be initiated as soon as possible.

PLANNING ACTIVITIES

The following discussion presents a detailed analysis of the expected and forseeable planning activities which will be required

in order to properly implement the State's objectives specified above. It is envisioned that as these studies, analyses and reports are prepared, the need for additional activities will become apparent.

The planning activities listed below roughly parallel in order and sequence -- but not in number -- the previously mentioned Housing Objectives.

1. Housing Situation Study

To determine the following characteristics regarding owner-occupied, rental, public housing, non-profit sponsored housing and trailers for the State as a whole as well as each of the ten sub-State districts and any other required geographic or political areas: the number, type, condition, plumbing and other facilities, size, occupancy, ownership, cost, monthly payments, rental price, age, overcrowding, location and environmental conditions. This information should be comparable to the 1960 Census of Housing and be available on an annual or bi-annual basis and should cover new construction, rehabilitation and removals.

The Study should be developed in such a manner and be designed so that it can be readily updated at least every two years. It should also specify procedures at both the local and State levels which could be adopted to enable accuracy and ease in updating.

This Study will require the input of housing market analysts as well as State Government personnel. The initial stages of this Study should be completed within six months and will cost in the neighborhood of $5,000 to $8,000.

2. Housing Market Analyses

These analyses will rely upon the information obtained in the Housing Situation Study and will identify the current overall and specific need and demand for housing by type, location, size, ownership-rental characteristics and cost. They should also identify the present as well as estimated future numerical differences between the demand and available supply of housing identified according to the characteristics listed above. Based upon this information, financial estimates of the total cost to construct and/or rehabilitate the required housing units should be made.

The analyses must also, of course, assess the total population by delineated housing market and identify major characteristics such as family composition, size, age, sex, race, income, types of employment and housing desires. Particular emphasis will need to be given to the housing wishes, needs and ability to pay of the State's minorities and disadvantaged. This population information, of course, would be an essential input for and coordinated with the elements listed above.

The Market Analyses will concentrate on the State's prime or major housing market areas. Their preparation will necessitate the assistance of housing market specialists in addition to State personnel. Some major portions of the analysis could be finished within six to eight months after 1970 Census of Housing information became available. Other analyses would need to be done in later years.

3. Legislative Analysis

This analysis would review all State legislation pertaining to housing and housing-related regulations, codes, ordinances and other powers, controls and restrictions. It would identify pertinent laws which present serious economic, administrative, political, social and/or other impediments to the provision of sound housing, particularly to the low and moderate income. The study would also preliminarily identify critical provisions and powers whose absence make the provision of sound housing difficult, expensive or impossible.

An essential part of this analysis is to determine what actions have been taken as a result of the laws which have been enacted. What entities or groups have been created and what actions and activities they have performed since their creation or incorporation will also be a part of the study. In addition, it should be determined the impact on the provision of housing and the functions the entities and groups have performed for various segments of the population.

This study would require private legal assistance as well as that of the State's Attorney General. The analysis described here would be part or phase one of the later described Housing Legislative Program.

4. Home Building Process Study

A thorough analysis and understanding of the home-building process in South Carolina is an essential ingredient for improving the housing situation. Such an analysis would consist of an examination of policies, attitudes, problems, prevailing practices, needs, opportunities and other particulars for all the types of participants in the pre-construction, construction and long-term financing phases of the process.

The prime participants include: State and local governments, public utility companies, market analysts, land owners, surveyors, realtors, banks, savings and loan institutions, mortgage financiers and insurers, attorneys, architects, engineers and site planners, the builders and various sub-contractors and building supply marketers and manufacturers.

This study of necessity will be complex in nature and will

require the expertise of various and sundry public and private specialists. Numerous interviews will be utilized. The analysis will concentrate on identifying and analyzing those elements or steps in the process which are or create impediments and/or tend to unnecessarily increase the cost of housing.

5. Citizen Housing Desires Study

An intensive and comprehensive interview study to understand the housing needs and desires of the State's citizens is imperative in order to structure future efforts to improve housing conditions. Particular emphasis in this interview study will be given to the desires of the State's disadvantaged: the black, low income, handicapped, aged and lower middle income.

Portions of this study process have already begun and portions of it can probably be completed in the next six to eight months. This, of course, will only be phase one of a continuing process.

6. Governmental Policies, Programs and Taxes Analysis

Governmental policies, programs, requirements, regulations, restrictions and taxes have a significant impact on the provision of housing. An analysis of all the factors involved and their influence on the cost, location, types, and availability of housing is badly needed. Emphasis in the analysis will be given to a determination of which programs, regulations, taxes, etc. seriously impede or restrict the construction and/or rehabilitation of housing and needlessly increase its costs. The need for certain programs, such as the Workable Program, which are prerequisites for Federal financial assistance and the adequacy of such programs will be studied also. A list of programs, severe tax policies and lack of programs which prevent or impede improvement of the housing situation will be compiled by county and community.

Preliminary portions of this analysis can be made within a relatively short time, about three months, because substantial information is now available. State personnel could provide much of the work involved in the analysis.

7. Formulation of Goals and Objectives

In the definitive sense, a formulation of comprehensive, detailed State goals and objectives for housing would be the outgrowth of and result from an analysis of all the previously mentioned planning activities. However, a preliminary set of goals and objectives, which would reflect the major problems, needs and desires, could be developed in the very near future. The adoption of goals and objectives, of course, will be the responsibility of the State's elected officials.

8. Housing Legislative Program

A thorough and complete housing legislative program is an

absolute necessity if the State is to improve its housing conditions. Appropriate legal framework is the base upon which much of the State's action housing program is based. The development of this suggested legislative program will require a collection and analysis of what other States have enacted and "model" State housing legislation.

The development of appropriate legislation and coordination with legislative leaders will require considerable State personnel time and private legal services and expertise. It will probably require about a year and a half to complete and must be based on many of the other studies described above.

9. Analysis of Governmental Housing Aids and Programs

A comprehensive understanding of all Federal housing assistance programs by State and local governments in South Carolina is a desired goal. It is also imperative to understand the extent to which they have been utilized and what groups have and have not taken advantage of Federal assistance. The prerequisites to their use and the status of State and local governments in this regard is essential information. Any reservations with regards to the use, fear or inability to use Federal funds should also be determined.

This analysis will consist essentially of two parts, an interview with appropriate Federal officials and discussions with State and local government personnel and private industry.

The results of this analysis will be cataloged in strategic places in the State where it will be available to anyone interested. State Government personnel should develop sufficient expertise to provide technical and other assistance to anyone desiring to utilize Federal assistance.

Some State competence in this area and portions of this analysis is already available. However, by nature this analysis will be of a long-term, continuing nature.

10. State Housing Aids Programs

South Carolina, if it is to actively participate in improving its housing situation, will probably find it desirable to develop some programs of a direct or indirect financial nature to local governments, financiers, developers and perspective home buyers. Numerous States, as presented in the Housing Activities by State Government chapter, are currently providing incentives of a financial nature to increase the supply of housing, particularly for low and moderate-income families.

The formation of a State aids program will require an analysis of what activities other States are engaged in and development of suitable programs for use in South Carolina.

This will require careful preparation, review and approval by both technical State personnel, private attorneys and financial specialists and the State's elected officials. It will probably require about two years to formulate.

11. Educational Activities on Housing Needs, Problems and Opportunities

The State will develop a number of methods designed to educate all levels of government and the general public about the State's housing needs, problems and opportunities. Seminars, meetings, lectures, training programs and possibly a newsletter are envisioned as the primary vehicles which can be utilized to "spread the word" about programs such as Public Housing, 221 D 3 housing, Operation Breakthrough, etc. These activities would be of a continuing nature.

12. Methods to Enlist Private Industry into Housing

Efforts should be initiated by State Government to enlist, to a greater degree, private industry in the struggle to improve housing, particularly for providing low-cost housing for the disadvantaged. Programs have been adopted by other States and have proved very successful. A study to determine how best to enable private industry to more actively participate could be developed primarily from interviews with various key participants in the home-building process.

13. State Technical Assistance

It is imperative that the State employ sufficient personnel with expertise in the field of housing in order to coordinate and supervise the above mentioned analyses and studies as well as provide technical assistance to governmental entities and private and public groups and citizens. These personnel would be located within the framework of State government in a position which would permit them to be aware of housing and related programs and needs of the State.

To a certain extent, the State is already providing technical assistance in housing through the Local Government Coordinator and the State Planning and Grants Division, both in the Office of the Governor. However, the State's competency and personnel in the field of housing must be strengthened in order to permit it to achieve its aims as outlined in the Housing Objective portion of this report. This function, of course, would be of a long-term, continuing nature.

Specific information about the time sequence and cost of the above described elements of the Planning Activities is shown in the Housing Planning Activities Chart on the following page.

HOUSING PLANNING ACTIVITIES CHART

Fiscal Year / Quarter	1969-70 1st 2nd 3rd 4th	1970-71 1st 2nd 3rd 4th	1971-72 1st 2nd 3rd 4th	1972-73 1st 2nd 3rd 4th	1973-74 1st 2nd 3rd 4th
1- Housing Situation Study	$5,000 - 8,000	$1,000 - 2,000		$2,000 - 3,000	
2- Housing Market Analyses		15,000 - 25,000	$5,000 - 10,000	5,000 - 10,000	$5,000 - 10,000
3- Legislative Analysis	2,000 - 3,000	500 - 1,000	500 - 1,000		500 - 1,000
4- Home Building Process Study		10,000 - 15,000			1,000
5- Citizen Housing Desires Study	5,000 - 7,000	2,000 - 3,000	2,000 - 3,000	2,000 - 3,000	2,000 - 3,000
6- Government Policies, Programs and Taxes Analysis	2,500 - 3,000	1,000	1,000		1,000
7- Goals and Objectives Formulation		500			1,000
8- Housing Legislative Program			5,000 - 7,000	2,000 - 3,000	500
9- Governmental Aids and Programs Analysis	1,000	500	500	500	500
10- State Housing Aids Study		5,000 - 7,500	5,000 - 7,500		1,000 - 2,000
11- Educational Activities	1,000	1,000	1,000	1,000	1,000
12- Private Industry Involvement Study		2,000 - 3,000	500	500	
13- State Technical Assistance	6,000 - 8,000	15,000 - 20,000	15,000 - 20,000	15,000 - 20,000	15,000 - 20,000
TOTALS	$22,500 - 31,000	$53,500 - 77,000	$35,500 - 51,500	$28,000 - 41,000	$28,500 - 41,000
Average	$23,750	$60,250	$38,500	$32,500	$31,750
Anticipated Funding:					
HUD	$15,835	$40,165	$25,665	$21,665	$21,165
State	7,915	20,085	12,835	10,835	10,750
Other	3,000	5,000	5,000	3,000	3,000

IMPLEMENTATION ACTIONS

It is very early in the housing program to specify what implementation actions will be taken as a result of the planning activities and identification of needs. The responsibility for implementation of housing programs, of course, rests with the State's elected officials: primarily the Constitutional Officers and members of the General Assembly.

Although it is premature, it is felt that the following programs will be implemented in South Carolina in the next four to five years.

1. Endorse a comprehensive set of goals and objectives for improvement of the housing situation.

2. Establish, within the framework of State Government, an office to provide assistance in the area of housing to all levels of government, private industry, and the general public.

3. Adopt an exhaustive housing legislative program.

4. Enact and finance various State housing aids and programs of a direct and indirect financial nature to local government, financiers, developers and the disadvantaged.

COORDINATION AND UPDATING

This initial housing element was developed by the State Planning and Grants Division which is the agency responsible for the State's comprehensive planning work program. Thus, the State Government's role and responsibilities in the housing field are viewed in terms of their relationship to other State responsibilities and action programs. Procedures for accomplishing this sort of coordination among the several State Government agencies have been established and are being elaborated and strengthened pursuant to Bureau of the Budget Circular A-95.

Because this Division will have a continuing involvement in developing the State's housing action program, inter-agency planning coordination problems will be alleviated. The Division is the State planning agency for purposes of the local planning assistance program, supported in part by 701 funds. The Division is developing similar direct coordination arrangements with the sub-State district organizations, particularly through the project notification and review procedures spelled out in Budget Bureau Circular A-95. This organizational arrangement enables this Division to directly relate its housing planning efforts with those of the various localities of the State. It will thus easily permit

the definition of responsibilities in the field of housing and the assignment of roles among the various governmental entities involved.

The housing element will be revised and up-dated annually as an integral part of the Division's work program design. That program design reflects the Division's long-term approach and objectives and describes the particular studies and activities to be undertaken as a part of its annual work program.

APPENDIX

APPENDIX I

GOVERNOR'S ADVISORY COMMITTEE ON HOUSING

Lt. Governor John C. West, Chairman

Mr. William E. Sellars, President
South Carolina Mortgage Bankers Association

Mr. H. Ciremba Amick, President
South Carolina Bankers' Association

The Honorable H. O'Dell Weeks, President
South Carolina Municipal Association

The Honorable S. M. Forrester, President
South Carolina Small Towns Association

Mr. Charles W. Lawrimore, President
South Carolina Association of Counties

Mr. John R. Folsom, President
South Carolina Savings and Loan League

Mr. Clifton C. Brown, Director
Federal Housing Administration

Mr. Robert A. Darr, President
Federal Land Bank, Columbia

Mr. E. W. Brooks, Director
Farmers Home Administration

Mr. Glynn A. Lindsey, President
South Carolina Home Builders Association

Dr. Wayne T. O'Dell, Director
Clemson University Extension Service

Mr. Isaac W. Williams, Field Director
National Association for the Advancement
of Colored People

The Reverend I. DeQuincey Newman
Chairman and President
Statewide Homes Foundation, Incorporated

APPENDIX II

In March, 1969 Governor McNair signed an Executive Order designating official sub-State districts for the State of South Carolina. The official pattern is shown below.

This report presents a summary of the districts' population and housing characteristics, by County and district.

DISTRICT NO. 1

INFORMATION	ANDERSON COUNTY	CHEROKEE COUNTY	GREENVILLE COUNTY	OCONEE COUNTY	PICKENS COUNTY	SPARTANBURG COUNTY	DISTRICT	DISTRICT AS PERCENT OF STATE
POPULATION								
Total, 1960	98,478	35,205	209,776	38,563	47,671	156,830	586,523	24.6
Births, 1960-67	15,100	5,900	35,800	6,500	7,600	25,200	96,100	22.3
Deaths, 1960-67	6,500	2,400	13,100	2,500	2,600	10,400	37,500	24.4
Net Migration, 1960-67	-2,100	-500	-4,000	-1,800	1,300	1,400	-5,700	
Total, 1967	105,000	38,200	228,500	40,800	54,000	173,000	639,500	24.2
Percent Change, 1960-67	6.6	8.6	8.9	5.7	13.2	10.3	9.6	
Total White, 1960	79,233	27,735	172,823	35,903	41,400	122,145	479,239	30.9

SOURCE: U. S. CENSUS OF HOUSING 1960

APPENDIX III

The State's housing information-education-promotional activities, including its widely publicized activities in cooperation with the brick and block industries, have resulted to varying degrees in the following accomplishments in North Carolina:

(1) There is increased recognition and growing discussion at all levels of the State's housing problems. At the level of State government, the demonstration has resulted in (a) recommendation (set forth elsewhere in this report) by the Governor's Advisory Committee on Low-Income Housing for the creation of a permanent State housing agency; and (b) an application by the State Department of Administration for a grant in the amount of $200,000 from the Office of Economic Opportunity, that has been approved, to "maintain the interest created" by the demonstration and sustain a continuing "State focus for guidance and technical assistance" relating to housing until such time as the General Assembly is in session and can act on the Advisory Committee's recommendation...

(2) More local officials are aware of public responsibility for dealing with these problems.

(3) A climate has been created where more low-income and elderly housing developments are likely to materialize in the months and years ahead.

(4) A start has been achieved in combating unthinking prejudice against utilizing federal housing aids. The housing specialist has been instrumental in helping several communities "over the hump" in establishing local public housing authorities, where past opposition had prevented this.

(5) Interest has been stimulated in the Federal Housing Administration 221-d-3 program, public housing, and the Farmers Home Administration 504 shelter local program.

(6) Local public officials have been put in touch with appropriate federal officials where they have shown interest in particular programs.

(7) Builders have been interested in building for the lower-income market. Where the positive, but relatively modest efforts of the brick and block industries have produced no earth-shaking innovations or cost-

reduction breakthroughs, these efforts have resulted in another significant accomplishment. They have demonstrated to local contractors and the public the feasibility of building and profiting from the construction of conventional and readily marketable relatively low-cost ownership housing...

(8) North Carolina insurance companies have committed $14.5 million, over and above their commitment under the national insurance program, for use in North Carolina low-income housing finance.

(9) North Carolina-based federal housing officials have been made aware of State government's live interest and concern with the effectiveness of federally assisted housing programs, as these relate to low-income groups. An important by-product of the demonstration project described later in this report is a variety of insights gained into federal agency activities in North Carolina--some aspects of which may be impeding the effectiveness of their low-income housing programs.

STATE OF SOUTH CAROLINA

BREAKTHROUGH OPERATIONS PLAN
FOR NORTH CAROLINA

State Planning Division
N. C. Department of Administration
April 1970

BACKGROUND

In November 1968, North Carolina took a comprehensive look at its housing situation. A study titled Toward Good Housing for All North Carolinians was published by the State Planning Division. It described the results of the State's experimental housing program, reviewed the current housing situation, and summarized Statewide public and private low-income family housing activities. Additionally, administrative and action recommendations were rendered. Some of these have been carried out, and others are under consideration. This BREAKTHROUGH Operations plan represents North Carolina's continued interest in alleviating the dearth of low- to moderate-income family housing in the State. The plan is an expression of the State's concern for its ill-housed citizenry.

The BREAKTHROUGH Operations Plan for North Carolina represents an effort which was begun on January 2, 1970. Although nearly five months have elapsed since beginning work on the plan, approximately one and one-half months were expended in its formulation. All expenses, including travel, subsistance and materials, have been charged to State Planning funding accounts, representing a cost of nearly $3,000.00. The time differential indicates the time elapsed in the process of arranging for and holding meetings with agencies of various governmental levels and in the process of waiting for proposals and decisions of the various agencies participating in the planning effort. If the expenses incurred by the other State and regional agencies contributing to the planning exercise could be calculated, it is expected that the sum total of salary, travel and subsistance funds, and materials expenditures would be substantial.

SPD
JRH/4-8-70

PURPOSE

The BREAKTHROUGH plan is based on two Horizon Concepts: a postulate and a process. These are taken from North Carolina's State Planning Division's recognition of basic purposes as spelled out in its publication of April 1969, titled Horizon Concepts for North Carolina.*

Personal Well-being - The individual's state of happiness, health, and prosperity should be reasonably assured. Sustainment of human life for those unable to maintain themselves should be provided through financial assistance to the needy and social services to dependent persons. General social services must provide a barrier against poverty and social deprivation and offer the means of realization of maximum individual development and self-sufficiency.

Shelter - A level of development where every person or family is able to acquire a home that suits its particular needs should be achieved -- housing that is above minimal standards of decency, is healthful, safe, and fosters healthy family development and community relations. Regulations governing the safe construction of all types of shelter should be enforced.

This BREAKTHROUGH plan is dedicated to increasing the supply of standard and adequate housing available to North Carolinians of all economic levels with the primary emphases on placing low- and moderate-income families in structures which offer, at the least, a minimal standard of decency. Additionally, the plan's purpose is to identify a housing market for Operation BREAKTHROUGH prototypes now under construction in various parts of the country and to awaken community interest in and to develop community acceptance of the concept of industrialized housing. Moreover, the plan will pave the road for the HUD-approved industrialized housing. systems now being developed. The plan represents a State-wide concerted effort in North Carolina to cope with the housing problem. The plan is strongly activity oriented; its elements are all practical activities which lead to the most immediate and moderate-income families.

---

*State of North Carolina, Department of Administration, State Planning Task Force, Raleigh, April 1969.

SECTION I.
PLANNED BREAKTHROUGH ACTIVITIES IN SUMMARY

Listed in the following, in general outline form, is an epitome of the planned BREAKTHROUGH Operations for North Carolina. The Summary of Operations Activities (A.) and the following Synopsis of Organizational Structure (B.) are the outlines for the detailed plan which follows in Section II. The elements of the plan are listed in sequence with beginning dates of effectuation and, in some cases, termination given. The dates establish a timetable of planned operations events, and a flow chart covering the full 24-month span of the operations period appears at the end of this outline. The first seven months are described in detail, and the last 17 months are shown in outline form.

A. Summary of Operations Activities

The following paragraphs are an outline of planned BREAKTHROUGH operations activities. Details of the summary are given in Section II of this report titled Details of Operations Activities starting on page 18. Page numbers for cross-reference purposes are given at the end of each summary paragraph so that the details of the plan in Section II can be related to readily. The operations activities appear in chronological order and can be seen on the 24-month timetable on page 7.

1. Creating the Position of Housing Planner

Within the State Planning Division, the position of housing planner has been established. Procedures to hire a person to fill the position were begun in February. The housing planner will head up housing staff, and others from the Division will be assigned to BREAKTHROUGH operations. See pp. 18 and 19.

2. Establishment of the Interagency Committee on Housing

A State interagency planning committee on housing will be established in June 1970. The committee will be sponsored by the State Planning Division. The sponsorship of the committee is one of several interagency

efforts now underway. The committee will include the heads of several State agencies or their designated representatives and approximately ten ex officio members from Councils of Governments, regional commissions. and municipal and county associations. See pp. 19 and 20.

3. Development of the State Housing Information Exchange

In order that the State Planning Division will have the capacity to receive, digest, evaluate, and disseminate State-wide housing information, a Housing Information Exchange will be developed during June 1970, the first month of BREAKTHROUGH operations. This will be accomplished as soon as feasible so that early information coming into the Division can be handled. The Exchange will be developed with the assistance of the Information Systems section of the Division. See pp. 21-23.

4. Preparation of Estimates of Potential Housing Starts

The first input into the State Housing Information Exchange will come from potential regional housing start estimates gathered from Councils of Governments, Regional Planning Agencies, and Economic Development Districts in the latter part of June 1970 and continue on a quarterly basis. Extra-regional information will be supplied by the Department of Local Affairs on a third-party contract basis. See pp. 23-25.

5. Identification of Housing Sites

In addition to sites which were already proposed for BREAKTHROUGH prototype projects, sites of all types - public, private, abandoned, etc. - shall be sought out and scrutinized for useability. This endeavor will begin in June 1970 and continue on a quarterly basis. Regional information will be gathered by Councils of Governments and regional commissions; extra-regional information will be collected by the Department of Local Affairs on a third-party contract basis. See pp. 25-27.

6. Inventory of Land Development Plans, Subdivision Regulations, and Zoning Ordinances

An inventory on a sampling basis will be conducted to evaluate the capabilities of local land development plans, subdivision regulations, and zoning ordinances, and the administration thereof, to provide for the development of industrialized housing. Based on the inventory action on the local, regional, and State level will be recommended. This effort will begin in June and extend through October in 1970, and a follow-up phase will take place in November and December of 1971, respectively. Conducting the inventory and analysis will be the Department of Local Affairs on a third-party contract basis with the cooperation of the "staffed" Councils of Governments and regional planning and development agencies. See pp. 27-29.

7. Modernization of Building Codes

In its 1969 session, the North Carolina General Assembly passed a bill to become law on July 1, 1970 a regulation for mobile homes and modular dwelling units. With the assistance of the Department of Insurance, the Department of Local Affairs will delve into the effectiveness and applicability of regulations for industrialized housing in June 1971. See pp. 29 and 30.

8. Development of a Housing Assistance Response System for Sponsors and Developers

After several months of operations, the Department of Local Affairs will develop a technical assistance delivery system for sponsors and developers of low- and moderate-income housing. In addition to keeping these people informed of potential, need, and development in the State through the utilization of the Housing Information Exchange, assistance will be proffered in organizing, financing, and managing housing development. The system will be developed with a team approach. The team will consist of people from approximately twelve State agencies. See pp. 31 and 32.

9. Promotion of State Housing Efforts

The promotion of State housing efforts is divided into two aspects: one is developing community interest, and the other is gaining support of the General Assembly. Both these areas will be tackled in September 1970. Major contributions to this task will be made by the Interagency Committee on Housing with the assistance of the Department of Local Affairs. See pp. 32-34.

10. Establishment of BREAKTHROUGH Housing Development Targets

Although preliminary targets have been established, in November 1970 the Housing Information Exchange is expected to have accumulated enough pertinent information to justify the establishment of relatively accurate BREAKTHROUGH Housing Development Targets. The targets will be based on the potential housing start information which will be first collected and injected into the Exchange in May 1970. See pp. 34 -36.

11. Promotion of Free Choice of Housing

Promotion of free choice of housing will be developed and carried out in two phases. The first step will be the identification of obstacles to freedom of choice and equality of opportunity. The second step will consist of the consideration of an action program to eliminate obstacles standing in the path of free choice and equality. This effort will begin in August 1970. See pp. 36 and 37.

TIMETABLE OF BREAKTHROUGH OPERATIONS EVENTS

BEGINNING DATES

1970

May 15	Creating the Position of Housing Planner
June 1	Inventory of Plans, Regulations & Ordinances
June 22	Interagency Committee on Housing to be appointed
June 29	Estimates of Potential Housing Starts begins (quarterly basis)
June 29	Identification of Housing Sites begins (quarterly basis)
June 29	Institution of State Housing Information Exchange
August 17	Promotion of Free Choice of Housing
September 15	Development of Housing Assistance Response System
September 22	Promotion of Operation BREAKTHROUGH
November 1	Housing Development Targets evaluated & updated (continuous)

1971

July 1	Modernization of Building Codes

COMPREHENSIVE FLOW CHART
STATE BREAKTHROUGH ACTIVITIES
MAY 1970 - APRIL 1972

**The North Carolina General Assembly meets from January to June 1971.

▬ denotes special emphasis in preparation for and operations during the General Assembly Session

**Project years begin on June 1, 1970 and 1971.

B. Synopsis of Organizational Structure

To carry out the elemental projects of the BREAKTHROUGH Operations plan, a detailed organizational structure had to be developed. Because of the interagency and intergovernmental nature of the State's housing efforts as spelled out in the plan, the structure tends to be complicated. However, after studying the enclosed structure and information flow charts, one will recognize that the intricacy is a necessity to develop the unified State housing support system. The system is the interagency and intergovernmental experience on the State level which will demonstrate the extent to which the housing concern permeates the structure of State government. Hopefully, the experience will be of worth to the State government reorganization studies now being conducted in the State Planning Division.

1. Interrelationships in Planning and Implementing BREAKTHROUGH Operations

a. Planning - A working rapport has been developed with the Councils of Governments, the Research Triangle Planning Commission, the Department of Local Affairs, the Department of Conservation and Development, the North Carolina Housing Corporation, and several others. The largest contributors in the planning process have been the Division of Community Planning, Councils of Governments, and the Research Triangle Planning Commission.

b. Implementation - The key line organization in carrying forth the elemental responsibilities of BREAKTHROUGH Operations is the Department of Local Affairs. This agency, as can be seen in the flow charts on page 16 and page 17, plays a very important role in implementation. To realize the full responsibilities of the agency in carrying out the plan refer to Section II., 4, 5, 6, 8, and 9 on pages 23, 25, 27, 31, and 32, respectively.

c. Organization - For the organizational aspects of the State interagency and intergovernmental housing support system, reference should be made to the chart on page 15. Housing planning is one of several operations

situated in the State Planning Division, i.e., Comprehensive Health Planning, Model Cities Coordination, Clearinghouse and Information Center, etc. Housing planning will serve as the synchronization center for State government housing operations. It will promote interagency and intergovernmental cooperation leading to a unified State thrust in housing.

2. Personnel to be Assigned to Housing Operations

The needs for personnel at the State Planning level include a housing planner, a part-time assistance housing planner, and a secretary for the first seven months of operation, up until December 1970. Detailed planning has not gone beyond this point because needs cannot be seen relatively firmly beyond this period of time. Although some specifics are given for nine of the 11 plan elements for the entire two year planning period, most of the plan is mapped in sketch form for the last 17 months. It is assumed that an additional person will be needed during the second year, if the State housing mechanism comes to fruition as herein calculated. During the months of June, July, and August, it is probable that one and possibly two interns from the Urban Studies program at Shaw University will be assigned to housing planning. Specifics on manpower in the other cooperating agencies are unavailable at this time, although it may be possible that two experienced planning students from the University of North Carolina at Chapel Hill may be hired in intern capacities to aid in the Department of Local Affairs' contribution areas.

3. Budget for Operations

On the following pages an indication of the first year expenditures for the two year BREAKTHROUGH Operations Plan is given.

SOURCES OF FUNDS

1.	Total Non-Federal Contribution (State Planning Division)	$17,500
2.	Federal Grant Requested	35,000
3.	Total Anticipated Cash	$52,500

OPERATIONS COSTS

1.	Salaries and Wages in State Planning Division	$22,300
2.	Third Party Services by Department of Local Affairs	26,250
3.	Travel by SPD Staff	2,620
4.	Reproduction and Publication (SPD)	1,330
	Total BREAKTHROUGH Operations Costs	$52,500

SALARIES AND WAGES

STATE PLANNING DIVISION

Position	Annual Gross Salary Cost	Percentage of time assigned to Project	Annual Net Salary Cost	Filled	Vacant
Housing Planner	$14,400	100	$14,400		1
Assistant Housing Planner	11,395	33	3,790		1
Stenographer II	5,500	25	1,374		1
Business Officer	12,800	5	640	1	
Accountant	10,415	5	526	1	
Accountant Clerk	6,500	5	324	1	
Information Systems Coordinator	12,467	10	1,246	1	
			$22,300		

SERVICES BY OTHER PUBLIC AGENCIES ON A THIRD PARTY CONTRACT BASIS

NORTH CAROLINA DEPARTMENT OF LOCAL AFFAIRS	$26,250

TRAVEL

STATE PLANNING DIVISION

Out-of-State trips to HUD offices by project staff:

4 trips to Atlanta by air	$ 400
2 trips to Washington by air	190
1 trip to prototype site in Macon, Ga.	140
1 trip to prototype site in Memphis, Tenn.	160
1 trip to prototype site in Wilmington, Del.	130
Transportation and Subsistance	$1020

In-State travel by project staff:

Transportation by State vehicle 10,000 miles @ $.07	$ 700
Estimated subsistance	900
Transportation and Subsistance	$1600

TOTAL ESTIMATED TRAVEL AND SUBSISTANCE	$2620

REPRODUCTION AND PUBLICATION

STATE PLANNING DIVISION

INFORMATION MATERIALS	
Pamphlets	$ 600
Visual aids & illustrations	430
Xerox	300
TOTAL ESTIMATED REPRODUCTION AND PUBLICATION COSTS	$1330

SECTION II.
DETAILS OF OPERATIONS ACTIVITIES

Indicated in the following 11 sections of the BREAKTHROUGH Operations plan are the plan elements in detail as coordinated with the summary of activities of page 3 in Section I. The elements are treated in general chronological order.

1. Creating the Position of Housing Planner

Recruiting efforts have been under way in the State Planning Division to hire a housing planner since February. It is expected that a person will join the staff to head up operations by June 1, 1970. The housing planner will be in charge of operations and be directly responsible to the Assistant State Planning Officer in charge of Statewide planning. To operate housing efforts, additional staff will be needed. It is expected that an assistant housing planner on a part-time basis at first will be necessary, and a quarter-time secretary with stenographic capabilities will have to be placed on board.

The housing planner will be the responsible officer for Operation BREAKTHROUGH management in North Carolina and for overseeing and coordinating all State government activities in the area of housing. Specifically, the planner will: (1) be in charge of State interagency housing coordination; (2) serve as the secretariat to the newly established Interagency Committee on Housing, a body to be sponsored by the State Planning Division; (3) be responsible for the development and operation of the proposed State Housing Information Exchange; (4) be accountable for planning and aiding the Department of Local Affairs in developing the State housing assistance delivery system for housing sponsors and developers; and (5) be called upon to establish an intergovernmental cooperative effort (State, regional, and local) to improve housing conditions in North Carolina. On the chart on page 15, the function of housing planning is schematically projected.

Housing planning operations will be established on June 15, 1970. Further staffing will be dealt with upon demand; other State Planning Division personnel will be assigned on a part-time basis to perform special tasks attendant to BREAKTHROUGH Operations and State Planning's overall housing coordination responsibility, i.e., Planning Information Systems Coordinator, Economist, etc.

2. Establishment of the Interagency Committee on Housing

During the month of June 1970, an interagency group on housing will be appointed by the Director of Administration. The Interagency Committee on Housing will be one of several interagency planning groups sponsored by the State Planning Division. The first session of the Committee will probably be held during the latter part of July 1970. For educational purposes, the group will meet within two weeks of its first session and monthly thereafter.

Membership of the Interagency Committee on Housing will consist of the heads or their designees of the various State agencies whose operations include housing responsibilities. Tentatively, these agencies will include the North Carolina Housing Corporation; the Department of Local Affairs; the Department of Conservation and Development; the Department of Insurance; the North Carolina Good Neighbor Council, the Department of Administration; the Department of Health; and the Department of Social Services.

Ex officio members will be welcomed to serve on the Committee. They will include the housing officers of the Piedmont Triad COG (Council of Governments), the Central Piedmont COG, the Western Piedmont COG, the Research Triangle Planning Commission, and others as they are staffed. Possibilities are that representatives of the North Carolina League of Municipalities, the North Carolina County Commissioners Association, and representatives from the economic development districts of the Coastal Plains Region and the local development districts of the Appalachia Region may be represented as ex officio members also. The Committee will be established as both a working group for the development of housing policies

and housing planning for North Carolina and as a public relations group serving as a disseminator of information on housing to the citizenry of the State. Most of the Committee's meetings will be conducted as working sessions in an unaugmented state, without ex officio members present. The full board will get together quarterly or on some other periodic basis and when problems of a very important nature arise. Ex officio members will serve primarily in an advisory capacity.

The reasoning behind the appointment of ex officio members is that these people will be involved in developing information for and delivering it to the State Housing Information Exchange, and they will also be recipients of some of the technical assistance being offered in the area of housing by the State. They will serve as transitional units and buffers to render State assistance more meaningful on the local and regional level.

The purpose of the Interagency Committee on Housing will be to develop and bolster the interagency and intergovernmental relations and coordination needed to facilitate and enhance the increased production of decent housing in North Carolina; a unified, rather than fragmented, approach to the housing problem is the objective here. The membership of the Committee will be flexible. As the body finds that it has need of the participation of additional State agencies, it will seek to add the agency head or his representative to its membership.

The State Planning Division will be responsible for calling meetings, preparing agendas, and taking minutes of the Committee's sessions. The housing planner's responsibilities will require him to apprise the members of significant happenings in the field of housing at the Federal, State, regional, and local levels and the progress of housing coordination operations. He shall present the BREAKTHROUGH Operations Plan to the body and relate successes and failures in implementation to it.

The relationship of the Committee to the overall multi-agency and multi-governmental effort can be seen on the chart on page 15.

3. Development of the State Housing Information Exchange

During June 1970, the operations of the State Housing Information Exchange will be instituted. The Exchange will be set up so that it will have the clearinghouse capacity to receive, digest, evaluate, and disseminate Statewide housing information. The operation will begin as soon as feasible so that early information being received from the Councils of Governments and the Regional Planning agencies in the latter part of May can be digested.

Exchange operations will be planned, instituted, and maintained with the assistance of the Planning Information Systems Coordinator of the State Planning Division. It is surmised that the Exchange will be a "hand-to-hand" operation in its early stages. Moreover, as the materials which are received from the cooperating housing agencies throughout the State mount, the system will be converted to a computerized operation.

Information for the Exchange will be garnered through the use of standardized questionnaire forms developed for computerized systems purposes. No set time frame will be used to gather information; the system will be geared to receive advisories at any time. However, information will be solicited on a regular quarterly basis to insure that cooperating agencies will not tend to lag in participation. Most of the early input will be received from the Councils of Governments, regional planning agencies, and economic development districts which are "staffed." The Department of Local Affairs will assume the responsibility of supplying information from "extra-regional" communities and counties on a sampling basis for input into the Exchange. Assistance from the Department of Local Affairs will be conducted on a third-party contract basis. A schematic view of COG and Local Affairs input into the Exchange can be seen on the Exchange operations chart on page 16.

Data collected and injected into the Exchange will be used: (1) to establish estimates of potential housing starts; (2) to establish BREAK-THROUGH housing development targets; (3) to inform and to keep abreast sponsors and developers of housing information, programs, industrialized-

construction techniques, site availability, and site particulars; (4) to aid in developing a "site bank" (See Section 5 on page 25); and (5) to assist in any conceivable manner in alleviating the shortage of standard and respectable housing for the State's citizenry.

Within the State Housing Information Exchange, housing planning operations will maintain information which will be of assistance to sponsors and developers in achieving their objectives of constructing BREAKTHROUGH-type housing. The Exchange will include: detailed information on HUD-tested and -certified BREAKTHROUGH production systems; information on prototype projects in the region; information on other housing developments in the region using industrialized housing systems; detailed information about possible sites for BREAKTHROUGH; information about potential sponsors and developers; information on Federal and State housing programs; and any other information which would be of value to sponsors and developers of BREAKTHROUGH housing and users of BREAKTHROUGH techniques. For information on the development of further technical assistance for sponsors and developers, see Section 8 on page 31 on a housing assistance response system for aiding sponsors and developers.

A site bank, within the State Housing Information Exchange, will be established. Via the quarterly reception of previously described information on standardized data forms from the Department of Local Affairs, Councils of Governments, Regional Planning Commissions, etc. the inventory will take shape. The site bank will become operational during July 1970. At this time the State Housing Information Exchange will have the capacity of receiving site information that will include the key applicable identification characteristics needed for BREAKTHROUGH purposes plus additional information required for other State planning purposes including: dimension, ownership, tenure, taxes, assessed value, appraised value, availability, existing land use, existing structures, existing zoning, transportation accessibility, recreation accessibility, school accessibility, locality in relation to other types of development, utilities, municipal, county, and State protective services, voluntary protective services,

topography, vegetative cover, accessibility to water, pollution characteristics, etc. All this information on each piece of land will be gathered and recorded in the site bank to establish an accessible information system on all potential BREAKTHROUGH sites in the State. Through the quarterly reporting system of the Department of Local Affairs and Councils of Governments, etc., land transactions and other status information of the parcels will be kept up to date. It is suspected that the delivery of information will often be more frequent than on a quarterly basis after a personal working relationship is established with key contacts in State government and on other governmental levels.

The Exchange will operate on a continuing basis over the two-year planning period and will be supported thereafter, if proven to be a valuable tool in maintaining a market for HUD-approved industrialized housing. It is hoped that Exchange quality will be developed to the extent that it will become the authority in the State on all industrialized and low- to middle-income housing. The aim of the State Planning Division will be to develop the Exchange to the degree of sophistication within a year's time, that it can be depended upon for information in many additional facets, i.e., information for commercial and industrial planning and development, for new town planning, for transportation facility planning, for churches and other types of organizations, for social service organizations, etc. It is surmised that the Exchange will be developed to the point of capability where instant responses, via telephone, of up-to-date general information can be delivered and that 24 hour responses to more sophisticated requests can be given.

4. Preparation of Estimates of Potential Housing Starts

Comprehensive State estimates for potential housing starts will be prepared based, in part, upon information collected from the "staffed" Councils of Governments and regional planning and development commissions by the State Planning Division. Estimating housing starts in other localities of the State would be conducted through a collection mechanism established in the Department of Local Affairs. The three "staffed" Councils of Govern-

ments and the Research Triangle Regional Planning Commission have agreed to send in information on housing to the State Housing Information Exchange as soon as standardized housing questionnaires are developed by the State Planning Division and thenafter, continually and regularly, on a quarterly basis starting in November 1970. For other areas of the State that are not covered by the councils of governments and regional planning and economic development commission operations, an arrangement with the Department of Local Affairs would be developed. The work performed will be accomplished on a third-party contract basis.

The information garnered by Local Affairs from the other cities and counties in the State would be collected with the assistance of economic development districts and local development districts and/or by dealing directly with local government agencies. Contacts will be made with local housing authorities, FHA insuring offices, Home Builders Associations, banks, sponsors, developers, and contractors identified with existing housing developments for low- and moderate-income families. Information collected by the Department of Local Affairs will be submitted to Housing Planning on a quarterly basis and will be tabulated on the standard housing forms comparable to the aforementioned regional questionnaires which will be developed by the State Planning Division.

An essential ingredient for all agencies, whether State or regional, in estimating potential housing starts and in developing and operating the State Housing Information Exchange, will be the establishment of personal relationships with the numerous contributing agencies throughout the State. Personal acquaintances will enhance the viability of the Exchange.

The potential housing start estimate system is indicated on the Information Flow chart on page 16.

Early emphasis will be placed on the estimates received from the "staffed" Councils of Governments and Regional Planning Commissions. It is evident that these agencies will have the capability of making an early input into the State Housing Information Exchange.

The data to be collected on the potential number of housing starts will include:

(1) information revealing the size of the immediate market potential for housing;

(2) information to be used in measuring the gap between demand and remedy for low- and moderate-income housing;

(3) information for developing housing targets for the State; and

(4) information that will perpetrate a system to identify obstacles in the way to increasing productions for low- and moderate-income housing.

5. Identification of Housing Sites

Within the State Housing Information Exchange a site bank will be established. Please refer to Section 3 on page 21 titled Development of the State Housing Information Exchange. Through the use of site feasibility study techniques, an inventory of land available for industrialized housing for low- and moderate-income families will be conducted on a cooperative basis with the Department of Local Affairs, the Division of Commerce and Industry of the Department of Conservation and Development, the Property Control Division of the Department of Administration, the State Highway Commission, the Federal Property Agency, the North Carolina Housing Corporation, Councils of Governments, regional planning and development bodies, counties, and municipalities.

The Department of Local Affairs which was very active in "phase one" of Operation BREAKTHROUGH has accumulated information on at least four sites which were submitted for prototype projects in 1969. These sites represent the most immediate possible market for BREAKTHROUGH housing in North Carolina. Although these sites were not selected for prototype development, and depending upon their present tenure status, they are nonetheless generally suitable for housing construction. These known sites will naturally receive top priority in formulating development plans to utilize them in the BREAKTHROUGH program.

With the aid of the regional BREAKTHROUGH manager and Federal Property Agency, surplus and excess Federal property suitable for housing development will be identified. With the assistance of the State Property Control Officer and the State Highway Commission, the availability and applicability of excess, surplus, and abandoned State property and land to which the State holds property rights will be established.

Site information for local governments located within "staffed" regions will out of necessity have to be garnered by Councils of Governments and by regional planning and development commissions. The information will be submitted to the Information Exchange through the same means used to accumulate potential housing starts estimates, and it will be submitted at an early date during the months of June, July, and August, and on a quarterly basis beginning in November 1970. The staffed COGs and commissions have agreed to participate in submitting information.

Because of the close contacts which the Department of Local Affairs has with local government throughout the State, its staff would carry the responsibility of attaining this information for governments which do not lie within the jurisdiction of "staffed" regional agencies. Although this is a large assignment, it is expected that the task would diminish because other regional agencies are building staffs presently with the consequent capability of supplying information.

Very important contacts on the local scene will be Redevelopment Commissions and Local Housing Authorities. These agencies are aware of the current public land availability situation, and they will be major contributors to the site bank via regional agencies and the Department of Local Affairs.

The Division of Commerce and Industry of the Department of Conservation and Development maintains an inventory on land primarily for industrial purposes. However, there are possibilities that some of the parcels in this Division's inventory have not been suitable for industrial prospects or are just marginal for industrial purposes that would be perfectly good sites for industrialized low- to moderate-income family housing. The

Division also has general information on housing availability kept in support of its operations. Aid from this State agency will be solicited formally in June 1970. Already two informal discussions have taken place with the staff.

Local governments located in metropolitan areas will be encouraged to inventory vacant and abandoned sites within their jurisdictional areas to determine the feasibility of their use for housing purposes. These governments will be encouraged to attain these properties.

Land owned by the private sector will be the major source of sites for housing. However, because of the lack of feasible means of inventorying privately owned land, emphasis will not be placed on such an endeavor in the early stages of BREAKTHROUGH Operations. But it is felt that much information will be accumulated on privately-owned property through word-of-mouth. This word will be cataloged on standard forms and will serve as the beginning effort in an attempt to comprehensively inventory private land which might be suitable for industrialized housing units. It is expected that the State Housing Information Exchange will begin to develop this capability by the beginning of the second year of operation, circa June 1971.

The aim of the identification of housing sites endeavor is to keep all sponsors and developers (existing and potential) of BREAKTHROUGH-type, low- to moderate-income family-housing, informed of the availability of land for such development. This will be done through mailings of information to them, as it is cataloged in the site bank, on an irregular basis. However, a regular quarterly report, based upon the quarterly information sent into the Exchange, will be mailed to the sponsors and developers.

6. Amendment of Land Development Plans, Zoning Ordinances, and Subdivision Regulations

Based on inventories taken by the Councils of Governments, regional planning and development bodies, and the Department of Local Affairs, recommendations for State and local action addressed to alleviating re-

straints of unreasonable planning, zoning, and subdivision control will be made to clear the way for BREAKTHROUGH-type low- and moderate-income family housing. Staffed COG and regional planning commissions will submit their findings to the Department of Local Affairs. Local Affairs will be responsible for studying, on a sampling basis, other areas of the State not lying within metropolitan areas. Local Affairs in turn will put together all findings, including collected COG information, and prepare recommendations for the housing coordination section of the State Planning Division. Refer to the chart titled Information Flow-Inventory and Recommendatory/Action on page 17 to comprehend the Department of Local Affairs' and COGs' roles.

N. C. Inventory Sampling Schedule

Categorical City Population	Total in N. C.	DCP	COG's	Total	% of Total
50,000 & Over	7	2	5	7	100
25,000 to 49,999	7	3	4	7	100
10,000 to 24,999	21	5	6	11	55
3,000 to 9,999	55	6	0	6	11
500 to 2,999	225	5	0	5	2
		21	15	36	

The time frame for this work is June through October 1970. It is planned that recommendations from the Department of Local Affairs will be submitted two months prior to the 1971 Session of the General Assembly, which normally meets from January until June.

The inventory will search out excessive and unreasonable development requirements. It will seek out local provisions for planned unit development, and it will look for highly restrictive subdivision regulation and zoning ordinance requirements including set back requirements, multi-family unit exclusion, large lots, high front footage, and general "snob zoning" tactics. Additionally, a check on the administration of the ordinances will be conducted to determine to what degree and in what instances they are carried out to the letter or not carried out at all.

A short treatise on the comparative economy of serving planned unit developments as compared to standard large lot development will be prepared. A typical example of the costs required in each of the cases will be rendered on the basis of 100 family units in terms of water, sewer, fire, police, recreation, gas, electricity, and other municipal services. Although it is already known that planned unit development is much less expensive to service, a North Carolina comparative analysis will be needed to back up claims when legislative proposals are made on the local, regional, and State level. See Section 9 on page 32.

The work to be performed on this element by the Department of Local Affairs will be done on a third-party contract basis. During the second year of the plan a follow-up study will be made by the Department, during November and December 1971, to reveal the effect of the efforts made to rectify some of the prohibitive laws and practices. An evaluation of the effectiveness of the legislative steps and changes made at the local, regional, and State level to alleviate excessive requirements will be conducted to determine whether the measures have in fact rendered the ordinances more receptive to industrialized-type and planned unit development home construction. To bolster a continuing scrutinization of local ordinance capacities and administrative practices, the State Planning Division will consider carefully the policy of State review of local zoning determinations in connection with its State Land Policy planning program to recommend to the General Assembly in 1971 or 1973.

7. Modernization of Building Codes

On July 1, 1970, North Carolina will require that all mobile homes which are manufactured from that date forward will have to meet the requirements of the Uniform Standards Code for Mobile Homes. The provisions of the code are applicable to factory built homes. An agency which has been authorized to conduct insepctions at the point of manufacture is the Underwriters Laboratories. The first U. L. labeled mobile home in the United States came off the assembly line in a plant in North Carolina on March 11, 1970. Other labeling agencies will be designated by the Building

Code Council as the demand for this service grows and their capability is proven.

The manufacturer of modular housing units could follow either of these two procedures:

(1) Factory Inspection - Build the units in accordance with the N. C. Residential Building Code or USAS A119.1 as a finished product like a mobile home and apply to Underwriter's Laboratories, etc. for labels under same procedures as a mobile home. The local inspector may accept a prefabricated structure so labeled under section 23 of the N. C. Residential Building Code. NOTE: If a local inspector is required to sign an inspection certificate before the power is turned on, etc., he should insert the words "not inspected, except for utility connection, U. L. labeled" on such certificates for finished U. L. labeled modular dwelling units.

Provisions must be made for making on-site inspections of connecting structural, plumbing, heating and electrical systems for two or more units.

(2) Local Inspection - Build the units in accordance with the N. C. Residential Building Code or USAS A119.1 so that they may be inspected locally. Panels must be left off in appropriate places and should be worked out to the satisfaction of local inspectors so that structural, plumbing, heating and electrical inspection can be made.

After experience has been gained in labeling of factory built homes, the Department of Local Affairs with the guidance of the Department of Insurance's Engineering Division will assess the effectiveness of such an inspection system. A report will be made to the Interagency Committee on Housing with recommendations on what steps should be taken to continually insure high quality construction standards and at the same time remove barriers which tend to stand in the way of quality industrialized housing development. A report will be presented in September 1971.

8. Development of a Housing Assistance Response System for Sponsors and Developers

After several months of operation and after the development of some expertise in the BREAKTHROUGH area, the Department of Local Affairs will develop a formal technical assistance response system for sponsors and developers of low- and moderate-income housing in September 1970. In addition to the establishment and the utilization of the State Housing Information Exchange to render assistance to "housing people" in the State, a housing technical assistance group will be gathered together. The team, which will meet on a regular basis, will be made up of staff members of the State agencies represented on the Interagency Committee on Housing. Assistance to contractors, developers, and sponsors, depending on the nature of the aid requested, will be delivered either on a categorical basis or on a team effort basis. For instance, if assistance is requested specifically in the area of zoning, the categorical expertise of the Division of Community Planning might best serve the needs of the applicant for assistance. On the other hand, if a group requests assistance in the promotion of the free choice of housing where several areas of discrimination may enter, i.e., planning, zoning, building and housing code enforcement, it may require the expertise of several members or the entire team to deal with the request.

Local Affairs, with the expert assistance of the multi-agency Housing Assistance Response Team (HART) in its services to sponsors and developers of BREAKTHROUGH housing for low- and moderate-income families, will develop a program which will include assistance: (1) in developing new projects by bringing together potential sponsors, developers, land owners, producers, and financing institutions; (2) in comprehending and meeting requirements of housing assistance programs; (3) in securing commitments from financial institutions for funding construction and long-term requirements; (4) in acquiring local government cooperation for constructing projects, including securing zoning and building code clearance; (5) in landing the commitment of HUD funding of the subsidized part of a project; and (6) in securing matching HUD funding for water, sewer, community facilities, urban renewal, and Model Cities programs.

Housing assistance delivery will be an out-reach program to help sponsors and developers. Initial contacts will be made via the processes used in estimating housing starts as described in Section 4 on page 23.

9. Promotion of State Housing Efforts

State housing efforts will be promoted in two ways: one on the community level and the other on the State legislative level. The program will begin in September 1970.

The Department of Local Affairs will undertake a promotional campaign aimed at awakening community interest in developing community acceptance of the concept of industrialized housing. The prime aim of the campaign will be to play down the stigma attached to so called "prefab" housing by explaining the many advantageous aspects of industrialized housing. The promotional effort will include information programs to be presented to community groups including builders associations; realtors; professional groups such as planners, architects, engineers, etc.; business groups including civic clubs, Chambers of Commerce, banking organizations, development associations, etc.; churches and benevolent groups; and local government officials. Wherever possible HUD-prepared materials, movies, slides, and pamphlets will be used. Efforts of this nature will be made on both the local and regional levels. State level efforts will be directed primarily through the mass media.

In State government, informational programs will be conducted at the Interagency Committee on Housing level. The first sessions of this body will be mainly educational, and it is planned to hold the first two sessions within two weeks of each other and the following meetings one month apart. This will help agency representatives to learn about BREAKTHROUGH and become familiar with its goals as they relate to their own agency operations.

With building firms and organizations, special promotional efforts will be made particularly with potential sponsors and developers of BREAKTHROUGH type low- to moderate-income family housing units. In November 1970, a

conference will be held with these people to discuss BREAKTHROUGH systems and marketing concepts. Federal and State housing personnel and prototype contractors will be invited to participate. The conference would be held at a prototype project site in the region: either at Macon, Georgia, or at Memphis, Tennessee. Additional trips will be arranged to the prototype sites for potential sponsors and developers. All building firms in the State will be encouraged to visit the prototype sites in the region.

Beginning in September 1970, an effort to review general legislation as it relates to housing in North Carolina will begin in preparation for the 1971 General Assembly session which convenes in January. At this time meetings of the Interagency Committee on Housing will be concerned with the preliminary findings of the Department of Local Affairs on the capabilities of the various plans, ordinances, regulations, and codes on the local level to provide for the development of industrialized housing. The Committee will also be contacting the various professional organizations of the State such as the State Chapters of the American Institute of Architects, American Institute of Planners, the professional Engineering societies, the building and housing inspectors' association, the State builders association, the Institute of Government at the University of North Carolina at Chapel Hill, the North Carolina League of Municipalities, the North Carolina County Commissioners Association, and others who are involved in proposing new legislation and amendments in the building and development fields every two years. Several of the organizations have legislative committees which make recommendations to the General Assembly. Normally, the practice of professionals in the building and development fields is geared closely to the general legislation applicable to them, and in some cases these people work with applicable general legislation almost every day. Therefore, by meeting with these organizations, deficiences in the housing legislation for North Carolina can be found, and through their expertise and pooling of thoughts, new proposals and amendments can be developed. When the General Assembly meets, support through the various lobby operations of these organizations could be of great help in effecting passage.

In September 1970, an examination of the possible legislation in support of increased housing production in North Carolina will begin. Local Affairs will consider the possibility of developing legislation to aid non-profit and limited profit sponsors of low- and moderate-income family housing via various techniques. The Department of Local Affairs will look into developing a program to grant State assistance to local government for promoting low- to moderate-income housing within their local jurisdictions. And lastly, it will consider legislation to modernize the State's administration for running its housing programs including the possible establishment of a staff within a State agency, centralizing within one department all housing programs administered by the State. Local Affairs will render these recommendations to the Interagency Committee on Housing which in turn will study the Statewide applicability and feasibility of the proposals. The Committee will in turn recommend legislation to the General Assembly.

10. Establishment of BREAKTHROUGH Housing Development Targets

The following targets have been set for BREAKTHROUGH development housing in North Carolina. For the Fiscal Year, July 1970 - June 1971, the goal is set at 2000 units: 1500 units for low- and moderate-income families and 500 units for middle- and upper-income families. For the following Fiscal Year, July 1971 - June 1972, the goal is set at 3500 units: 2800 units for low- and moderate-income families and 700 units for middle- and upper-income families.

The estimates for both fiscal years are very rough and are based on crude information taken from estimates of potential housing starts based on site availability and unit capacity of the North Carolina site submissions for prototype projects made in 1969 through the efforts of the Department of Local Affairs. Additionally, estimates are based upon conversations held at meetings with Councils of Governments and regional planning and development agencies. The goals which are herewith established for BREAKTHROUGH housing development in the State are temporary and will be changed and updated as new information is injected into the State Housing Information Exchange operation (November 1970).

The establishment of the new BREAKTHROUGH Housing unit targets will be based upon the potential housing start information received from the Councils of Governments', Regional Planning Commissions', and Department of Local Affairs' initial inputs (June, July and August 1970) and first quarterly inputs (November 1970) into the State Housing Information Exchange. The State Planning Division will review the data received to determine the number of planned housing units which might utilize BREAKTHROUGH industrialized production systems.

It is expected that after the staff gains more experience in the area and after BREAKTHROUGH housing development systems are accepted by the public (consumers, sponsors, and developers), targeting will become very flexible. It is suspected that the Exchange information system will attain the degree of quality where it will be highly sensitive to the housing situation in the State to the point that targeting may justifiably change from month to month reflecting the situation. The flexible and continually changing statement of targets which will be based on the estimates of potential housing starts, site identification, and other information gathered by the State Housing Information Exchange, will be expressed in as explicit terms as possible. The statement of targets will include: projected yearly numbers of housing starts utilizing BREAKTHROUGH type units; projected yearly numbers of housing starts representing single-family detached units; projected numbers of multi-family units of the walk-up and elevator development types; projected price ranges for each type of unit; the income groups for which BREAKTHROUGH housing is targeted and the numbers of units designed for each of these income groups; and the designation of geographic areas in which the units would be constructed including the projected numbers of units to be built in each of these geographic areas.

It will take about three months of gathering pertinent information, of analysis, and of calculation to justify the establishment of BREAKTHROUGH housing development targets to the explicit degrees which are indicated in the above. It is felt, however, that the State Planning Division will have the caliber information needed to perform this task on or about the time of the November 1970 input of housing start estimates and housing

site identifications into the Exchange. This will represent the first scheduled, quarterly input contribution from the Department of Local Affairs, Councils of Governments, and regional planning and development commissions and districts which will take place regularly over the two-year planned BREAKTHROUGH Operations period. If proven to be of value in the two-year operation period, the procedure will be continued indefinitely.

In November, carefully calculated housing development targets will be made for the remaining half of Fiscal Year July 1970 - June 1971 and for the entire Fiscal Year of July 1971 - June 1972. These will be made with the assistance of the Planning Information Systems Coordinator of the State Planning Division staff. The housing development targets will be broken down into the categories which are given in the above and into others which may be found to be necessary to serve the purpose of finding and creating sponsors and developers to absorb the full capacity of North Carolina's housing production facilities.

11. Promotion of Free Choice of Housing

It is recognized that the ultimate success of Operation BREAKTHROUGH depends very heavily upon the elimination of discriminatory practices in housing in North Carolina and the Nation. It is recognized that forcible solutions are not the answers to this dilemma in North Carolina. It would be foolhardy and delusional to think that forcible mixture of racial, ethnic, and economic groups is the panacea to the polarization of residential living patterns.

Beginning in August 1970, the obstacles which stand in the path of free choice and equality of opportunity of housing in North Carolina will be identified. The assistance of the North Carolina Good Neighbor Council will be solicited. Information on obstacles will be gathered from home-builders, housing officials, FHA offices, housing sponsors, local good neighbor councils, fair housing groups, civil rights organizations, lawyers, housing authorities, and low-income area organizations. Based

on information gathered, a report will be made to the Interagency Committee on Housing which in turn will decide upon an action program to overcome obstacles to open housing in the State. Concurrently, parallel activities on the regional and COG level of government will be encouraged.

on of mentally ill persons, mentally retarded, or inebriates without having a license therefor from the Department of Mental Health, or from the State Board of Public Welfare in accordance with subsection (e) of this section. Any person who carries on, conducts or attempts to carry on or conduct a private hospital, home, or school for the cure, treatment or rehabilitation of mentally ill persons, mentally retarded, or inebriates without having a license therefor from the Department of Mental Health or from the State Board of Public Welfare in accordance with subsection (e) of this section shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not more than one thousand dollars ($1,000.00), or by imprisonment for not more than six (6) months, or by both such fine and imprisonment. The managing and executive officers of any corporation violating the provisions of this section shall be liable under the provisions of this section in the same manner and to the same extent as a private individual violating the law.

(b) Licenses shall be obtained annually. Every application for license hereunder shall be accompanied by a plan of the premises proposed to be occupied describing the capacities of the buildings for the uses intended, the extent and location of the grounds and the number of patients proposed to be received therein with such other information and in such form as the Department may require. The Board of Mental Health may by rules or regulations prescribe minimum standards of safety, sanitation, medical, nursing, and other facilities and equipment for each type of establishment which must be met by the applicant before a license will be granted by the Department.

(e) The authority to license nonmedical privately operated homes or other nonmedical institutions (including religious facilities) for mentally ill persons, mentally retarded persons, and inebriates shall be the responsibility of the State Board of Public Welfare, and in such cases, in construing the provisions of subsections (b) and (c) herein, the words "State Board of Public Welfare" shall be substituted for every reference to the Department of Mental Health or the Board of Mental Health. (1899, c. 1; s. 60; Rev., s. 4600; C. S., s. 6219; 1945, c. 952, s. 41; 1957, c. 100, ss. 1, 4; 1963, c. 1166, s. 7; 1965, c. 1178, ss. 1-3; 1969, c. 954.)

Editor's Note.—

The 1969 amendment, effective July 1, 1969, deleted "first" preceding "having" and "obtained" following "having" in the first and second sentences of subsection (a), added the first sentence of subsection (b) and deleted a reference to subsection (d) in subsection (e).

As subsections (c) and (d) were not changed by the amendment, they are not set out.

Chapter 122A.

North Carolina Housing Corporation.

Sec.
122A-1. Short title.

122A-21. Additional method.
122A-22. Chapter liberally construed.
122A-23. Inconsistent laws inapplicable.

§ 122A-1. Short title.—This chapter shall be known and may be cited as the "North Carolina Housing Corporation Act." (1969, c. 1235, s. 1.)

§ 122A-2. Legislative findings and purposes.—The General Assembly hereby finds and declares that as a result of the spread of slum conditions and blight to formerly sound urban and rural neighborhoods and as a result of actions involving highways, public facilities and urban renewal activities there exists in the State of North Carolina a serious shortage of decent, safe and sanitary residential housing available at low prices or rentals to persons and families of lower income. This shortage is severe in certain urban areas of the State, is especially critical in the rural areas, and is inimical to the health, safety, welfare and prosperity of all residents of the State and to the sound growth of North Carolina communities.

The General Assembly hereby finds and declares further that private enterprise and investment have not been able to produce, without assistance, the needed construction of decent, safe and sanitary residential housing at low prices or rentals which persons and families of lower income can afford, or to achieve the urgently needed rehabilitation of much of the present lower income housing. It is imperative that the supply of residential housing for persons and families of lower income affected by the spread of slum conditions and blight and for persons and families of lower income displaced by public actions or natural disaster be increased and that private enterprise and investment be encouraged to sponsor, build and rehabilitate residential housing for such persons and families, to help prevent the recurrence of slum conditions and blight and assist in their permanent elimination throughout North Carolina.

The General Assembly hereby finds and declares further that the purposes of this chapter are to provide financing for development costs, land development and residential housing construction, new or rehabilitated, for sale or rental to persons and families of lower income.

The General Assembly hereby finds and declares further that in accomplishing this purpose, the North Carolina Housing Corporation, a public agency and an instrumentality of the State, is acting in all respects for the benefit of the people of the State in the performance of essential public functions and serves a public purpose in improving and otherwise promoting their health, welfare and prosperity, and that the North Carolina Housing Corporation is empowered to act on behalf of the State of North Carolina and its people in serving this public purpose for the benefit of the general public. (1969, c. 1235, s 2.)

§ 122A-3. Definitions.—The following words and terms, unless the context clearly indicates a different meaning, shall have the following respective meanings:

(1) "Bonds" or "notes" means the bonds or bond anticipation notes authorized to be issued by the Corporation under this chapter but shall not include any fund notes;

(2) "Corporation" means the North Carolina Housing Corporation created by this chapter;

(3) "Development Costs" means the costs approved by the Corporation as appropriate expenditures which may be incurred by sponsors, builders and developers of residential housing, prior to commitment and initial advance of the proceeds of a construction loan or of a mortgage, including but not limited to:

a. Payments for options to purchase properties on the proposed residential housing site, deposits on contracts of purchase, or with prior approval of the Corporation, payments for the purchase of such properties,

b. Legal and organizational expenses, including payments of attorneys' fees, project manager, clerical and other staff salaries, office rent and other incidental expenses,

c. Payment of fees for preliminary feasibility studies and advances for planning, engineering and architectural work,

d. Expenses for tenant surveys and market analyses, and

e. Necessary application and other fees;

(4) "Fund notes" means the notes authorized to be issued by the Corporation under the provisions of § 122A-7;

(5) "Governmental agency" means any department, division, public agency, political subdivision or other public instrumentality of the State, the federal government, any other State or public agency, or any two or more thereof;

(6) "Housing development fund" means the housing development fund created by § 122A-7;

(7) "Insured construction loan" means a construction loan for land development or residential housing which is secured by a federally insured mortgage or which is insured by the United States or an instrumentality thereof, or for which there is a commitment by the United States or an instrumentality thereof to insure such a loan;

(8) "Insured mortgage" or "insured mortgage loan" means a mortgage loan for residential housing insured or guaranteed by the United States or an instrumentality thereof or for which there is a commitment by the United States or an instrumentality thereof to insure such a mortgage;

(9) "Land development" means the process of acquiring land primarily for residential housing construction for persons and families of lower income and making, installing or constructing nonresidential housing improvements, including water, sewer and other utilities, roads, streets, curbs, gutters, sidewalks, storm drainage facilities and other installations or works, whether on or off the site, which the Corporation deems necessary or desirable to prepare such land primarily for residential housing construction;

(10) "Obligations" means any bonds, bond anticipation notes or fund notes authorized to be issued by the Corporation under the provisions of this chapter;

(11) "Persons and families of lower income" means persons and families deemed by the Corporation to require such assistance as is made available by this chapter on account of insufficient personal or family income, taking into consideration, without limitation, such factors as (i) the amount of the total income of such persons and families available for housing needs, (ii) the size of the family, (iii) the cost and condition of housing facilities available, (iv) the eligibility of such persons and families for federal housing assistance of any type predicated upon a lower income basis and (v) the ability of such persons and families to compete successfully in the normal housing market and to pay the amounts at which private enterprise is providing decent, safe and sanitary housing, and deemed by the Corporation therefore to be eligible to occupy residential housing constructed and financed, wholly or in part, with insured construction loans or insured mortgages, or with other public or private assistance;

(12) "Residential housing" means a specific work or improvement undertaken primarily to provide dwelling accommodations for persons and families of lower income, including the acquisition, construction or rehabilitation of land, buildings and improvements thereto, and such other nonhousing facilities as may be incidental or appurtenant thereto; and

(13) "State" means the State of North Carolina. (1969, c. 1235, s. 3.)

§ 122A-4. North Carolina Housing Corporation. — There is hereby created a body politic and corporate to be known as the "North Carolina Housing Corporation" which shall be constituted a public agency and an instrumentality of the State for the performance of essential public functions. The Corporation

shall be composed of nine members. The State Treasurer, Director of the Department of Administration, Director of the Department of Conservation and Development, Director of the Department of Local Affairs and the State Health Officer and their successors in office from time to time shall, by virtue of their incumbency in such offices and without further appointment or qualification, be members of the Corporation. The Governor shall appoint the other four members of the Corporation who shall be residents of the State and shall not hold other public office. One of such appointees shall have had experience in real estate, one shall have had experience in banking, one shall have had experience in mortgage finance and another shall have had experience in insurance. The four members of the Corporation thus appointed shall continue in office for terms of one, two, three and four years, respectively, as designated by the Governor, and until their successors shall be duly appointed and qualified. The successor of each such member shall be appointed for a term of four years and until his successor shall be duly appointed and qualified, except that any person appointed to fill a vacancy shall serve only for the unexpired term. Any member of the Corporation shall be eligible for reappointment. Each member of the Corporation appointed by the Governor may be removed by the Governor for misfeasance, malfeasance or wilful neglect of duty after reasonable notice and a public hearing, unless the same are in writing expressly waived. Each member of the Corporation appointed by the Governor before entering upon his duty shall take an oath of office to administer the duties of his office faithfully and impartially and a record of such oath shall be filed in the office of the Secretary of State. The Governor shall designate a member of the Corporation to serve as chairman. The term of the chairman shall extend to the earlier of either the date of expiration of his then current term as a member of the Corporation or a date six months after the expiration of the then current term of the Governor designating such chairman. The Corporation shall annually elect one of its members as vice-chairman. The Corporation shall also elect or appoint, and prescribe the duties of, such other officers as the Corporation deems necessary or advisable, including an executive director and a secretary, and the Governor and the Advisory Budget Commission shall fix the compensation of such officers.

No part of the revenues or assets of the Corporation shall inure to the benefit of or be distributable to its members or officers or other private persons. The members of the Corporation shall receive no compensation for their services but shall be entitled to receive, from funds of the Corporation, for attendance at meetings of the Corporation or any committee thereof and for other services for the Corporation reimbursement for such actual expenses as may be incurred for travel and subsistence in the performance of official duties and, only as to the members appointed by the Governor, such per diem as is allowed by law for members of other State boards, commissions and committees.

The executive director shall administer, manage and direct the affairs and business of the Corporation, subject to the policies, control and direction of the members of the Corporation. The secretary of the Corporation shall keep a record of the proceedings of the Corporation and shall be custodian of all books, documents and papers filed with the Corporation, the minute book or journal of the Corporation and its official seal. He shall have authority to cause copies to be made of all minutes and other records and documents of the Corporation and to give certificates under the official seal of the Corporation to the effect that such copies are true copies, and all persons dealing with the Corporation may rely upon such certificates. Five members of the Corporation shall constitute a quorum and the affirmative vote of five members at a meeting of the members duly called and held shall be necessary for any action taken by the membership of the Corporation except adjournment. No vacancy in the membership of the Corporation shall impair the rights of a quorum to exercise all the rights and to perform all the duties of the Corporation. (1969, c. 1235, s. 4.)

PAGE PARTIALLY ILLEGIBLE

§ 122A-5. General powers.—The Corporation shall have all of the powers necessary or convenient to carry out and effectuate the purposes and provisions of this chapter, including, but without limiting the generality of the foregoing, the power:

(1) To make or participate in the making of insured construction loans to sponsors of land development or residential housing; provided, however, that such loans shall be made only upon the determination by the Corporation that construction loans are not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

(2) To make or participate in the making of insured mortgage loans to sponsors of residential housing; provided, however, that such loans shall be made only upon the determination by the Corporation that mortgage loans are not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

(3) To purchase or participate in the purchase of insured mortgage loans made to sponsors of residential housing or to persons of lower income for residential housing where the Corporation has given approval prior to the initial making of such loan; provided, however, that any such purchase shall be made only upon the determination by the Corporation that mortgage loans were, at the time such approval was given, not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

(4) To make temporary loans from the housing development fund;

(5) To collect and pay reasonable fees and charges in connection with making, purchasing and servicing its loans, notes, bonds, commitments and other evidences of indebtedness;

(6) To acquire on a temporary basis real property, or an interest therein, in its own name, by purchase, transfer or foreclosure, where such acquisition is necessary or appropriate to protect any loan in which the Corporation has an interest and to sell, transfer and convey any such property to a buyer and, in the event such sale, transfer or conveyance cannot be effected with reasonable promptness or at a reasonable price, to rent or lease such property to a tenant pending such sale, transfer or conveyance;

(7) To sell, at public or private sale, all or any part of any mortgage or other instrument or document securing a construction, land development, mortgage or temporary loan of any type permitted by this chapter;

(8) To procure insurance against any loss in connection with its operations in such amounts, and from such insurers, as it may deem necessary or desirable;

(9) To consent, whenever it deems it necessary or desirable in the fulfillment of its corporate purposes, to the modification of the rate of interest, time of payment of any installment of principal or interest, or any other terms, of any mortgage loan, mortgage loan commitment, construction loan, temporary loan, contract or agreement of any kind to which the Corporation is a party;

(10) To borrow money as herein provided to carry out and effectuate its corporate purposes and to issue its obligation as evidence of any such borrowing;

(11) To include in any borrowing such amounts as may be deemed necessary by the Corporation to pay financing charges, interest on the obligations for a period not exceeding two years from their date, consultant, advisory and legal fees and such other expenses as are necessary or incident to such borrowing;

(12) To make and publish rules and regulations respecting its lending programs and such other rules and regulations as are necessary to effectuate its corporate purposes;

(13) To provide technical and advisory services to sponsors, builders and developers of residential housing and to residents thereof;

(14) To promote research and development in scientific methods of constructing low cost residential housing of high durability;

(15) To make and execute agreements, contracts and other instruments necessary or convenient in the exercise of the powers and functions of the Corporation under this chapter, including contracts with any person, firm, corporation, governmental agency or other entity, and each and any North Carolina governmental agency is hereby authorized to enter into contracts and otherwise cooperate with the Corporation to facilitate the purposes of this chapter;

(16) To receive, administer and comply with the conditions and requirements respecting any appropriation or any gift, grant or donation of any property or money;

(17) To sue and be sued in its own name, plead and be impleaded;

(18) To maintain an office in the city of Raleigh and at such other place or places as it may determine;

(19) To adopt an official seal and alter the same at pleasure;

(20) To adopt bylaws for the regulation of its affairs and the conduct of its business and to prescribe rules, regulations and policies in connection with the performance of its functions and duties; and

(21) To employ fiscal consultants, engineers, attorneys, real estate counselors, appraisers and such other consultants and employees as may be required in the judgment of the Corporation and to fix and pay their compensation from funds available to the Corporation therefor. (1969, c. 1235, s. 5.)

§ 122A-6. Credit of State not pledged.—Obligations issued under the provisions of this chapter shall not be deemed to constitute a debt, liability or obligation of the State or of any political subdivision thereof or a pledge of the faith and credit of the State or of any such political subdivision, but shall be payable solely from the revenues or assets of the Corporation. Each obligation issued under this chapter shall contain on the face thereof a statement to the effect that the Corporation shall not be obligated to pay the same nor the interest thereon except from the revenues or assets pledged therefor and that neither the faith and credit nor the taxing power of the State or of any political subdivision thereof is pledged to the payment of the principal of or the interest on such obligation.

Expenses incurred by the Corporation in carrying out the provisions of this chapter may be made payable from funds provided pursuant to this chapter and no liability shall be incurred by the Corporation hereunder beyond the extent to which moneys shall have been so provided. (1969, c. 1235, s. 6.)

§ 122A-7. Housing development fund. — There is hereby created and established a special revolving loan fund to be known as the "housing development fund" and to be administered by the Corporation as a trust fund separate and distinct from any other moneys or funds administered by the Corporation.

The housing development fund shall be comprised of the proceeds of grants and contributions and of fund notes issued by the Corporation for the purpose of providing funds therefor. The Corporation is hereby authorized to receive and accept from any source whatever any grants or contributions for the housing development fund. The Corporation is further authorized to provide for the issuance, at one time or from time to time, of housing development fund notes for the purpose of providing funds for such fund; provided, however, that not more than five million dollars ($5,000,000.00) fund notes shall be outstanding at any

PAGE PARTIALLY ILLEGIBLE

one time. The principal of and the interest on any such fund notes shall be payable solely from the housing development fund. The fund notes of each issue shall be dated, shall mature at such time or times not exceeding ten years from their date or dates, and may be made redeemable before maturity, at the option of the Corporation, at such price or prices and under such terms and conditions as may be determined by the Corporation. The Corporation shall determine the form and manner of execution of the fund notes, including any interest coupons to be attached thereto, and shall fix the denomination or denominations and the place or places of payment of principal and interest, which may be any bank or trust company within or without the State or any agent, including the lender. In case any officer whose signature or a facsimile of whose signature shall appear on any fund notes or coupons attached thereto shall cease to be such officer before the delivery thereof, such signature or such facsimile shall nevertheless be valid and sufficient for all purposes the same as if he had remained in office until such delivery. The fund notes may be issued in coupon or in registered form, or both, as the Corporation may determine, and provision may be made for the registration of any coupon fund notes as to principal alone and also as to both principal and interest, and for the reconversion into coupon fund notes of any fund notes registered as to both principal and interest, and for the interchange of registered and coupon fund notes. Any such fund notes shall bear interest at such rate or rates as may be determined by the Corporation and may be sold in such manner, either at public or private sale, and for such price as the Corporation shall determine to be for the best interest of the Corporation and best effectuate the purposes of this chapter.

The proceeds of any fund notes shall be used solely for the purposes for which issued and shall be disbursed in such manner and under such restrictions, if any, as the Corporation may provide in the resolution authorizing the issuance of such fund notes. The Corporation may provide for the replacement of any fund notes which shall become mutilated or shall be destroyed or lost.

Fund notes may be issued under the provisions of this section without obtaining the consent of any department, division, commission, board, body, bureau or agency of the State, and without any other proceedings or the happening of any conditions or things other than those proceedings, conditions or things which are specifically required by this chapter and the provisions of the resolution authorizing the issuance of such fund notes.

The purpose of the housing development fund is to provide a source from which the Corporation may make temporary loans, and the Corporation is authorized to make temporary loans from the housing development fund, at such interest rate or rates as may be determined by the Corporation to be for the best interest of the Corporation and best effectuate the purposes of this chapter, and with such security for repayment as the Corporation deems reasonably necessary and practicable, to

(1) Defray development costs of sponsors, builders and developers of residential housing, or

(2) Provide to persons and families of lower income who are applying for mortgages, the amounts required to make down payments and pay closing costs, or

(3) Make or participate in the making of construction loans which are not federally insured to sponsors, builders and developers of land development or residential housing; provided, however, that such loans shall be made only upon the determination by the Corporation that construction loans are not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions; and provided further that no such loan shall be made unless

a. The United States or an instrumentality thereof has approved the subdivision planning and has agreed to insure the mortgage

loan or loans, the proceeds of which shall be applied to the payment of all or any part of such construction loans, and

b. A North Carolina banking or lending institution has agreed to furnish not less than 20% of such construction loan, the security interest of the banking or lending institution under the loan to be subordinate in all respects to the Corporation's security interest in such loan.

No temporary loan shall be made by the Corporation from the housing development fund except in accordance with a written agreement which shall include, without limitation, the following terms and conditions:

(1) The proceeds of such loan shall be used only for the purposes for which such loan shall have been made as provided in the agreement;

(2) Such loan shall be repaid in full as provided in the agreement;

(3) All repayments in connection with a loan to defray development costs shall be made concurrent with receipt by the borrower of the proceeds of a construction loan or mortgage loan, as the case may be, or at such other times as the Corporation deems reasonably necessary or practicable; and

(4) Such security for repayment shall be specified and shall be upon such terms and conditions as the Corporation deems reasonably necessary or practicable to insure all repayments.

No funds from the housing development fund shall be used to carry on propaganda or otherwise attempt to influence legislation. (1969, c. 1235, s. 7.)

§ 122A-8. Bonds and notes.—The Corporation is hereby authorized to provide for the issuance, at one time or from time to time, of not exceeding two hundred million dollars ($200,000,000) bonds of the Corporation to carry out and effectuate its corporate purposes; provided, however, that not more than fifty million dollars ($50,000,000) bonds shall be issued prior to June 30, 1971. In anticipation of the issuance of such bonds, the Corporation also is hereby authorized to provide for the issuance, at one time or from time to time, of bond anticipation notes; provided, however, that prior to June 30, 1971 the total amount of bonds and bond anticipation notes outstanding, at any one time shall not exceed fifty million dollars ($50,000,000.00) excluding therefrom any bond anticipation notes for the payment of which bonds shall have been issued. The principal of and the interest on such bonds or notes shall be payable solely from the funds herein provided for such payment. Any such notes may be made payable from the proceeds of bonds or renewal notes or, in the event bond or renewal note proceeds are not available, such notes may be paid from any available revenues or assets of the Corporation. The bonds or notes of each issue shall be dated and may be made redeemable before maturity at the option of the Corporation at such price or prices and under such terms and conditions as may be determined by the Corporation. Any such bonds or notes shall bear interest at such rate or rates as may be determined by the Local Government Commission of North Carolina with the approval of the Corporation. Notes shall mature at such time or times not exceeding 10 years from their date or dates and bonds shall mature at such time or times not exceeding 40 years from their date or dates, as may be determined by the Corporation. The Corporation shall determine the form and manner of execution of the bonds or notes, including any interest coupons to be attached thereto, and shall fix the denomination or denominations and the place or places of payment of principal and interest, which may be any bank or trust company within or without the State. In case any officer whose signature or a facsimile of whose signature shall appear on any bonds or notes or coupons attached thereto shall cease to be such officer before the delivery thereof, such signature or such facsimile shall nevertheless be valid and sufficient for all purposes the same as if he had remained in office until such delivery. The Corporation may also provide for the authentication of the bonds or notes by a trustee or fiscal agent. The bonds or notes may be

PAGE PARTIALLY ILLEGIBLE

issued in coupon or in registered form, or both, as the Corporation may determine, and provision may be made for the registration of any coupon bonds or notes as to principal alone and also as to both principal and interest, and for the reconversion into coupon bonds or notes of any bonds or notes registered as to both principal and interest, and for the interchange of registered and coupon bonds or notes. Upon the filing with the Local Government Commission of North Carolina of a resolution of the Corporation requesting that its bonds or notes be sold, such bonds or notes may be sold in such manner, either at public or private sale, and for such price as said Commission shall determine to be for the best interest of the Corporation and best effectuate the purposes of this chapter provided that such sale shall be approved by the Corporation.

The proceeds of any bonds or notes shall be used solely for the purposes for which issued and shall be disbursed in such manner and under such restrictions, if any, as the Corporation may provide in the resolution authorizing the issuance of such bonds or notes or in the trust agreement hereinafter mentioned securing the same.

Prior to the preparation of definitive bonds, the Corporation may, under like restrictions, issue interim receipts or temporary bonds, with or without coupons, exchangeable for definitive bonds when such bonds shall have been executed and are available for delivery. The Corporation may also provide for the replacement of any bonds or notes which shall become mutilated or shall be destroyed or lost.

Bonds or notes may be issued under the provisions of this chapter without obtaining, except as otherwise expressly provided in this chapter, the consent of any department, division, commission, board, body, bureau or agency of the State, and without any other proceedings or the happening of any conditions or things other than those proceedings, conditions or things which are specifically required by this chapter and the provisions of the resolution authorizing the issuance of such bonds or notes or the trust agreement securing the same. (1969, c. 1235, s. 8.)

§ 122A-9. Trust agreement or resolution.—In the discretion of the Corporation any obligations issued under the provisions of this chapter may be secured by a trust agreement by and between the Corporation and a corporate trustee, which may be any trust company or bank having the powers of a trust company within or without the State. Such trust agreement or the resolution providing for the issuance of such obligations may pledge or assign all or any part of the revenues or assets of the Corporation, including, without limitation, mortgage loans, mortgage loan commitments, construction loans, temporary loans, contracts, agreements and other security or investment obligations, the fees or charges made or received by the Corporation, the moneys received in payment of loans and interest thereon and any other moneys received or to be received by the Corporation. Such trust agreement or resolution may contain such provisions for protecting and enforcing the rights and remedies of the holders of any such obligations as may be reasonable and proper and not in violation of law, including covenants setting forth the duties of the Corporation in relation to the purposes to which obligation proceeds may be applied, the disposition or pledging of the revenues or assets of the Corporation, the terms and conditions for the issuance of additional obligations, and the custody, safeguarding and application of all moneys. It shall be lawful for any bank or trust company incorporated under the laws of the State which may act as depositary of the proceeds of obligations, revenues or other money hereunder to furnish such indemnifying bonds or to pledge such securities as may be required by the Corporation. Any such trust agreement or resolution may set forth the rights and remedies of the holders of any obligations and of the trustee, and may restrict the individual right of action by any such holders. In addition to the foregoing, any such trust agreement or resolution may contain such other provisions as the Corporation may deem reasonable and proper for the security of the holders of any obligations. All expenses incurred in carrying out the provisions of such trust agreement or resolution may be paid from the revenues or assets

pledged or assigned to the payment of the principal of and the interest on obligations or from any other funds available to the Corporation. (1969, c. 1235, s. 9.)

§ 122A-10. Validity of any pledge.—The pledge of any assets or revenues of the Corporation to the payment of the principal of or the interest on any obligations of the Corporation shall be valid and binding from the time when the pledge is made and any such assets or revenues shall immediately be subject to the lien of such pledge without any physical delivery thereof or further act, and the lien of any such pledge shall be valid and binding as against all parties having claims of any kind in tort, contract or otherwise against the Corporation, irrespective of whether such parties have notice thereof. Nothing herein shall be construed to prohibit the Corporation from selling any assets subject to any such pledge except to the extent that any such sale may be restricted by the trust agreement or resolution providing for the issuance of such obligations. (1969, c. 1235, s. 10.)

§ 122A-11. Trust funds.—Notwithstanding any other provisions of law to the contrary, all moneys received pursuant to the authority of this chapter shall be deemed to be trust funds to be held and applied solely as provided in this chapter. The resolution authorizing any obligations or the trust agreement securing the same may provide that any of such moneys may be temporarily invested pending the disbursement thereof and shall provide that any officer with whom, or any bank or trust company with which, such moneys shall be deposited shall act as trustee of such moneys and shall hold and apply the same for the purposes hereof, subject to such regulations as this chapter and such resolution or trust agreement may provide. Any such moneys or any other moneys of the Corporation may be invested as provided in G.S. 159-28.1. (1969, c. 1235, s. 11.)

§ 122A-12. Remedies.—Any holder of obligations issued under the provisions of this chapter or any coupons appertaining thereto, and the trustee under any trust agreement or resolution authorizing the issuance of such obligations, except to the extent the rights herein given may be restricted by such trust agreement or resolution, may, either at law or in equity, by suit, action, mandamus or other proceeding, protect and enforce any and all rights under the laws of the State or granted hereunder or under such trust agreement or resolution, or under any other contract executed by the Corporation pursuant to this chapter, and may enforce and compel the performance of all duties required by this chapter or by such trust agreement or resolution to be performed by the Corporation or by any officer thereof. (1969, c. 1235, s. 12.)

§ 122A-13. Negotiable instruments.—Notwithstanding any of the foregoing provisions of this chapter or any recitals in any obligations issued under the provisions of this chapter, all such obligations and interest coupons appertaining thereto shall be and are hereby made negotiable instruments under the laws of this State, subject only to any applicable provisions for registration. (1969, c. 1235, s. 13.)

§ 122A-14. Obligations eligible for investment. — Obligations issued under the provisions of this chapter are hereby made securities in which all public officers and public bodies of the State and its political subdivisions, all insurance companies, trust companies, banking associations, investment companies, executors, administrators, trustees and other fiduciaries may properly and legally invest funds, including capital in their control or belonging to them. Such obligations are hereby made securities which may properly and legally be deposited with and received by any State or municipal officer or any agency or political subdivision of the State for any purpose for which the deposit of bonds, notes or obligations of the State is now or may hereafter be authorized by law. (1969, c. 1235, s. 14.)

§ 122A-15. Refunding obligations.—The Corporation is hereby authorized to provide for the issuance of refunding obligations for the purpose of refunding any obligations then outstanding which shall have been issued under the provisions

PAGE PARTIALLY ILLEGIBLE

this chapter, including the payment of any redemption premium thereon and interest accrued or to accrue to the date of redemption of such obligations d, if deemed advisable by the Corporation, for any corporate purpose of the rporation. The issuance of such obligations, the maturities and other details reof, the rights of the holders thereof, and the rights, duties and obligations of e Corporation in respect of the same shall be governed by the provisions of this apter which relate to the issuance of obligations, insofar as such provisions may be propriate therefor.

Refunding obligations may be sold or exchanged for outstanding obligations ued under this chapter and, if sold, the proceeds thereof may be applied, in dition to any other authorized purposes, to the purchase, redemption or payment such outstanding obligations. Pending the application of the proceeds of any ch refunding obligations, with any other available funds, to the payment of the incipal, accrued interest and any redemption premium on the obligations being funded, and, if so provided or permitted in the resolution authorizing the issuance such refunding obligations or in the trust agreement securing the same, to the yment of any interest on such refunding obligations and any expenses in connecn with such refunding, such proceeds may be invested in direct obligations of, obligations the principal of and the interest on which are unconditionally guaraned by, the United States of America which shall mature or which shall be subject redemption by the holders thereof, at the option of such holders, not later than e respective dates when the proceeds, together with the interest accruing thereon, ll be required for the purposes intended. (1965, c. 1235, s. 15.)

§ 122A-16. Annual reports.—The Corporation shall, promptly following e close of each fiscal year, submit an annual report of its activities for the precedg year to the Governor, State Auditor, the General Assembly, the Advisory dget Commission and the Local Government Commission. Each such report all set forth a complete operating and financial statement of the Corporation ring such year. The Corporation shall cause an audit of its books and accounts be made at least once in each year by an independent certified public accountant d the cost thereof may be paid from any available moneys of the Corporation. 969, c. 1235, s. 16.)

§ 122A-17. Officers not liable.—No member or other officer of the Corpotion shall be subject to any personal liability or accountability by reason of his ecution of any obligations or the issuance thereof. (1969, c. 1235, s. 17.)

§ 122A-18. Authorization to accept appropriated moneys. — The rporation is authorized to accept such moneys as may be appropriated from e to time by the General Assembly for effectuating its corporate purposes includg, without limitation, the payment of the initial expenses of administration and eration and the establishment of a reserve or contingency fund to be available the payment of the principal of and the interest on any bonds or notes of the orporation. (1969, c. 1235, s. 18.)

§ 122A-19. Tax exemption.—The exercise of the powers granted by this apter will be in all respects for the benefit of the people of the State, for their ll-being and prosperity and for the improvement of their social and economic nditions, and the Corporation shall not be required to pay any tax or assessment any property owned by the Corporation under the provisions of this chapter or on the income therefrom.

Any obligations issued by the Corporation under the provisions of this chapter, ir transfer and the income therefrom (including any profit made on the sale reof), shall at all times be free from taxation by the State or any local unit or litical subdivision or other instrumentality of the State, excepting inheritance or t taxes. (1969, c. 1235, s. 19.)

§ 122A-20. Conflict of interest.—If any member, officer or employee of Corporation shall be interested either directly or indirectly, or shall be an

PAGE PARTIALLY ILLEGIBLE

officer or employee of or have an ownership interest in any firm or corporati interested directly or indirectly in any contract with the Corporation, including a loan to any sponsor, builder or developer, such interest shall be disclosed to t Corporation and shall be set forth in the minutes of the Corporation, and t member, officer or employee having such interest therein shall not participate behalf of the Corporation in the authorization of any such contract. (1969, c. 123 s. 20.)

§ 122A-21. Additional method.—The foregoing sections of this chapt shall be deemed to provide an additional and alternative method for the doing the things authorized thereby and shall be regarded as supplemental and additio to powers conferred by other laws, and shall not be regarded as in derogation any powers now existing; provided, however, that the issuance of bonds or no under the provisions of this chapter need not comply with the requirements any other law applicable to the issuance of bonds or notes. (1969, c. 1235, s. 21.)

§ 122A-22. Chapter liberally construed.—This chapter, being necess for the prosperity of the State and its inhabitants, shall be liberally construed effect the purposes thereof. (1969, c. 1235, s. 22.)

§ 122A-23. Inconsistent laws inapplicable.—Insofar as the provisions this chapter are inconsistent with the provisions of any general or special law or parts thereof, the provisions of this chapter shall be controlling. (1969, c. 123 s. 24.)

Chapter 127.

Militia.

Article 11.

General Provisions.

Sec.
127-106.2. Immunity of guardsmen from civil and criminal liability.

ARTICLE 7.

Pay of Militia.

§ 127-79. Rate of pay for service. — The Governor may, whenever public service requires it, order upon special or regular duty any officer or enli man of the national guard or naval militia, and the expenses and compensa therefor of such officer and enlisted man shall be paid out of the appropriati made to the Adjutant General's Department. Such officer and enlisted man s receive the same pay as officers and enlisted men of the same grade and like vice of the regular service, provided that no such officer or enlisted man shall ceive less than eight dollars ($8.00) per day; but officers when on duty in con tion with examining boards, efficiency boards, advisory boards, and courts of quiry shall be allowed per diem and subsistence prescribed for lawful State bo and commissions generally for such duty. Officers serving on general or sp courts-martial shall receive the base pay of their rank. No staff officer who recei a salary from the State as such shall be entitled to any additional compensa other than actual and necessary expenses incurred while traveling upon or issued by the proper authority. (1917, c. 200, s. 51; C. S., s. 6865; 1935, c. 4 1949, c. 1130, s. 4; 1959, c. 218, s. 18; 1963, c. 1019, s. 1; 1969, c. 986.)

Editor's Note.—

The 1969 amendment inserted in the second sentence "provided that no such officer or enlisted man shall receive less t eight dollars ($8.00) per day."

N. C. High Court Upholds Housing Authority Law

By ROD COCKSHUTT

Staff Writer

In a long awaited opinion, the State Supreme Court Friday reversed a lower court decision and, by a margin of 5-2, upheld the constitutionality of a legislative act creating the North Carolina Housing Authority.

In an opinion writen by Chief Justice William H. Bobbitt, the court declared "we accept the legislative findings, which are supported by facts set forth in the stipulation, that there exists in North Carolina "a serious shortage of decent, safe and sanitary residential housing available at low prices or rentals to persons and families of lower incomes."

Superior Court Judge James H. Pou Bailey ruled last December that the act, set up by the 1969 legislature to issue tax-free revenue bonds to build homes for the state's poor, was unconstitutional.

In Friday's majority opinion, the high court held that "private enterprise and investment have not been able to produce, with assistance," the needed residential housing.

Hence the selling of bonds, exempt from the state income tax, is to accomplish a proper public purpose and therefore constitutional, the court held.

Associate Justice I. Beverly Lake, in a dissenting opinion, argued the superior court ruling should be upheld because the act appropriates tax revenues for purposes other than a public purpose.

He also contended the concept of tax exempt revenue bonds is unconstitutional under the circumstances.

Associate Justice Carlisle Higgins joined in Lake's dissent, but did not write a dissenting opinion of his own.

The high court's action clears the way for the state agency to issue $200 million in tax exempt bonds to help finance the housing construction.

State Reps. Perry Martin, D-Northampton and Sam Johnson, D-Wake, had brought the original suit challenging the act.

Following Judge Bailey's decision last December, an order was issued restraining the housing corporation's director, Rep. Joe Eagles, D-Edgecombe, from spending any of the money.

But Eagles had gone ahead with a series of meetings across the state to clear the way for the corporation to go into action if and when

See HOUSING, Page 2

HOUSING

Continued from Page One

a favorable ruling was handed down by the high court.

Judge Bobbitt wrote: "We are of the opinion that the corporation does not legislate but determines factually, by application of factors the General Assembly has prescribed persons or families of lower income and therefore entitled to benefits of the 1969 act."

The housing corporation was advocated by Gov. Bob Scott to provide homes for Tar Heel families with incomes of less than $6,000 a year, who were unable to get loans through conventional channels.

The Governor had expressed the hope that about 10,000 new residences a year could be built under the program, thereby alleviating the plight of an estimated 400,000 North Carolinians believed to be living in substandard housing.

In a statement Friday afternoon, the Governor said "this is a landmark decision." He said the high court ruling was "good news to the many low income families in the state who desire to own their own homes.

"We will need the concern and the willing cooperation of local governments to see that outdated zoning, land use policies and code enforcements do not hamper or hold back this program," the governor said.

'I stated last year my firm belief that decent housing is the public's business," Scott added. "Decent housing for all of our citizens is essential for the well-being of the state."

Scott emphasized the corporation would not compete with private mortgage brokers or lending institutions.

Eagles, in a separate statement, said he was 'reasonably confident all along that once all the facts involved in home construction and home financing in our day and time were considered, the courts would agree the state's action was not only desirable but imperative.'

Eagles said the Corporation has already met with commercial banks, mortgage banks and savings and loan associations to establish standard contracts.

He said it would probably be 90 days before the first loan could be made. He said most of that time would be spent in applying to the U.S. Internal Revenue Service for tax exempt status.

NORTH CAROLINA SUPREME COURT SPRING TERM 1970

PERRY MARTIN on behalf of himself and all other of the same or like class

v. No. 10 - Wake

NORTH CAROLINA HOUSING CORPORATION, a body politic and corporate, and WILLIAM L. TURNER, Director of the Department of Administration for the State of North Carolina, G. ANDREW JONES, JR., State Budget Officer for the State of North Carolina, and GEORGE S. LAMBERT, State Disbursing Officer for the State of North Carolina

Appeal by defendants from Bailey, J., December 22, 1969 Special Civil Session of Wake Superior Court, certified, pursuant to G.S. 7A-31, for review by the Supreme Court before determination by the Court of Appeals.

This action is for injunctive relief.

Plaintiff-taxpayer alleges that Chapter 1235, Session Laws of 1969, referred to hereafter as the 1969 Act, which provides for the creation of "a body politic and corporate to be known as the 'North Carolina Housing Corporation,'" and defines its authority, is unconstitutional and therefore void. He prays that William L. Turner, Director of the Department of Administration, and G. Andrew Jones, Jr., State Budget Officer, and George S. Lambert, State Disbursing Officer, be enjoined "from doing any act or taking any steps constituting the expenditure of any funds from the general fund of the State of North Carolina for or on behalf of the North Carolina Housing Corporation or causing any funds to be expended by said Corporation for or on its behalf," and that the North Carolina Housing Corporation, hereafter referred to as Corporation, be enjoined "from accepting said funds and undertaking to carry out investments and programs in construction and development of residential housing to be financed in any degree with public funds or with tax exempt revenues."

Defendants assert the 1969 Act, which is now codified in the 1969 Cumulative Supplement to Volume 3B of the General Statutes of North Carolina as Chapter 122A, consisting of Sections 122A-1 through 122A-23, is in all respects constitutional and valid.

The pleadings establish these facts:

Plaintiff is a citizen and resident of Northampton County, North Carolina. He pays ad valorem taxes to one or more municipalities and also to one or more counties in northeastern North Carolina. He pays income, sales and intangible taxes to the State of North Carolina; and income and excise taxes to the United States of America.

The Corporation is composed of nine members, consisting of Edwin M. Gill, State Treasurer; William L. Turner, Director of the Department of Administration; Roy G. Sowers, Jr., Director of the Department of Conservation and Development; G. Irvin Aldridge, Director of the Department of Local Affairs; Jacob Koomen, State Health Officer; and the following four citizens and residents of North Carolina appointed by the Governor, to wit, R. Peyton Woodson, III; John W. Winters; Roy A. Southerland; and Claude E. Pope. R. Peyton Woodson, III, was designated by the Governor to serve as Chairman. (1969 Act, s. 4.)

The individual defendants are officials of the State of North Carolina in the capacities set forth in the caption.

The Corporation was created as a public agency, an instrumentality of the State of North Carolina, and empowered to act on behalf of the State of North Carolina for the purpose of providing residential housing "for sale or rental to persons and families of lower income." (1969 Act, s. 2.)

Defendants, under color of their respective offices, are about to transfer to the Corporation the $500,000.00 appropriated from the General Fund of the State by Chapter 1162, Session Laws of 1965, for the fiscal years 1969-1970 and 1970-1971, or a portion thereof, to enable the Corporation "to further organize and pay the expenses of its administration during the first two years of the Corporation's

operation," and that these and such additional funds as may be appropriated will be used by the Corporation for purposes enumerated in the 1969 Act.

The Corporation is authorized "to provide for the issuance, at one time or from time to time, of not exceeding two hundred million dollars ($200,000,000) bonds of the Corporation to carry out and effectuate its corporate purposes; provided, however, that not more than fifty million dollars ($50,000,000) bonds shall be issued prior to June 30, 1971." (1969 Act, s. 8.)

The Corporation is authorized "to provide for the issuance, at one time or from time to time, of Housing Development Fund notes for the purpose of providing funds for such Fund: provided, however, that not more than five million dollars ($5,000,000.00) fund notes shall be outstanding at any one time. The principal of and the interest on any such fund notes shall be payable solely from the Housing Development Fund." (1969 Act, s. 7.)

It was stipulated and agreed that the court, without a jury, should hear the evidence, make findings of fact and conclusions of law and enter judgment. Thereupon, the parties submitted a Stipulation of Facts, referred to hereafter as the Stipulation.

Additional facts established by the Stipulation are summarized or quoted below.

In Paragraph 8, the twenty-one specific powers which Section 5 of the 1969 Act purports to confer on the Corporation are quoted verbatim. It was stipulated that the Corporation proposed to exercise each and all of these powers.

In Paragraph 9, it was stipulated that the Corporation proposed to carry out the following program:

"(a) to issue self-liquidating tax exempt housing revenue bonds to be sold as tax exempt securities in the national bond market, with the approval of the Local Government Commission, up to a maximum of two hundred million dollars, and more if needed and if permitted by

amendment to the statute;

"(b) to use the money obtained for the purchase of federal insured mortgage and construction loans, for establishing working agreements with private financial institutions such as banks, savings and loans, and mortgage brokers whereby the individual borrower would make application through the private lending institution and the private lending institution would service the mortgage for a fee in behalf of the Corporation. The private institution would receive a service fee in the range of one-half percent, and would forward monthly payments to the Corporation. The Corporation would pay the bondholders on its loans and would from time to time sell mortgages to investors;

"(c) to operate in this manner, the Corporation proposes to market its bonds at an interest rate lower than it receives, and thereby have a sufficient margin to pay for some of its expenses and losses;

"(d) to establish a special revolving fund known as the Housing Development Fund, administered as a separate trust fund funded from gifts, grants and loans from industries, foundations and government with a total capitalization of five million dollars, with the fund maintained on a business level with interest payable, when earned and with some agreement for the repayment of principal for said loans."

In Paragraph 10, it was stipulated that the Housing Development Fund, created and established by Section 7 of the 1969 Act would be used for the following three purposes:

"(a) Providing project development loans (seed money) to builders, sponsors and developers of residential housing for lower income families. These loans would cover such preconstruction activities as site engineering, preliminary architectual drawing, land options and legal fees, and this money would be repaid from construction loans or mortgage proceeds; these costs should not exceed five percent of the final cost of a dwelling unit;

"(b) providing (through loans) down-payment assistance to needy, but otherwise qualified families seeking to purchase a home.

The down-payment assistance would help young wage earners, and others who lack the down-payment, where prudent business practices justify this assistance with a limit in the range of $300.00 per family.

"(c) providing uninsured loans in part with private lenders to builders and developers for land development and residential construction for lower income families. This program would assist small builders who cannot obtain funds at a reasonable interest rate in the market for subdivision development. The private lender would participate in this program to an extent of at least twenty (20%) percent of the total loan, on subdivisions that meet minimum design requirements, where housing would qualify for mortgage insurance programs."

In Paragraph 11, it was stipulated that "(t)he Corporation will use the $500,000.00 appropriation to cover administrative cost during the first two years, and to establish the bond contingency fund"; and that "(d)uring the first two years it will be necessary for the Corporation to establish a pattern and history of operation to assure that its bonds and other obligations meet a favorable reception in the market."

In Paragraph 12, it was stipulated that "(t)he Corporation proposes to help overcome the shortage of adequate housing by making financial assistance available where private funds are not available, in the range of lower income families, and using the existing framework of private financing and construction industries."

Paragraph 13 provides: "The interest rate charged for private loans for residential housing has increased substantially in recent years. A federally guaranteed loan for a single family dwelling was in the range of six (6%) percent in 1965, seven (7%) percent in 1967, and eight (8%) percent in 1969. Conventional loans for single family residential housing are not available for over eighty (80%) percent of the purchase price in most cases, and such loans are in the same general range of interest as those which are federally insured. At the same time, the Local Government Commission of North

Carolina has experienced a substantial increase in interest rates for municipal bonds."

Paragraph 14 provides: "On the basis of the Municipal Bond Buyers' Index, which is similar in the field of municipal bonds to the Dow-Jones Average in the field of corporate stocks, the average national interest rate for revenue bonds, which is closely paralleled in the case of North Carolina revenue bonds, was 4.56% in 1965, 5.45% in 1967 and 7.88% in 1969. Because of interest rate ceilings by reason of either legislative restrictions or limitations imposed by certain municipal governing bodies, there are cases in which the North Carolina Local Government Commission has recently been unable to find a ready market for certain North Carolina Local Governmental revenue bonds."

Paragraph 15 provides: "The State of North Carolina has found a better market for its general obligation bonds, with an average interest rate of 3.56% in 1965, 4.45% in 1967 and 6.88% in 1969. It is readily observable that revenue bonds ordinarily command an interest rate which will be 1% per year higher than general obligation governmental bonds. Revenue bonds of the North Carolina Housing Corporation could not be marketed at as favorable an interest rate, from the State's point of view, as general obligation bonds of the State."

In Paragraph 16, it was stipulated that the Corporation had taken the following action:

"(a) That the Corporation held an organizational meeting in October, 1969, in the City of Raleigh, North Carolina, that the members of the Corporation have taken an oath of office, and that they are now acting and the Corporation has a Chairman, Vice Chairman, and acting Secretary.

"(b) That the Corporation has employed the Honorable Joe E. Eagles of Edgecombe County to serve as Executive Director and, in such capacity, he has established an office for the transaction of the business of the Corporation. The Corporation has employed necessary personnel and the Corporation is undertaking to carry out the

program authorized by the General Assembly in the creation of the Corporation.

"(c) That in carrying out its function, the Corporation has already expended a very small portion of the $500,000.00 of the General Fund appropriation provided for it by Chapter 1162 of the Session Laws of 1969, to pay salaries of Corporation employees, purchase office equipment and supplies, defray necessary travel expenses while engaged in the business of the Corporation and to take other preliminary steps in making preparation for issuing bonds pursuant to the provisions of the Act creating the Corporation."

Paragraph 17 refers to attached Exhibit A, a two-page document designated as "Table 9: INADEQUATE HOUSING IN NORTH CAROLINA COUNTIES, 1960," based on 1960 reports of the United States Census, indicating housing units in this State which are either structurally unsound or lacking adequate plumbing facilities. Quoting from Paragraph 17: "Table 9 (Column 3) shows that the percentage of such housing units ranges from a low of 20.6% (Dare) to a high of 72.8% (Northampton). In terms of absolute numbers, Dare has the fewest such units (835), Guilford the most (20,526). Besides Dare, seven other counties rate below 30%: Durham, Forsyth, Guilford, Mecklenburg, New Hanover, Onslow, and Wake. At the other extreme, 33 counties have over 60% of their housing units unsound or lacking in adequate plumbing facilities; some are in the mountain counties, but the largest concentration is in the eastern half of the State."

Paragraph 18 refers to attached Exhibit B, a one-page document which shows annual salary ranges of mortgagors in North Carolina with FHA secured mortgages, which figures were compiled by Harold Albright, Assistant Regional Administrator for FHA. Quoting from Paragraph 18: "These figures indicate, among other things, that 91.5% of the mortgagors with new homes earn an annual salary of $7,000.00 or more. Mortgagors who earn an average annual salary of less than $6,000.00 constitute only 2.6% of such mortgagors with new homes."

Paragraph 19 refers to attached Exhibit C, a seventeen-page

pamphlet entitled, "North Carolina Housing Corporation," which has been issued by the Corporation and sets forth a description of the Corporation, its inception, its purposes, its method of operation, and other matters relating to the Act in question.

Paragraph 20 states that the United States Department of Housing and Urban Development has a program intended to enable lower income families to become home owners, and refers to attached Exhibit D, a document entitled, "Home Ownership for Low Income Families, October, 1968," indicating that some housing programs are available to citizens of low income, families of marginal credit, and for families who need assistance payments and other forms of aid. Quoting from Paragraph 20: "Federal funds are also available through VA and FHA insured loans, Farmers Home Administration loans in rural areas in small communities, and through public housing programs. Federal funds afford citizens of low income an opportunity to rent apartments with rent subsidy, or other plans of aid, and federal funds also permit some projects in which citizens of low income can lease-purchase and eventually own single family houses of good quality as illustrated by Apollo Heights, Raleigh, North Carolina, in which about two hundred (200) homes were occupied during 1969."

In Paragraph 21, it was stipulated: "Housing needs are changing and housing techniques are changing. In 1969, about twenty (20%) percent of the single family units were mobile home types, being marketed in the range of $5,000.00 to $8,000.00, plus finance charges."

In Paragraph 22, it was stipulated: "Private construction has steadily increased year after year, and federal programs have expanded rapidly, but there is still a substantial need in North Carolina for improved housing, either public or private, for thousands of North Carolina families whose annual income is in the lower twenty-five (25%) percent. Many of the houses now being occupied lack suitable accommodations for the health of the occupant."

In Paragraph 23, it was stipulated that attached Exhibit E, a copy of the 1969 Act, was enacted by the General Assembly upon the

strong urging of the Governor. Quoting from Paragraph 23: "North Carolina has not previously been active in this field, other than providing enabling legislation and regulations for local communities to establish public housing organizations. A few states have undertaken a similar program, but there is insufficient evidence to evaluate the success of such a program in other areas of the country."

The Stipulation, after setting forth these factual matters, states and presents for determination the following six questions of law, viz.:

I. "Does the Act authorize the use of public funds for other than a public purpose in violation of Section 3 of Article V or Section 17 of Article I of the North Carolina Constitution or Section 1 of the Fourteenth Amendment to the United States Constitution?"

II. "Does the Act authorize the lending of the credit of the State in violation of Section 6 of Article VII or Section 4 of Article V of the North Carolina Constitution?"

III. "Does the Act provide for a delegation of legislative authority in violation of Section 8 of Article I of the North Carolina Constitution?"

IV. "Does the Act authorize the creation of a debt in violation of Section 6 of Article VII or Section 4 of Article V of the North Carolina Constitution?"

V. "Does the Act exempt property from taxation in violation of Section 5 of Article V of the North Carolina Constitution?"

VI. "Does the Act violate basic due process, and basic public purpose, in the broad constitutional sense, by permitting an agency of the State of North Carolina to engage in a function that is reserved to private enterprise underour system of government, and does said Act constitute a complete departure from the constitutional provisions for the government and taxation within the State of North Carolina?"

The court, after adopting as its Findings of Fact the facts set forth in the Stipulation, concluded as a matter of law that the

1969 Act is unconstitutional on each and all of the grounds on which it is challenged by plaintiff, and entered judgment as follows:

"IT IS, THEREFORE, ORDERED, ADJUDGED AND DECREED:

"1. That the North Carolina Housing Corporation is hereby restrained from issuing tax exempt revenue bonds, and it is hereby adjudged that Chapter 1235, Session Laws of 1969, is an unconstitutional Act of the General Assembly.

"2. That said Corporation may not lawfully receive any of the unexpended funds of the sum of $500,000.00 of public funds appropriated for fiscal year 1969-1971 by the General Assembly of North Carolina.

"3. That the individual defendants as officials of the State of North Carolina, and their successors in office, are hereby restrained from transmitting any of the unexpended funds of said $500,000.00 appropriation of public funds to said corporate defendant, North Carolina Housing Corporation.

"4. That the relief sought by the plaintiff be and it is in all respects allowed, and all of said defendants shall forever cease from said unlawful and unconstitutional action, as heretofore set forth in this judgment.

"5. That the cost of this action be taxed against the plaintiff."

Defendants excepted to each of the court's legal conclusions, and to the judgment, and appealed.

Johnson & Gamble for plaintiff appellee.

Attorney General Morgan, Deputy Attorney General McGalliard and Staff Attorney Blackburn for defendant appellants.

BOBBITT, C. J.

"(U)nder our Constitution, the General Assembly, so far as that instrument is concerned, is possessed of full legislative powers unless restrained by express constitutional provision or necessary implication therefrom." Hoke, J. (later C. J.), in Thomas v. Sanderlin, 173 N.C. 329, 332, 91 S.E. 1028, 1029. Absent such constitutional

restraint, questions as to public policy are for legislative determination. Reid v. R. R., 162 N.C. 355, 358, 78 S.E. 306, 307. When the constitutionality of a statute is challenged, "every presumption is to be indulged in favor of its validity." Stacy, C. J., in State v. Lueders, 214 N.C. 558, 561, 200 S.E. 22, 24. And, ordinarily, this Court will not undertake to determine whether a statute is unconstitutional except with reference to a ground on which it is attacked and definitely drawn into focus by the attacker's pleadings. Hudson v. R. R., 242 N.C. 650, 667, 89 S.E.2d 441, 453; Surplus Store, Inc. v. Hunter, 257 N.C. 206, 211, 125 S.E.2d 764, 768.

Whether the public policy and program established by the 1969 Act is wise or unwise is for determination by the General Assembly. Education Assistance Authority v. Bank, 276 N.C. 576, 592, ___ S.E.2d ___, ___. Our function is to determine whether any portion thereof which plaintiff, as a general taxpayer, may challenge, is unconstitutional on any ground asserted by him. Nicholson v. Education Assistance Authority, 275 N.C. 439, 168 S.E.2d 401.

Section 18 of the 1969 Act authorized the Corporation "to accept such moneys as may be appropriated from time to time by the General Assembly for effectuating its corporate purposes including, without limitation, the payment of the initial expenses of administration and operation and the establishment of a reserve or contingency fund to be available for the payment of the principal of and the interest on any bonds or notes of the Corporation." The General Assembly appropriated "out of the General Fund of the State" to the Corporation "the sum of five hundred thousand dollars ($500,000.00) for the biennium commencing July 1, 1969." Chapter 1162, Session Laws of 1969. Portions of this appropriation have been used and are being used for the payment of the initial expenses of administration and operation of the Corporation.

QUESTIONS I and VI

Questions I and VI present essentially the same question, namely, whether the 1969 Act and the Corporation's activities pursuant thereto

are for a PUBLIC PURPOSE.

Article V, § 3, of the Constitution of North Carolina provides: "This power of taxation shall be exercised in a just and equitable manner, for public purposes only, and shall never be surrendered, suspended, or contracted away." (Our italics.) "The power to appropriate money from the public treasury is no greater than the power to levy the tax which put the money in the treasury." Mitchell v. Financing Authority, 273 N.C. 137, 143, 159 S.E.2d 745, 749-750.

Plaintiff asserts the 1969 Act is unconstitutional as violative of Article V, § 3, of the Constitution of North Carolina, and of Article I, § 17, of the Constitution of North Carolina, and of Section 1 of the Fourteenth Amendment to the Constitution of the United States, and is void because the purpose for which the Corporation was created is not a public purpose. If so, plaintiff, as taxpayer, may maintain this action to restrain defendants from paying to the Corporation and the Corporation from using the $500,000.00 appropriated out of the General Fund for the biennium commencing July 1, 1969. Mitchell v. Financing Authority, supra; McIntyre v. Clarkson, 254 N.C. 510, 513, 119 S.E.2d 888, 890; Dennis v. Raleigh, 253 N.C. 400, 116 S.E.2d 923.

Was the Corporation established for a public purpose? If so, "the means of executing the project are for the General Assembly, and the General Assembly alone, to determine." Redevelopment Commission v. Bank, 252 N.C. 595, 606, 114 S.E.2d 688, 696.

"A slide-rule definition to determine public purpose for all time cannot be formulated; the concept expands with the population, economy, scientific knowledge, and changing conditions. As people are brought closer together in congested areas, the public welfare requires governmental operation of facilities which were once considered exclusively private enterprises, Fawcett v. Mt. Airy, 134 N.C. 125, 45 S.E. 1002, and necessitates the expenditure of tax funds for purposes which, in an earlier day, were not classified as public. Keeter v. Lake Lure, 264 N.C. 252, 141 S.E.2d 634. Often public and private interests are so co-mingled that it is difficult to determine

which predominates. It is clear, however, that for a use to be public its benefits must be in common and not for particular persons, interests, or estates; the ultimate net gain or advantage must be the public's as contradistinguished from that of an individual or private entity. Briggs v. Raleigh, 195 N.C. 223, 141 S.E. 597." Sharp, J., in Mitchell v. Financing Authority, supra, at 144, 159 S.E. 2d at 750.

A legislative declaration which asserts in general terms that the statute under consideration is enacted for a public purpose, although entitled to great weight, is not conclusive. When the facts are determined, what is a public purpose is a question of law for the court. Redevelopment Commission v. Bank, supra, at 603, 114 S.E.2d 604.

In its enactment of the 1969 Act, the General Assembly went far beyond a mere declaration as to public purpose. It made and set forth in Section 2 thereof its factual findings as to the conditions upon which it based its declaration as to public purpose, viz.:

1. "(A)s a result of the spread of slum conditions and blight to formerly sound urban and rural neighborhoods and as a result of actions involving highways, public facilities and urban renewal activities there exists in the State of North Carolina a serious shortage of decent, safe and sanitary residential housing available at low prices or rentals to persons and families of lower income. This shortage is severe in certain urban areas of the State, is especially critical in the rural areas, and is inimical to the health, safety, welfare and prosperity of all residents of the State and to the sound growth of North Carolina communities."

2. "(P)rivate enterprise and investment have not been able to produce, without assistance, the needed construction of decent, safe and sanitary residential housing at low prices or rentals which persons and families of lower income can afford, or to achieve the urgently needed rehabilitation of much of the present lower income housing. It is imperative that the supply of residential housing for

persons and families of lower income affected by the spread of slum conditions and blight and for persons and families of lower income displaced by public actions or natural disaster be increased; and that private enterprise and investment be encouraged to sponsor, build and rehabilitate residential housing for such persons and families, to help prevent the recurrence of slum conditions and blight and assist in their permanent elimination throughout North Carolina."

3. "(I)n accomplishing this purpose, the North Carolina Housing Corporation, a public agency and an instrumentality of the State, is acting in all respects for the benefit of the people of the State in the performance of essential public functions and serves a public purpose in improving and otherwise promoting their health, welfare and prosperity, and that the North Carolina Housing Corporation is empowered to act on behalf of the State of North Carolina and its people in serving this public purpose for the benefit of the general public."

"If the constitutionality of a statute . . . depends on the existence or nonexistence of certain facts and circumstances, the existence of such facts and circumstances will generally be presumed for the purpose of giving validity to the statute, . . . if such a state of facts can reasonably be presumed to exist, and if any such facts may be reasonably conceived in the mind of the court. This rule does not apply if the evidence is to the contrary, or if facts judicially known or proved, compel otherwise." 16 C.J.S. Constitutional Law § 100b, pp. 454-455. Accord: 16 Am. Jur. 2d Constitutional Law § 143.

In Velishka v. Nashua, 106 A.2d 571, 44 A.L.R.2d 1406, the Supreme Court of New Hampshire sustained the constitutionality of the Urban Development Law of that State. After stating the legislative findings and declarations of necessity relating to the elimination of blighted areas and the advancement of redevelopment projects, Chief Justice Kenison states: "These legislative findings and declarations have no magical quality to make valid that which is invalid but they

are entitled to weight in construing the statute and in determining whether the statute promotes a public purpose under the Constitution." Accord: Redevelopment Commission v. Bank, supra, at 611, 114 S.E.2d at 700.

In State ex rel. W. Va. Housing Dev. Fund v. Copenhaver, 171 S.E.2d 545 (1969), the Supreme Court of Appeals of West Virginia sustained the constitutionality of the legislation which created The West Virginia Housing Development Fund. The West Virginia Act is similar to our 1969 Act and similar constitutional questions were presented and decided. Legislative findings set forth in Section 6 of the West Virginia Act are in accord, verbatim or in substance, with the legislative findings quoted from Section 2 of our 1969 Act. With reference thereto, Calhoun, J., for the Court, said: 'Legislative findings of fact which are made the basis of a legislative act are not thereafter open to judicial investigation." In the present case, whether the legislative findings of fact are conclusive need not be determined. Suffice to say, the facts set forth in the Stipulation confirm the legislative findings. There are no facts of which we may take judicial notice which tend to negate the legislative findings. On the contrary, current widespread publicity indicates an acute shortage of residential housing for persons and families of lower income.

The General Assembly, exercising the police power of the State, may legislate for the protection of the public health, safety, morals and general welfare of the people. Accordingly, this Court upheld the constitutionality of the Housing Authorities Law, Chapter 456, Public Laws of 1935, which, as amended, is codified as Article 1, Chapter 157, of the General Statutes, G.S. 157-1 through G.S. 157-39.8. Wells v. Housing Authority, 213 N.C. 744, 197 S.E. 693 (1938). It was held that a Housing Authority organized pursuant to the provisions of this 1935 Act was created for a public purpose and exercised an essential governmental function. Briefly stated, its public purpose was the elimination or rehabilitation of unsafe and unsanitary dwelling

units in crowded and congested areas and the construction of housing projects to provide safe and sanitary dwelling units for rental to persons of low income. In Wells v. Housing Authority, supra, Seawell, J., for the Court, said: "The State cannot enact laws, and cities and towns cannot pass effective ordinances, forbidding disease, vice, and crime to enter into the slums of overcrowded areas, there defeating every purpose for which civilized government exists, and spreading influences detrimental to law and order; but experience has shown that this result can be more effectively brought about by the removal of physical surroundings conducive to these conditions. This is the objective of the act, and these are the means by which it is intended to accomplish it." Our decision in Wells v. Housing Authority was approved and followed in Cox v. Kinston, 217 N.C. 391, 8 S.E.2d 232 (1940), and in Hallard v. Housing Authority, 221 N.C. 334, 20 S.E.2d 281 (1942).

The 1935 Act conferred the power of eminent domain upon a Housing Authority created in accordance with its provisions and prescribed the procedural requirements incident to the exercise thereof. G.S. 157-11; G.S. 157-28. Later decisions based on the 1935 Act relate to such procedural requirements and to the selection of sites for housing projects. In In re Housing Authority, 233 N.C. 649, 65 S.E.2d 761 (1951), and in Housing Authority v. Wooten, 257 N.C. 358, 126 S.E. 2d 101 (1962), it was held, inter alia, that a Housing Authority had wide discretion in the selection and location of a site for a housing project; that it was not required to select a site in a slum area as the site for a low-rent housing project; and that the fact that a few isolated properties in an area to be taken and dismantled were above the average standard of slum properties, or that some few desirable homes would be taken, did not affect the public character of the condemnation proceeding.

It is noted that statutory provisions relating to a Housing Authority created in accordance with the 1935 Act include the following:

"The bonds and other obligations of an Authority (and such bonds and obligations shall so state on their face) shall not be a debt of any city or municipality and neither the State nor any such city or municipality shall be liable thereon, nor in any event shall such bonds or obligations be payable out of any funds or property other than those of said authority." G.S. 157-14. G.S. 157-26 provides that the property of such Housing Authority shall be exempt from State and local taxes and fees; and that "the (b)onds, notes, debentures and other evidences of indebtedness" of such Housing Authority "shall be exempt from taxes."

In Housing Authority v. Dockweiler, 94 P.2d 794 (1939), the Supreme Court of California considered California legislation which contained provisions substantially the same as those of our Housing Authorities Law. The opinion of Shenk, J., cites a decision from each of fifteen States, including our decision in Wells v. Housing Authority, supra, in which the constitutionality of similar statutes had been "fully sustained as against onslaughts similar in character to those here urged." Later cases in accord are cited in Humphrey v. City of Phoenix, 102 P.2d 82, 86 (Ariz. 1940).

Housing Authority v. Dockweiler, supra at 803, decides a question which was not expressly raised and considered in Wells v. Housing Authority, supra, namely, that "(t)he tax exemption available to the property of housing authorities" included "bonds issued by them and the income therefrom." Decisions in accord from other jurisdictions are cited by Shenk, J.

In Redevelopment Commission v. Bank, supra, this Court upheld the constitutionality of the Urban Redevelopment Act, Chapter 1095, Session Laws of 1951, which, as amended, is now codified as Article 37, Chapter 160, of the General Statutes, G.S. 160-454 through G.S. 160-474.1. It was held that the condemnation of blighted and slum areas within a municipality and the sale or exchange thereof "to any redeveloper for residential, recreational, commercial, industrial or

other uses or for public use in accordance with the redevelopment plan" (G.S. 160-464) under safeguards to prevent such areas from reverting to slum areas, was in the interest of the public health, safety, morals and welfare, and therefore such condemnation was for a public purpose. The opinion of Parker, J. (later C. J.), states: "It may be that the measure may prove eventually to be a disappointment, and is ill advised, but the wisdom of the enactment is a legislative and not a judicial question. The General Assembly has the right to experiment with new modes of dealing with old evils, except as prevented by the Constitution." Id. at 612, 114 S.E.2d at 700. Later cases which hold that lands acquired for the purposes and in the manner set forth in the Urban Redevelopment Law meet the public purpose test include the following: Redevelopment Commission v. Hagins, 258 N.C. 220, 128 S.E.2d 391 (1962); Norton v. Redevelopment Commission, 259 N.C. 605, 131 S.E.2d 464 (1963). The constitutional questions raised in connection with statutes such as our Urban Redevelopment Law are discussed fully and clearly by Schaefer, J., in People v. City of Chicago, 111 N.E.2d 626 (Ill. 1953), and cases cited therein.

The dwelling accommodations provided by a project of a Housing Authority created pursuant to G.S. Chapter 157 are available at the lowest possible rentals to persons of meager income. G.S. 157-29 provides: "It (Housing Authority) shall not accept any person as a tenant in any housing project if the person or persons who would occupy the dwelling accommodations have an annual net income in excess of five times the annual rental of the quarters to be furnished such person or persons, except that in the case of families with three or more minor dependents, such ratio shall not exceed six to one . . . ." When the annual net income of the tenant(s) exceeds the prescribed limit, he (they) must move to other dwelling accommodations.

The evident function of the Corporation created by the 1969 Act is to assist "persons and families of lower income" who desire and seek residential housing elsewhere than as tenants in a low-cost housing project. Such persons would include those who were or are

ineligible to be tenants in a housing project. The Corporation is not vested with the power of eminent domain. Unlike a Housing Authority, it does not seek to acquire real property for the purpose of providing low-rental dwelling accommodations. Rather, its function is to foster the planning, construction and financing of modest residences which would not otherwise be available to "persons and families of lower income."

The 1969 Act confers upon the Corporation all the powers necessary or convenient to carry out and effectuate its purposes and provisions, including the twenty-one specific powers set forth in Section 5 thereof. In the present context, it is sufficient to quote the first four of these powers, viz."

"(1) To make or participate in the making of insured construction loans to sponsors of land development or residential housing; provided, however, that such loans shall be made only upon the determination by the Corporation that construction loans are not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

"(2) To make or participate in the making of insured mortgage loans to sponsors of residential housing; provided, however, that such loans shall be made only upon the determination by the Corporation that mortgage loans are not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

"(3) To purchase or participate in the purchase of insured mortgage loans made to sponsors of residential housing or to persons of lower income for residential housing where the Corporation has given approval prior to the initial making of such loan; provided, however, that any such purchase shall be made only upon the determination by the Corporation that mortgage loans were, at the time such approval was given, not otherwise available, wholly or in part, from private lenders upon reasonably equivalent terms and conditions;

"(4) To make temporary loans from the housing development fund . . . ." (Our italics.)

The legislative findings and the Stipulation establish the existence of a serious shortage of decent, safe and sanitary housing available at low prices or rentals to persons and families of lower income and also the inability of private enterprise and investment, without assistance, to meet that need.

Unquestionably, when construction of residential housing is made possible by the Corporation's assistance, all persons in the building industry benefit from such construction. Such benefit is similar to that which results from the construction of any public project, e.g., public buildings, school buildings, highways, etc. Too, the "persons and families of lower income" who will occupy such residential housing as owners or tenants will benefit from the existence and availability thereof. Although these benefits will flow from the Corporation's authorized activities, its raison etre, the reason and justification for its existence, is to make available decent, safe and sanitary housing to "persons and families of lower income" who cannot otherwise obtain such housing accommodations. The General Assembly, with good reason, was fully aware that the acquisition of homes by "persons and families of lower income" gives them a stake in the preservation of our society. Nothing could contribute more to the stability of our institutions than the acquisition of homes by an ever-increasing proportion of our people.

Plaintiff relies upon Mitchell v. Financing Authority, supra, in which this Court held unconstitutional the North Carolina Industrial Development Financing Act, Chapter 535, Session Laws of 1967, codified as Chapter 123A of Volume 3B (1969 Cumulative Supplement) of the General Statutes, G.S. 123A-1 through 123A-27. In distinguishing the Industrial Development Financing Act from the Housing Authorities Act, Sharp, J., said: "The State does not engage in a private enterprise when it undertakes a project of slum clearance. Wells v. Housing Authority, 213 N.C. 744, 197 S.E. 693 (1938). Slums are a serious menace to society; they breed both disease and crime. As Seawell, J., pointed

out in Wells v. Housing Authority, supra, the State can combat these two evils in overcrowded areas only by 'the removal of physical surroundings conducive to these conditions.' Id. at 743, 197 S.E. at 696. The existence of a slum area proves the impotency or unwillingness of private enterprise to cope with the problem and 'where community initiative has failed and authority alone can prevail,' government must deal with the emergency created. Id. at 743, 197 S.E. at 696." (Our italics.) Mitchell v. Financing Authority, supra at 157-158, 159 S.E. 2d at 759.

In these and other respects, the Industrial Development Financing Act is distinguishable from the 1969 Act now under consideration. There the State was undertaking to subsidize particular private industries which were in competition with other unsubsidized private industries. As pointed out by Sharp, J., in Mitchell v. Financing Authority, supra at 159, 159 S.E.2d at 760, the Authority's primary function was "to acquire sites and to construct and equip facilities for private industries" and "to bait corporations which refuse to become industrial citizens of North Carolina unless the State gives them a subsidy."

The Corporation's authorized activities respond to a serious need of deep public concern but do so only when the planning, construction and financing of residential housing is not otherwise available to "persons and families of lower income." We are of opinion and hold that the 1969 Act was enacted for a PUBLIC PURPOSE and that the Corporation's authorized activities pursuant thereto are for a PUBLIC PURPOSE.

The only decisions in other jurisdictions involving legislation similar to our 1969 Act which have come to our attention are the following:

(1) State ex rel. W. Va. Housing Dev. Fund v. Copenhaver, supra, decided December 9, 1969, involved the West Virginia Housing Development Act, which consists of statutes enacted in 1968 and 1969

and is now codified in Volume 10 of the West Virginia Code, 1970 Cumulative Supplement, as Chapter 31, Article 18. This West Virginia statute contains substantially (often verbatim) the same provisions as our 1969 Act. Its constitutionality was fully sustained. In all respects, this West Virginia decision is in accord with our decision in the present case.

(2) In re Advisory Opinion, 158 N.W.2d 416 (Mich. 1968), in which the Supreme Court of Michigan rendered an advisory opinion relating to the constitutionality of the Michigan statutes (Volume 8 of Michigan Compiled Laws, Sections 125.1401 et seq., including 1969 Cumulative Pocket Part) which created the Michigan State Housing Development Authority. The Michigan legislation was approved in all respects except the following: The Michigan statutes provided for a Housing Development Fund similar to the Housing Development Fund created by our 1969 Act. The Michigan statutes also provided for a Capital Reserve Fund for use in discharging the obligations of the Development Authority. In the content of specific provisions of the Constitution of Michigan, the opinion expressed was that, although an appropriation to the Development Authority for the purpose of administration was for a proper public purpose, an appropriation to the Housing Development Fund or to the Capital Reserve Fund of the Development Authority was not for a proper public purpose. The only decision cited in support of this conclusion is Opinion of the Justices to the House of Representatives, 195 N.E. 897 (Mass. 1935), 98 A.L.R. 1364. The 1969 Massachusetts decision referred to below was decided subsequent to the advisory opinion in the Michigan case.

In the Michigan case, the Court, after expressing the opinion that an appropriation for the Housing Development Fund or for the Capital Reserve Fund was not for a proper public purpose, stated: "This does not mean, however, that the State can, under no circumstances, appropriate public money to such funds. Constitution 1963, art. 4, § 30, provides: 'The assent of two-thirds of the members

elected to and serving in each house of the legislature shall be required for the appropriation of public money or property for local or private purposes.'"

(3) Massachusetts Hous. F. Ag. v. New England Mer. Nat. B., 249 N.E.2d 599 (Mass. 1969), in which the Supreme Judicial Court of Massachusetts considered questions relating to the constitutionality of the Massachusetts statutes which created the Massachusetts Housing Finance Agency. Volume 2A of Massachusetts General Laws Annotated, Appendix to Chapter 23A, 1970 Cumulative Pocket Part. This decision revises substantially the views expressed in Opinion of the Justices, 219 N.E.2d 13 (Mass. 1966), an advisory opinion. Generally, the 1969 Massachusetts decision is in accord with our decision in the present case.

(4) Vermont Home Mtg. Cr. Ag. v. Montpelier Nat. Bank, 262 A.2d 445 (Vt. 1970), in which the Supreme Court of Vermont upheld as against attack on constitutional grounds the statute creating the Vermont Home Mortgage Credit Agency. Volume 3 of Vermont Statutes Annotated, Title 10, Chapter 11B, §§ 241-253a, 1969 Cumulative Pocket Supplement. Although this Vermont decision is in accord with our decision in the present case in several particulars, there are material differences between the Vermont statute there considered and our 1969 Act.

(5) New Jersey Mortgage Finance Agency and James C. Brady, Jr., Commissioner of Banking, v. Joseph H. McCrane, Jr., Treasurer of the State of New Jersey, decided July 6, 1970, in which the Supreme Court of New Jersey upheld as against attack on constitutional grounds the New Jersey Mortgage Finance Agency Law. L. 1970, c. 38, N.J.S.A.17: 1B-4 et seq. New Jersey Session Law Service, 1970 Regular Session, pp. 84-95. Although there are differences between the provisions of the New Jersey Law and our 1969 Act, the main thrust of the New Jersey decision is in accord with our decision in the present case.

QUESTIONS II AND IV

Questions II and IV present essentially the same question, namely, whether the 1969 Act violated Article VII, § 6, or Article V, § 4, of the Constitution of North Carolina. Question II refers to

"the lending of the credit of the State" and Question IV refers to "the creation of a debt."

Article VII, § 6, provides: "No county, city, town, or other municipal corporation shall contract any debt, pledge its faith or loan its credit, nor shall any tax be levied or collected by any officers of the same except for the necessary expenses thereof, unless approved by a majority of those who shall vote thereon in any election held for such purpose." This constitutional provision is applicable to a "county, city, town, or other municipality." It requires the approval of a majority of the voters therein before such subdivision of the State may pledge its credit or levy a tax except for its necessary expenses. It places no limitation upon the General Assembly or on an instrumentality of the State created by the General Assembly for a public purpose.

Article V, § 4, in part, provides: "The General Assembly shall have the power to contract debts and to pledge the faith and credit of the State and to authorize counties and municipalities to contract debts and pledge their faith and credit for the following purposes: . . . ." (Our italics.)

The 1969 Act provides:

"Sec. 6. Credit of State not pledged. Obligations issued under the provisions of this Act shall not be deemed to constitute a debt, liability or obligation of the State or of any political subdivision thereof or a pledge of the faith and credit of the State or of any such political subdivision, but shall be payable solely from the revenues or assets of the Corporation. Each obligation issued under this Act shall contain on the face thereof a statement to the effect that the Corporatinn shall not be obligated to pay the same nor the interest thereon except from the revenues or assets pledged therefor and that neither the faith and credit nor the taxing power of the State or of any political subdivision thereof is pledged to the payment of the principal of or the interest on such obligation.

"Expenses incurred by the Corporation in carrying out the

provisions of this Act may be made payable from funds provided pursuant to this Act and no liability shall be incurred by the Corporation hereunder beyond the extent to which moneys shall have been so provided."

Decisions of this Court establish that this method of financing does not create a debt within the meaning of the Constitution and therefore the limitations of Article V, § 4, are inapplicable. Turnpike Authority v. Pine Island, 265 N.C. 109, 117, 143 S.E.2d 319, 325 (1965), and cases there cited.

We hold that the 1969 Act does not violate either Article VII, § 8, or Article V, § 4, of the Constitution of North Carolina.

Section 18 of the 1969 Act provides: "The Corporation is authorized to accept such moneys as may be appropriated from time to time by the General Assembly for effectuating its corporate purposes including, without limitation, the payment of the initial expenses of administration and operation and the establishment of a reserve or contingency fund to be available for the payment of the principal of and the interest on any bonds or notes of the Corporation." However, the fact that the $500,000.00 heretofore appropriated and such further appropriations, if any, as the General Assembly may see fit to make, may be used for "the establishment of a reserve or contingency fund to be available for the payment of the principal of and the interest on any bonds or notes of the Corporation," does not constitute a pledge of the faith and credit of the State or of any political subdivision thereof "for the payment of the principal of and the interest on any bonds or notes of the Corporation." The Corporation has no authority to incur any debt which would obligate the General Assembly to make appropriations. Moreover, the 1969 General Assembly, assuming it had authority to do so, did not purport to control actions of succeeding sessions of the General Assembly. Massachusetts Hous. F. Ag. v. New England Mer. Nat. B., supra at 608.

QUESTION III

Question III presents the question whether the 1969 Act delegates legislative authority in violation of Article I, § 8, of the

Constitution of North Carolina, which provides: "The legislative, executive, and supreme judicial powers of the government ought to be forever separate and distinct from each other."

"It is settled and fundamental in our law that the legislature may not abdicate its power to make laws nor delegate its supreme legislative power to any other coordinate branch or to any agency which it may create. Coastal Highway v. Turnpike Authority, 237 N.C. 52, 74 S.E.2d 310. It is equally well settled that, as to some specific subject matter, it may delegate a limited portion of its legislative power to an administrative agency if it prescribes the standards under which the agency is to exercise the delegated powers." Turnpike Authority v. Pine Island, supra at 114, 143 S.E.2d at 323, and cases cited.

The clear and declared purpose of the General Assembly is to provide "residential housing" for "persons and families of lower income." Necessarily the Corporation must determine what persons and what families are to receive its assistance.

The General Assembly, in Section 3(11) of the 1969 Act, provided: "'(P)ersons and families of lower income' means persons and families deemed by the Corporation to require such assistance as is made available by this Act on account of insufficient personal or family income, taking into consideration, without limitation, such factors as (a) the amount of the total income of such persons and families available for housing needs, (b) the size of the family, (c) the cost and condition of housing facilities available, (d) the eligibility of such persons and families for federal housing assistance of any type predicated upon a lower income basis, and (e) the ability of such persons and families to compete successfully in the normal housing market and to pay the amounts at which private enterprise is providing decent, safe and sanitary housing, and deemed by the Corporation therefore to be eligible to occupy residential housing constructed and financed, wholly or in part, with insured construction loans or insured mortgages, or with other public or private assistance."

We are of the opinion and hold that the Corporation does not legislate but determines factually, by application of the factors the General Assembly has prescribed, what persons or families are "persons and families of lower income" and therefore entitled to the benefits of the 1969 Act.

A loan which the Corporation is authorized to make or participate in making or to purchase or participate in purchasing is an "insured construction loan" or an "insured mortgage loan," which, as provided in Section 3(7) and (8) of the 1969 Act, means a loan secured by a federally insured mortgage or insured or guaranteed by the United States or an instrumentality thereof or for which there is a commitment by the United States or an instrumentality thereof to insure such loan or mortgage. This provides sufficient standards for the use of the proceeds from the sale of the Corporation's tax-exempt bonds.

Standards for making the temporary loans from the Housing Development Fund are set forth in Section 7 of the 1969 Act. The purposes for which such loans may be made are specifically defined by the General Assembly.

The public purpose of the 1969 Act is to make additional residential housing available to persons and families of lower income by promoting the construction thereof. The function of the Housing Development Fund, "a trust fund separate and distinct from any other moneys or funds administered by the Corporation," is to initiate the Corporation's program. Temporary loans from the Housing Development Fund for "development costs" are the first step in an integrated program, the second step being a construction loan, and the third step being permanent financing. Obviously, the Corporation must exercise its discretion and judgment with reference to the choice of sites and the identity of the sponsor, builder or developer with whom the Corporation will deal in connection with a particular project. It is contemplated that such sponsor, builder or developer will continue until completion of the program. No doubt the General Assembly considered this preferable to efforts by the Corporation through its own

personnel to undertake the work preparatory to the letting of contracts for the construction of residential housing.

The General Assembly has made no appropriation to the Housing Development Fund. The Housing Development Fund is to be constituted by grants from the federal government or other sources and by money borrowed in connection with the issuance and sale of its fund notes. Although we do not base decision on that ground, plaintiff, as taxpayer, has nothing to lose even if unwise or uncollectible temporary loans are made from the Housing Development Fund.

Plaintiff calls attention to provisions of the 1969 Act to the effect the Corporation may act without the prior approval of any other State agency and that no provision is made for an appeal from any of the Corporation's decisions. Suffice to say, should the factual considerations underlying the 1969 Act cease to exist or should the Corporation undertake any actions in excess of the authority conferred by the 1969 Act, a remedy through judicial proceedings would be available. Too, presumably the General Assembly will continuously review and evaluate the specific programs of the Corporation; and, if the authorized activities of the Corporation should become unnecessary or prove ineffectual, will amend or repeal the 1969 Act to such extent as may be appropriate.

QUESTION V

Question V presents the question whether the 1969 Act exempts property from taxation in violation of Article V, § 5, of the Constitution of North Carolina, which provides that "(p)roperty belonging to the State, counties and municipal corporations shall be exempt from taxation" and enumerates other properties the General Assembly may exempt from taxation. The enumerated properties do not include bonds issued by the State or any State agency, whether revenue bonds or full faith and credit bonds.

Section 19 of the 1969 Act provides:

"Tax exemption. The exercise of the powers granted by this Act will be in all respects for the benefit of the people of the State,

for their well being and prosperity and for the improvement of their social and economic conditions, and the Corporation shall not be required to pay any tax or assessment on any property owned by the Corporation under the provisions of this Act or upon the income therefrom.

"Any obligations issued by the Corporation under the provisions of this Act, their transfer and the income therefrom (including any profit made on the sale thereof), shall at all times be free from taxation by the State or any local unit or political subdivision or other instrumentality of the State, excepting inheritance or gift taxes."

In Education Assistance Authority v. Bank, supra at 539, ___ S.E.2d at ___, it was stated: "Since the tax-exempt feature makes possible the more favorable sale of revenue bonds and thereby contributes substantially to the accomplishment of the public purpose for which they are issued, we hold that the General Assembly may exempt them from taxation by the State or any of its subdivisions." In accord, we hold that, since the 1969 Act and the Corporation's activities pursuant thereto are for a public purpose, it was permissible for the General Assembly to exempt from taxation the property of the Corporation and the obligations incurred by the Corporation to effectuate such public purpose. Cf. Housing Authority v. Dockweiler, supra at 803, and cases there cited.

On this appeal, we accept the legislative findings, which are supported by facts set forth in the Stipulation, that there exists in North Carolina "a serious shortage of decent, safe and sanitary residential housing available at low prices or rentals to persons and families of lower income" and "that private enterprise and investment have not been able to produce, without assistance," the needed residential housing.

The General Assembly has determined that the State of North Carolina should respond to this serious public need, without encroachment on private enterprise, by the bold and comparatively new course

embodied in the 1969 Act. This course recognizes the responsibility and desire of this State, through a Corporation whose members are five highly-placed and responsible State officials and four non-officials appointed by the Governor of the State, to respond to this public need. True, the 1969 Act contemplates federal assistance under certain of the various provisions for federal mortgage insurance (12 U.S.C.A. §§ 1707-1715(z)) and perchance the purchase by some federal corporation or agency of the Corporation's tax-exempt bonds. However, the Corporation, as an instrumentality of the State, will manage the program and make the essential administrative decisions. If the serious shortage of residential housing is to be met, and the State fails to recognize any responsibility in the matter, the only alternative will be ever-increasing programs in which the federal government will deal directly with those in our local communities who desire to sponsor residential housing for persons and families of lower income. Presumably, the General Assembly considered that North Carolina should meet her own problems as far as possible through her own agencies and not turn them over to the exclusive attention of the federal government.

In this action, plaintiff attacks the 1969 Act in its entirety on specific constitutional grounds. We hold the 1969 Act is not unconstitutional on its face or when considered with reference to the facts set forth in the Stipulation on any of the grounds asserted by plaintiff. Whether any specific regulation or activity of the Corporation is authorized by the 1969 Act or, if authorized, whether the 1969 Act is unconstitutional as applied to that precise factual situation, is not before us.

For the reasons stated, the injunction is vacated; the judgment is reversed; and plaintiff's action is dismissed.

Reversed.

Should be Corporation

Housing Authority Has No Funds

Low income Tar Heel families who would like to buy homes of their own will have to wait at least until summer for help from the North Carolina Housing Corporation.

The reason is that the agency, plagued by delays during ber. In October, Scott said much of its 18-month existence, does not have any money yet.

And Executive Director Joe E. Eagles said the corporation won't have any funds until the bond market improves.

The Housing Corporation was created by the 1969 General Assembly at the request of Gov. Bob Scott to promote and finance private, single-family dwellings for low income families.

The agency was authorized to issue up to $[illegible] million in bonds to finance long-term mortgages for families with less than $6,000 a year income. It's goal was [illegible] mortgages a year.

Soon after the formation of the agency, however, a court

Joe E. Eagles

case challenging its constitutionality was filed. The suit claimed that the corporation would be using public funds for a private purpose.

But the state argued that eight per cent of its population — some 400,000 persons — live in substandard housing and that decent housing is as much a public purpose as education.

The North Carolina Supreme Court upheld the constitutionality of the corporation on July 31.

But the court case delayed for a year the issuance of corporation bonds, and during that year the financial pictur changed.

Right after the court decision, Eagles predicted that the corporation would make its first mortgages by Octo- the agency hoped to finance its first mortgage within 90 to 120 days.

This week, Eagles said it would be at least summer before the bonds are issued.

While the agency was tied up in court, the bond market was being flooded as municipalities, counties and corporations issued bonds to gain long-term money that was not available from commercial and mortgage banks and savings and loans. This pushed the interest rate on bonds up.

At the same time, under government pressure and the slackening demand for loans, bank and savings and loans were lowering their interest rates from 8½ to 7½ per cent.

Eagles said the corporation's underwriters estimate its bonds would sell at about 6½ per cent interest right now. That high rate is caused not only by the bond situation but by the uniqueness of the agency's bonds. They are believed to be the first in the nation backed only by low income mortgages.

The 6½ per cent rate would have been alright when mortgage interest rates were at 8½ per cent.

This would have given the corporation a 2 per cent margin between what it paid for its money and the return it received on loans.

But the current mortgage rate of 7½ per cent leaves only a 1 per cent spread. One half of this would have to go to the private lending agency which serviced the loan, and the other half of 1 per cent would be left to operate the corporation and provide some type of rebate to low income persons who borrow coporation money.

Eagles said until bonds actually go on the market, the corporation will not be able to determine exactly what type and amount of rebate it can give.

Eagles said that the agency hopes by this summer to be able to market its bonds at 6 per cent. He said this would provide a fairly safe 1½ per cent margin.

The actual mortgages w the corporation finances be made through private ding agencies on contrac the corporation.

The corporation will finance individual loan sured by the Federal Ho Authority (FHA). If a p defaults, the federal go ment would pay off the The FHA also makes and interest subsid available to low in families.

While it waits to bonds, the corporation is operating on the $500,000 money provided by the General Assembly. The is also busy soliciting grants and loans from dustries, foundations, dividuals and the fe government for a ho development trust fund.

The corporation is aut ed to use this trust fun make loans to developer construct low income hou

The first money that be received by the corpo is a $100,000 grant from Appalachian Regional mission for a tec assistance program. The will pay one-third of salaries for seven h specialists to help non groups plan low-cost h projects. The non groups would pay the two-thirds of the salaries.

Dear Mr. Barker:

We are pleased to enclose a copy of the legislation establishing the North Carolina Housing Corporation enacted by the 1969 session of the General Assembly.

You will remember that we had to get clearance from the State Supreme Court of North Carolina as to the constitutionality of the legislation. Although the suit was instituted in December of 1969, the favorable ruling from the Supreme Court did not come down until July 31st, 1970.

During the interim, the market for tax exempt bonds was rising. Our legislation calls for the issuing of tax exempt bonds which would be a back up by an F.H.A. insured mortgage. While the F.H.A. insured rate did go up to 8½% in January of 1969, it came down to 8% in December, 1970, 7½% in January, 1971, and to 7% just day before yesterday.

Our problem is that our financial advisers tell us the bonds will yield 6½%. There is not a sufficient spread for the Corporation to operate on between bond yield and the going F.H.A. insured (7%) maximum rate. We were planning to use local lending institutions as our agents to service the local mortgages at a negotiable rate of 3/8 to 1/2 of 1%. While tentative agreements have been reached with the leadership of mortgage bankers and Savings and Loan Associations, no contracts have been signed with individual lending institutions since we have not marketed any bonds.

6½
½

Under present conditions all mortgages seem to be finding a home so there is no real need for the mortgage financing phase of our program as there was in the spring of 1969 when the program was formulated.

development fund

There is still a need for the Development phase of our program to help produce low-and-middle income housing in our smaller cities and towns. We have evidence of this almost daily as developers and contractors call or come by to see us.

We are now formulating plans to see if we can get enough money via grants and gifts to get moving in this direction.

A $100,000,000 grant from the Appalachian Regional Commission has assured us of getting moving in the 29 Appalachian Counties, but there is a great need in the other areas as well.

If this information is not sufficient, we would be pleased to have a call from you if we could help you further.

Dear Mr. Campbell:

Thank you for your letter of October 19, 1970.

I am enclosing our latest brochure telling our basic functions and progress to date. I am also enclosing a copy of the legislation which was passed by the North Carolina General Assembly creating the North Carolina Housing Corporation.

We are now in the process of attempting to go to market with our first issue of bonds. We plan to purchase loans originated by private lenders under the FHA 235 program.

The housing development fund has not been established yet. We are trying to obtain several large contributions before setting this in motion. This fund will provide "seed money" loans, land development loans, and construction loans.

If you desire further information, please feel free to contact me at your convenience.

Sincerely,

J. C. Jordan
Associate Director

Joe E. Eagles

Executive Director

INTRODUCTION

In July, 1970, the North Carolina Supreme Court ruled the legislation establishing the North Carolina Housing Corporation constitutional.

The Housing Corporation is now a reality. To steal a current phrase, "It's the real thing."

Additional personnel have joined the staff to assist in implementing the program of the Housing Corporation. We have moved to new expanded quarters in the 505 Building, Oberlin Road, in Cameron Village, Raleigh, North Carolina.

Firm negotiations have been made with bond underwriters to market our bonds on the national market, and bond attorneys have been retained to work out the many details of getting tax exempt status for the bonds and the first issue marketable. Steps to implement the "Trust Fund" are now underway.

It is hoped that proceeds from the sale of bonds will be available for the Corporation to be actively making loans by January, 1971.

We at the North Carolina Housing Corporation look to the future with a great deal of enthusiasm toward filling a void in the housing needs in North Carolina.

The North Carolina Housing Corporation was authorized by Act of the 1969 General Assembly, to issue tax-exempt bonds in the amount of up to $200,000,000. Proceeds from these bonds will be loaned to builders, developers and to individual families only on FHA insured mortgages on the individual properties.

We expect this program to augment the efforts of private enterprise in the building and selling of homes. We further expect every community to benefit from the increase in the number of livable homes and the increase in local tax receipts. We expect, also, that many thousands of families who for years have been wanting and needing a standard home will benefit most of all.

For the assistance of these in the low-income brackets, we expect to work through local builders, developers and housing committees to secure Federal funds for interest and rent subsidies under Sections 235 and 236 of the Housing Act of 1968. These subsidies, in some instances and depending upon the family's income and circumstances, allow up to all but one percent of interest to be paid by the Federal Government. This will help many now eligible for public housing to become home owners instead.

PURPOSE

The purpose of the Corporation is to assist in the providing of decent, safe and sanitary residential housing to persons and families at prices or rentals they can afford.

In providing this assistance, the activities of the Corporation will embrace the entire homebuilding process, including the following stages of homebuilding:

—Pre-construction

—Land Development and Construction

—Permanent Financing

The Corporation can provide financing for preconstruction costs, land development mortgages, construction loans, and mortgage loans. Additional loan assistance will be provided to lower-income families for down payments on homes. *In no instance will financial assistance be provided when private funds are available.*

BENEFITS

The major direct beneficiaries of the Corporation will be the lower-income families of the State. Not only will the Corporation stimulate the supply of such housing, it will also be able, through its financing, to make housing available at costs estimated between $300-$800 less than is otherwise available.

The Corporation will utilize the existing framework of the private financing and construction industries. It will compliment rather than compete with them. In so doing, it will strengthen these industries, and in many parts of the State, help to develop them.

FUNCTIONS

The functions of the Corporation are:

—To make or participate in the making of Federally-insured construction loans.

—To make or participate in the making of Federally-insured mortgage loans.

—To purchase or participate in the purchase of Federally-insured mortgage loans.

—To provide technical advisory services to builders and developers, including market information.

—To provide advisory services to families both with respect to the achievement of new or improved housing, and the proper maintenance of such housing.

—To promote research and development in scientific methods of constructing low-cost residential housing of high durability;

And from the special Housing Development Fund: - only?

—To provide temporary development cost loans to qualified sponsors, builders and developers of residential housing projects for lower-income families in order to defray preconstruction expenses.

—To provide loans to qualified families to help meet down payments and other closing costs on home purchases.

—To provide, under special conditions and with participation of private lenders, uninsured loans from the special fund to cover land development and construction costs of lower-income housing projects.

The North Carolina Housing Corporation introduces a new source of mortgage capital in the State.

The Corporation will purchase or make mortgages by establishing working agreements with private financial institutions—commercial banks, savings & loan associations, and mortgage bankers. Under these agreements, an individual seeking a mortgage and meeting the income limitation of the Corporation will contact a private lending institution and file an application.

If you, as a builder, developer, real estate broker or individual, desire assistance in selecting a local lending institution, contact the North Carolina Housing Corporation and we will supply you a list of approved lending institutions in your area or county.

The private lending institution will process the application and close the mortgage, passing it on to the Corporation. The lending institution will then service the mortgage, and receive a reasonable fee for this service. It is estimated that mortgage amounts will range between $8,000 and $20,000 per dwelling unit. Families near the bottom of the income scale would require Federal interest or rental assistance. (Housing Act 1968, Sections 235 and 236).

SOME COMMONLY ASKED QUESTIONS AND ANSWERS —

1. What Does the State Intend to Do About Inadequate Housing?

The State intends to encourage private enterprise to sponsor and build housing for lower income families.

2. What Will the Housing Corporation Do?

The major emphasis of the Corporation will be to provide mortgage financing for low income families, when mortgage money is not available from private sources.

3. Is This A Public Housing Program?

On the contrary, this program will meet the needs of many people now eligible for public housing by offering them an opportunity for home ownership. In fact, it may cause many communities to take this path rather than that of public housing.

4. What Kind of Houses are We Talking About?

Principally, one-family homes, with a price range of $8,000-$20,000.

5. Who Will Build The Houses?

The private construction industry, including every business or profession in the sale and financing of homes.

6. Who Will Make the Actual Decisions of the Corporation?

The nine-member Board of Directors composed of five public officials and four members appointed by the Governor. The Board has elected its officers, including an Executive Director, Mr. Joe E. Eagles.

7. What Happens if There's a Default on a Mortgage?

All mortgages will be F.H.A. or V.A. insured and would be paid off by the Federal Government.

8. What Effect Will This Have on the Faith and Credit of the State?

It will not be involved in the backing of the bonds in any way, shape or form. The bonds will be sold nation-wide and will bring additional capital into the State that would not otherwise come. Since the State must import capital, this is another avenue by which it can be done.

9. What is the Attitude of the Private Home Builders and Home Financers Toward This Program?

Response has been favorable since a new market is seen for their service or products, a market from which they are blocked under present conditions.

If you desire further information, please contact this office, and we will be glad to assist you.

LOAN COMMITTEE

All loans shall be approved by the Loan Committee and then recommended for approval by the Board of Directors of the North Carolina Housing Corporation.

1. The Loan Committee shall approve all loans for the Housing Development Fund (Trust Fund) and shall also approve all loan purchases made from the bond proceeds.

2. The Loan Committee shall be comprised of Joe E. Eagles, Luther C. Hodges, J. C. Jordan and Vernon Schrum. At least three members must be present at a Loan Committee meeting to form a quorum.

3. The committee shall record minutes of all meetings, stating date of meeting, time, place, members present and shall record each loan considered. Loans that are rejected shall be recorded with the reason for the rejection. Loans approved shall have recorded the amount, terms, rate, fee and any special or limiting conditions. The minutes are to be retained in safe place for future reference.

4. No loan shall be presented to the Board of Directors unless it has been reviewed and approved by the Loan Committee.

5. The Loan Committee shall select a regular meeting time and shall attempt to hold all meetings at this specified time (i.e. Mondays at 10:30 a.m.).

6. All loans to be presented to the Loan Committee shall be complete in every respect. Loans for land, construction, temporary, etc., shall be on appropriate forms of N.C.H.C. and shall be supported with current financial statements, credit reports, plats, cash flow statements, etc. It is a waste of everyone's time to present an incomplete loan package without all facts and data needed to make a loan decision.

7. All requests for loan purchases shall be submitted with appropriate data on the location of the properties, average loan amount, quality of borrowers, rate, discount and yield to N.C.H.C., stated in the submission papers.

8. The Loan Committee shall adhere to loan policies and intent of General Statutes of North Carolina in making loan decisions.

9. A loan shall be approved on 3/1 or 2/1 vote. If there is a tie (2/2) the loan shall then be presented to the Board of Directors for action.

10. The Loan Committee may approve a development cost loan, construction loan, land loan and other interim finance loans up to $100,000 without Board of Directors approval. Temporary loans may be approved without Board of Directors approval. Loan purchases of FHA/VA loans from N. C. lending institutions may be approved up to $250,000 without the approval of the Board of Directors.

11. All loans approved by the Loan Committee under #10, above, shall be listed and knowledge of their approval made to Board of Directors. The list shall state borrower (or sellers) name, amount rate (or yield), purpose of the loan, location and fees collected (if any).

12. In the event a committee meeting is impossible to obtain, the members of the committee may be polled by telephone, telegram or personal interview by one other committee member in order to render a loan decision. A statement of the polling shall be prepared for the minutes.

13. The committee shall select a Chairman and a Secretary. The meetings shall be run on an orderly basis with Roberts Rules of Order prevailing.

14. Notice of approval of a loan shall be sent to the borrower and/or

field representative by the Director of Field Operations.

15. Notice of approval of a loan purchase shall be sent to the seller by the Director of Finance.

16. Rejections shall be notified in the same manner as in 14 and 15 above.

17. All loans shall be presented to the committee by the Chairman. The vote shall be recorded by the Secretary. From time to time, if necessary, a field representative may be called upon to make a presentation on a land loan, construction or loan situation that he has first hand knowledge of and working with the borrower.

18. If a loan application has principals that are relatives, personal friends, etc. of a committee member, said committee member should excuse himself from voting on the application.

19. All loans shall be subject to review by the Board of Directors and legal counsel.

20. The minutes of the Loan Committee shall be open to review at any time to members of the Board of Directors.

The Need For Family Planning In North Carolina

By C. Horace Hamilton

Associate Director
Carolina Population Center
and
Visiting Professor of Sociology
and Biostatistics

Many counties, cities, and communities have some more or less systematically organized family planning programs. Moreover, the current downward trend in the birth rate is evidence that family planning is practiced by a large percentage of North Carolina families. The practice of birth control has no doubt been facilitated by the development of the "pill" and other contraceptive methods. Because of these trends and facts, many people are under the impression that we need no longer be seriously concerned about the problem of overpopulation or of the need for investing public funds in family planning programs.

If there is any complacency over the need for family planning, a look at the latest available facts about births in North Carolina should dispel any idea that we can now relax and forget about the problem. During the calendar year 1966, according to the Statistics Section of the State Board of Health, there were 92,727 births and 42,218 deaths. The difference between births and deaths, i.e., natural increase, was 50,509. Thus, from one point of view, in 1966, the state had 50,509 more births than were needed to maintain the population at a stable level.

A similar excess of births over years of age. For all other age groups, we shall define as **excessive** all births occurring during 1966 to mothers in the following age and birth order groups:

Age of Mother	Excluded Births
15-19	Above the 1st order
20-24	Above the 2nd order
25-29	Above the 3rd order
30-34	Above the 4th order
35-39	Above the 5th order

Although these assumptions are made partly for the purpose of establishing some sort of reasonable and convenient statistical criterion, it can also be argued that such limits are in the interest of both the individual family and of society which must pay part of the cost of excessively large families among the low income groups.

Actually our definition of excess births is more on the liberal than the conservative side. There are both medical and economic reasons why

ties, such as Madison, Clay, Alleghany, Graham, and Ashe.

Among nonwhite mothers, the highest percentage of excess births are found in such predominantly agricultural counties as Greene, Halifax, Edgecombe, Jones, and Northampton.

Urban metropolitan counties, such as Wake and Mecklenburg, in general have low percentages of excess births, but even in these counties the percentage of excess nonwhite births is greater than the white. In Wake County only 18.8 percent of the white births are classed as excess. Other counties having a low percentage of excess white births are Orange, Tyrrell, Lenoir, Durham, Mecklenburg, Hertford, Chowan, Gates, and Pasquotank. Among nonwhite mothers having lower than average percent excess births are those of Durham, Chatham, Lee, Guilford, Pamlico, Orange, Randolph, Stanly, Onslow, and Chowan counties.

TABLE 1
Number and Percentage of Excess Births By Color and Age of Mother, North Carolina, 1966

Age of Mother	Number and Percentage of Excess Births

39. Granville	580	267	46.0	11

state had 50,509 more births than were needed to maintain the population at a stable level.

A similar excess of births over deaths has existed throughout our state's history. As a result of the relatively high rate of natural increase, North Carolina has experienced a heavy out-migration and, at the same time, has increased in population. Most people, intuitively, think that population growth is a good thing, but that heavy out-migration is a bad thing. Just how bad and how good these trends are is a matter of opinion, but it is not the purpose of this paper to discuss population policy. It suffices to point out that rapid population growth, not only in other countries but also in our own state and nation is creating serious social and economic problems.

There are many ways to measure the need for family planning, although there may be some disagreement as to how many children a family should have. In a free and democratic society the decision on family size is considered to be the prerogative of individual families. Yet many surveys show that most married couples do not want more than two to four children. (In order to maintain a stable population, only about 230 children per hundred married couples are needed to maintain the population.)

In spite of the fact that most women in this country no longer want the very large families which were common in the rural areas of our nation for many generations, the current birth statistics show that a substantial percentage of North Carolina families are still giving birth to more children than they can provide for even at a modest standard of living. In 1966, the vital statistics show that more than a fourth of the babies were born to North Carolina mothers who already had three children. However, a more refined and accurate estimate of the number of "excess" births may be arrived at by taking into consideration the age of the mother.

On the basis of known relationships between maternal and child health and the timing and number of births, we shall define as "excess" births all those born to mothers either under 15 years or over forty

40 - Up	2,198	100.0	[illegible]	[illegible]

the conservative side. There are both medical and economic reasons why a mother over 35 years of age should not have any children of the sixth order and above. However, statistically, it is justified on the grounds that a very small number of families with more than five children should be included so that the average number of children per mother will be high enough to maintain the population. If, for example, the relative number of women with zero, one or only two children should increase, there would need to be some increase in the number of mothers with three or more children.

On the basis of the above assumptions, it is found that 33,033, or 35.6 percent of the 1966 births were excessive, and most of them were probably unwanted by the parents. This number of excessive births may be broken down by age of mother as shown in Table 1.

It is interesting to note that of the 17,201 excess births to mothers under 25 years of age, more than one-half were white (8,887, or 51.7 percent.) On a percentage basis, the number of excess nonwhite births is approximately twice that of the white percentage. It should be noted that other studies show excess fertility is associated with low income, educational attainment, and occupational level, irrespective of race.

The county differences (see Table 2) in the number and percentage of excess births, indicative of the need for family planning, also reflect differences in the social, economic, and educational characteristics of the population. Counties with high percentages of farm people have high percentages of excess births; and the large metropolitan and urban counties have relatively low percentages of excess births.

Greene County, an eastern North Carolina agricultural county, has the highest percentage of excess births. Practically all of the other counties ranking high in excess births are also found in eastern North Carolina.

Among white mothers the highest percentages of excess births are found in the rural mountain counties. Stanly, Onslow, and Chowan counties.

The data presented in this issue of the **News Letter** are of great significance from the point of view of developing an effective family planning program. Since nearly all babies are now delivered by physicians in hospitals, the counseling of mothers needing family planning and clinical services can most effectively be carried out by physicians and other professional health personnel at the time a mother is having either an unwanted or a higher order birth. Unfortunately, very few hospitals and physicians (except at the three medical schools in North Carolina) have developed effective programs for guiding mothers in modern family planning practices.

Since these data apply only to women at child birth, we must not overlook the fact that many women who do not give birth to a child during any particular year may also be in need of family planning. However, by combining data on births by age of mother and birth order for several years, a more complete picture of the overall need for family planning in a county can be derived.

A complete program of family planning in any county involves also a consideration of the social, educational and economic status of the county's population. Many counties now have local family planning committees; and they work closely with the health and welfare departments. However, a survey of family planning programs in the counties shows that health and welfare departments simply do not have an adequate supply of health personnel to do the kind of job required.

More effective family planning, in both public and private programs, will help to: (1) raise the level of living; (2) improve the health of both mothers and children; and (3) improve the overall quality of life—the human dividend—for all North Carolinians.

Man and His Environment

Economic factors are more important than population growth in threatening the quality of American life.

Ansley J. Coale

The way our economy is organized is an essential cause, if not *the* essential cause, of air and water pollution, and of the ugly and sometimes destructive accumulation of trash. I believe it is also an important element in such dangerous human ecological interventions as changes in the biosphere resulting from the wholesale use of inorganic fertilizers, of the accumulation in various dangerous places such as the fatty tissue of fish and birds and mammals of incredibly stable insecticides. We can properly attribute such adverse effects to a combination of a high level of economic activity and the use of harmful technological practices that are inconsistent with such a high level.

The economist would say that harmful practices have occurred because of a disregard of what he would call *externalities*. An externality is defined as a consequence (good or bad) that does not enter the calculations of gain or loss by the person who undertakes an economic activity. It is typically a cost (or a benefit) of an activity that accrues to someone else. A fence erected in a suburban neighborhood for privacy also affords a measure of privacy to the neighbor—a cost or a benefit depending on how he feels about privacy versus keeping track of what goes on next door. Air pollution created by an industrial plant is a classic case of an externality; the operator of a factory producing noxious smoke imposes costs on everyone downwind, and pays none of these costs himself—they do not affect his balance sheet at all. This, I believe, is the basic economic factor that has a degrading effect on the environment: we have in general permitted economic activities without assessing the operator for their adverse effects. There has been no attempt to evaluate—and to charge for—externalities. As Boulding says, we pay people for the goods they produce, but do not make them pay for the bads.

To put the same point more simply: environmental deterioration has arisen to a large extent because we have treated pure air, pure water, and the disposal of waste as if they were free. They cannot be treated as free in a modern, urban, industrial society.

There are a number of different kinds of policies that would prevent, or at least reduce, the harmful side effects of some of our economic activities, either by preventing or reducing the volume of the harmful activity, or by inducing a change in technique. Other policies might involve curative rather than preventive steps, such as cleaning up trash along the highways, if we cannot prevent people from depositing it there.

Among the possibilities are steps that would make externalities internal. An example that I find appealing, although it is perhaps not widely practical, is to require users of flowing water to take in the water downstream of their operation and discharge it upstream. A more general measure is to require the recycling of air or water used in industrial processes, rather than permitting the free use of fresh water and clean air, combined with the unmonitored discharge of exhaust products.

Public authorities can charge for unfavorable external effects by imposing a tax on operations that are harmful to the environment. The purpose of such taxes is to reduce the volume of adverse effects by inducing a shift in technique or by reducing the volume of production by causing a rise in

The author is director of the Office of Population Research at Princeton University, Princeton, New Jersey 08540. This article is adapted from a talk given 19 March 1970 at a symposium devoted to "Man and Environment" at the University of North Carolina, Chapel Hill.

price. Also, the tax receipts could be used to pay for mitigating the effect. An example of a desirable tax is one imposed to minimize the use of disposable cans and bottles for soft drinks and beer. Not long ago the majority of manufacturers produced these commodities in containers that were to be returned. The producer offered a modest price for returning bottles as an inducement. It has proven cheaper to use disposable glass bottles and cans; recently aluminum cans have rapidly increased in popularity, substituting a container that lasts indefinitely for the tin cans that would sooner or later rust away. Everyone is familiar with the resultant clutter on beaches, in parks, and along the highways. If a tax of 10 cents per unit were imposed on each disposable container, it would clearly be cheaper to go back to returnables. If some manufacturers found it advantageous to pay the 10-cent tax, the receipts could be used to pay for cleaning up highways and beaches.

Another approach that would induce people to give up economic activities with harmful effects on others is to make individuals and corporations financially liable for any damage caused by their operations. The resultant litigation would be an unwarranted windfall for lawyers, but financial liability might be a very potent factor in reducing pollution.

There is general agreement that our knowledge of what affects the environment is wholly inadequate. Because of inadequate monitoring and measurement, we do not know what is happening to the atmosphere or the biosphere; we need research to keep track of what is going on as well as to develop the techniques that will produce the goods we want with fewer of the bads we do not want.

An Economist's Review of Resource Exhaustion

One of the questions most frequently raised about the environmental effects of modern life is the rapid and rising rate of extraction of raw materials. Are we running out of resources?

I would first like to note that the distinction between renewable and nonrenewable resources is not a clear one. There are, of course, instances of nonrenewable resources in the form of concentrated sources of energy, such as the fossil fuels. These are reservoirs of reduced carbon embodying radiant energy from the sun that accumulated over many thousands of years. When these fuels are used, the energy that is released is to a large extent radiated into space, and we have no way of reclaiming it. The geological processes that are constantly renewing the fossil deposits of carbon are so slow compared to the rate at which we are burning the fuels that the designation "nonrenewable" is appropriate.

On the other hand, when we think of our resources of such useful materials as the metallic elements of iron, copper, nickel, lead, and so forth, we should realize that spaceship Earth has the same amount of each element as it had a million years ago, and will have the same amount a million years from now. All we do with these resources is to move them around. The energy we use is lost, but the minerals we find useful are still with us. It does not pay to recycle these minerals (that is to use them repeatedly by reclaiming scrap) because the deposits of minerals in the ground or in the ocean are still such a cheap source. It must be noted that the mining of fresh ore is cheaper than the use of scrap in part because miners are not charged for their "externalities." If harmful by-products of mining could not be discharged into streams, if mine tailings were regulated, and erosion-producing or even unesthetic practices forbidden, minerals would be more expensive and recycling more attractive. In the production of any metallic element, the easier sources are exploited first. As mining gets more difficult, the ore gets more expensive, and recycling becomes more nearly competitive. It seems wholly probable that the technology of recycling will be improved.

The surprising fact is that raw materials are not at the moment very costly, and moreover their cost relative to the cost of finished goods has not been increasing. The gross national product in the United States is more than $4500 per capita and the raw materials component per capita is less than $100. The price of raw materials relative to the price of finished goods is no higher now than at the beginning of the century, and if we were running out of raw materials, they would surely be rising in relative expensiveness. A prominent exception is saw lumber, which is substantially more expensive relative to the cost of finished wooden products than it used to be.

The reason that the future of our resource situation always seems so bleak and the past seems quite comfortable is that we can readily construct a plausible sounding estimate of the future demand for a particular raw material, but cannot form such a plausible picture of the future supply. To estimate the future demand, we need merely note the recent trends in the per capita consumption of whatever it is we are concerned about, utilize whatever plausible projection of population we are prepared to accept, multiply the two together and project an astonishingly high rate of usage 50 years in the future. If this demand does not seem overwhelming, we need only make a projection 100 years in the future. What we cannot so readily foresee is the discovery of new sources and of new techniques of extraction, and, in particular, the substitution of other raw materials or the substitution of other industrial processes which change the demand away from the raw material we are considering. Hence it can always be made to appear that in the future we are going to run out of any given material, but that at present we never have.

It is possible to set plausible limits to the stores of fossil fuels that we are likely to discover, and with the very rapid rise in the use of these fuels they will surely become more expensive in some not too distant time. It should be noted, however, that we will not suddenly "run out" of fossil fuels. Long before the last drop of oil is used, oil will have become much more expensive. If gasoline were $5 or $10 a gallon, we would utilize it much more sparingly, with small economical automobile engines, or perhaps the substitution of some non-petroleum-based fuel altogether. In fact, the principal user of our petroleum deposits may be the petrochemical industries. I have given this special attention to fossil fuels because there is no substitute in prospect for such fuels in small mobile units such as automobiles. On the other hand, the supply of overall energy seems to pose no problem. There seems to be ample fissionable material to supply rising energy needs for many centuries, if breeding reactors are perfected. If fusion proves a practical source, the supply of energy can properly be considered limitless.

Another aspect of the relation of the United States economy to resources that is much publicized today is the

fact that we are consuming such a large fraction of the current annual extraction of raw materials in the world. A much quoted figure is that 6 percent of the world's population is using 30 percent of the resources. It is concluded from figures such as these that we are robbing the low-income countries of the world of the basis of their future prosperity—that we are using up not only our resources, but theirs as well. Most economists would find this a very erroneous picture of the effect of our demand for the raw materials extracted in the less developed parts of the world. The spokesmen for the less developed countries themselves constantly complain about the adverse terms of trade that they face on world markets. The principal source of their concern is the low price of raw materials and the high price of finished goods. The most effective forms of assistance that the developed countries (including the United States) give to the less developed countries are the purchases they make from the less developed countries in international trade. A developing country needs receipts from exports in order to finance the purchase of the things they need for economic development. For example, in order to industrialize, a nonindustrialized country must for a long time purchase capital equipment from more advanced countries, and the funds for such purchases come from exports—principally of raw materials. Economists in the developing countries feel that the demand for raw materials is inadequate. Perhaps the most important adverse effect of slowing down the growth of the gross national product in the United States would be that it would diminish the demand for primary products that we would otherwise import from the less developed countries. After all, if a developing country wants to retain its raw materials at home, it can always place an embargo on their export. However, it would be a policy very damaging to economic progress of that very country.

Note that the effect of our high demand for raw materials is a different matter from the desirability of the domestic control of mineral resources within the developing countries. Selling oil on the world market provides immense economic advantages to a developing country. Whether foreign interests should be represented in the extraction of raw materials is another question.

Population Growth in the United States

I shall begin a discussion of populaton with a brief description of recent, current, and future population trends in the United States. Our population today is a little over 200 million, having increased by slightly more than 50 percent since 1940. I think it is likely to increase by nearly 50 percent again in the 30 years before the end of the century.

This rate of increase cannot continue long. If it endured throughout the next century, the population would reach a billion shortly before the year 2100. Within six or seven more centuries we would reach one person per square foot of land area in the United States, and after about 1500 years our descendants would outweigh the earth if they continued to increase by 50 percent every 30 years. We can even calculate that, at that rate of increase, our descendants would, in a few thousand years, form a sphere of flesh whose radius would, neglecting relativity, expand at the velocity of light.

Every demographer knows that we cannot continue a positive rate of increase indefinitely. The inexorable arithmetic of compound interest leads us to absurd conditions within a calculable period of time. Logically we must, and in fact we will, have a rate of growth very close to zero in the long run. The average rate of increase of mankind from the inception of the species until the present is zero to many decimal places. If we agree that 10,000 years from now we can have no more than one person per square foot, and that the population of the world will at a minimum exceed that of Richmond, Virginia, we can say that the average annual growth of population will be within one per thousand of zero.

The only questions about attaining a zero rate of increase for any population is when and how such a rate is attained. A zero rate of increase implies a balance between the average birth and death rates, so the choice of how to attain a zero rate of increase is a choice between low birth and death rates that are approximately equal. The average growth rate very near to zero during mankind's past history has been attained with high birth and death rates—with an average duration of life that until recently was no more than 30 or 35 years. I have no difficulty in deciding that I would prefer a zero rate of growth with low rather than high birth and death rates, or with an average duration of life in excess of 70 years, as has been achieved in all of the more advanced countries of the world, rather than the life that is "nasty, brutish, and short." The remaining question then is *when* should our population growth level off.

A popular answer today is "immediately." In fact a zero rate of increase in the United States starting immediately is not feasible and I believe not desirable. The reason is the age composition of the population that our past history of birth and death rates has left to us. We have an especially young population now because of the postwar baby boom. One consequence is that our death rate is much lower than it would be in a population that had long had low fertility. That is, because our population is young, a high proportion of it is concentrated in ages where the risk of mortality is small. Therefore, if we were to attain a zero growth rate immediately, it would be necessary to cut the birth rate about in half. For the next 15 or 20 years, women would have to bear children at a rate that would produce only a little over one child per completed family. At the end of that time we would have a very peculiar age distribution with a great shortage of young people. The attendant social and economic disruptions represent too large a cost to pay for the advantages that we might derive from reducing growth to zero right away.

In fact, a more reasonable goal would be to reduce fertility as soon as possible to a level where couples produced just enough children to insure that each generation exactly replaced itself. If this goal (early attainment of fertility at a replacement level) were reached immediately, our population would increase 35 to 40 percent before it stabilized. The reason that fertility at the mere replacement level would produce such a large increase in population is again the age distribution we have today. There are many more people today under 20 than 20 to 40, and when the relatively numerous children have moved into the childbearing ages, they will greatly outnumber the persons now at those ages, and when the current population under age 20 moves into the old ages, they will be far more numerous than the people now at the old ages. Thus to move the population to replacement would be to insure approximately that the number of children

under 20 will be about the same as it is today, but that the number above that age will be substantially higher. The net effect is the increase of 35 to 40 percent mentioned just above. It is the built-in growth in our age composition that led me to state earlier that I think an increase in the order of 50 percent of the U.S. population is not unlikely.

A sensible choice in reducing our growth rate to zero then is between early or late attainment of fertility at the replacement level. Is there any reason that we should not attempt to attain a fertility at replacement as soon as possible? My own opinion is that an early move in that direction is desirable, but for the sake of completeness, I must point out that there is a non-negligible cost associated with attaining a stationary population—the population that will exist with fertility at replacement after the age distribution left over from the past has worked out its transitory consequences.

A stationary population with the mortality levels that we have already attained has a much older age distribution than any the United States has ever experienced. It has more people over 60 than under 15, and half the population would be over 37 rather than over 27, as is the case today. It would be an age distribution much like that of a health resort.

Moreover, if we view the age pyramid in the conventional way, with the number of males and females being drawn out as in the branches of a Christmas tree (age representing altitude of the tree) the pyramid for the stationary population is virtually vertical until age 50 because of the small number of deaths under the favorable mortality conditions we have attained. In contrast, the age distribution of the United States to date has always tapered more or less sharply with increasing age. The stationary population with its vertical sides would no longer conform in age composition to the shape of the social structure—to the pyramid of privilege and responsibility. In a growing population, the age pyramid does conform, so there is a rough consonance of shape between diminishing numbers at higher ages and the smaller number of high positions relative to low positions. In a stationary population there would no longer be a reasonable expectation of advancement as a person moves through life. I have indicated that sooner or later we must have a stationary population, so that sooner or later we must adjust to such an age composition. I am pointing to this disadvantage to show that there is a choice between moving more gradually to a stationary population at the expense of a larger ultimate population size in order to continue to enjoy for a longer time the more desirable age distribution of a growing population.

Connection between Population and Pollution

The connection between the current growth in our population and the deterioration of our environment of which we have all become aware is largely an indirect one. The problem has arisen because we are permitting the production of bads (pollution, or negative externalities) along with goods. There seems little doubt that the rapid increase in the production of goods has been responsible for the rapid increase in the production of bads, since we have made no effective effort to prevent the latter from accompanying the former. But per capita increase in production has been more important than population growth. It has been calculated that if we were to duplicate the total production of electricity in the United States in 1940 in a population enjoying the 1969 per capita usage of energy, the population could be only 25 million rather than 132 million people there were in 1940. Population has increased by 50 percent, but per capita use of electricity has been multiplied several times. A similar statement can even be made about the crowding of our national parks. The population has increased by about 50 percent in the last 30 years—attendance in national parks has increased by more than 400 percent.

A wealthy industrial urban population of 100 million persons would have most of the pollution problems we do. In fact, Sydney, Australia, has problems of air and water pollution and of traffic jams, even though the total population of Australia is about 12 million in an area 80 percent as big as the United States. Australia is actually more urbanized than the United States, in spite of its relatively small population and large overall area.

If we have the will and intelligence to devise and apply proper policies, we can improve our environment and can do so either with the current population of 200 million, or with the population that we will probably have in another 50 years of 300 million. On the other hand, if we ignore environmental problems and continue to treat pure air and water and the disposal of trash as if they were free, and if we pay no attention to the effects of the techniques that we employ upon the balance of nature, we will be in trouble whether our population grows or not. There is no doubt that slower population growth would make it easier to improve our environment, but not much easier.

Policies That Would Affect the Growth of Population

We must, at some time, achieve a zero rate of population, and the balance should surely be achieved at low birth and death rates rather than at high rates. If, as at present, only about 5 percent of women remain single at the end of the childbearing span, and if 96 percent of women survive to the mean age of childbearing, and if finally the sex ratio at birth remains about 105 males for every 100 females, married couples must have an average of about 2.25 children to replace themselves. What kinds of policies might be designed to assure such a level of fertility or, more generally, to produce the fertility level that is at the moment socially desirable?

I begin with a set of policies that are consistent with general democratic and humanitarian principles, although a minority of the population would oppose them on religious grounds. These are policies that would, through education and the provision of clinical services, try to make it possible for every conception to be the result of a deliberate choice, and for every choice to be an informed one, based on an adequate knowledge of the consequences of bearing different numbers of children at different times. A component of such a set of policies would be the development of more effective means of contraception to reduce the number of accidental pregnancies occurring to couples who are trying to avoid conception. These are policies that call for a substantial government role and I think that an effective government program in these areas is already overdue. I personally believe that education in the consequences of childbearing and in the techniques of avoiding preg-

nancy, combined with the provision of contraceptive services, should be supplemented by the provision of safe and skillful abortion upon request. It is clear that the public consensus in favor of abortion is not nearly as clear cut as that in favor of contraception, and I know that the extent and the strength of the moral objection to induced abortion is much greater. Nevertheless, I am persuaded by experience in Japan and eastern Europe that the advantages of abortion provided under good medical auspices to cause the early termination of unwanted pregnancies are very important to the women affected, as is evident in the fact that when medically safe abortion has been made available at low cost, the number of abortions has initially been as great or greater than the number of live births. Later there is a typical tendency for women to resort to contraception rather than repeated abortions.

The reason I favor abortion is that such a high proportion of births that occur today are unwanted, and because a large number of desperate pregnant women (probably more than a half a million annually) resort to clandestine abortions today, with high rates of serious complications. In contrast, early abortion, under skilled medical auspices, is less dangerous than tonsillectomy, and substantially less dangerous than carrying a child to full term.

N.C.? In recent years the number of births that were unwanted in the United States constituted about 20 percent of the total (an unwanted birth was defined as one in which the woman said that conception occurred either as a result of a failure of contraception or in the absence of contraception but without the intent to become pregnant as soon as possible, when at the time the conception occurred the husband or wife or both did not want another child then or later). The rate at which women are having children today would lead to a completed family size of slightly under three children. If all unwanted births were eliminated, the number of children born per married woman would be about 2.4 or 2.5 on average. This is very little above replacement, and when allowance is made for the likely possibility that women understated the proportion of births that were unwanted, it is probable that the elimination of unwanted births would bring a fertility at or below replacement.

If it is true that the elimination of unwanted pregnancies would reduce fertility very nearly to replacement, it must be conceded that this outcome is fortuitous. It is highly unlikely that over a substantial period of time the free choice by each couple of the number of children they want would lead exactly to the socially desirable level of fertility. The erratic behavior of fertility in America and in other advanced industrialized countries in the last 30 or 40 years is ample evidence that when fertility is voluntarily controlled, the level of fertility is subject to major fluctuations, and I see no logical reason to expect that on average people would voluntarily choose a number of children that would keep the long-run average a little above two per couple. In other words, we must acknowledge the probable necessity of instituting policies that would influence the number of children people want. However, there is no need for haste in formulating such policy, since, as I have indicated, improved contraceptive services combined with a liberal provision of abortion would probably move our fertility at present quite close to replacement, and a gradual increase in population during the next generation would not be a major addition to the problems we already face.

Policies intended to affect people's preferences for children should be designed within the framework of our democratic traditions. They should be designed, for example, to encourage diversity and permit feedom of choice. An average of 2.25 children does not require that 75 percent of couples have two children and 25 percent three, although that would produce the desired average. Another possibility is a nearly even division of family size among zero, one-, two-, three-, four-, and five-child families. The ideal policy would affect the decision at the margin and not try to impose a uniform pattern on all. I do not think that people who prefer to have more than the average number of children should be subject to ridicule or abuse.

It is particularly difficult to frame acceptable policies influencing the number of children that people want. While it is still true that so many large families result from unwanted pregnancies, the unwanted child that is the most recent birth in a large family already faces many deprivations. The psychological disadvantages of the unwanted child cause some of our most serious social problems. In addition to these psychological disadvantages, the unwanted child in a large impoverished family faces an inadequate diet, much below average chances for schooling, and generally inferior opportunities. I hardly think it a wise or humane policy to handicap him further by imposing a financial burden on his parents as a result of his birth.

When unwanted births have become negligible in number, we could imagine trying to design a policy in which the couple is asked to pay some part of the "externalities" that an additional birth imposes on society. In the meantime, I suggest as a desirable supplement to better contraception and free access to abortion the extension of more nearly equal opportunities in education and employment for women, so that activities outside of the home become a more powerful competitor to a larger family. We should start now devoting careful attention to formulation of policies in this area—policies that could increase fertility when it fell too low as well as policies to induce people to want fewer children.

Some aspects of the deterioration of our environment appear to be critical and call for prompt action. We need to start now to frame and apply actions that would arrest the careless destruction of the world in which we live. We also need policies to reduce promptly the incidence of unwanted births. In the long run we shall also need ways to influence the number of births people want. To design policies consistent with our most cherished social and political values will not be easy, and it is fortunate that there is no valid reason for hasty action.

International Conference

POPULATION PRIORITIES AND OPTIONS FOR COMMERCE AND INDUSTRY, 1970-2000

The Carolina Population Center

UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL, OCTOBER 22-23, 1970

COMMITTEE

To All Conference Speakers and Participants:

We have been receiving a number of inquiries as to whether wives of conference speakers and participants may join their husbands for scheduled meals and some or all of the conference sessions. We appreciate this expression of interest and are sorry to advise that we cannot open the conference to everyone who has an interest in attending.

The conference has been planned as a closed, working conference. Participants will be assigned to discussion groups which will remain constant throughout the conference, including meal hours. Groups will be seated at specified, individual tables during sessions and meals. Except for the opening night banquet to which we are inviting wives of conference speakers as one expression of our appreciation for their participation, there will be no way in which we can easily accommodate interested persons other than participants and speakers without changing the conference format. We remain hopeful that we may find a way to set up a limited number of chairs at the rear of the ballroom to accommodate wives who may wish to observe some of the sessions.

We do hope all wives will attend the Wednesday night preview of the Soleri exhibit at the Ackland Gallery.

"Role of Industrialists in Family Planning"

by S. P. Godrej

Population Crisis a World Syndrome

It is but appropriate that the Pearson Commission Report, hailed as a milestone in international economics, should have laid particular emphasis on the imperative need for population planning. According to the Commission, "there can be no serious social and economic planning unless the ominous implications of uncontrolled population growth are understood and acted upon." "No other phenomenon," the Commission adds, "casts a darker shadow over the prospects for international development than the staggering growth of population."

The Commission further emphasises that the population problem will not just disappear. It will be resolved either by sensible solutions or senseless suffering. If we want a sensible solution, with a corresponding enhancement of the quality of life for hundreds of millions of children as well as for their parents, then we must get on with the job at hand. The prospects for the success of family planning throughout the world are rated promising and dubious at the same time: promising, if we do what in fact can be done, as Japan has so successfully shown; dubious, if in fact we continue as we are.

The misery in the underdeveloped world is reflected in the low life-expectancy and high infant-mortality rates and large-scale starvation, malnutrition, illiteracy and unemployment. The gap between the per capita income of the rich nations and the poor nations is widening. At the extreme, the gap is already more than $3,000. Present projections indicate that it may well widen to $9,000 by the end of the century. In the year 2000, the per capita income in the U.S.A. in terms of today's prices is expected to be approximately $10,000, in Brazil $500 and in India $200.

To maintain even subsistence levels, it is estimated by the Food and Agricultural Organisation that the total food supplies of developing countries will have to be increased by 75% over the period 1965-1980 and by 225% over the period 1965-2000. In the words of U Thant, U.N. Secretary-General, "on present showing there simply is not in prospect a growth in agricultural production sufficient to accommodate this rising flood of people."

Of late, of course, there has been a growing realisation of the disastrous implications of unchecked population growth. It is significant that out of 163 countries in 5 continents surveyed by the International Planned Parenthood Federation (IPPF), 30 have government-sponsored programmes, and 24 governments give support to family-planning programmes. As a result,

about 30% of the world population is covered by government-sponsored programmes alone. Among the international agencies, the World Bank, under the dynamic leadership of President McNamara, the U.N. Population Division, UNDP, UNESCO, WHO, FAO, ILO, UNICEF, and OECD have all expressed their wilingness to participate in population-planning activities. The U.N. Economic and Social Council has proposed 1974 as World Population Year.

International Conferences such as this one also influence public opinion in the right directions. When I attended the International Planned Parenthood Federation Conference in Tunis in November 1969, with Mr. Naval H. Tata, an eminent Indian industrialist and a specialist on labour welfare, it was inspiring to see a distinguished international gathering of social workers, scientists, and sociologists seriously grappling with the problem, and to know how opinion-leaders can give the right lead to their people.

While these developments are heartening, it must be emphasised that the task is difficult for many reasons, but primarily because of its sheer overwhelming size. Consider the magnitude of the factors involved; there are dozens of countries plagued with the problem - each of them different, each of them possessing its own set of social and cultural traditions and structures.

Let us take the example of India.

The Indian Experience

When we take a discerning look at the present situation in India, it appears, on the one hand, somewhat gratifying, and, on the other, terribly alarming. The consoling feature is that the Government of India has taken up the cause of family planning and the public is becoming generally more receptive to the concept. India has the largest organised family-planning programme in the world and there is no doubt that, if it is successful in the near future, it will have a most dramatic effect in Asia and elsewhere.

The Family Planning Assoication of India, a voluntary organisation, under the leadership of Lady Rama Rau and now Mrs. Avabai B. Wadia, pioneered the work in this field and is expanding its action-programmes for family planning as well as introducing population education for the younger generation. Institutes such as the Central Family Planning Institute in New Delhi headed by Dr. S.K. Rao, the International Institute of Population Studies in Bombay, whoe Director is Dr. S.N. Agarwala, the Gandhigram Rural Institute directed by Dr. Runganadhan, and other demographic centres in different parts of the country, are making important contributions in the field of research. The Population Council of India which was recently formed will provide an additional research and advisory component for all aspects of population.

The tragic part is that we have made a very late start in this endeavour. Though India attained freedom over 23 years ago, and systematised economic planning was started within three years after Independence, earnest efforts in the field of family planning began hardly 5 or 6 years back -- the actual application of the extension technique in the educational programme on a wide scale came about only during 1963-64 -- with the result that we are now faced with a veritable "population explosion" which has eroded the gains of our development.

Our problem is really stupendous. We accommodate 14% of the world's population on only 2.4% of the world's land area and sustain it on 1.5% of the world's income! On top of it all, every year 13 million people -- the total population of Australia -- are being added. If fertility is unchecked, the total population will reach 841 millions in 1985 and 1,000 millions in 1991.

The rate of growth in our production, industrial as well as agricultural, just cannot keep pace with this astounding growth in population. Consequently, our development programmes are neutralised or even retarded. To take an example, the figure of the unemployed figure was 3.5 million in 1951-52 and is now over 12 millons, in spite of the 35 million or so new jobs created during this period. To take the example of education, in 1950-51 the total number of children going to school was 23 million; today it is 67 million, but the number of children wanting school facilities has far outspaced the opening of new schools. Similarly, while India's net national income at constant prices increased by 69% between 1951 and 1969, the per capita income increased by only 21% during the period.

Even the flora and fauna of the country -- among the main tourist attractions -- are being destroyed by the unchecked population growth. Tourism is a valuable foreign exchange earner for India.

According to a number of demographers and economists, who have worked out the cost of raising a child and the burden of it on the national economy, India can afford to pay an incentive as high as $670 per person for sterilisation because, in terms of the gains to the national economy, such an investment would pay high dividends.

The magnitude of the problem can be gauged from the fact that the family planning campaign has to be carried out throughout 570,000 villages and 2,700 towns and cities, with a target audience of approximately 100 million couples, spread over an area of 1.26 million square miles, speaking at least sixteen major languages and having little income or education.

Considering the monumental task before us, it is obvious that a multi-sided effort is needed on the part of Government, voluntary organisations and industry to make any headway. There is also need for a high level of co-ordination in the activities of organisations connected with family planning and those engaged in other social work. These problems are inter-linked.

If family planning were carried out on a large scale, there would be less mentally-handicapped, blind, malformed and under-nourished babies. Being an industrialist keenly interested in the implementation of the family-planning programme in India, I shall confine this paper to the role of industrialists.

Vital Role of Industrialists

Over twenty years ago, my father, Mr. P.B. Godrej, had warned about the dangers of unbridled population growth. But businessmen and officials, generally speaking, deemed family planning as something not worthy of their consideration and would not provide time for considering this vital subject at conferences. Industrialists, in their concern for the economic development of the country, rightly lay emphasis on the promotion of exports and mechanisation of agriculture, the otherimportant tasks on hand. But we industrialists should realise that the root of all evils is the runaway population growth.

Taxation, for example, is a very heavy burden on industries and it could be less heavy if the population is checked and the fruits of development become tangible.

Similarly, if the national economic growth rate is 5% and the population growth rate is 2.4%, the per capita income, miserably low as it is in India and other under-developed areas, would not even double by the end of this century. Unless the per capita disposable income increases, the effective demand will not increase and, consequently, industries will not thrive. To put it differently, there may be an increase in the demand for goods without the requisite increase in purchasing power. This would result in inflation and shortages, bringing in all the concomitant ramifications of rationing, government controls, legislative action and other tethers on the economy.

The relationship between the home conditions of employees and their productivity is also important. An employee who is constantly harrassed by the hard realities of providing for a large family simply cannot function as an efficient worker. Similarly, though the percentage increase in food production in our country has not been less than that of other countries, the per capita food availability has actually been going down. This has resulted in malnutrition and could affect the brains of children and has had an adverse effect on labour productivity.

Though wages have increased by 33% to 100% in many industries during the last 10 years, there has not been any significant rise in the standard of living. In an era of rising expectations, such a situation creates an alarming chain-reaction of discontent as demonstrated by the ever-increasing cases of strikes, lock-outs, and violence, resulting in loss of production. Even if ultimately labour demands are conceded, the inflationary trend is further accentuated, causing more economic distress. This vicious circle is a manifestation of the basic law of demand and supply, of a perpetual race between the number of people needing goods and services and the quantum of output. This general economic distress, as also the colossal problem of unemployment, are thus potential sources of mass upheaval affecting industrial harmony and industrial production.

Therefore, even from the point of view of enlightened self-interest, it is imperative that industrialists should take up the cause of family planning.

Now let us look at it from the point of view of the effectiveness of the industrial sector. The problem is not so much the reluctance or aversion of parents to practise birth-control as their inability to do so due to sheer ignorance or the feeling of insecurity. The concept has to reach down to the lower rungs of the social ladder. And, since industrial workers form a sizeable chunk of the lower strata of society, it is the industrial units to which they are attached that can play the most effective role.

Another advantage of educating the industrial workers community is that industries are situated largely in urban areas and so the workers are already exposed to several influences pressing them towards a change in their usual attitudes and behaviour patterns. They are faced with the stresses and strains of urban life. Exposure to mass-communication media creates new needs and aspirations. In such circumstances, a favorable situation is

created for them to accept family planning as a way of life.

Moreover, industrial workers are the pace-setters for rural folk. As Mr. Asoka Mehta, a former Central Government Minister for Planning, put it, "we must remember that industrial workers will continue to have intimate contact with people in rural areas. What they learn here in the city, they will communicate to their friends and relatives in the village. One of the most promising ways of spreading the message in the hinterland is to get the urban workers involved in the Family Planning Programme."

What is most important, industrial and commerical establishments can have greater flexibility in formulating and implementing programmes and in evaluating and choosing alternatives than any bureaucratic entity. This is a crucial factor. Bureaucracy in any country is of necessity slower than private initiative and enterprise. The leadership and resources that the family planning programme requires so badly can be provided best by industrialists. One can take the cue from the Japanese experience, where industrial units and newspaper groups have played, and are still playing, a leading role in propagating family planning. The result is there for all to see. The birth rate was cut by half within 10 years (from 3.35% in 1947 to 1.7% in 1957) and has remained at 1.7% since then.

Therefore, the population problem is not just a "government-problem." It is a national problem pervading the entire cross-section of the country. And, for industrialists, active participation in family planning is both an economic necessity and a social obligation.

Industrialists' Growing Awareness

Some enlightened employers have taken serious note of this complex problem and have taken steps to provide family-planning facilities to employees and their families. Many industrial organisations are making efforts to formulate systematic programmes. Extensive programmes have been launched in major cities like Bombay, Calcutta, Delhi, and Madras. The Family Planning Association of India is running family-planning services in 126 industrial units in Bombay, covering a worker-population of 117,500. Notable among the companies which have well-set family-planning programmes are the Tata organisation, the Hindustan Spinning and Weaving Mills, Bombay Dyeing and the T.V.S. group in Madras. Tatas have had exceptionally good results. Out of a total of 110,000 permanent employees, 18,600 have been sterilised. The tea estates of Assam and Bengal provide another striking example of a well-planned, intensive family planning programme for a "captive" audience.

According to a survey of "Family Planning Facilities in the Bombay-Thana Industrial Complex," conducted by the Family Planning Association of India in 1967, though family planning services were available in only 26.5% of the 230 units surveyed, the programmes in these units covered 52.6% of the 416,000 employees concerned, a sterilisation total of 25 per 1000 had been attained, and, what is more important, the managements were giving their workers time off to utilise the family planning services. Two-thirds of the units gave both incentives and leave with pay to those who underwent the sterilisation operation. 15% of the units offered special leave with pay. The incentives ranged between $2 and $40 and leave with pay between 2 and 7 days. Of the remaining units, 82% expressed the need for assistance from

agencies specialising in family-planning work to run or initiate suitable programmes for them.

This may not be a representative sample of the whole industrial sector, nor could its conclusions be used as a yardstick to measure the exact progress of family planning in all regions. All the same I am mentioning it as it illustrates the growing awareness of industrialists regarding this vital aspect of economic development.

Commercial organisations have helped in another big way. The most important component of India's nation-wide non-clinical contraceptive delivery system is the subsidised Commerical Distribution of Condoms (Nirodh) programme. Under this programme, 6 of India's largest and most experienced private consumer-goods marketing organisations are involved in the marketing of Nirodh, as a public service. The entire country is covered with each organisation serving as the primary distributor of Nirodh in a given region, and marketing the product through its regular network of wholesalers, retailers, and salesmen.

Realising the need for a non-governmental institutional set-up, Mr. J.R.D. Tata, Chairman of the Tata Group, and Mr. Bharat Ram, President of the International Chamber of Commerce, among others, have been instrumental in setting up the Family Planning Foundation which intends to promote population policies and population control measures by undertaking and financing various projects and programmes and by chanelling resources and information to persons and institutions involved in the execution of programmes pertaining to population control.

Chambers of commerce and trade associations can be key motivating agencies. In this regard, I would like to mention the pioneering work of the Federation of Indian Chambers of Commerce and Industry, Delhi, and the Indian Chamber of Commerce, Calcutta. A Co-ordinating Committee for Family Planning has been set up by the Indian Merchants' Chamber, Bombay. Both the Federation and the Indian Merchants' Chamber have also instituted awards for family planning, apart from those for export promotion, scientific research, and so on; and these have been handed over at specially organised functions by the Prime Minister and, shortly, the President of India is going to be the guest of honour at the Indian Merchants' Chamber at a special awards function.

Family Planning at "GODREJ"

In the Godrej organisation, a Family Planning Centre was opened in September 1957 as part of the Health Programme. It is administered by the Welfare Centre, "Pragati Kendra." In the initial stages, only family planning advice and conventional contraceptives at concessional rates were given. As the results were not very encouraging, emphasis was laid on sterilisation. The later landmarks were the opening of a family-planning exhibition in 1962, the setting up of a Vasectomy Centre in 1963, the founding of an IUCD Research Centre in 1965 in co-operation with the Indian Council of Medical Research, and the distribution of oral contraceptives from the following year.

The family planning programme in Godrej is implemented on a plant and departmental basis and covers all the 6,239 employees. About 130 employees (both workmen and supervisors) have till now been selected and given an orientation course for 3 days. Each of them is entrusted with

the task of contacting and motivating 40 men in their plant/department. Cash incentives are given to the persons undergoing the operation as well as to the motivator. A plant or department-wise meeting is held every month to evaluate the work done. Thus, family planning is practised right at the floor level. There are also meetings of those having more than 3 children. Suggestions are discussed thoroughly and implemented. Printed leaflets on family planning are enclosed in all the pay-packets. Direct restrictions such as in the allotment of housing, admission of children to our schools and advances against salary are also placed on those not following the family planning programme. In our recruitment policy, we have incorporated the idea that a person, no matter what his job is, should be committed to the concept of family planning. In general we have realised our expectations. Out of a work force of 6239, 1026 have been sterilised.

That family planning is proving successful at Godrej is further substantiated by the fact that the special motivation that workers required in the early stages is not needed now but the activity has not slackened. Those who are not prepared to take up new ideas also do so after some time because of the social pressures operating within the unit.

I would like to mention here the fact the "Godrej" received two awards from the Federation of Indian Chambers of Commerce and Industry for outstanding work in the fields of Industrial Relations and Family Planning. We are convinced that good industrial relations are co-related with the success of family planning, as it requires the cooperation of the management, the Union, and the workers. Hence, we make special efforts in allied directions also.

Adult literacy, and both general and sex education, are given due importance. By studying at the "Udayachal" co-educational schools and living in the housing colony, people of different classes and communities learn to live together harmoniously and eliminate the friction between the "sons of the soil" and "outsiders" which animosity, incidentally, is also an outgrowth of the population explosion. Enlightened education also helps in eradicating social inhibitions that thwart population-control measures.

Social surveys are carried out to find out if workers are living within their means and what they need to make them happier. Under the aegis of the Council for Social Development, a survey was recently carried out to gauge the impact of family planning. We feel that if a worker has a happy personal life, both production and productivity will increase.

One cannot view with equanimity a situation where there are islands of prosperity in an ocean of poverty. We are, therefore, planning to carry the message of birth control to the villages from where the workers come. The Tata organisation is doing pioneering work in this direction. I would suggest that, in order to propagate the concept in rural areas, mobile clinics with towns as their bases should tour the countryside bringing family planning to the doors of the villagers.

We are also doing our best to increase the recreational activities at "Godrej." In this context, I would like to mention that television should have been introduced on a national scale in India long ago mainly for the purpose of family planning. Besides being a powerful instrument for propaganda, it is also a recreational item which is what the workers need. Television, radio and other mass media should be galvanised for the purpose of family planning and more money should be spent on advertising and propaganda for family planning.

What Industrial Units Need to Do

Although a number of industrial houses in India have launched family planning programmes, it is painful to note that a sizeable number of units have not yet evinced sufficient interest in the venture. While some companies even pay substantial incentives from their own funds, in addition to what they get from the Government, others have not taken any advantage of the various facilities and incentives (including tax benefits) offered by the Government. What is needed, therefore, is strong motivation on the part of industrialists.

Actually, I do not see any reason why the establishment of family-planning facilities should be in any way difficult for industries. Every industrial unit has a medical and welfare set-up for its workers. Family planning has only to be appended to it. Family planning can make the required impact only if it forms part of the health programme.

From our own experience, and on the basis of the knowledge gained so far in other industrial units, I would strongly recommend the following programme to ensure the effective participation of the industrial sector in the family planning programme of various countries.

1. A course in family planning should be organised for leaders like union officials and others in various departments who command the respect of the workers.

2. Follow-up meetings of these trained leaders should be held at least once a month, or, preferably, a Family-Planning Committee should be formed with representatives from both management and labour. The committee should meet regularly to co-ordinate, guide and programme operations, assess the progress from time to time, keep track of the latest developments in the field in the country and abroad, lay down targets, set up specific programme objectives and agree on the methods for achieving the goals.

3. Small group meetings of workers having three or more children should be organised and special use should be made of audio-visual aids. The problem of population explosion should be explained by means of films, charts, graphs and posters . . . how economic development is lagging behind due to the ever growing population; the tragedy, drudgery and sufferings of a big and unplanned family; and the material benefits that accrue to a small, well-planned family.

There should be separate meetings for men and women as well as combined ones. Clear and accurate information about family planning methods, like vasectomy and tubectomy, should be given to employees to allay their misapprehensions.

4. Newly-weds and those about to get married should be made familiar with contraceptives for spacing births and to sell them the idea of the small family norm.

5. Apart from meetings, the following modes of communication would be most effective:

a) house journals;
b) film shows and entertainment programmes;

c) regular lectures, discussions and demonstrations;
d) exhibitions on health and family planning;
e) insertion in the pay-packets of all employees of simple literature on the essential nature of birth control and the advantages of a small family;
f) verbal propaganda, especially by trained leaders and Family Planning Committee members.

6. In the chairman's speeches, there should be special mention of family planning.

7. Information needed for planning and assessing the progress of the programme should be collected and maintained. The up-to-date data should include the total number of employees, their age, marital status and the number of living children; a special list of those having three or more children; and a list of those who have already accepted sterilisation or some other method of family planning.

8. The services available to the employees should include:

a) advice and guidance on family planning;
b) free availability of condoms and other contraceptives;
c) arrangements for vasectomy operations either as a regular service at the medical centre or through periodic camps;
d) arrangements for tubectomy services in a nearby hospital;
e) arrangements for IUCD insertions for female employees or wives of male employees;
f) proper follow-up care for those who accept IUCD or sterilisation.

The managements should encourage their employees to avail of these services by providing the necessary leave facilities.

9. Industrial units should avail of the assistance provided by the Government for setting up family planning centres.

10. Industrial units which can afford additional incentives in the form of cash or kind or service rewards should do so. Incentives should preferably be given on a sliding-scale basis, i.e., those who undergo sterilisation operations after three living issues should be given maximum benefit, after four issues a little less, after five or more still less.

11. Maternity benefits to female employees should be given only up to the birth of the third child and that too only once in three years; that is, at least three years' spacing between the births of the children should be maintained.

12. Restrictions of facilities and amenities could be enforced against all those who do not actively conform to the family planning programme. In their own and in the national interest employees should be made to realise the gravity of the situation. They must be made to feel that they have a say in this vital matter and are co-participants in this national endeavour.

13. Businessmen should publicly endorse family planning and support, financially and otherwise, research and pilot projects. They should also be associated with the family planning associations or councils in their countries. In the United States, for example, industrialists could associate themselves with the Carolina Population Center for coordinating their family planning programmes and for collecting and disseminating information.

Such a programme would, I am sure, go a long way in promoting family planning in the business sector and thereby act as a catalyst in the national endeavour to control population growth.

POPULATION, FAMILY PLANNING AND HEALTH: INVOLVEMENT OF A MAJOR INDUSTRIAL CORPORATION

Introduction

The press of problems associated with population growth is becoming more and more apparent with every passing day. In spite of its material affluence, the United States is running out of fresh air and drinking water, not to mention parking places for its superabundance of cars. Its people need better housing, education, and health care at prices they can afford to pay. These and other problems including food production, transportation, and even employment are likely to become even more serious as our population continues to expand.

Fortunately businesses have become increasingly aware of the magnitude of many of these problems and are beginning to invest their resources and talents in a variety of approaches to their solution. A primary reason, of course, is that the business sector expects much of its growth in the years ahead to come, not only from a continuing expansion of existing markets, but from the development of new markets stemming from human needs which business has not previously served, except in a peripheral way. Building materials, construction equipment, and contracting services, for example, will be needed to rehabilitate blighted neighborhoods. New individualized learning systems like Project Plan, modular multi-media instructional materials, and comprehensive textbooks and services to the classroom teacher, as well as to school administrators, will be required for the expansion and improvement of our schools. Managerial skills and administrative expertise will have to be provided to develop and operate effective service delivery systems whether they be for transportation, communication, or health care.

This is not to suggest that the profit motive is the exclusive or even the paramount concern of businessmen. Most able executives are motiviated by a strong sense of public responsibility just as much as they are by concern about an adequate return on their stockholders' investment.

Westinghouse Electric Corporation, for example, is convinced that its future depends on how well it meets the economic, social, and needs of people. To this end, Westinghouse and other companies like it have launched programs in such areas as urban planning and development, pollution control, transportation, housing, health care, education and training, and even crime prevention and the administration of justice. In most cases they have proven that they can assemble the resources needed to do a job rapidly, generally without the bureaucratic inertia which hampers government agencies, and at a lower total cost to the taxpayer.

The problem of population, however, is a much thornier subject and, as Robert S. McNamara once described it, one which "it would be very much more convenient to leave alone."[1] Neither government nor the rest of the nonbusiness sector reached any kind of agreement on the nature of the problem, let alone the kinds of solutions that should be sought. In the absence of such a consensus, the lack of any significant business involvement is not surprising. Undoubtedly a great deal of public concern about the population problem is reflected in the increased interest in and support for family planning. As recently as eleven years ago, President Eisenhower was able to state categorically that family planning did not fall within the province of government. By the mid-1960's, however, the official government position had changed to one of token support for family planning programs within the United States. Now the situation is such that support for family planning is necessary and millions of tax dollars are specifically earmarked for family planning activities. Family planning has been officially designated as a high-priority domestic program; a "National Center for Family Planning" has been established as a separate office within the Department of Health, Education and Welfare, and some state and local health departments are moving to set up programs designed to meet the family planning needs of the communities they serve.

---

1 Address of Robert S. McNamara to the Board of Governors, World Bank. Washington, D. C., September 30, 1968.

A recognized impetus behind these major shifts in policy, of course, has been a widespread popular recognition of the relationship between population growth and many of the other problems which beset our society. Even more significant has been the increasing concern of society for the health and well being of its members and the recognition that the unwanted and unplanned growth of families can be detrimental to maternal and child health, to the emotional health of the family, and to its stability as a social and economic unit.

Widespread popular support coupled with federal funding and a shortage of skilled and experienced personnel within government fostered involvement by the business sector. Among the first to respond was Westinghouse Learning Corporation (WLC), a wholly-owned subsidiary of Westinghouse Electric Corporation, established in 1967 to bring together the resources and expertise needed to expand an already sizeable corporate effort in education and training.

This early involvement was possible since WLC found among its full-time staff skills ranging from systems engineering and physical sciences through the humanities, education, anthropology, behavioral and social psychology, economics, linguistics, and political science, as well as business administration and public health. In addition, WLC found it could employ the services of specialists in other fields from the nation's leading universities and research centers to consult, administer, and instruct as needed in specific programs and special projects.

Although the primary emphasis of most of its earlier activities had been in formalized education and training, WLC found that bringing together the best available human resources within a carefully designed and managed administrative framework could provide instructive technical assistance in family planning, a field in which both technical assistance capabilities and expertise in education and training were in short supply.

Technical Assistance Activities in Support of Family Planning Programs

At the present time, WLC provides technical assistance and special services to family planning programs administered or supported by two federal agencies, the Office of Economic Opportunity (OEO) and the Department of Housing and Urban Development (HUD).

In OEO programs, there is frequently a need for highly competent consultants in such areas of expertise as the medical aspects of family planning, operational analysis, program development and implementation, administrative management and record retention, education and training, community organization, fiscal control and financial management. Specialists in each of these areas, most of them university-based, are made available upon request to local family planning agencies on an as-needed basis.

To insure the ready availability of consultants who can respond quickly and effectively to requests, WLC has maintained a contractual relationship with six universities: The University of Pittsburgh, Marquette School of Medicine, the University of North Carolina Population Center, the University of Nebraska, the Medical College of Georgia, and the University of Missouri.

These institutions deliver such technical assistance as may be needed in their immediate geographical areas. WLC oversees the delivery of technical assistance and provides these services directly to areas outside the geographical jurisdiction of the university resource centers.

A simplified management information and control system enables WLC's headquarters staff to keep track of operations in the field from their offices in Bladensburg, Maryland. Local requests for assistance are routed through the appropriate OEO Regional Office to the nearest specialist resource institution.

Upon receipt of such a request, it is reviewed first by the institutional coordinator and then by a family planning program analyst. As the principal link between the resource institution and a local program, the program analyst is well versed in the various aspects of program operations, has considerable knowledge of how OEO programs are organized and supported, is sensitive to the role of the consultant in the delivery of health services to the poor, is able to quickly and accurately assess and define problems related to family planning projects, and can explain and recommend matters of varying technical complexity. After studying the request, and in most cases after telephoning the local program for additional information, the program analyst delivers the necessary technical assistance personally or refers the request to a selected specialist. In situations requiring additional or special assistance, the analyst provides the necessary continuity and follow up through his report, as well as by briefing other specialists assigned to the project. Upon delivery of technical assistance, both the resource institution and the recipient prepare reports describing the nature and the efficiency of the assistance provided. In this way WLC is able to monitor the responsiveness of this nationwide system, which in ten months delivered over eleven hundred mandays of technical assistance by 135 specialists in forty-two states.

In addition to coordinating the delivery of technical assistance to local community action programs and delegate agencies, WLC headquaters staff also performs special services for OEO-supported family planning projects. These include the development of training programs for OEO project personnel in the mechanics of a new family planning patient data information system and the collection of data needed by OEO headquarters staff for nationwide project development and program expansion. Tasks recently completed include a review of the literature dealing with the incidence and impact of abortion among poor women, a study of the extent and nature of organized opposition to subsidized family planning services, and a survey of the education and training needs of OEO-supported

family planning projects. Further research related to the family planning needs of teenagers, migrants, American Indians and the rural poor is contemplated.

While continuing to provide services to ongoing family planning programs supported by OEO, WLC also will provide technical assistance to selected HUD "Model Cities" having an interest in developing family planning programs. Most Model Cities' staffs have a rather limited experience with what is required to make family planning services available to those who need them most. Because they lack the specialized knowledge to plan, organize, and deliver these services, the necessity for technical assistance is likely to be as great as with the OEO projects.

The contractual relationship with HUD calls for WLC to provide three kinds of special services; namely, direct, indirect, and ad hoc technical assistance. Direct technical assistance encompasses the provision of special expertise required for the initial planning and development of viable family planning programs. In each of the 15 to 20 cities selected to receive such assistance, WLC will help local Model Cities' staffs, involved health professionals, and other interested persons to document the existence of a need for family planning services in selected target neighborhoods and to identify potential resources that can be utilized for the delivery of such services. Once a demand for services and the available delivery resources have been established, a plan for translating processes into effective action programs will be developed.

WLC will supply the technical expertise needed to move Model Cities family planning projects from the planning stage to development and implementation. This will entail securing the cooperation of various national, state, and local organizations and providing such assistance as may be required to develop the program during the initial stages of implementation.

In the area of indirect technical assistance, WLC is expected to generalize the best ways and means of establishing effective family planning programs on the basis of its own and other people's experience in program planning, development, and implementation. The purpose, of course, is to develop a compendium of reports and materials designed to benefit other agencies not directly involved in this particular activity.

Finally, WLC is also expected to provide ad hoc technical assistance on a short-term basis to other Model Cities, if and when the need arises. It is expected that WLC will be able to provide much of this assistance using the network of consultants that has been set up to serve OEO family planning programs.

As of this date, there are few results to report. Because the program has just recently been funded, progress has been limited to staff development and assisting in the selection of cities to receive direct technical assistance.

Family Planning As A Step Toward Better Health Care

At the present stage of its development, WLC views its technical assistance activities in the family planning field as a stepping stone to greater involvement in the nation's health care. As long ago as 1968 when WLC drafted its first business development plan for the nation's health industry, family planning was recognized as having certain characteristics which led to its choice over others as a place from which to begin.

First of all, public awareness of family planning is a relatively new phenomenon. Most publicly supported activities have been in operation for less than five years. Its newness makes it susceptible to innovative approaches not currently possible in more traditional areas of the health care system.

Secondly, substantial amounts of money have been earmarked for family planning, especially for the poor, primarily because government has recognized that the poor tend to have more children than they can afford to support with a decent standard of living. Widespread interest plus the influx of money, coupled with the overall newness of the concept, have all contributed to the development of service programs which have proven to be singularly responsive to the needs and desires of their beneficiaries. As a relative newcomer to the public health field, and one which deals with relatively sensitive issues, family planning has also been forced to continually re-evaluate its posture in the face of skepticism, if not outright criticism, from certain factions of society.

The possibility of expanding concepts developed from family planning program activity is quite apparent. As a natural base for the entire maternal and child health structure, family planning programs have already shown strength in encouraging comprehensive health programming. Through greater emphasis on outreach, community education, closer coordination between health and human service agencies, and the recognition of the importance of consumer input into decision-making processes, family planning programs are making significant contributions to the development of a framework upon which can be built a truly comprehensive health care system. As a model, family planning is as close as any existing health program to meeting the health needs of people.

At the same time, family planning shares many of the same problems which hamper the delivery of more effective services in the whole health care field. Among the most important of these, and the ones in which WLC is most interested, are the problems of manpower development and patient education. Like most other areas of health care, family planning is in dire need of innovative approaches to education and training for its professional, technical, and auxillary personnel, as well as patient education and information programs.

Much of the knowledge, experience, and capability needed in family planning, in the whole health care field for that matter, is close at hand. WLC, for example, recently established a Health Services Division within the Instructional Services and Training Systems Group to bring its resources and experience to bear on the related problems of health personnel development and patient education. The new division has completed a systems analysis of the education and training requirements of military hospitals and a survey of the instructional needs of general hospitals.

The military hospitals study was part of a comprehensive systems analysis leading to the design and development of a "New Generation of Military Hospitals" recently conducted for the Department of Defense by Westinghouse. The results of the WLC study included a design for a cost effective, media-based ins system for the prototype hospital scheduled for construction in 1973. The general hospital survey provided WLC with detailed information on the basis of which multi-media training packages for hospital and nursing home personnel can be prepared.

Other developmental activities in the health field include: the design of a semi self-instructional training program for ambulance attendants, plans for a variety of instructional services and programs for extended care institution personnel ranging from management training for administrators and supervisory personnel through skills training and job-related basic education for other staff members. WLC involvement in the design, development, production and validation of self-instructional learning materials for patients and their families in the USA and overseas is also projected.

Summary and Conclusion

In conclusion, the totality of need in the field of health care is only beginning to be identified. Obviously, solutions to many problems which have only recently become apparent have yet to be developed. The role of industry has by no means been clearly established. Some successes have been noted but there have also been more than a few failures. Other private sector activities are too new to evaluate. If the success of American businesses is due primarily to their capacity to create and develop efficient organizations rapidly, to recruit, train, and employ capable people, and to use competition to get results quickly, effectively, and at a price people are willing and able to pay, a great deal can and will be accomplished. More activities like those of WLC in the family planning and health fields could signal the beginning of a new and beneficial interplay between the social concern of government, the technical expertise of universities, the managerial know-how of big business, and the practical knowledge and skills of the deliverers of health services.

RESEARCH TRIANGLE INSTITUTE

Projections and Analysis of the Coastal Region Economy: 1970-80

A. Approach[1/]

The information contained in this section has been drawn from a study designed to provide the Coastal Plains Regional Commission with a projection of 1980 national and regional income per capita, assuming no significant regional development effort. These data were used in a comparative analysis of the region's economic performance.

The method of analysis consisted of projecting historical trends in components of the economic structure of the nation and the region, i.e., personal income, employment and population. Projection of the nation's structure was based on a Bureau of Census population projection from which labor force and employment projections were developed by the Bureau of Labor Statistics, Department of Labor. The region's employment structure was projected by continuing trends in the historical relationship between national and regional employment. Population was then projected from trends in the labor force participation rate. The remaining requirements, national and regional average earnings per employee, property income and net transfer payments, are extensions of historical trends.

B. Results

The income per capita differential between the Coastal Plains Region and the nation is projected to grow from the 1968 figure of $913 to $1,114 by 1980, measured in current dollars. This gap translates into an absolute 1980 regional personal income deficit of $6.6 billion. The increase in the projected 1980 disparity in income per capita is, however, due to the inflation expected in the seventies. In constant dollars the income per capita gap narrows somewhat and the absolute personal income deficit decreases slightly. In either terms there is relative improvement in regional income per capita since this

---

1/ Projections and Analysis of the Coastal Region Economy: 1970-1980. (Research Triangle Institute, 1970).

measure is projected to increase to 82 percent of the U. S. level by 1980 from 73 percent in 1967.

While regional personal income is projected to grow somewhat faster than the U. S., an important source of the improvement in relative income per capita is expected to be a lower regional population growth than the nation due to migration from the region. During this decade about 214,000 people, in net terms, are expected to leave the region in pursuit of economic opportunity. The actual number leaving the region may be higher when not offset by migration into the region.

The projected 1980 gap is rooted in the past economic structure of the region. It is a product of any economy which is biased toward low wage industries, which are not only below the average national wage for all industries but also below the average national wage for the specific industry. It is also caused by an employment participation rate that is lower than the nation. In addition about one-quarter of the region's employment is in four industries where employment is expected to decline by 1980--agriculture, lumber, tobacco, and the military.

While the projected 1980 income per capita gap is the focal point of this study, in translating that gap into an investment objective for the Coastal Plains Regional Commission, it is important to recognize that the earnings component of regional personal income will be the primary vehicle for raising personal income. Personal income can be divided into both employment and nonemployment related sources. The employment related sources of personal income (earnings) are wages and salaries, other labor income and proprietors income. The nonemployment sources are property income and net transfer payments. Since there is a tendency for the non-earnings sources of personal income to be related to the level of earnings, the projected personal income gap should be adjusted to an earnings gap in order to establish Commission private investment objectives.

Based on the historical relationship between regional personal income and earnings, the income per capita gap would be erased if the Commission could induce enough investment into the region to raise 1980 earnings by $5.2 billion ($3.3 billion in constant dollars) above the level that would exist in the absence of a significant development effort.

C. 1962 - 1967

Between 1962 and 1967, U. S. personal income grew by $127 billion in 1958 dollars, 78 percent of which was accounted for by a change in earnings. The changes in earnings for the major sectors were, in descending order:

Manufacturing	$29,137,000,000
Government	21,481,137,000
Services	16,639,220,000
Trade	14,321,857,000
Contract Construction	6,262,984,000
Transportation, Communications and Public Utilities	5,876,854,000
Finance, Insurance and Real Estate	5,161,097,000
Mining	237,219,000
Agriculture, Forestry and Fishing	-56,719,000

The major sources of growth in manufacturing income were transportation equipment and nonelectrical and electrical machinery. Growth in government income accounted for 26 percent of the growth in earnings. The largest component of government income growth was state and local governments.

Most sectors had positive income growth except petroleum and stone, clay and glass where income declined. Eleven other sectors, the most notable being agriculture, made only small contributions to the change in U. S. income.

For the five years under review, personal income in the region grew $3 billion, 83 percent of which was accounted for by earnings growth. The sector accounting for the largest income change was government, especially military, which alone accounted for 21 percent of the earnings growth. The changes in earnings for the major sectors were, in descending order:

Government	$1,009,890,000
Manufacturing	549,928,000
Trade	306,326,000
Services	247,776,000
Contract Construction	138,180,000
Transportation, Communication and Public Utilities	101,547,000
Agriculture, Forestry and Fishing	98,750,000
Finance, Insurance and Real Estate	90,644,000
Mining	9,033,000

All sectors had positive income growth in the region from 1962 to 1967. However, three sectors had negative employment growth (agriculture, lumber and petroleum) while five sectors (printing and publishing, ordnance, rubber and plastics, and leather) had declining average wage rates. The average wage rate for electrical machinery, for practical purposes, was unchanged. Since all industries which experienced a wage rate decline between 1962 and 1967 had a positive growth in employment, the explanation for the wage decline would appear to be that lower paying industries within the industry classification moved into and/or expanded in the region during the period under review, bringing down the average wage rate.

The general tendency for the remaining industries was to have fairly equal employment and wage components or an employment component greater than the wage component. Sectors in the latter classification are found in the lower triangle of the first quadrant.

D. 1970 - 1980

In the next decade, U. S. personal income is expected to increase by $264 billion (in 1958 dollars), 74 percent of which will be attributable to growth in earnings. The leading sectors and their percentage contribution to income growth are expected to be:

Services	25%
Government	20%
Manufacturing	16%
Trade	15%
Transportation, Communication and Public Utilities	9%
Finance, Insurance and Real Estate	6%
Agriculture	1%
Mining, less than	1%

All sectors are expected to have a positive wage component; however, several are projected to have declining employment. The military and petroleum sectors are expected to show income losses from their 1970 level.

Coastal Plains Regional personal income is expected to grow $6 billion, 83 percent of which will be accounted for by earnings growth. The leading sectors are expected to be:

Manufacturing	29%
Government	21%
Services	13%
Transportation, Communication and Public Utilities	12%
Trade	11%
Contract Construction	9%
Finance, Insurance and Real Estate	5%
Mining	1%
Agriculture, less than	1%

Every sector is expected to have a positive wage component in this decade. Five industries, however, are expected to have negative employment components (military, agriculture, lumber, tobacco, and petroleum). It should be noted that the previous decade's leading sector, military, is expected to show an income decline.

DIRECTORY OF CONFERENCE PARTICIPANTS

ALDRIDGE, G. Irvin	Director, Department of Local Affairs, State Government of North Carolina	Raleigh, N.C.
ALLEN, James E.	Assistant Professor of Health Administration & Senior Research Associate, Carolina Population Center	Chapel Hill, N.C.
ANDERSON, Herman	Director of Area Development, Blue Ridge Electric Membership Corporation	Lenoir, N.C.
ANGIER, Newton D.	Vice President, Szabo Food Service, Inc.	Flat Rock, N.C.
ATWATER, Verne	President, Westinghouse Learning Corporation	New York
BAILEY, G. Sterling	Director, Environmental Resources, Weyerhauser Company	Plymouth, N.C.
BARBEE, Allen C.	State Representative, N.C. Legislature	Spring Hope, N.C.
BARNETT, W. T.	Vice President in Charge of Real Estate, Roses Stores, Inc.	Henderson, N.C.
BEASLEY, Joseph D.	Professor & Chairman, Department of Family Health & Population Dynamics, Tulane Univ.	New Orleans
BECKER, Arthur L.	Former Executive, International Business Machines Corporation	Raleigh, N.C.
BELK, John M.	Mayor of Charlotte, City of Charlotte, N.C.	Charlotte, N.C.
BEMAN, C. E.	Secretary-Treasurer, The Memorial Fund, Inc.	Laurinburg, N.C.
BERGMAN, Elihu	Research Associate, Carolina Population Center	Chapel Hill, N.C.
BEZA, Angell	Director of Research Services, Institute for Research in Social Science, U.N.C.	Chapel Hill, N.C.

BLACKFORD, H. L.	Director of Marketing, International Telephone & Telegraph Telecommunications, Inc.	Raleigh, N.C.
BOLDT, O. C.	President, O.J. Boldt Construction Company	Appleton, Wis.
BONDURANT, William L.	Executive Associate, Mary Reynolds Babcock Foundation, Inc.	Winston-Salem
BOOTH, Robert H.	Executive Vice President, Durham Chamber of Commerce	Durham, N.C.
BOWERS, Bobby M.	Demographer, Division of Research & Statistical Services, S.C. State Budget & Control Board	Columbia, S.C.
BOYD, Haco	Mayor of Little Rock, City of Little Rock, Ark.	Little Rock, Ark.
BRANCH, Harllee, Jr.	Chairman of the Board, The Southern Company	Atlanta, Ga.
BROOKS, Michael P.	Department of City & Regional Planning, U.N.C.	Chapel Hill, N.C.
BROWER, David	Director of Services, Center for Urban & Regional Studies, U.N.C.	Chapel Hill, N.C.
BROWN, C.G., Jr.	Senior Vice President, Piedmont Airlines	Winston-Salem
BROWN, George H.	Director, Bureau of the Census, U.S. Dept. of Commerce	Washington, D.C.
BROWN, George R.	Chairman of the Board, Brown & Root, Inc.	Houston, Texas
BROWN, James S.	Professor of Sociology & Demography, Univ. of Kentucky	Lexington, Ky.
BROWN, Richard	Population Unit, Economic Development Programs, Center for Advanced Studies, General Electric Company	Santa Barbara, Cal.

BURBY, Ray	Center for Urban & Regional Studies, U.N.C.	Chapel Hill, N.C.

SUPPLEMENTARY LIST OF CONFERENCE PARTICIPANTS

BLAKE, Robert	Director, Educational Materials Unit Carolina Population Center	Chapel Hill, N.C.
BURBY, Raymond	Assistant Professor of Planning and Research, Inst. for Research in Social Sciences, U.N.C.	Chapel Hill, N.C.
CALDWELL, John	Personnel Director, Carolina Mills	Hickory, N.C.
CHANLETT, Eliska	Admin. Assistant, Dept. of Biostatistics, U.N.C.	Chapel Hill, N.C.
CHESSON, N. Worth	Development Specialist, Mid East Commission	Washington, N.C.
COGSWELL, Betty	Family Sociologist, Carolina Population Center	Chapel Hill, N.C.
EMIG, Otto	Population Program Advisor, Ford Foundation	Rio de Janeiro, Brazil
PAYDARFAR, Ali	Lecturer in Sociology, U.N.C.	Chapel Hill, N.C.
RITCHIE, Charles	Assistant City Planner	Fort Lauderdale, Fla.
SCHEFFLER, Richard	Department of Economics, U.N.C.	Chapel Hill, N.C.
SIEGEL, Earl	Professor of Maternal and Child Health, School of Public Health, U.N.C.	Chapel Hill, N.C.
WIGHTMAN, George	First Union National Bank of North Carolina	Charlotte, N.C.

BUS SCHEDULE

For Participants Housed At
Holiday Inn & University Motel

	HOLIDAY INN	UNIVERSITY MOTEL
OCTOBER 21		
Depart for Carolina Inn	5:00 p.m.	5:20 p.m.
Leave Carolina Inn at 10:30 p.m.		
OCTOBER 22		
Depart for Carolina Inn	8:00 a.m.	8:20 a.m.
Leave Carolina Inn at 5:00 p.m.		
Depart for Carolina Inn	5:45 p.m.	6:00 p.m.
Leave Carolina Inn at 10:30 p.m.		
OCTOBER 23		
Depart for Carolina Inn	8:00 a.m.	8:20 a.m.
Leave Carolina Inn at 3:30 p.m.		

Note: The bus will arrive at the Holiday Inn approximately 10 minutes before the schedule departure time.

Note: The bus will be parked by the entrance to the new ballroom of the Carolina Inn for loading and unloading passengers. The bus will remain at the Carolina Inn during the evening sessions.

Toward an Optimal Population: What Can Business Do?

by
George Contis, M.D.

Outline of Comments

I. Introduction

II. The Problem Restated in Industry and Labor Terms

- A. Needs for services
  - 1. Total estimated needs
  - 2. Working women; the need for subsidized services
- B. Cost to industry of pregnancy in work force
- C. Potential benefits to industry and labor of family planning programs
- D. What is already being done by labor and industry

III. Provision of services to employees

- A. Target industries
- B. Kinds of services that could be provided to employees
- C. Methods of approach
- D. Issues raised

IV. Industry as a Contract Provider of Services

- A. Service delivery
- B. Special services

V. Future

- A. OEO's new initiatives
- B. Joint efforts by private industry, government, and volunteer/labor organizations
- C. Implications for industry

Toward an Optimal Population: What Can Business Do?

by
Philip M. Hauser

Outline of Address

I. Population growth as a factor in economy

   A. Indirect effects
   B. Direct effects

II. Total population and components of growth

   A. Retrospect
   B. Prospect: 1970-2000

III. Population concentration

   A. Retrospect: urban and metropolitan
   B. Prospect: 1970 to 1985

IV. Regional differences

   A. Retrospect
   B. Prospect: 1970 to 1990

V. Age structure

   A. Retrospect
   B. Prospect: 1970 to 2000

VI. Implications of age structure changes

   A. General (education, delinquency and crime, accidents, savings, productivity)
   B. Labor force
   C. Household formation

VII. Metropolitan area patterns

   A. Land use: retrospect and prospect
   B. Peopling: immigration cycle; Negro Americans--similarities and differences and implications

Draft for discussion only.

DEMOGRAPHIC AND SOCIAL CONSEQUENCES OF A ZERO POPULATION GROWTH RATE IN THE UNITED STATES

by

Lincoln H. Day
Chief, Demographic and Social Statistics Branch
Statistical Office, United Nations, New York

Carolina Population Center
University of North Carolina at Chapel Hill
International Conference on Population Priorities and Options
for Commerce and Industry, 1970-2000
October 1970

It is by now a truism that the growth of human population--in every country--must eventually cease. The most obvious reason for this is the existence of limits on both space and resources. One could, in fact, reasonably argue that such limits ultimately impose not merely a growth rate that is zero, but actually, for any population at more than a stone age level of living, one that is negative: negative in order to keep human numbers, whatever the level of consumption, in balance with an ever diminishing resource base.

But if the existence of physical limits is the most obvious of the ultimate limits to human increase, there is some question as to whether it is the most important. We need not resort to inferences about human behavior from research on Norway rats and the like[1] to conclude that, as with other species, increases among humans would press against the limits of what might be termed "social and psychic space" well in advance of reaching those of a more physical nature. Moreover, such increases would approach these social and psychic limits (and the physical limits too for that matter) at rapid rates in complex, high energy-consumption, technologically advanced societies--partly because the degree of specialization characteristic of such societies makes the individuals in them quite dependent upon one another for the fulfillment of their needs, and partly because individuals in such societies impinge upon one another to a high degree. For such societies are characterized by a high frequency of interpersonal contact--in the form, for example, of noise, pollution, and vision (however meaningless this contact may be to the satisfaction of psychic needs). Long before the occurrence of absolute physical crowding over any extended period of time (human beings do seem capable of adjusting to considerable amounts of physical crowding over fairly short periods, as in crowds at sporting events), there would arise such social and psychic densities as to result in a breakdown of those social relationships and behaviors necessary to the continuation of human society. The difficulties already occasionally observable in our society in transportation and communication, in gaining access to recreation, in the disposal of waste and the like, are but mild forms of what on a larger scale could reduce social viability either through outright increases in mortality or through the spread of that state of apathy and withdrawal to which Durkheim applied the term, "anomie."

To note that a population's average growth rate must ultimately equal zero is not to deny the possibility that such a rate may be accompanied by considerable short-term fluctuation in rates and, hence, in total numbers: a decrease in one year, an increase in the next, for example. Wide fluctuations in the short-run seem, in fact, to have been characteristic of nearly all populations until man's relatively recent achievement of extensive control over mortality. But given a population like that in the United States--one in which there exists substantial control over both natality and mortality--it seems reasonable to expect that annual fluctuations in population size will ultimately occur over a range so narrow as essentially to constitute what demographers term a "stationary" population: that is, a population with a growth rate of zero and an unchanging age and sex distribution.

In reaching this conclusion I am making both an assumption and a hypothesis. I am assuming, with respect to mortality, that extensive

control will continue and that, as a consequence, there will be virtually no annual fluctuation in age- and sex-specific death rates. I am hypothesizing, with respect to natality, that those social conditions that would lead to a pattern of natality sufficient to maintain a zero average growth rate (under given levels of mortality) would be of a sort unlikely to be introduced or abandoned to an extent productive of anything but the most minimal fluctuation in annual growth rates. I have in mind here such social conditions, for example, as those determining the status of women, patterns of residence, the position of the aged, and the nature and duration of formal schooling and vocational training; none of which is likely to undergo major short-run swings, either in character or in level of intensity.

There is, of course, scant likelihood that the United States will attain this pattern of growth in the near future. For one thing, the current birth rate is well above that necessary for replacement and the various polls on the subject consistently show childbearing "ideals" and "expectations" at similarly excessive levels. But even if birth rates were suddenly to decline and to remain at replacement levels indefinitely, further population increases would still be forthcoming. Despite a long period during which the net reproduction rates have been below unity (that is, below the level needed to replace the current childbearing generation), the populations of both Japan and Hungary have continued to grow as a consequence of earlier patterns of childbearing.[2]

In the absence of extensive changes in the timing of childbearing, the working out of the age structure in the United States would itself produce further population increases for another 65-70 years.[3] This is true because by 1975 there will be 18,250,000 women between the ages of 20 and 29--the peak childbearing ages in this country; by 1985 there will be 20,931,000, for an increase of 52 and 63 percent, respectively, over the 12,824,000 in this category in 1966.[4] There is nothing hypothetical about this; these potential mothers have already been born. If the total number of babies born to women in this age group in 1985 is to remain the same as in 1966 (a level that was part of an overall pattern of childbearing well in excess of the number needed for replacement) the average 20-29 year-old woman in 1985 will have to bear 40 percent fewer children than did her counterpart in 1966: a decidedly unlikely event. Thus, we can hardly expect to stop population growth in this country for another two or three generations, at the very least, without reductions in natality of a literally incredible sort.

However, such a pessimistic forecast should not deter us from acting now to halt population growth in the future. Any reduction in growth rate will be beneficial since the size of our population is already a prime determinant of the quality of life that can be led in this country, and there can be little question that our chances of attaining the "good life" would be enhanced had our numbers stopped increasing some years past.[5] If a cessation of population increase is to be achieved rather sooner than later, the time to set this process in motion is now--not some decade or two in the future, for as I have indicated above, population is not like water issuing from a tap, to be turned off at will when the desired level has been reached.

Demographic Consequences of Zero Population Growth

Given the need to act, and given the importance of "images of the future" as determinants of action in the present,[6] it is important to determine what we can expect, demographically, with a population that has ceased to grow.

Size: We do not really know what size this future population will be. Certainly our numbers will increase substantially beyond the present level, but whether the current period of increase will be followed by one of decrease cannot be determined at the present time. A decrease is possible but not very likely--and certainly not for a long time in the future--given the circumstances of present age structure and family size ideals.

Age structure: Even though we do not know what size the future stationary population will be, we do know something about its composition. It will be an older population--assuming a continuation of low mortality rates. Taking as our guide the current life table values for whites (because the more favorable mortality experience of whites allows for some further reduction in death rates for the population as a whole), the median age of this stationary population will have increased from its present level of 27.7 years to an eventual one of approximately 36.9 years. The proportion of school age children will be lower, and proportions of working and retirement age individuals, higher in the future hypothetical stationary population than in the actual mid-year population for 1969 as shown below:[7]

Age	Mid-year 1969	Hypothetical stationary population	Ratio: Hypothetical / Stationary
Under 18	34.8%	24.6%	.71
18 to 64	55.6	60.0	1.08
65 & over	9.6	15.3	1.66
TOTAL	100.0%	99.9%	

The population in the "dependent" ages (that is, school and retirement ages), as here defined, would be 39.9 percent of the total, a reduction of 10 percent from the 44.4 percent level of the present time.

Such a categorization is, of course, essentially arbitrary. One could argue that a more appropriate delineation of the "dependent" ages would be those under 21 rather than 18, together with those over 70 rather than over 65; such a delineation would take account, on the one hand, of the long period of schooling and training characteristic of modern industrial societies, and, on the other, of the fact that a high-longevity population can be expected to retain its health and physical vigor to an older age. There

is nothing sacred about an arbitrary retirement age of 65; in Sweden, for example, it is 70. Using these age limits, we have the following proportions in different age groups:

Age	Mid-year 1969	Hypothetical stationary population	Ratio: Hypothetical / Stationary
Under 21	40.1%	28.7%	.72
21 to 69	53.7	60.8	1.13
70 & over	6.2	10.5	1.69
TOTAL	100.0%	100.0%	

Thus defined, the proportion of those of "dependent" age in the stationary population would be slightly lower: 39.2 percent of the total as contrasted with the 39.9 percent afforded by the other definition of "dependent."

Both of these delineations of the "dependent" population imply an essentially industrialized economy and society. It is possible, however, that other conditions might obtain, particularly if, either as a result of conscious planning or as a consequence of steady depletion of our resources, there is a return to the greater use of animate sources of energy--more handmade goods, for example, or less use of machinery in agriculture. One consequence of such a change would be to lower the age at which a person could enter the work force and, possibly, to raise the age at which he would have to retire. Lowering the customary age of entry into the work force, while retaining age 70 as representing average retirement age, would have the following statistical consequences:

Age	Mid-year 1969	Hypothetical stationary population	Ratio: Hypothetical / Stationary
Under 15	29.2%	20.5%	.70
15 to 69	64.6	69.0	1.07
70 & over	6.2	10.5	1.69
TOTAL	100.0%	100.0%	

Once again the "dependent" section of the population is reduced. Thus, whatever the age limits taken as denoting the "dependent" population, the transition to a stationary population would reduce the proportion of the total classed as "dependent."

Sex ratio: If we assume a sex ratio at birth of 105 males to every 100 females, and progressively age this population by application of the appropriate death rates from sex-specific life tables, men are seen to outnumber women until nearly age 48 in the hypothetical stationary population. Differences between this and present conditions arise from unequal sex ratios among migrants and from changes in age- and sex-specific death rates. The following table shows sex ratios (number of men per hundred women) at selected ages:

Age	Mid-year 1969	Hypothetical stationary population
20	102.5	103.8
25	100.1	103.2
30	97.8	102.7
35	97.4	102.2
40	96.1	101.7
45	94.1	100.8
50	93.3	99.4

Marital status: The main demographic consequence of such stability in sex ratios would probably appear in the patterns of marriage. In a society with a growing population there might be a reduction in the number of marriages in consequence of a change in numbers of births two decades earlier. For example, where custom decrees that a groom should ideally be two years older than his bride, a 35 percent increase in births over the number two years earlier (which is what happened in the United States in 1947)[8] would result in sex ratios of only 77 males per 100 females at the prime marriageable ages for women (20-24), assuming equal age-specific migration rates, and an "ideal" age difference of two years between husband and wife.[9] The result: for some, a departure from the "ideal;" for others, postponement of marriage; and for still others, possibly no marriage at all.

With a stationary population, there would be no demographic pressure in any of these directions. A stationary population of the sort predicated could be characterized by a variety of marriage patterns. Marriage could be virtually universal or limited to a relatively small proportion of the population; it could occur at an early age or a late age, over a wide range of ages or within a very narrow one, once a lifetime or several times. There is nothing about a stationary population in itself that is productive of any one pattern of marriage more than another. However, such a stationary population is less likely either to force individuals to

remain unmarried against their will or to produce fluctuations in annual marriage rates. With little annual variation in birth rates (and hence in numbers of births), sex ratios among those in the age groups socially defined as ready for marriage will be essentially constant.

Residence: A stationary population would seem to require no particular distribution by residence. It could be primarily rural, primarily small urban, primarily metropolitan, or any mixture of the three. Urbanization is well developed in those countries with the lowest average growth rates over the past two decades, but there is no uniformity among these countries in either the proportion of the population that is urban or the proportion of the urban population living in agglomerations of different sizes.[10]

However, the absence of any necessary relationship between a stationary population and its pattern of residence does not mean that each of these patterns of urbanization has the same likelihood of occurrence. For the present, whatever happens to natality, it seems unlikely that the United States will experience a return movement to farm and rural residence. Farming in this country has steadily become less a way of life and more a strictly commercial enterprise, with all the latter signifies in terms of the substitution of capital for human labor, of the removal of economically marginal operators, and of the increased economic valuation of land--which acts as a further incentive to the use of land for the most commercially rewarding purposes. Moreover, we can probably expect to see a continuation for many more years of the trend toward metropolitanization, though this could involve considerable variation in patterns of residence, especially with likely improvements in mass transit of a sort to permit commuting over greater distances at no greater expenditure of time. It is important to remember, however, that continuation of none of these trends depends in any way upon whether or not natality moves in a direction commensurate with attainment of a stationary population. Whatever happens, it will not be a consequence of whether or not overall growth rates move in the direction of zero.

Mortality: Low mortality--that is, high average longevity--has already been assumed in my calculations. Such an assumption is not incongruent with a continuation of group differentials. However undesirable, it is quite possible that nonwhites could continue to die sooner than whites, lower income persons sooner than higher income, those in certain occupational categories sooner than those in others; and, of course, those with life styles characterized by smoking, overeating, lack of exercise, aggressive driving, and the like sooner than those with more healthful ways of living.

The one difference in mortality necessitated by a stationary population is that death would occur more frequently. Because a stationary population (for any given pattern of mortality) would be an older population than one that was increasing by means of an excess of births over deaths, there would be a higher concentration in those age groups where death rates are higher. At the mortality levels assumed in this discussion, a stationary population would have a crude death rate (that is, deaths per 1000 population) approximately 47 percent higher than at present; that is 14.0 deaths per 1000 population as contrasted with the present rate of 9.5. That death would occur almost half again as frequently as at present

would be due not to any change in longevity, but to the change in age structure entailed in the transition to a stationary population. A more frequent occurrence, death would, under such conditions, presumably be more difficult to deny. It could thus become more readily acknowledged as the fact of life it properly is.

Natality: A stationary population under the given mortality assumptions (and assuming no changes as a consequence of migration) would have an average natality level* about a fifth lower than what it is now, and about a third lower than the average in this country over the past five years.[11] The crude birth rate would be equal to the crude death rate (as noted, approximately 14.0 per 1000) and, concomitantly, the average number of births, each year, would equal the average number of deaths.

The natality conditions necessary to maintain a zero growth rate could rest on a variety of demographic conditions, between one extreme in which childbearing was confined to a small group having very high natality and the other extreme in which there was nearly universal childbearing at the level of two children per woman. There is nothing about a stationary population itself that necessitates any particular distribution of birth parities. All that maintenance of a stationary population requires is that the number of births be equal to the number of deaths. In a country enjoying low mortality this means an average of approximately 2.1 births per woman.

Migration: Whatever the amount of international migration, its net numerical consequences, if a nation's population were to remain stationary, would have to be compensated for by the rate of natural increase. If there were a net gain from migration of one percent per annum, for example, natality would have to be correspondingly lower; if a loss, natality would have to be correspondingly higher--assuming no change in mortality levels.

It seems reasonable to suppose, however, that migration in such a population would be minimal. As annual birth and death rates evened out, the peaks and troughs in the age structure would disappear. This would have a stabilizing effect on the size of the labor force, partly by limiting the amount of annual fluctuation in numbers entering and leaving the labor market, and partly by reducing the amount of fluctuation in demand for labor that would otherwise occur in response to changes in population size and composition. Of course, there are other than economic determinants of the rate and direction of international migration, but in a market economy, employment of some member of the household would seem to be a virtual requisite of membership in the society. It seems unlikely that there would be a reversion to a condition of relatively unregulated mass immigration of jobless individuals seeking a better life under conditions in which they know little about the kinds of opportunities available to them in the country to which they migrate.

---

*Natality level is measured in this instance by the Net Reproduction Rate, a measure of the extent to which a hypothetical female birth cohort would replace itself if subjected throughout its lifetime to current age-specific natality and mortality rates.

Concerning internal migration there would appear to be much less certainty. It is conceivable that present high rates could continue with a stationary population, but this seems unlikely. For one thing, a limit to the number who can leave agriculture must soon be reached. By 1967, the proportion of the American labor force engaged in agriculture hardly exceeded 5 percent--a lower proportion than in any other industrialized country save the United Kingdom (exclusive of Northern Ireland). Corresponding percentages, that year, were 3.1 in the United Kingdom, 10.6 in West Germany, 8.3 in the Netherlands, and 5.8 in Belgium, for example.[12] Even if childbearing were to become the virtual monopoly of the agricultural population, the migration that would result from this source alone could hardly equal the annual internal migration rate of about 20 percent that has obtained in this country over the past two decades.[13]

Moreover, the trend to a stationary population would reduce incentives to migrate by permitting better, less hasty planning of land use and urban renewal and thus lead to fewer forced removals and, presumably, to less dissatisfaction with one's housing and living conditions. As already suggested, a stationary population might also result in less fluctuation in economic activity and, therefore, in less frequent moving about in search of, or because of, changes in conditions of employment. But whatever a stationary population's effect on the amount and direction of internal migration, this effect will be mediated through a variety of non-demographic conditions. There is nothing, in itself, about a stationary population that would seem to necessitate any particular pattern of migration.

Social Consequences of Zero Population Growth

What non-demographic conditions would flow from a stationary population is a matter for some conjecture. There seem to be no one-to-one causal relationships: rather, the range of possible consequences appears very wide indeed. Life could be meager or bountiful, violent or peaceful, miserable or happy. A population's size and composition will set limits, but they will not, except at the very extremes, be the ultimate determinants of the conditions of human life. We must beware of lapsing into demographic determinism. A stationary population would only make the "good life" more attainable: it would not, in itself, produce it. Under any set of demographic conditions short of the extremes, conditions of life will be more a consequence of institutional structures and of social attitudes and policies, than of any population characteristics as such.

Health: It would be reasonable to expect the demand for medical and hospital services, for old age homes and wheelchairs to increase with an aging of the population. But even here there is no one-to-one relationship. Aging is a social and psychological process every bit as much as a biological one. (Orwell somewhere writes of "old women of 40.") Aging is perhaps more rapid than it needs to be under present conditions in this country, where access to medical care, though recently improved, remains costly; where the decline of small-scale agriculture and small-scale business has lessened the economic opportunities for older people; where pensions hardly compare with wages; and where urban sprawl is combined with little opportunity for walking and cycling (both common activities among the aged in Europe), with a paucity of opportunities for informal and chance encounters, and with a woefully inadequate system of public transportation.

Given conditions that enable older persons to remain active and useful, and that do not rob them of status and living, the higher proportion of the population in the upper age groups that we can expect with a stationary population may well contain a smaller proportion of "aged"-- in a social and psychological, and possibly even physical, sense. Obviously, aging cannot be prevented: but when aging begins and how it manifests itself would seem to be explained less by considerations of birthdays than of living conditions.

Economic conditions: However worthwhile a different pattern of economic growth in this country might be from the standpoint of the conservation of resources and the enhancement of the quality of life,[14] there is nothing in a stationary population itself that would make such changes inevitable. Economic growth, economic stability, and economic decline all seem possible with such a population. I have already pointed out that a stationary population would have a lower proportion of people in the economically "dependent" ages, however these may be defined; a lower ratio of dependency is no guarantee of better economic conditions, however. There would be less tendency toward inflation, to the extent that inflation originates in increased demand arising from additions to our numbers. But the major sources of inflation are surely to be sought in more complex and varied conditions than those consisting solely of population structure and growth rates. Once again, population sets the limits, but the limits set are broad indeed.

Forecasting: There could presumably be more certainty in economic forecasting, particularly at the national and (to a lesser degree) at regional levels. However, if internal migration is at a high rate--and it could be, even with a stationary population--forecasting by local firms, with a local labor market or a local sales market, could continue to be a rather uncertain undertaking. A stationary population should also permit more accurate forecasting--particularly at the national and regional levels--with respect to provision of social services: health, education, welfare, retirement benefits, recreation, transportation, and waste disposal, for example. But here, too, internal migration could continue to create difficulties to such forecasting at the local level.

Behavior: Among those who have on occasion succumbed to the temptations of demographic determinism, the main anxieties expressed about a stationary population concern its age structure. A physician prominent in the family planning movement has been quoted as saying that such a population would have a median age of 65 (which, as we have seen, is about 27-28 years too high), the thought of which he finds "depressing."[15] A well-known economist-demographer avers that a society with the older age structure of a stationary population "would not be likely to be receptive to change and indeed would have a strong tendency towards nostalgia and conservatism."[16] And a French writer characterized such a population as one of "old people ruminating over old ideas in old houses."[17]

As it happens, the cause of such concern is an age structure little different from the current age structures of Sweden and of England and Wales--populations hardly characterized by rampant decrepitude.[18] The following table shows the percentage distribution of these populations by age as compared to the hypothetical stationary population for the U. S.

Age	(a) 1969 population of England and Wales	(b) 1967 population of Sweden	(c) Hypothetical stationary population of U. S.*	Ratios: (c)/(a)	Ratios: (c)/(b)
Under 10	16.55%	14.16%	13.71%	.83	.97
10-19	13.86	14.28	13.64	.98	.96
20-29	14.05	14.83	13.50	.96	.91
30-39	12.04	11.55	13.32	1.11	1.15
40-49	13.02	13.35	12.96	1.00	.97
50-59	11.94	13.06	12.09	1.01	.93
60-69	10.49	10.43	10.26	.98	.98
70 & over	8.05	8.34	10.50	1.30	1.26
TOTAL	100.00%	100.00%	99.98%		

*derived from 1967 U. S. white life table population data.

Only at the highest age category does the stationary population differ much from that of these two actual populations, and then to the extent of but 2.45 percentage points in the case of England and Wales, and but 2.16 percentage points in the case of Sweden.

Moreover, is receptivity to change always desirable, and nostalgia and conservatism always undesirable? Might not one ask: Receptivity to what kinds of change? Nostalgia and conservatism about what? And, for that matter, which "old ideas" in which "old houses"?

"Conservative," "progressive," "reactionary," "radical" are spongy concepts, especially when removed from their specific referents. Were Hitler's youthful storm troopers "progressive"? Were the aged Townsendites "conservative"? Dressed up in the jargon of mathematical economics and presented 35 years later by a prominent economist, the basic elements of the latter program have become suddenly "liberal." Even if we know, ourselves, what we mean by these terms, can we assume that the "conservative" on one issue is going to be "conservative" on others as well? In terms of the demonstrated willingness to introduce changes in economic behavior, education, the status of women, and the like, the world's most conservative societies are those with the youngest--not the oldest--populations. And this holds even when we consider only the adult portion of those populations.

To argue in terms of age is to commit a fallacy--the fallacy of misplaced emphasis--for the behavior of any group above the age of infancy is determined by its position in society, not its accumulation of years. To worry about the supposed behavioral consequences of an aging, or more aged, population is to divert attention from the real issue, which is how to incorporate a higher proportion of old people--given the inevitability of a cessation of population increase and the desirability of low mortality--into society in a socially and emotionally meaningful way.

It is possible that a stationary--and hence older--population would be less subject to fad, whether in clothing, grooming, music, entertainment, furnishings, architecture, or politics. Participating less in the mainstream of the society, being less completely socialized, still to a degree "in process" of development--often, incidentally, many years after attaining full biological maturity--younger persons seem to have fewer countervailing pressures toward conformity with adult (or other) patterns of thought and behavior. When to this condition are added two others--a high proportion of the population in these socially-defined "youthful" ages, and a substantial amount of disposable wealth in the hands of these "youths"--there is a very strong incentive to exploit the greater lability of young people for economic or political purposes. A reduction in the proportion in these youthful age groups would surely reduce this incentive, or, at the least, confine it to a smaller share of the total operation in business and politics. As the owner of a large dress shop once told me, "We'll stock fashions for old ladies when old ladies are as numerous, or have as much to spend, as teenagers."

Status succession: In any system in which power and position are determined at least in part by length of service, a stationary population enjoying low mortality is going to afford less opportunity for promotion. At the probabilities of death used in my calculations for this paper, a stationary population would have fully 90 percent as many males at age 50 as at age 20 and 95 percent as many females. Contrasted with the present condition of 62 and 68 percent as many, respectively, this represents a considerable reduction in this particular kind of opportunity. It should be noted, however, that even now success in this competitive struggle can be enjoyed by only a minority and that fluctuation in annual numbers of births has given some birth cohorts a decided advantage and others a decided disadvantage in this competition. Those born in 1935, for example, have had only about 60 percent as many age peers to compete with for space in school, the attention of their teachers, and jobs as have those born in 1947, and only about half as many as will those born in 1962.[19]

Whether this lower rate of social mobility is to be viewed with satisfaction or alarm is largely a matter of values. It will probably have some effect on the rate of internal migration, however, as fewer executives and professionals are moved about to "higher" positions, and as fewer families change houses in response to "upward" (or "downward") movement. As neighborhoods thus become more demographically stable, real estate speculators and salesmen may suffer a bit, but housing may come to take a smaller share of one's income, and neighborhoods may come to be less subject to inward and outward movements of persons who have little emotional attachment to their place of residence.

The shortage of opportunity for promotion could work in two directions. It could lead to more job-switching, including a higher tendency to go into business for oneself, on the--in this instance, false--assumption that the structural limits to status mobility would be less constraining elsewhere. It is possible too, that for a time there would be a heightened competitiveness in response to the diminished number of opportunities. But it seems unlikely that aspirations for higher position could be entertained for very long without some sort of positive reinforcement. A more likely response would seem to be a reduction in the levels of aspiration which--given the fact of a lower rate of social mobility--would be the more rational psychic response.

Whether a decline in status-striving would necessarily delay the march toward "progress" (or some other similarly metaphysical concept) is at best a debatable point. Surely there is more to human motivation--even in the occupational sphere--than can be accounted for by the hope of invidious distinction. The satisfaction of doing a job well, the approbation of one's peers, the intrinsic interest one might have in certain activities, the quality of the on-the-job associations with one's fellow workers, for example, all figure in the motivation of a work force. To attain a given end, these types of motivating factors may have to play a more prominent role than they do currently, but there seems no reason to doubt their capacity for taking up whatever slack might remain after the virtual disappearance of the, even now, limited opportunities for promotion.

If there is, indeed, a decline in competitiveness and in levels of aspiration, one undoubted consequence will be a reduction in status frustration, for promotion can be socially disruptive and emotionally frustrating since promotion creates aspirations where formerly there were none, and super- and subordinates out of those who were formerly peers. As Stouffer and his associates found in their classic American Soldier study, morale with respect to perceived opportunities was higher where promotions were few than where they were numerous.[20] Surely there are enormous emotional costs in any system, such as that in the United States today, that condemns such a high proportion of its total work force to the self-defined category of occupational "failure." If the advent of a stationary population serves to reduce the incidence of such "failure," this must surely be adjudged one of the positive consequences of such a demographic change.

Automobiles: To the extent that the private ownership and use of automobiles could continue to be permitted in a society of the population size and geographic distribution likely to be reached before a stationary condition is attained--and one could reasonably argue that they should not be permitted even now--a change in age structure of the sort envisaged should reduce the pressure to accommodate this ubiquitous symbol of private affluence and cause of public squalor. With a reduction of some 21 percent in the proportion of the population of ages 15-25 (from 17.3 percent down to 13.7 percent of the total population), there should be somewhat less support for further construction of roads and parking facilities, and therefore less loss of ratable properties condemned for such construction and less ruination of neighborhoods, both urban and rural.[21] With families with small children comprising a smaller proportion of the total of all families, there should be proportionately less demand for large cars, particularly of the station wagon variety, and for facilities for family-type vacationers--though aggregate demand, because of population size could, of course, remain quite high. It will not be the millenium; we have gone too far for that. But a smaller proportion in those age groups for which the automobile seems to hold a special appeal, and a correspondingly higher proportion in those for whom it is a positive nuisance, should at least help to halt the automobile's social and ecological depredations.

Personality structure: If there are, indeed, differences in personality associated with different orders of birth, or that arise as a consequence of different parent-child or sibling relationships originating in different family sizes--and the evidence on this is at best equivocal--any change in the distribution of family sizes will alter the distribution of personality types. More research on this issue could be of some interest, but before we devote too much time and energy to the question, two points should be emphasized: first, that the family is only one of many socializing influences; and second, that whatever the results of such an inquiry, the policy implications inherent in the need for a stationary population, in conjunction with the likely desires of the great majority for parenthood, will surely outweigh in importance anything turned up on this score by the psychologists. As with the aged, the question is one of making the best of the situation, not sacrificing more important values in a misguided effort to avoid a demonstrably lesser evil--if evil it even is, in this particular instance.

Women: Because of the nature of their maternal role in American society, women are more likely than men to be affected by the transition to a stationary population. Whether or not attainment of such a population entails a change in the proportion marrying or in age at marriage, it will, of necessity, reduce the number of woman-years devoted to the bearing and rearing of children. The reduction may be evenly spread throughout the society, or concentrated within one segment as childbearing becomes the monopoly of another. But the average duration of the "period of the empty nest" will inevitably be longer, unless childbearing is substantially postponed to a higher age. Given the present distribution of ultimate family sizes, the reduction would seem likely to weigh most heavily on that half of all women who, under current probabilities, would bear three or more children--and even more particularly on the quarter of them who would bear four or more.[22] I assume that the natality of those who, under current probabilities, would bear but one or two will remain unchanged.

The current pattern of natality has already promoted recognition of the fact that women need to prepare for playing a role other than, or in addition to, that connected with child care. And under present patterns of family life, this, of course, means that men must also be prepared to think of women as more than simply helpmeets and child-rearers. The necessity for such changes in attitude, for increased opportunities for women, and facilities such as daycare, retraining programs, and public transportation to enable women to take advantage of such opportunities can only be heightened by the changes in patterns of childbearing associated with the advent and maintenance of a stationary population. The alternative: women idly filling their days close to home with shopping, housework, gossip, and soap operas which, quite apart from what one might think from the standpoint of values, seem insufficient to satisfy the needs of more than a small minority.

Social security: A stationary population (enjoying low mortality) will doubtless place a greater emphasis on social, as opposed to private, means for the support of the aged, infirm and disabled. This will arise, in part, in the presumably greater political power of the older population --because of their relatively greater numbers--and in part in the substitution of a greater dependency of age for a lesser dependency of youth. Only a population with a youthful age distribution can effectively relegate support for the aged exclusively to the contributions of children and relatives. With higher material levels of living, the disappearance of extended-family households, and an older age distribution, there will be every incentive for the development of procedures for enabling (or, from another point of view, requiring) the aged to support themselves by means of forced savings--customarily in the form of social security payments during the years of peak earnings. The development of such procedures in this country can probably be expected to continue, regardless of changes in age structure. The transition to a stationary--and therefore older--population will thus merely reinforce a trend already well underway.

Conclusion

I have confined my discussion to two general considerations: first, the demographic characteristics of a stationary population and second, the probable non-demographic consequences of such a population. I have said nothing about the sorts of conditions that will eventuate in this kind of population. My omission is in response to limitations of space, to the more conjectural nature of whatever could be said on the topic, and to the fact that I have already discussed this topic at some length elsewhere.[23]

Suffice it to say here that I should expect the particular mix of conditions most conducive to the control of childbearing at no more than replacement levels to lie toward either end of a continuum having to do with the perception of what Weber termed "life chances." Toward one end of the continuum natality would be low because conditions were so bad that people did not wish to overextend themselves, to take chances by having more children. A severe housing shortage, massive unemployment, the threat of arbitrary arrest, a foreign army at the doorstep--these are the sorts of conditions that might evoke such a demographic response. At the other end, natality would be low because there were alternative sources of satisfaction for those needs presumably met by additional childbearing: the needs for affection, response, intellectual stimulation, for a sense of continuity, for the approval of one's peers, for security in old age, for example. In the one instance, in short, people would <u>not dare</u> to have additional children; in the other; they would <u>not need</u> to.[24] My preference obviously lies with the latter. But any continuation of population increase will simply make the realization of these conditions all the more difficult.

Therein lies a problem: Continued population increase makes more difficult the attainment of those conditions of life that would presumably remove the stimulus to excessive childbearing. The consequence is a cessation of population increase in response, instead, to conditions that make childbearing appear a more hazardous undertaking. But what appears undesirable to one generation may be defined as but a fact of life by the next and play, for that reason, a lesser role in the determination of human behavior. Moreover, the ability of unpleasant conditions to limit childbearing must surely be only temporary, not only because these conditions become accepted as "facts of life," but also because the absence of alternative sources of satisfaction can induce people to retreat to family and childbearing, to multiply the personal ties of kinship, for remission and protection from a hostile environment.[25]

Ultimately, then, the choice of means to maintain natality at replacement levels would appear to be between, on the one hand, the provision of ample opportunity for the satisfaction of human needs in ways not conducive to additional childbearing and, on the other hand, coercion. If we are to avoid coercion, the time is now upon us to initiate those institutional changes that will make the resort to such an option unnecessary.

SOME COMMENTS ON THE EFFECTS OF THE POPULATION PROBLEM ON BUSINESS

Thomas H. Naylor

Duke University

In the last several years the United States has experienced a growth in population, in national income, in the material standard of living, not comparable to any other period in its history. We have paid for those increases with likewise incomparable increases in crime, in pollution, and in disruption. Since the Second World War, the population of the United States has been increasing by more than a quarter every ten years--a far greater rate than in other highly developed countries of the world, but still more slowly than the increase in the crime rate, more slowly than the increase in the amount of wastes that must be disposed of.

Having determined during these conferences that there is indeed a population problem, we can turn our attention to other questions. First, is it possible for our technology to cope with the increases? If the technology can provide for the requirements of a burgeoning population, how will the community, and in particular, the business community, be affected by applying ourselves to those problems? If the society were to be better off if the population were to stop growing so rapidly, will it be at my expense? Or will

I, personally, and my family benefit just as much. These are the questions that I propose to answer for you today.

The analogy is often drawn to the almost tragic apollo flight. There was a self-contained body in outer space that had a fixed amount of life-giving materials aboard. There could have been a relief flight from the earth, to take them the necessary water and the like, but it would have been foolhardy for the crew to count on such a deliverance. One of the crew could have taken over the space craft's resources for himself to the exclusion of the others, but the crew comprised men of higher stature.

The situation on the earth, the analogy continues, is not unlike that lonely space ship. We are in the middle of outer space with a fixed amount of resources, and no one has discovered how to extend our pleasures beyond the final consumption of those resources. Clearly, each of us has basic needs and desires and resources will be used, but it seems reasonable to say that if we don't want the earth to run out of bounty in the middle of our children's lifetimes, then we ought to minimize the number of people who will be using up the earth in competition with each other. Perhaps our technology could bail us out of our distressed ship, but we have no guarantee, and until we see someone bring the pails aboard, fewer people on the ship will make it sink more slowly.

Furthermore, it seems clear from the examples that we have at hand that the services that large populations require are much more costly beyond a cretain limit. Police forces, schools, water and sewage systems, streets and sidewalks, a larger government bureaucracy all must be provided at an extremely high cost per capita

to an excessively large population. Why must we direct our technology towards solving the problems that large populations bring with them? Why not use our resources to make life better for a smaller number of people. In other words, why make problems for ourselves?

What is the cost of this application of our talents to solving the problems of large populations? How much of our productivity has had to be diverted because of a growing population? What would our average per capita income be if we did not have to divide it among so many people?

In our society, who is it that produces our output? The people who fall in the group bounded approximately by the ages of 16 years to 65 years are the most productive members of our culture. People outside that age group are generally dependent upon the productive portion. And in the center of that productive class lies the greatest coincidence of experience, talent, and incentive. Let us analyze what would happen if the birth rate were to drop somewhat and remain at that lower level. Immediately, of course, there would be no change in output. And as those children grew to the age of five years, the labor force would be exactly the same as if there had been no change in birth rate or if thirty million had been born in each of those five years. Hence, output would not be affected by the change. But we will have experienced a windfall. There are fewer dependents for whom the working force must provide. Therefore, everyone--on the average--is richer. What will the situation be like after fifteen years of reduced birth rate? Still the labor force will not have felt the reduction, and our windfall will have an even greater impact upon our welfare.

If both the population and the national income continue to grow at the current rates, then in 1985--fifteen years from now--the average per capita income will have grown by about 25%. If, however, the population were to maintain itself at the present level and not increase, then average per capita income would increase by about 125%. That is, if Americans had only enough children to keep the population stable, then average per capita income in 1985 would be almost double what it would be if population continued to grow as it grows today. By maintaining our present rate of population growth we would, in essence, throw away 80% of our gross national product just to maintain a lot of extra people at the present level of per capita income.

Another comparison seems in order. During the period from 1950 to 1960, the gross domestic product of the United States increased by 29%, according to the record keepers of the United Nations. During that same period the gross domestic product of the United Kingdom increased by only 24%. But because of a smaller rate of natural increase, the per capita figures in Great Britain were increased by almost double the increase in the United States. The statistics are similar for several other highly developed countries.

In East Germany, where the natural rate of increase was negative in the 1960's, the country was able to maintain the same per capita income growth rate as the United States by increasing output only two-thirds as much as the United States needed to increase output. If their economy had been geared to higher production, as in the United States, the conclusion is likewise obvious.

The United States is trying to run a winner's race in the economic olympics while standing on its shoelaces.

Returning for a moment to our hypothetical decrease in population growth in the United States, we soon find that there are fewer children in the schools. As a result, the schools can provide a better education for each child. There would be no need to decrease the amount spent on education. Because there are fewer children in each family, parents will be able, on the average, to devote more time to bringing up their children. Because cities are less crowded, there will be fewer of the aberrations that result from the tensions related to urban population density. Altogether, the children will grow up in a situation that is probably preferable to today's situation.

A better-educated, healthier child becomes a more productive, better-adjusted member of society. Therefore, twenty years after the initial drop in the birth rate, when the smaller yearly waves hit the labor force, the sheer numerical size of the force will be smaller, but because of their positively advantaged childhoods, they will be capable of much more than their counterparts ten or fifteen years earlier. After a couple of generations, there is reason to believe that the ratio between the labor force and their dependents would be back to what it is right now. Income per capita could not be less than it is right now--likely it would be much greater because of our advantage in the intermediate years. And the added attraction is that our children and grandchildren will be using less of the world's resources because there will be fewer people to use them. That, of course, moves the world's expiration date quite a bit further back.

Overcrowding can be a primary cause of belligerence on the part of nations. The French under Napoleon, the English under the monarchs from Elizabeth through Victoria, the Germans under Bismarck and Hitler, the Japanese under Hirohito, the Americans under the administrations that encouraged expansion at the expense of the Indians--and who knows what other countries--have gone on quests for the land and labor resources of others. Probably very many of us here today have our ancestry in one of those nationalities, so we know it is not an intrinsic trait in any one of them to conquer others. But overcrowding has unfortunate effects.

As a country like Germany became overcrowede, the Germans, who were learning the pleasures of a consumption economy, began to feel the effects of a large population. A horrible inflation pushed a normally very reasoned people over the brink. Germany had an advanced manufacturing economy, but it could not keep up with the demand. The inflation nearly destroyed an entire culture.

There is no reason to suppose that the United States would succumb to the same fate, but think of the frustration of a severe inflation. As it is, Americans use more resources per capita than any other people. We consume about 50% of the total yearly product of the world whild we are only about 6% of the world's population. There isn't much we can do about such a voracious appetite for commodities, but it is the sort of situation that has strong inflationary tendencies. And a large population implies a large aggregate appetite.

Furthermore, just as that astronaut could not politically have taken over the resources of the spaceship for his own use, neither is it diplomatic for an ever increasing population in the highly developed world to usurp the productivity of the earth for themselves.

What will I pay, as a businessman, either in direct costs or loss of business, to have a decrease in the rate of population growth? How will I benefit? How will my family benefit? Our offsprings and their families will surely begin to see the benefits in less crowded roads and cities, in a higher income as described earlier, and--most important--in less of a likelihood that payment in full will be demanded on our mortgage on the future. But would we, here, pay for high population growth, or would we benefit from controlled population size? A hundred years ago one might have said that any such change could not possibly have an important impact on one's own life. But today we see the results of overpopulation all around us--symptoms that would be attenuated if the situation were altered. The democratic process is beginning to break down, not because of intransigence on the part of this group or that, not because of a malicious foe, but because it is simply difficult to get along with each other as it gets more crowded. We are suffering from high crime rates. Partly as a result, we are suffering from high insurance rates. We are suffering from smog and pollution of our habitat. Partly as a result we are running out of room to dump garbage, and disposal rates for many things are rising. Partly because our population has risen so rapidly in the past, we shall have to pay dearly as consumers demand cleaner manufacturing methods today. We are suffering from

overcrowded roads and the attendant dangers. We are suffering from overcrowded beaches and resorts as people try frantically to get away from other people and instead they end up elbow to elbow with them. We are suffering from unresponsive government. And partly as a result, we are paying excessive amounts of money to keep it operative in its very inefficient state. If there were fewer people there would be less of each of these problems. If the population at least does not increase, then the problems will not grow cancerous.

What happens to the labor and commodities markets when the population does not grow? For the first few years after an initial drop in the birth rate, the consuming public has essentially constant characteristics. As the society becomes richer and richer as a result of the issues discussed earlier, then less will have to be spent on the necessities of life--the producers of which can barely keep up with demand at present--and more will be spent on travel, televisions, sports, books, good government, and services. As youngsters grow up out of their privideged state, in which they will have better education and backgrounds, they will be far more productive than their parents were. Being more productive, they will of course demand a higher wage and be able to use that higher income on consumption goods. The labor market will not be as extensive, but each member of the labor force will have superior training, and will be able to make a superior contribution. Yes, they will command higher wages, but it is certainly worthwhile to pay more to get more.

We could postpone thinking about the population crisis, but even a child knows that if he has a chocolate soda, he does not try to find as many people as possible with whom to share it. When the chocolate soda is gone and there are only bubbles left at the bottom of the glass, we can pull and pull on the straw and still not get anything to drink.

ENERGY AND ENVIRONMENT

Earl Cook
Texas A&M University

Summary of remarks to be made at University of North Carolina on October 22, 1970:

Over the next 20 years fossil fuels will be our main source of energy for the generation of electricity and the propulsion of self-powered vehicles. It is in extraction from the ground, processing, transport, and burning of these fuels that we impact our environment most strongly. Two-thirds of the air pollution in the United States is due directly to the burning of fossil fuels, mainly gasoline and coal; this air pollution is concentrated in urban areas, about 20 percent of our national area.

The use of fossil fuels for electric-power production will double over the next twenty years; energy consumed by internal-combustion engines may triple over the same period. During the same period, rapid urbanization will continue, so that by 1990 perhaps 80 percent of our people will live in 15 percent of our national area. Collision between power demand and environmental quality in the urban area is inevitable.

More rigorous environmental-quality standards are already exacerbating fuel shortages and increasing power costs. Natural gas is in short supply to meet a demand augmented because of its "cleanness" as a fuel; Canadian imports are increasing and cryogenic tankers are being built for importing liquefied natural gas. Low-sulfur residual fuel oil is in great demand, and desulfurizing facilities are under construction or just completed in Venezuela, the Netherlands Antilles, and the Bahamas. Provision of cooling towers to reduce thermal pollution, installation of flyash precipitators in exhaust stacks, and improved waste-management systems are adding to power costs. New air-quality standards are forcing adoption of modified fuel and pollution-abatement designs for automotive engines.

In the long term, power demand, fuel availability, and environmental protection will be the major elements in local as well as national energy decisions. Total energy demand is increasing at a rate of 5 percent per year; electric-power demand at a rate of 9 percent per year. Natural gas and petroleum can be relied upon as major energy sources for only a few decades at most. With present reactor technology, uranium reserves will last no longer than natural gas. Coal reserves are ample

for hundreds of years, but means must be found for removing sulfur from most U.S. coal before it will be suitable for burning; large-scale conversion of coal to desulfurized gas at or near the mines appears feasible by the late 1970s. Domestic petroleum reserves, like gas, offer only a few decades of use as fuel; world petroleum reserves are much greater, but problems of assured accessibility and cost loom large; in addition, after about 1990, decreased total effectiveness of exhaust-emission standards for gasoline-powered vehicles may force large-scale banning of such vehicles from urban areas or substitution of a radically different type of motive power.

Geothermal and tidal power are too small to furnish much future energy. Solar energy is enormous but too diffuse to be collected for large-scale practical use.

Breeder reactors (catalytic burners) offer the best hope for major amelioration of the energy crisis, because by complete utilization of uranium and thorium they will at one stroke enlarge energy-resource reserves hundreds of times. It is hoped that such reactors will be available for commercial use by 1985, but if they are not, fossil fuels (probably gas manufactured from coal and oil shale) will have to carry the burden of electric-power production for many years.

Environmental protection will be costly. It has been estimated that total environmental protection would double the present cost of electric power. Because of unwillingness of the citizen to pay all the cost of protection directly, the cost will probably be paid partly in increased power charges, partly in acceptance of some level of environmental quality below the pristine, and partly in a slightly decreased rate of increase of power consumption. By the year 2000, the major environmental problems with stationary power plants will be radioactive and thermal waste management. With mobile power plants, it probably will still be air pollution caused by combustion products.

The South is far from homogeneous in the energy picture. The Southwest or South Central Region of the FPC is a region with an ample power-generating reserve, with large production and reserves of natural gas, much of which is exported from the region, and of petroleum, most of which is exported. The Southeast, in contrast, is a region with a marginal power-generating reserve, with limited energy resources, which has to import coal from the north, natural gas from the west, and residual fuel oil from the south. The power economy of the southwest is based on natural gas, that of the southeast on coal. Because of anticipated cost and environmental problems, the Southeast is more eager to adopt nuclear

power generation than is the Southwest. Both are areas of rapid urbanization and industrialization. The Southwest has a present advantage in being able to fuel its own industrialization without great environmental costs, as well as to export both fuel and power for profit. This advantage will diminish with the depletion of gas reserves, the growth of nuclear power, and the large-scale generation of gas from coal.

Both parts of the South share a long coastline toward which population and industry are moving. They share a paternalistic, business-oriented tradition and a relatively low profile of environmental concern. It should be possible, because of its decision structure, the available resources, and its stage of development, for the South to avoid some of the energy and environmental problems of the North.

Suggested Questions for Discussion

Q. Freeman of OST has suggested regressive pricing to control power demand; should utility rate structures be changed to penalize big users?

Q. In November 1969, Fortune magazine described utility executives as "generally unimaginative men, grown complacent on private monopoly and regulated profits." Is this charge valid? Fortune says management is at fault, not environmentalists, for present power crisis.

Q. What should be the roles of industry and government in Research and Development on resource development, power-production technology, and pollution-abatement techniques?

Q. Should gasoline-powered automobiles be banned from cities if emission-control devices and modified fuels do not reduce air pollution to desirable levels?

Q. FPC Chairman Nassikas charges that the gas industry is lagging far behind the necessary research and development level in discovery and fuel-conversion technology and suggests large capital commitments to fund research and development. Is this justified by the private sector in light of dwindling reserves and government "competition" in nuclear research?

Q. Should big oil companies be allowed to own or control large coal reserves? Is a concentration of economic power over energy reserves unwise?

Q. Should industry be protected against application of new pollution standards to existing, operating plants? If so, how? By variances? By subsidies for control equipment?

Q. What are the difficulties encountered in passing the costs of environmental control on to the direct beneficiaries? What was Vepco's recent rate increase so bitterly opposed, as Forbes Magazine reports?

Q. What are the major components of recent increases in the cost of producing electric power?

POPULATION GROWTH WITH BUSINESS PROFITS

by Stephen Enke*

Introduction

A question being increasingly asked is whether a significant reduction in the rate of population growth would somehow be "bad for business". This recent worry on the part of a few businessmen is probably due to the currently popular discussion of Zero Population Growth. These businessmen very naturally wonder whether "business" generally, and especially their own businesses, would not suffer shrinking sales and profits as a result.

The following analysis should indicate that as men engaged in business they have little if anything to worry about on the score of profits and much that is good to expect on other grounds.

The main reasons why this is so can be quickly summarized. A faster or slower rate of population growth has relatively little impact on GNP, and a slower rate of increase in population means a more rapid increase in output and income per head of population. Second, while changes in population growth rates will alter the relative demand for the products of different industries, these changes will come so slowly that there will ordinarily be ample time for labor and capital to transfer from more slowly to more rapidly expanding industries. Third, an individual firm's profits are less sensitive to realistic variations in population growth than they are to its distribution between down-town,

---

* Dr. Stephen Enke is Manager of Economic Development Programs for TEMPO, General Electric's Center for Advanced Studies in Santa Barbara, California. He acknowledges with gratitude the assistance of Mr. Richard Brown of the TEMPO staff.

suburbia, and exurbia, and among the counties and States. Fourth, profits are far less sensitive to population changes than they are to changes in technology, for ours is a dynamic economy. Fifth, if a particular firm makes a poor profit showing around the year 2000, its managers should not blame declining fertility, but rather their own decisions on new product lines, location of plants, investments, etc.

What Demographically is Really Involved?

At the outset several demographic "facts of life" need stressing.

What is involved are birth rates, not death rates. Not even the most enthusiastic proponent of Zero Population Growth (ZPG) is advocating a reduction in public health expenditures so that infant mortality rates will rise. The question is whether it is desirable for fertility rates to fall, and if so by how much?

Whether the population of any country grows or stabilizes is a function not only of age specific fertility rates but of the age distribution of its female population. Nations with high fertility rates have young age distributions that in turn contribute to many births. Accordingly , even if fertility rates were to decline to a level at which girl infants would be expected to reproduce themselves, it could take the better part of a century for the age distribution to "age" to a degree that births would not exceed deaths.

Many projections have been made for the US, by the Census, by population research groups, and even by TEMPO. Consider for example two contrasting assumptions about falls in the Gross Reproduction Rate. (The GRR is roughly the number of live girl babies a typical woman has had by menopause.) If this were to fall from today's GRR of 1.441 to 1.014 in the next 5 years, which is unrealistic, the US population would not stabilize until AD 2050 at a population of 293 million. Alternatively, if the GRR took 30 years from today to fall from 1.441 to 1.014, the population would not stabilize until AD 2050 at a 344 million population.

Slowing the growth of an increasing population until it stabilizes at zero growth takes a long time. This is because the age distribution must adjust to fertility and mortality rates for each age cohort. During this wait of almost a century, the population continues to grow, ever more slowly.

Many of us will not be alive to experience more than another 30 years of US population growth. By AD 2000, under the not unreasonable assumption that it takes this long for the net reproduction rate to fall to unity, the population could be 279 million. With no decline in fertility – probably not realistic – it would be 308 million. At the other extreme, assuming unrealistically a net reproduction rate of unity by 1975, the AD 2000 population of the US would be about 257 million.

We would have to live another 80 years to AD 2050 for TEMPO's unrealistic extreme cases of high and low fertility to give us a factor of two ratio in projected population size.

Realistically, the choice for AD 2000 is probably between 270 and 290 million. Even if business profits were notably sensitive to population size and growth, which the following analysis indicates is not the case, the population 30 years ahead is now predictable within about 10% if only because most of it is alive today. Businessmen need not worry that their markets will suddenly stop growing.

What is "Business?"

It is impossible to discuss what is good or bad for "business" without deciding what "business" is. Each different component element of business may be affected differently by zero population growth. Are we considering business managers, business investors, business employees, or what?

Managers, who are managers only and not investors in the same firm, are simply employees. It may be that their pay is part in salary and part in bonuses related to profits, but the fact remains that they

constitute a special pocket of the labor market, and indirectly their compensations as managers are effected over several decades by the competition of all those who earn their living by providing professional services. During 30 years or so the rewards of managers who are only employees is related to the rewards that of lawyers, doctors, engineers, etc.

Investors in business are another matter, including not only businessmen but legal entities such as universities, and even widows and orphans. A slower population growth may result in less than a one-tenth lower average rate of return on all investment, whether bonds, stocks, or direct investment. But total savings and investment per head of population would be larger. And so it might be expected that the income from investments per capitalist would be higher with a slower population growth.

Employees of business, including professionally trained, technically skilled, and unskilled workers, are yet another part of interest. A slower population growth will tend slightly to raise all personal service compensation above what it would be with a faster population increase. This, together with a lower return on investment will favor investing in the education and health of people as against investing in plant and equipment for instance.

If we consider only business managers and business investors, ignoring business employees, it is probably safe to say that a significant slowing of population growth would very modestly advantage the managers relatively as compared with investors. In those cases where the same man or woman is manager and investor there are obvious offsets. Where the investor is not a manager, his income may have increased relatively less than managers, but still be higher absolutely than with a faster population growth.

Businessmen's Usual Worry

Why is it that a few businessmen are concerned that a decline in fertility, and an associated slowing of population growth, would be bad for their business?

The "reasoning" is probably as follows.

Almost every business manager or owner knows from experience that more customers ordinarily mean more sales. And more sales ordinarily mean more profits if output can be increased with existing facilities. Also, it is usually assumed that more population in the firm's own market area means more customers, able to buy.

This is a fairly short term analysis on a year to year basis. But it may be quite invalid over even one decade. This is because it overlooks, (1) the extra investment and costs of making more output and sales, (2) the possibility if not probability that a larger market will attract rival firms into it, and (3) the danger that a generally growing population may not mean more buying customers for any specific firm.

(1) Extra sales are usually profitable if there are only extra prime costs for extra material and labor. But a sustained growth in sales often requires additional investment in equipment and facilities. Expert business judgement is needed to avoid making a too large and less profitable expansion in capacity.

(2) Ease of entry of new and rival firms is always a threat to profits of an existing firm. The question here is whether entry of rivals is inhibited by the existing firm's brand names, special client relations, location, patents and copyrights, or other significant aspects of "monopoly" in competition. Only if each existing firm "owned" a constant fraction of a particular market would a growing population ordinarily mean more customers and perhaps more profits.

(3) More population does not necessarily mean more customers for a particular firm. There is too much competition through new technological innovations, changes in fashion or style, advertising of rivals,

altered customers needs, etc. Any business owner who passively waited for a growing population to yield more profits could soon find himself out of business because of more energetic competitors.

The geographic distribution of population often means more for profits than how many people are living in the United States. Montana utility companies are not benefiting notably from current US population growth. Nor are the down-town stores throughout America for whom US population growth means that more former customers have moved away to surburbia.

The American economy is ever changing and extraordinarily dynamic. A growing motoring population did not prevent most of the early automobile manufacturers from being taken over or failing outright. The growing entertainment business did not mean extra profits for movie theater owners. The growing need for motor freeways have terminated the existence of many retail businesses. Whether most of today's businesses have flourished or failed by AD 2000 will not depend on whether the national population was 10 million more or less than now expected but upon whether these firm's managers more often made the right or wrong decisions during preceding decades. Growth and change are profitable for some firms but almost fatal for others.

The Surrounding Economy

The general state of the national economy, and more especially the value of GNP relative to number of people to share it, strongly influences general business profits. This is because it also influences the earnings of employees and investors. A higher national output and income per head of national population is likely to mean more income and consumption for all typical factory workers, office employees, investors, landowners, managers, and businessmen.

How do lower or higher fertility rates affect income per capita?

More children mean more available labor force 20 years or so later. But more available labor force does not mean proportionately more employed labor unless the capital to worker ratio can be more than sustained. Increasing GNP per capita is partly a matter of saving and investing more capital per worker, so that unemployment is reduced and each employee can be more productive.

It is also advantageous if a larger rather than a smaller fraction of the population is of working age. Lower fertility rates after several decades mean that a smaller percentage of the population will be dependent children. This is one of the main benefits accruing from declining fertility rates.

The US along with many other countries is experiencing a continuous improvement in technology. Although it cannot be estimated precisely, it appears that the same stock of employed capital and labor would typically produce at least 2 percent more, compounded each year, because of "state of art" advances. One way that a nation can increase its GNP per head is to slow its population growth so that technology and capital accumulation can advance and grow still further "ahead" of its growing population.

All of these ideas can be incorporated into a demographic-economic model used with a computer to make rather detailed projections into the future. TEMPO has pioneered in making such projections. Table 1 gives the results of three contrasting fertility assumptions for the year AD 2000.

The reason that a low AD 2000 population does not mean a proportionately low GNP is that there is then a higher ratio of work-age to non-work-age population. The resultant higher output and income per head have generated more savings per head. Hence the total stock of capital is almost the same regardless of fertility and absolute population size. More capital per worker means more output per worker. This is reflected in the higher annual earnings of a typical worker.

In AD 2000 the rate of return on capital is lower (15.8 percent) with rapidly declining fertility than it is with no such decline (16.5 percent). The total dollar value of GNP going to capitalists in the former case is 96 percent of what it is in the latter. However, if the ratio of capitalists to non-capitalists in the nation is the same, in the former case there are only 84 percent as many, and each should typically be getting 15 percent more from his investments.

Perhaps more significant than differences in GNP per head are differences in the GNP mix that may result. The products of some industries are more income-elastic than other. Higher family incomes mean relatively fewer shoes and shirts and relatively more entertainment and tourism for example.

It does not follow however, that those who own shoe factories should be opposed to reducing fertility while those that profit from tourism should favor it. The amazing mobility of labor and capital in America should prevent involuntary unemployment. Over a 30 to 50 year period, ordinary attrition of labor and capital is enough to adjust to even a 25 percent decline in use, without occasioning skilled labor unemployment or unused equipment and facilities.

Nor does it follow that landowners would suffer an unfair loss because of declining fertility. The value of a representative acre of land in 1970, computed by discounting its future rents for 30 years, will be 99 percent as large with low fertility as with high fertility. No real estate owner can estimate present capital values within several percent.

Nor does it follow that business men should favor high fertility as a means of avoiding "tight" labor markets. The "price" of a "loose" labor market gained this way is a lower per capita income. Few businessmen want their customers to be poorer.

Table 1. Economic Projections in 2000 AD

	Case I[a]	Case II[b]	Case III[c]
GNP ($ ~~billions~~ trillions)	2.67	2.63	2.55
Population (millions)	307	279	257
GNP/Head (dollars)	8,692	9,446	9,896
Labor Force(millions	124	120	113
Capital Stock ($ trillions)	4.86	4.83	4.83
Capital/Worker ($ thousands)	40.7	41.6	43.7
Children/Worker	.72	.56	.51
Annual Labor Earnings (dollars)	13,400	13,500	13,800
Return on Capital (percent)	16.5	16.3	15.8

Notes:

[a]No decline in birthrates.

[b]Birthrates decline to a unit net reproduction rate by the year 2000.

[c]Birthrates decline to a unit net reproduction rate by the year 1975.

Source: TEMPO Economic-Demographic Model.

Perhaps most striking about the three alternative GNP projections for AD 2000 depending on fertility, is that in every case GNP is over 3 times that of today. However, the relative difference among the three AD 2000 projections of GNP is only about 5 percent. The real question is how best to exploit the fuller life that capital accumulation and technology will provide, not necessarily in an ever-greater outpouring of goods, but hopefully in more cultivated leisure besides.

Finally, changes in fertility and associated growth rates will affect everyone in several ways, so that analytically it is invalid to assume that what is good or bad for business provides the sole criterion for deciding whether reduced fertility is desirable. The very concept of a "businessman" cannot be used sensibly in such a discussion. If we redefine a "businessman" as a "man in business" we are immediately reminded that as a man he is also a commuter, taxpayer, vacationeer, homeowner, and parent, and in each of these roles he might want fewer rather than more extra millions of people in this country during the next several decades. The very reason a businessman is a man in business is ordinarily to support the family he is raising. What does it count for a man if the larger future population that <u>might</u> slightly increase his firm's profits also made life less worth living for his children?

UNIVERSITY OF NORTH CAROLINA 1907

General Information

Location: Central North Carolina, 500 ft. above sea level on U. S. Highway 15-501, N. C. Highways 54, 86, 87. Eleven miles south of Interstate No. 85.

Climate: Average winter temp. 48.5 degrees, average summer temp. 71.7 degrees, average mean temp. 60.2 degrees F., average annual rainfall 47," average snowfall 10".

Transportation: Through Raleigh, N. C. (30 miles distant) by Seaboard Airline Railroad. Chapel Hill has its own airport with 5000-foot runways. The Raleigh-Durham Airport is 16 miles away. Carolina Trailways and Queen City Buslines service the town with a modern up-to-date bus terminal.

Population: 1960 census – 12,573, 1970 estimated– 25,311 (plus more than 16,000 UNC students); radius of 3 miles – over 46,000.

Government: Town is governed by mayor and board of aldermen; assessed evaluation over $77 million; city tax rate $1.26 per $100.00; county tax rate $1.16 per $100.00; both based on 70% appraised value.

Entertainment: Morehead Planetarium, Playmaker Dramatic Productions, Lectures, Dances, Country Club, Two Golf Courses, Five TV Channels, UNC Athletic Events, WCHL Radio, Two Modern Movie Houses, Ackland Art Museum.

Restaurants: A mecca for good food. The Pines, Ranch House and Carolina Inn are best known, but there are over two dozen outstanding eating places featuring every type of food reasonably priced.

Business: Typical of most college towns. Many state offices located here. Excellent shopping facilities for all types of food and clothing.

Medical: UNC Medical School, 405-bed hospital, 100-bed psychiatry unit, 100-bed chest disease hospital, UNC Dental School and Clinic, U. S. Department of Public Health, Private Physicians and Dentists, Pharmacy School, School of Public Health, and School of Nursing.

Churches: Beautiful churches of all faiths bid you welcome.

Civic Clubs: There are more than 60 Civic Clubs and Fraternal Organizations.

Schools: New and modern elementary, junior high and high schools. Many private kindergartens, private classes in music, dancing, dramatic arts and painting.

Accommodations: Carolina Inn – University owned hotel at edge of campus, one block from midtown . . . corner Cameron Avenue and Columbia Street, 145 rooms, public cafeteria, dining room, private meeting rooms, Holiday Inn, 15-501E., 100 rooms, pool, Restaurant - By Pass Eastgate. University Motel–Located on N. C. Rt. 54 . . . . 500 yards east of U. S. 15 . . . one mile east of Campus on Raleigh Road . . . 71 air conditioned rooms . . . restaurant and golf course adjoining. Eight other modern motels located within eight miles of Chapel Hill.

State Taxes: North Carolina retail sales tax of 3 per cent. State income tax ranges from 3 to 7 per cent.

Real Estate: There are more than thirty real estate dealers ready and willing to help you locate in Chapel Hill. They have homes in every price range to rent or sell. There are also many beautiful building sites available.

For further information on anything concerning Chapel Hill write to the Chapel Hill–Carrboro Chamber of Commerce.

If you like living--you'll love Chapel Hill

. . . THE SOUTHERN P

Regardless of what you might have heard about Chapel Hill, not everyone who makes his home here considers it to be a perfect place in which to live. Only about ninety-nine per cent of the present population do. This, we must hasten to add, is a mighty high average when you start comparing it with the feelings of persons who live in other towns and cities in this great land of ours.

There are some old-timers here who still like to call Chapel Hill a village. We don't blame them one whit, but we must remind them that the Chapel Hill of today has much of a "village quality," but in reality it is a thriving and growing community.

Here is located a great university, steeped in southern tradition and culture. Here you find small town living and cosmopolitan thinking. There are world famous persons who live in our surroundings as small-town folks. A celebrity in our midst does not create the usual excitement for we have many celebrities who live here, and we have come to realize that they are human beings just like the rest of us. And their problems are just as many and varied as our own.

Spend a month in our midst and we believe that you will find out that Chapel Hill is a way of life just a little different from that which you have found elsewhere. We believe that you will discover that here is a community where a man is judged for what he stands for and not what he owns. Wealth is an asset, but it does not buy a social standing. Intellectual thinking, along with an honest concern for the well being of your fellowman, is the greatest asset you can have.

The heart of the community is the University of North Carolina. Since it first opened its doors on October 12, 1793, the university has become one of the nation's outstanding centers of higher education. There are over 13,000 students enrolled, and they are taught by over a thousand professors and instructors. The cultural life of the area centers around the Univers featuring some of the most o public life, are open to one a townspeople have separate conc the noted poet, Robert Frost, and his speeches are enjoyed by

four-seasonal climate, with over 47 inches a year. lance for most of the year ge frost-free period of 217 emperature is 60.2 degrees, 0.7 and in July of 78.6 de- two light snows a winter six years—just enough for orrying about the conse-

ity of North Carolina for a moment we are reminded that here is the cultural center of the state of North Carolina. Over 100 buildings, valued at over $200,000,000.00 comprise the campus.

Much of this money has been spent for a new 405-bed hospital, a four-year medical school, a dental school, the 150-bed Gravely Sanatorium. No city ten times the size of Chapel Hill has better medical facilities or more capable staffs. Many persons have retired recently in Chapel Hill, thanks to the relaxed atmosphere and the availability of excellent medical treatment.

You can come here to spend a week, a day or a month and there will always be something new and interesting for you to see. If you're a camera bug you'll be in paradise. There are more beautiful pictures taken in the area than any place else in North Carolina.

Here are a few of the sights of particular interest to everyone.

You will certainly want to visit the Morehead Planetarium. Here is located in a beautiful $3,000,000 building, one of the six planetariums in the western hemisphere. There is also an art gallery, and from time to time there are other outstanding exhibits of a variety of things. Industrial-alumnus John M. Morehead, who is also the donor of the Morehead Scholarships, made this valuable contribution to the campus.

The Coker Arboretum is a four-acre botanical garden located on the campus. Flowers and foliage of every type and description are abundant.

At the Monogram Club, open to the public, there is a fine university owned restaurant and student lounge building. Here you can see the unique "Circus Parade," a wood carving worth driving miles to see.

In Kenan Stadium there is football, in Carmichael Auditorium there is basketball and in Emerson Stadium baseball. There are also intercollegiate contests weekly for almost a dozen other sports.

of the oldest state university in made a national shrine for that landmark on the University Affairs which includes a modern where the Tar Heels play before ead Planetarium—A blending of anetarium is the only one of its nauts have taken their celestial sity by John Motley Morehead; (8) A group of happy youngsters receiving expert tennis instruction; (9) The Morehead Sundial showing one of the many beautiful Chapel Hill Churches in the background; (10) Sidewalk Art Show—One of the many features that Make Chapel Hill a unique community. Chapel Hill----Heart of "The Old North State"

paolo soleri

Paolo Soleri came to controversial national attention this year when his drawings and models for megastructure cities set attendance records at the Corcoran Gallery in Washington this spring, and were again exhibited at the Whitney Museum in New York during the summer.

As a part of the Carolina Population Center's October 22-23 conference on "Population Priorities and Options for Commerce and Industry, 1970-2000," a portion of these monumental shows will be seen at the Ackland Art Center on the campus of the University of North Carolina at Chapel Hill. A preview will be held for conference participants the evening of October 21.

Soleri will deliver a public lecture in Memorial Hall at 8:00 p.m. October 23.

The show will be open to the public during the normal gallery hours from October 22 through November 29.

Cities That Climb Into the Sky
Spacious Living Heaped Together

The Plexiglas hive gleaming against the Arizona sky is a model of a hexahedron, two mated pyramids over 3,500 feet high that would house an entire city of 170,000 people on less than half a square mile of land. The concept is the work of Paolo Soleri, an Italian-born architect who with a Dantean passion envisages creative urban environments. Soleri, a former apprentice of the late Frank Lloyd Wright, describes what he does as arcology, a word he coined from architecture and ecology. . . . Soleri's intent is to compact rather than expand the city, reduce intracity travel times and distances, cut air pollution and leave most of the countryside for man's enjoyment.

LIFE
DECEMBER 5, 1969

In my mind, this man is a giant, to be ranked with thinkers like Buckminster Fuller.

WALTER HOPPS
ACTING DIRECTOR
THE CORCORAN GALLERY

. . . If you believe that the human spirit deserves and is capable of better than it has gotten environmentally . . . if you believe in the human spirit at all, go to the Corcoran. . . . "The Architectural Vision of Paolo Soleri" is an important and beautiful show. . . . His philosophical and environmental perceptions offer a sudden, stunning pertinence for today. He does not need the current bandwagon of despair. He has been preaching environment and ecology for a long time. . . . He has been the prophet in the desert and we have not been listening.

ADA LOUISE HUXTABLE
THE NEW YORK TIMES
MARCH 15, 1970

Paolo Soleri Thinks Big

(Soleri's arcologies) would make it possible to gather cities into solid geometric forms, make large communities compact enough to stand on a square mile or two of land, eliminate all vehicular traffic within their borders, remove blight from the vast bulk of the land, and still, according to the planner, afford city dwellers easy access to nature. Such colossal visions, warns Soleri's friend, R. Buckminster Fuller, "are not going to be easily interpreted by the public." . . . Soleri's arcologies really represent a form of earthbound space capsule intended for the survival of the human race, and most people are unprepared, as yet, to accept the idea that man himself must change if he is to remain on this planet.

SHERWOOD DAVIDSON KOHN
THE NEW YORK TIMES MAGAZINE
JULY 26, 1970

. . . Soleri's cities compound every problem we know of. These gigantic, concentric, beehive structures will require rigid programmed conformity from their inhabitants in order to function safely. They will require a complexity of technology which may not even be possible, and the level of dependence on technology will imply a rule by the technocrats.

JOHN LOBELL
INSTRUCTOR IN ARCHITECTURE
PRATT INSTITUTE
LETTERS COLUMN, THE NEW YORK TIMES
AUGUST 23, 1970

Architect of Tomorrow

The Corcoran Gallery's current exhibition may be remembered by future generations as one of the most significant ever to have been mounted by a museum; certainly, it is one of the most beautiful, radical and provocative. . . . Soleri's grand design . . . is nothing less ambitious than the complete architectural and ecological integration of the urban environment, a project that many will dismiss as "visionary," but one that Soleri himself considers an imperative for survival—and one that is about as similar to conventional notions of city planning as a skyscraper is to a pup tent.

THE ART GALLERY MAGAZINE
MARCH 1970

As an alternative to the disaster of the contemporary city, with its rotting and polluted core, its inchoate and exploited suburbs, and its hostile society, Soleri offers a utopia based on a reasonable conception of human dignity and society's potential, a richness of plastic experience far beyond what is provided by any contemporary city, and an unchallenged technical feasibility.

FREDERICK GUTHEIM
THE NATION
APRIL 13, 1970

In June, Soleri and his students will begin "Arcosant," a small arcological town. . . . Here his bizarre visions will be tested down to the nuts and bolts, as will his premise—that technology now can achieve anything, given the determination and the money. And there is no doubt about Soleri's determination, or his sense of urgency. To him, arcology is in effect the life raft for a world drowning in its own pollution. "There might not be any other way," he says, "to save ourselves."

REGION IV

TYPE II EVALUATION - RURAL HOUSING
A PROPOSED STUDY OF THE COMPARATIVE VALUE
OF HDC's AND SELF-HELP HOUSING
ENTERPRISES AS MEANS OF MEETING
THE HOUSING NEEDS OF THE RURAL POOR

1.0 INTRODUCTION AND BACKGROUND

2.0 PURPOSE

3.0 CONCEPTUAL APPROACH

4.0 TIME AND ACTIVITY SCHEDULE

5.0 PRODUCTS TO BE DELIVERED

6.0 ADMINISTRATIVE PROCEDURES AND BUDGET

APPENDIX A: PROJECT SITES IN REGION IV

1.0 Introduction and Background

.1 Introduction

The approach to evaluation in Region IV has significantly changed during the past two years. The Region's Type III Evaluation effort has been terminated altogether in favor of a decentralized performance monitoring/evaluation system and centralized evaluation studies designed to provide a more rigorous overview of program and grantee activities as these bear upon major regional policy issues. The program includes special management studies and applied research and development of planning and evaluation systems, methods, techniques and instruments. Evaluation studies proper are also being conducted to provide a more rigorous analytical basis for regional policy and program decision-making in the major policy and program areas. The proposed Type II Evaluation Study of two rural housing strategies fits naturally into this change in focus and approach.

Study results are expected to have an impact on three major areas of regional concern: Regional policy and program strategies in rural housing, regional technical guidance and support systems, and regional performance evaluation methods relating to grantee housing program activities. The more specific impacts anticipated are articulated in Section 2.0 below.

.2 Background

In 1969, a summer intern assigned to the then Training and Technical Assistance Office undertook a preliminary study of housing conditions in the region; search of state enabling legislation for public housing authority, a review of training and technical service delivery in housing and a survey of CAA housing program activities. This report highlighted the need - some 40% of all housing in the region was classified as unsound in the 1960 census; two-thirds of the nearly 5 million substandard units in the United States were located outside the Standard Metropolitan Areas (SMA's) according to a 1968 census survey; and the greatest proportion of substandard rural housing was located in the Southeastern United States - and the lack of CAA program activity in this area. Historically, program development activities in housing in the Region have been principally contingent upon the research and demonstration efforts of the Office of Program Development.

The principal devise used by the Regional Office to deal with this situation during F.Y. 1970 was to increase the quality of technical assistance in housing. During F.Y. 1971 and 1972, several other initiatives

have been undertaken both nationally and regionally:

(a) The Housing Assistance Council has been funded nationally.

(b) The Region has moved to expeand the scope of the technical assistance being provided by the Low Income Rural Housing Corporation in North Carolina, now receiving both regional and Headquarters funds.

(c) CAA program activities in housing have expanded - partly via local initiatives, within regular CAA program levels, partly via new projects funded under the F.Y. 1971 Regional Incentive Grants (nine of 43 projects). In F.Y. '72, 26 project proposals or 15.4% of those received were submitted in the second round competition; some of these will be funded.

Since housing is the first National Community Action program area priority for F.Y. 1973, this expansion will accelerate rapidly. A study of effective housing program models is therefore appropriate.

Past efforts to assess CAA program activities in housing in Region IV have been limited. Until two years ago there were no OEO sponsored HDC's in the Region. At present there are four such regionally funded. Generally information about the success and failure of HDC's is available for urban, not rural models. The Rural Housing Alliance (via contract from OPD) has undertaken an evaluation of six rural HDC's; that report is not yet available but will be of benefit to this study when issued. Of special interest will be their judgment of the success/failure of HDC's under rural conditions.

One quasi-HDC model has been operated by the CAA in Troy, Alabama. This CAA combines a training program with home construction by recruiting unemployed or under-employed low-income people as building trainees. The trainees are paid the minimum wage and are given classroom and on the job training. This program produced nearly 50 new low cost homes within its first two years existence. The little knowledge of housing programs that we have indicates the Troy program may be uniquely successful in this region in generating new housing.

Three Self-Helf projects have received regional fudning. Performance data on each is very sparse. There is, however, increased interest in this approach as evidenced by the proposals received in the 1971 and 1972 Incentive Grants Proposal. It remains unclear whether such methods can be very effective.

A report of the Rural Housing Alliance indicates that Self-Help has been extremely successful in Nova Scotia and Puerto Rico for several years. A report of the International Self-Help Housing Association states that, among the few Self-Help projects that have been attempted in the U.S., are some OEO funded experimental urban rehabilitation projects. The report indicates that in most respects these urban projects have failed.

Our survey of different kinds of housing efforts shows us that there are several limitation to the Self-Help approach. For the most part these limitations have to do with actually getting low-income people to do the tiring, demanding physical work involved in Self-Help. Another limitation is the amount of time that it usually takes to complete a Self-Help project.

In the light of this background, this study will focus its attention on approximately 10 to 12 projects employing the HDC or Self-Help Housing Approach. These will include OEO funded projects and non-OEO funded projects to which the study team can gain access. The tentative list of projects to be reviewed is included in Appendix A.

2.0 Purpose and Potential Impact of Study

The general purpose of this study is to provide an empirically informed basis for developing a variety of concepts CAAs can apply to solve the housing problems of the rural poor in Region IV. The specific focus of the study is the comparative value of the Self-Help Housing Approach and the Housing Development Corporation Approach. The major difference between these program strategies is that Housing Development Corporations utilize the existing profit-making system in which housing is marketed and act as implementers of the system to supply housing to the poor. The Self-Help Housing Method, on the other hand, explicitly ignores or minimizes the role of the profit-making system, providing all or most of the related parts of a housing supply system itself. A comprehensive comparison of the approaches would measure the variety of effects of HDC's and Self-Help Housing Enterprises on the profit-making system supplying housing to determine the economic impact on the Community, including the economic benefits to the low income housing consumer.

This study is of much more limited scope. It will compare the two approaches by examining the structures, processes and activities associated with each and assessing the circumstances under which each appear to be effective in supplying decent housing to the rural poor. A comparative analysis of the quality and quantity of the benefits to the housing consumers and of the constraints of each approach will then be completed. This analysis will

provide an empirically informed basis for choosing between these approaches, between variations of extreme forms of each, and potential ways of blending them. In addition, fruitful, possibly innovative, further alternatives will be developed and examined critically. The analysis should lead to strategies to maximize the probability of success of the alternatives analyzed.

The expected uses of the study results are multiple:

.1 Influence on Regional housing policy and programmatic services

.10 To provide additional intelligence for a housing program strategy in Region IV - especially choice of priorities among the approaches examined in the study.

.11 To provide a basis for a regional allocation strategy in housing - search among incentive devices to stimulate increased activity in priority program areas.

.12 To provide a more rigorous conceptual and analytical framework for training and technical assistance needs assessment in housing, especially as it relates to T&TA service delivery under contracts now being negotiated for delivery in F.Y. '73.

.2 Influence on Regional Technical Guidance Systems

.10 To provide the empirical and conceptual basis for technical aids to grantees in housing program planning as a part of Region IV's Grantee Planning Workbook, especially via Planning Model B and the technical aids section.

.11 To permit exchange of factual and analytical information about rural housing through Region IV's Technical Digest.

.12 To provide basis for special project development in housing for the rural poor in terms of program models which might emerge from the study.

.3 Influence on Regional Performance Evaluation System

.10 To provide a more analytical basis for review of grantee project performance in housing - a potential basis for revision of Section C of the Qualitative Factor Assessment Sheets now in use in Region IV.

.11 To provide a conceptual basis for analyzing housing program data and grantee performance data for projects in housing for the rural poor - potential of utilizing Mel Case's objective progress function for housing with conceptual analyses emerging from the study.*

* Melvin Elwood Case, MS thesis, "A Process for Evaluation and Resource Allocation in Comestic Public Spending Programs", Georgia Institute of Technology, November, 1971 - the thesis constructs an objective CAA progress model to provide a more objective basis for allocating regional OEO resources among grantees.

3.0 Conceptual Approach:

The scope of this study is limited to a rigorous comparison of the most effective means of supplying decent housing to the rural poor under each approach, variations of each, potential blends of each, and potentially new, though related, approaches. The study will be structured into three major phases with appropriate sub-phases: I - Analytical Phase; II Process Evaluation Phase and III Generation of Recommendations Phase.

I. Analytical Phase

This major phase will be critical in specifying the characteristics of the housing supplied under each approach and of the housing to be expected under variations and potential blends , and related approaches.

A - Orientation

1 - Preliminary Design -

(a) A descriptive standard operationalizing "decent housing for the rural" will be developed; this standard will consist of a Housing Quality Index sufficient for purposes of this study, adjustable for environmental factors. It will be used to identify instances of successful production under each of the two approaches. These cases become the objects for further intensive study and analysis.

(b) A tentative analytical model will also be developed to permit description of the structures, activities and processes associated with each approach.* The model will consist of the following:

(i) Specification of the structures, activity network and processes required to produce expected benefits under each approach.

* For purposes of this study, the following definitions will be observed; (1) STRUCTURE: An entity by which activities are carried out and end results obtained; (2) ACTIVITY NETWORK: Set of events which occur in an ordered manner to accomplish a given result; (3) PROCESS: An activity leading from event to event in an activity network.

(ii) Description of the expected benefits in terms of quantity and quality under the constraints of time and cost for the principal factors of production: Land, Labor, Money and Materials.

(iii) Construction of an economic model in terms of such output measures as number of units produced, cost per square foot, land acquisition costs, and dollar benefit to the low income housing consumer.

(c) Measurement instruments for the data collection sub-phase of orientation will be developed. In developing the analytical model, the issue of reducing benefits to the economic model will be critically examined.

This approach explicitly rejects the view that an a priori economic model can be fruitfully generated and tested empirically in the context of the present study. Such a model would either be so comprehensive - including long range measures of the quality of life - as to be unreliable within the limited sample population or too narrow to describe hypothetical effects of good housing on such measures of the quality of life as the health, education and general welfare of the housing consumer. The factors of land, labor, money and materials will nonetheless be analyzed rigorously in relation to the depicted level of quantity and quality of benefit to housing consumers. Both economic and non-economic criteria will be used to define value, however.

2 - Data Collection

Ten to twelve sites will be visited to collect the data needed for refinement of the analytical Model. (See Appendix A for a list of tentative sites.) Both OEO and non-OEO funded sites to which the study team can obtain access will be included. The Housing Quality Index will be used to identify a limited number of successful products of projects under each of the two program approaches. These cases will be analyzed intensively to determine how the result was obtained and how the probability of success/failure can be judged.

B - Analysis

1 - Model Refinements

Model refinement of the Activity Network and the output Measurement model will be made as data is collected and experience is gained from site visits. Final refinement will be based upon Data Reduction and Analysis.

2 - Data Reduction

Data collected will be analyzed to form the basis for model refinements and the process evaluation* which begins concurrently with the beginning of Phase I-B.

*Process evaluation is used in different ways by different authors. Cain & Hollister, e.g., use it to mean "administrative monitoring." ("The Methodology of Evaluating Social Action Program", Cain & Hollister, Discussion Paper No. 42-69, Institute for Research on Poverty, University of Wisconsin). This is not the meaning here. For purposes of this study, process evaluation is an identification of the critical events in the history of a program or a project.For each critical event, the evaluation will describe (1) the system or environment surrounding the event; (2) the decision-makers and their roles in decision-making; (3) the time frame of reference in the projects history; (4) the inputs required to make the decision; (5) the outcome or effects of the decision.

II. Process Evaluation Phase

This phase begins concurrently with sub-phase I-B above and will be completed at the end of sub-phase III-A below. Its aim is to define the critical events of each approach required to produce given results and then to construct a probability model of the success/failure of each approach. Hence, two sub-phases are identified - (See Section 4.0). The structures and activity networks will be examined in terms of environmental constraints relative to the critical events identified. An assessment of the structures and processes of each approach will be made to determine which critical events maximize the probability of success.

III. Generation of Recommendations:

Two subphases are planned: one of which combines the results of phases I and II for purposes of drawing analytical conclusions; the other of which creates additional alternatives for structures, activities and processes - especially variations of the extremes, blends of the two, and new, though related, alternates. Recommendations will be made as to those structures, activities and processes which will maximize the probability of success in dealing with the housing problems of the rural poor. The thrust of the final report is to be practical and operational, yet empirically informed and analytically sound.

4.0 Time and Activity Schedule:

This section places the major phases of the proposed study into their logical and temporal order. Proposed start-up and end dates are tentative and could be adjusted, if necessary, sliding the whole time table to the right. The first sub-section gives the logical order of the major phases; it should not be read as a sequential temporal ordering of events. The second section is a temporal ordering of the phases.

.1 Logical Order of Study Phases:

Phases & Sub-Phases	Associated Products
I. Analytical Phase	
A Orientation	
1- Preliminary Design	(a) Descriptive Standard-Housing Quality Index
	(b) Tentative Analytical Model
	(c) Measurement
2- Data Collection	(a) Unreduced Data
B Analysis	
1- Model Refinements	(a) Activity Network
	(b) Output Measurement Model (Econ. & Non-Econ. Criteria)
2- Data Reduction	(a) Data Analysis
II Process Evaluation	
A Definition of Critical Events	(a) Critical Activity Network
B Development of Probability Model of Success/Failure	(a) Probability Model

III Generation of Recommendations

A Combining Results of Phases I and II

(a) Comparative Analysis of two approaches.

B Creation of Additional Alternatives

(a) Recommended structures, activities and processes to maximize probability of success.

.2 <u>Temporal Order of Phases:</u>

I ANALYTICAL PHASE

II PROCESS EVALUATION PHASE

III RECOMMENDATION PHASE

5.0 Products to be Delivered

.1 Tentative Analytical Model - consisting of at least the following:

.11 Activity Network of each program approach.

.12 Descriptive Standard for decent housing.

-consisting of an operational, working definition of decent housing achievable under each approach; composed of a suitable Housing Quality Index. Probably a Scoring Model adjustable for environmental factors.

.13 Tentative output measurement model -

-Economic and Non-economic Indicators

.14 Measurement instruments for data collection.

.2 Refined analytical model of each approach.

.3 Process evaluation of each approach identifying critical events bearing upon the probability of success/failure.

.4 Final analytical report in two parts: (a) Analytical conclusions drawn from phases I and II and (b) analysis of recommended alternatives, including variations of the extreme forms of each approach, potential means of blending the two, and new, though related, approaches.

APPENDIX A

PROJECT SITES IN REGION IV BY TYPE

H.D.C.'s

1. North Florida H.D.C. $101,550
   Initially funded 1971 under Regional Incentive Grant Program
   Covers 27 counties

2. L.K.L.P. Community Action Council $100,000 (OPD)
   Covers 4 counties in Appalachia Kentucky. This OPD project is designed to demonstrate that a group of interested people including poor people can actually turn the Federal housing programs into houses for the rural poor.

3. OCAP (Area 23) H.D.C. $100,576
   Initially funded 1971 under Regional Incentive Grant Program.
   Covers 3 counties.

4. Volunteer H.D.C. (delegate of Douglas-Cherokee CAA) $58,000
   Regional Incentive Grant, 1971
   Covers 7 counties.

5. Agricultural Cooperative of South Florida - Non-OEO
   Budget not presently known.

SELF-HELP

1. Colbert-Lauderdale CAA
   Presently funded by FmHA for $175,000 for 2 years. Formerly funded by OEO under Title III-B. OEO funding was terminated because grantee's area did not meet "migrant" criteria. Now serves just Lauderdale county. Under OEO the project served 7 counties (including 5 counties in other CAA's jurisdiction).

2. LIFT, Inc. $48,083
   Initially funded 1971, incentive grant.
   Covers 3 counties.

3. OCAP (Area 23) $74,886
   Program has been operational for 4 years.
   Covers 3 counties

4. South Florida Migrant Program - non-OEO
Amount and sources of funds not presently known.

5. S.W. Florida Self-Help Housing, Inc. - Non-OEO
Has received seed money from United Fund. Overall budget not known at present.

6. Friend, Inc. Haneyville, Ala. - Rural Housing Alliance
Created by Migrant Division of OEO, funding level not presently known.

Armed Forces

The Angry Black Soldiers

by JACK WHITE

WHY DID racial violence break out at military bases across the nation last summer? Americans have suggested a number of answers. Some, like an irate writer in *Life* magazine, thought military authority had capitulated to "the black power boys." Others, like a veteran civil rights leader, attributed the troubles to long domination of the armed services by "men from the South, the section of the country we have the most trouble with." But in the main, the nation was shocked and surprised by racial fighting in what was thought to be its most successfully integrated institution, and there was no complete explanation for the trouble or proven solutions to prevent its recurrence.

Indeed, it was difficult to assess how widespread the turmoil was. Syndicated columnist Carl Rowan concluded that the armed forces "were full of dissension." But Representative William J. Randall, Missouri Democrat who headed a House investigation of the summer's violence, said that "the disturbances were much fewer than it would seem from nationwide publicity."

Perhaps the only thing that could be agreed upon was that a number of serious incidents had taken place at military bases in North Carolina, New Jersey, Hawaii, and Vietnam. There was little similarity among them.

Before the fall of 1969, the armed forces had been complacent about racial troubles. The top brass did not acknowledge any problem, and officers in the field tended to follow their example. If something occurred that might be construed as racial, the military was inclined either to ignore it or cover it up. In the fall of 1968, two top Pentagon civil rights officials —one black, one white—visited Vietnam. When they returned, the black official, L. Howard Bennett, reported that if something were not quickly done to ease racial tensions, there would be "riots and demonstrations of epidemic proportions." Members of Congress asked the Pentagon about the prediction and were told that it was "alarmist." Bennett's boss, Deputy Assistant Secretary Jack Moskowitz, who accompanied him on the Vietnam visit, said that he had not reached any of Bennett's conclusions. So nothing was done.

Subsequently, Vietnam became a racial battleground, with numerous serious incidents reported. In late November, an eight-man Pentagon team, accompanied by a special Presidential aide, was sent to Vietnam to "study the implementation of Department of Defense policies and programs dealing with minority-group relations within the military." A few weeks before the racial brawl at Camp Lejeune in North Carolina, an ad hoc committee of officers had warned the base's commander that serious trouble was in the offing. Again, nothing was done at the time.

Since then, the Pentagon has become a relative hotbed of activity. Marine Corps Commandant Leonard Chapman acknowledged the existence of a racial problem. He moved to ameliorate it by allowing black Marines to wear a version of the Afro haircut, use the black power salute when off duty, and listen to soul music on juke boxes on the base. He also instructed all commissioned and noncommissioned officers to re-read the Corps' manual on non-discrimination. His orders marked a permissive departure from Marine tradition, but it remains to be seen how effective they will be. There is already some evidence that they have contributed to greater racial polarization. However, some observers feel that Chapman's orders are significant because they mark a real effort on the part of a senior *military* man to cope with intraservice racial difficulties.

Soldiers are under great pressure not to make complaints because of fear their commanding officers will retaliate. Thus, where there is an allegation that patterns of discrimination exist, the military may respond that investigation did not discover any basis for court martial or other disciplinary action. When this happens, the discrimination is likely to continue.

Young black servicemen are increasingly adopting the trappings and rhetoric of black militancy. Many of them feel that the military places penalties on those Negroes who openly identify with the black identity movement. Clarence Browning, a twenty-year Army veteran and now assistant director of the Concerned Veterans of Vietnam, puts it this way:

"If a black GI stands up for his rights—to be black and proud of it—he's going to get knocked down. Some Negro officers will punish a black GI more severely than a white one just to prove to the man [white superior officers] that they aren't biased in favor of blacks. And black noncommissioned officers don't say anything about it because their careers come into it. Generally, what I did was keep my mouth shut so as to not interfere with my own efficiency rating."

Quite often the new spirit of black brotherhood takes organizational form. Exact figures for the number of black servicemen's organizations have never

JACK WHITE, formerly a correspondent for The Washington Post, is on the staff of the Race Relations Information Center.

been compiled, but one black naval officer says that "formation of black organizations is as much a trend as the Afro haircut, quite widespread." In many cases, he said, organization goes no further than eating together in the base cafeteria or congregating in a corner of a barracks.

In rare cases, organizations become highly sophisticated. The Concerned Veterans of Vietnam is one such organization. It was started at Camranh Bay, Vietnam, by black sailors after whites burned a six-foot wooden cross and flew a makeshift Confederate banner from the base's flagpole the day Martin Luther King Jr. was assassinated. The organization now has a $65,000 grant from the U.S. Office of Economic Opportunity, maintains offices in three states, and operates a veterans' assistance program.

A more typical organization, however, is the Moormen at Quantico Marine Base in Virginia. The Moormen wear black berets and African shirts off-duty and signal each other with the clinched-fist black power salute. Most of the members have been subjected to Marine discipline. Their purpose is to negotiate black grievances, such as the absence of soul music on base record players, with the base commander. He has given them unofficial recognition. Some observers feel the Moormen will prove a constructive channel for frustrations that might otherwise erupt into violence.

Many whites are put off by black organizations of any type. "How do you think we feel when we see black power flags or when we see them give their black power salute?" a white sergeant wrote to *Time* magazine. "I can tell you one thing, it sure doesn't make us happy." His attitude is echoed by a Marine officer who told a reporter, "There's no room in the Marines for any color except green."

In an effort to turn blacks and whites into "green" Marines, the Corps uses methods which one scholar has described as "brutal" and "anachronistic." Waldo Lyon, a psychologist, found that physical harassment at Marine boot camps was even more prevalent than in the brig. Methods such as Lyon describes are bound to cause abrasive reactions in young blacks, many of whom have just become attuned to black identity. One of the major tenets of black militant thought is that whites have brainwashed blacks, causing self-hatred and a distorted mental self-image. It is unlikely that young blacks will ever find a more clear-cut example of brainwashing than a Marine boot camp; everyone there is brainwashed from thinking of himself as anything other than a Marine. The other armed forces repeat the Corps pattern, but to a lesser degree.

Julius Williams, veterans affairs coordinator for the National Association for the Advancement of Colored People, claims, "The military has always been the policeman of the Southern segregationist tradition." He points to the chairmen of the House and Senate armed forces committees—L. Mendel Rivers of South Carolina and John Stennis of Mississippi respectively—as support for his argument. At least some black servicemen share this view. Said one: "I think that the primary cause of the racial disorder is that most of the military men, particularly those from the South, do not want to accept black men as their equal."

These views are balanced by those of servicemen who say the armed forces are far less discriminatory than civilian institutions. "Career-minded individuals are first of all soldiers and segregationists second," said Joseph Burgess, who served six years as an Army captain and is now a National Urban League staff member, "and on duty, you don't usually have racial problems." Says a black Navy officer, "The Navy is way ahead of any equal opportunity employer in civilian life." Black re-enlistment rates, over the years nearly double that of whites, offer additional support for this view.

"Many whites are put off by black organizations of any type."

It is impossible to say which attitude prevails among the 350,000 black servicemen. But career men—"lifers" who served in Jim Crow units prior to President Harry Truman's desegregation order in 1948—tend to see great improvements in military race relations. New recruits and draftees, on the other hand, tend to view the military as irrevocably racist.

Other factors believed to cause race troubles in the services are:

¶ DISCRIMINATION IN PROMOTIONS. Even the black captain cited above said, "The man who is commanded by a segregationist must always put out ten per cent more if he wants to be judged equal." The military insists that there is no discrimination in promotions because their procedures—including standardized tests—are so impersonal. But it is also true that usually a candidate for promotion must appear in person before a promotions board.

¶ IDLENESS. By most accounts, racial incidents are more prevalent in the Army and Marines than in the Navy and Air Force. The Air Force has had only twelve racially motivated incidents in the past two years, according to the Air Force Public Information Office. All were said to be minor. The Navy has had only "a small number, perhaps three to four of any consequence," according to the Naval Information Office. One explanation is that the Navy and Air Force are organized in much smaller units and much of the men's time is spent on duty, operating ships and airplanes. Infantry units, on the other hand, are inclined to be idle much of the time. Moskowitz, the former deputy assistant Secretary of Defense, said after returning from Vietnam that idleness was a key factor in racial troubles there last year.

¶ UNFAIR APPLICATION OF THE CODE OF MILITARY JUSTICE. Young blacks maintain that they are often court-martialed for offenses that are overlooked when committed by whites.

¶ THE WHITE OFFICERS' "ELITE." Less than one per cent of the officers in the Navy, Air Force, or Marines are black. In the Army the figure is higher: 3.4 per cent. Black soldiers, who make up about thirteen per cent of the Army's enlisted men, point to this as prima facie evidence that the military is a white supremacist organization.

Military officers, such as Captain

Hay at Quonset Point, maintain that the limited numbers of black officers result from the service's inability to recruit qualified Negroes. One black naval officer feels the problem is the military's inability to put across the message that it is dedicated to equal opportunity. He said that until recently recruiting films showed white soldiers visiting white European countries—with no blacks involved. "Looking at that," he said, "I don't blame any black brother for concluding that the armed forces were lily white."

Possibly an even greater producer of tension than intra-military discrimination is off-base discrimination, which raises the question of the value of military service for a black man. Militant organizations like the Black Muslims have long maintained that black men should not serve in the armed forces until discrimination was ended in America. "Why should I fight in Vietnam," one black soldier asked, "when I'll just have to fight some more when I get home?"

As recently as 1962, an Army survey found that at least forty-eight of its bases were located adjacent to communities operating segregated school systems, sixty-eight near segregated bars and restaurants, sixty-three near segregated theaters, ten adjacent to segregated libraries, and twenty-three near segregated churches. The problem is believed to have been alleviated by the passage of civil rights laws outlawing discrimination in public accommodations, but it has by no means disappeared.

". . . women seem to play a large part in racial conflict."

In October, Robert J. Brown, special assistant to President Nixon; L. Howard Bennett, Defense Department Civil Rights Director; and a black Air Force officer were all refused service in a Biloxi, Mississippi, tavern that caters to servicemen. Brown has since requested a list of establishments that discriminate and will ask Air Force Secretary Robert Seamans Jr. to place them off-limits.

If he complies, Seamans will be following a precedent set during the summer of 1967 when Defense Secretary Robert McNamara put off-limits on all housing in the Washington suburbs whose landlords would not rent to black servicemen. The ban was later made nationwide by his successor, Clark Clifford. In northern Virginia the number of landlords who have agreed to rent on a non-discriminatory basis jumped from ten per cent to thirty-six per cent as a result of McNamara's actions. Nationwide, an increase from sixty-one per cent to eighty-three per cent was announced by Clifford in 1968.

On and off base, women seem to play a large role in racial conflict. William Endicott and Stanley Williford, writing in *The Nation,* reported, "Most commanders will admit that in the last few months the post off-duty clubs have become increasingly explosive. 'One of the problems is the Saturday night dance,' explained Jack Bale, executive director of the Oceanside Armed Services YMCA near Camp Pendleton. 'We don't have enough girls, period.' Most of the white girls will dance with black Marines, he said, and some of the white Marines from the South resent it. When he sees trouble brewing, Bale immediately stops the dance."

The problem is more complex for black soldiers who are stationed in areas far away from any large number of Negro civilians. They cannot find women of their own race, so naturally they turn to those available. This problem has been particularly acute overseas, especially in Germany. There, white soldiers have been known to burn crosses or wear painted white robes and pointed hats. Reportedly they have told German women that blacks are "animals" and "rapists." White servicemen's prejudice has also led to German reluctance to rent to black servicemen. The reason: German women had been told their babies would be born black if Negroes lived nearby.

Paul Good, a well-known free lance journalist, wrote in *Life* magazine how various factors combined to bring racial tensions at Camp Lejeune to an explosive pitch last summer. Black Marines, he found, were welcome at only one bar in Jacksonville, North Carolina. Racial discrimination in hiring is widespread. A cross was burned on the lawn of a black civilian employe of the base after he was quoted in newspapers as saying, "Lejeune is worse than Mississippi." Women—of any color—are in short supply. For whites, the situation is not much better than it is for blacks. With no outlet for the boredom built up on base, Good wrote, all the Marines became edgy and aggressive.

The tension exploded in July. Accounts of the brawl differ. The official version, according to Good, is: "Blacks provoked a fight on the dance floor of the Area One Service Club after a black WAVE dancing with a white Marine refused to let a black Marine cut in. Then . . . blacks swarmed out in gangs beating hapless white individuals."

At the end of the fighting, one white Marine was dead, a number of others had been injured, and forty-two black and Hispano-American Marines had been arrested and charged with offenses ranging from murder to participation in a riot. Strong measures were taken to clamp down on any further disorder. Sentries were given twice the normal issue of ammunition and armed "reaction" squads were kept ready twenty-four hours a day.

Reporters who visited the camp in the wake of the brawl found blacks and whites at extreme odds. There were reports some men were taking guns to bed at night. Phrases like "black Mafia" came easily to the lips of whites. Camp Lejeune had split into two camps, warily eying each other and seemingly moving toward an inevitable confrontation. The scenario had been predicted by a committee of officers a few weeks before the brawl began, and now it was coming true.

Some believe it was not important how the fight began, that only the gloomy results matter. But NAACP official Williams investigated the incident in the company of Bennett, the Pentagon's civil rights director. Williams concluded that the fight was the result of a regional rather than a racial confrontation. "What happened is this," he said during an interview, "a

white sailor or Marine had dated the Negro WAVE, and, of course, a black Marine asked her to dance and she refused. Well, he went on about his business. Some of the white Southerners objected to this white sailor and everybody went outside and they got into a fight. The black Marines say that they were fighting to protect the white sailor when he was attacked, because he was a Northerner and had been friendly with some of them. It didn't start out racial, but it became that."

The unit involved in the Camp Lejeune violence was commanded by Lieutenant Colonel H. L. Maxwell, the only black Marine ever to head a combat battalion. He was relieved of command of the unit shortly after the incident and was made a race relations trouble-shooter for the 2nd Marine Division.

In an interview with the Associated Press late in November, Maxwell attributed the racial violence to the Corps' inability to deal with "the desires and feelings" of young black Marines. He said that the youths had experienced "the most intensive kind of integration" in Vietnam, only to return to off-base discrimination and intra-Corps prejudice at home. He added that young Marine officers could not deal with the problem because of their inexperience and that older officers would not deal with it because of indifference and a lack of understanding of "the social revolution that's going on in this country."

Now, however, Maxwell feels that the Corps' leadership has taken positive steps to "develop an environment in this division where discrimination cannot occur." He is hopeful that racial tension will be reduced.

As a result of the measures Maxwell referred to, Camp Lejeune has become a testing ground for military policies recommended by Bennett some years ago. These include the establishment of a base human relations council, with officers and enlisted men, both black and white. Its purpose is to discuss problems and seek solutions. It is also designed to spike rumors before they spread. Besides the human relations council, a human affairs officer has been assigned to each battalion. There is also an experimental program of "threshold" sensitivity training, designed to erase as much racial prejudice as possible from the minds of Marines.

". . . the military is not exempt from the racial pressures that threaten to tear America apart."

Off-base discrimination—or self-segregation—is practiced by blacks as well as whites. In Seaside, California, near Fort Ord, black soldiers have staked out a dingy conglomeration of pool hall, liquor store, and bar and renamed it "The Pit." It is unofficially off-limits to whites. In Vietnam, one section of Saigon where whites are unwelcome is known as "Soul City." The unofficial boundary lines are said to be religiously observed by black and white servicemen.

But intra-service discrimination and off-base prejudice have been present for a long time. In and of themselves they are insufficient to explain the outbreak of violence last summer. Some observers feel that the war in Vietnam may be the spark that ignited the explosive relations between black and white soldiers. In the first war ever fought by an integrated American Army, blacks are doing more than their numerical share of the fighting and dying. Figures released in 1965 showed that 18.3 per cent of the total Army casualties were suffered by Negroes, although they made up only a little more than thirteen per cent of the total Army manpower in Vietnam. Military officials say this results from the high percentage of blacks in elite fighting units such as the Airborne and Air Cavalry. Newsmen have reported all-black platoons in these units. Blacks therefore are in the forefront of the war effort. Why?

"Because they are the ones who see how they can advance in these units," according to Clarence Browning of the Concerned Veterans of Vietnam. "The black man has to risk his life to get ahead and get that extra little jump pay, whereas the white boys can get ahead just by putting in time."

The blacks are fighting supposedly to bring freedom to a country 8,000 miles away at a time when they feel they do not have freedom at home. Black militants say the war is a racist plan to exterminate "the cream of young black manhood." They see the war as "neo-colonialist." There is a connection between the revolutions in the Third World and the struggle for black freedom in America, they claim. And their analysis is taking hold, not only among young blacks, but among young radical whites as well.

During the riot in Washington, D.C. following Martin Luther King's assassination, a young paratrooper back from Vietnam said he could not understand why he should have to go so far away to fight when there was so much misery at home. His sergeant, a black veteran of more than twenty years, could not understand it either. His daughter was a soul singer, the original "Peaches" in the "Peaches and Herb" combo. His home was Washington. "If I weren't in this uniform, I'd be out here with them," he said of the rioters.

The young black soldier is angry. He is angry because he feels that the armed forces discriminate against him, because when he goes off base he becomes a second-class citizen, because he must fight in Vietnam and, sometimes, against his brothers in the streets at home. He is angry, too, because many times he will find unemployment his only reward for risking his life in his country's service. Bert Shaixnader, twenty-two, of Fresno, California, was wounded twice in Vietnam. Now, he has a job carting railroad ties. It pays two dollars an hour. Robert Clay, twenty-one, of Washington, D.C., put in eighteen months as a Marine in Vietnam, crawling into caves looking for the Vietcong. Now, he can't find a job.

Williams of the NAACP says the black veteran is "meeting with prejudice in the administration of the Vet-

erans Administration." Joseph Burgess of the Urban League says the program for assisting returned Vietnam veterans is reaching only forty per cent of the total. Thomas Johnson of *The New York Times* found that black veterans were "confused and bitter" because they could not find decent work. Poinchetta Pierce and Peter Baily of *Ebony* reported that black veterans were encountering problems finding good jobs despite the proliferation of programs set up by public and private agencies.

It is clear, then, that the military is not exempt from the racial pressures that threaten to tear America apart. The military is "a mirror reflection" of society, one high-ranking military man said recently. As Bennett put it, the events of last summer "represent the infiltration into the military community of the turbulence that has taken place in the civilian community."

How effective will the military's proposals for reform be? General Chapman's orders have led to confusion on Marine bases. Blacks at Camp Lejeune reportedly were outraged to discover that the Marine version of an Afro haircut does not closely resemble the civilian version. And civil rights leaders like Williams say that the orders deal only superficially with the problems. *The Chicago Defender*, perhaps the most respected of black newspapers, editorialized that the orders "amounted to a tap on the wrist." Browning of the Concerned Veterans of Vietnam claimed that "it will just make it easier for them to single out militant blacks for punishment." He who wears an Afro gets identified.

Secretary of the Army Resor's recommendations that Bennett's human relations training be implemented have not been in effect long enough to judge their effectiveness. But they show that the military has finally recognized the connection between discrimination off base and within the services.

From these actions, it is clear that the military will continue to grapple with its increasingly apparent racial problem. But it is also clear that the adjustments are made within the American pattern of racial prejudice and discrimination. In the last analysis, that is the real lesson of last summer.

Must We Hang Nixon Too?

by A. FRANK REEL

To most of the listeners, including the American Army officers sitting in judgment, it sounded like the brutal blood-lust of uncivilized beasts. To only a few did it appear to be the patterned reaction of frustrated soldiers who came to a foreign and inhospitable land, only to be ambushed, booby-trapped, mutilated by a phantom foe. The guerrillas are killers by night who fade into the landscape by day and are indistinguishable from the subservient peasantry. Whether the native farmer or his wife or even his child are themselves the midnight assassins is not really material; what is important is that the whole guerrilla movement could not exist without the support of the villagers. Hence the ultimate answer is the ultimate simplicity: wipe them out.

Thus it is that in the somber courtroom, speaking in their native tongue through painstaking interpreters, or perhaps testifying in halting, broken pidgin-English, the survivors tell their tales of horror: "Men, women, and little children—the soldiers pushed us into a group—they pointed their weapons and fired—people fell screaming all around me—."

Punctuating the testimony are the pictures of piles of bodies, grotesquely twisted, lying in groups in gutters and on hillsides. Women and children of all ages lie dead, some men but none in recognizable uniform. Exhibit E, exhibit F, exhibit G—and on and on. "I heard her scream." "I saw him shot." "I hid under the body." "They begged for mercy." "Cold blood, cold blood, cold blood. . . ."

Is this Mylai, in Songmy, Vietnam, 1968?

No.

It is Batangas, on Luzon, Philippine Islands, 1945. It is the testimony to which I listened day after day, for the better part of six weeks, some twenty-five years ago. The soldiers who so brutally killed civilians wore the uniform of Imperial Japan, not the United States of America. And the man my lawyer colleagues and I were defending, the man accused of violating the laws of war in that he was allegedly responsible for the indiscriminate murder of unarmed civilians, including helpless women and children, was not a lieutenant or a captain or a non-commissioned officer or a soldier who was there. Our defendant was the defeated commanding General of all Japanese forces—land, sea, and air—in that entire theater of war, General Tomoyuki Yamashita.

It is as though we were now to place on trial for complicity in the Mylai massacre not the lieutenant who has been charged or the captain who may be, but General Creighton W. Abrams or General William C. Westmoreland, or perhaps even the Commander-in-Chief, who is now a former

Are the Armed Forces equal opportunity employers?

attitudes and actions of the younger black soldier.

These enlisted men—in their late teens and early 20's—grew to maturity during an era of protest and social activism. They grew accustomed to speaking out and acting against discrimination even before entering the military. And once they donned the uniform, they refused to allow the regimentation and isolation of the military to lessen their identification with the black struggle back home.

When they saw inequities in the service, they spoke out—ignoring the counsel of older black soldiers that things were far better than in civilian society.

One answer came last week from Air Force Brig. Gen Daniel "Chappie" James Jr. and Army Brig. Gen. Frederic E. Davison, the nation's only black general officers: "There is no such thing as inequality of opportunity in the armed forces today."

The two men, who were both commissioned in the early 1940s and were made generals within the last two years, contended that there would be many black generals in years to come. The struggle against any lingering vestiges of discrimination in the services, they said, was among "the top priorities" of the Pentagon.

Another answer, however, is often sounded by black soldiers of lower rank. In fact, the growing militance and dissidence among young black enlisted men is in part a reflection of their contention that equal opportunity in the military is too often more a cliché than a fact.

Double Standard Seen

They have complained bitterly, at home and overseas, that black troops are on the wrong end of a double standard at many installations in terms of job assignments, promotions and the dispensation of military justice.

Studies of military administrative procedures, such as that conducted this year by the Third Division in Germany, do tend to support the charges involving job assignments and promotions. Enlisted men are given general assignments by computers, but company level officers and non-commissioned officers have wide latitude in determining what function the man will actually perform.

The major aim of the Company Review Policy developed by Gen. James H. Polk, commander of American forces in Europe, is to stop such inequities on the company level. General Polk authorized "flying squads" of officer and enlisted investigators to inspect unit records without prior notice to determine if discrimination in promotions and job assignments had occurred.

Checks of most military stockades—whether at Longbinh, South Vietnam, Rota, Spain or Mannheim, Germany—show that black inmates usually make up at least 50 per cent of the total. Black troops have suffered one out of four punishments on the battalion level and the same number of pre-trial confinements. They have also received a far greater percentage of the less than honorable discharges usually handed out in lieu of a court martial.

These are long-time inequities in the services, notwithstanding the military's integration and equal opportunity programs. They are receiving national attention today because of the

"If I'm going to be in the Army, I'm going to be treated the same—the exact same as anybody else," said 19-year-old Private First Class Benjamin Austin in Schweinfurt, West Germany, recently.

Rising out of such feelings, a number of racial disorders have occured at military bases around the world. There have been some deaths—a white youth at Camp Lejeune, a Marine base in North Carolina, some months ago, and a black youth recently in Ulm, West Germany. In Hohenfels, West Germany, last summer a hand grenade exploded in a crowded mess hall, during a time of racial tensions, injuring several soldiers of both races.

Though they may work closely together during duty hours, and most often without overt hostilities, black and white servicemen will most often separate when they relax.

Outside the joint Spanish and U. S. Naval Base at Rota, Spain, white sailors frequent Rota's "Missouri" bar while blacks flock to "Kelly's." White soldiers in Saigon are most often found along the honky-tonk strip on Tu Do Street while blacks predominate along Trinh Minh The Street in nearby Khanh Hoi.

Competition for local women also makes for problems. Many whites object to blacks fraternizing with European women—a situation dating back to World War I.

'Lifer Village'

There is far less racial conflict among career officers and non-commissioned officers. The career men, often living with their families in so called "lifer villages," quite often maintain life styles quite similar to suburban-dwelling professionals.

Such amenities, as well as the services' reputation for equal opportunity, caused many blacks to seek careers in the military following the integration of the services after World War II.

As a result, corporals and sergeants make up a very high percentage of the black total. Officers make up 2.7 per cent, and Pentagon officials are now trying hard to find ways of making the military more attractive to black college graduates.

Civilian industries have taken many black college men who might have entered the military, especially since the start of black protests in the early 1960's. One result has been that there are more black majors and lieutenant colonels in the Army (having entered during the 1950's) than there are first and second lieutenants (who would have entered during the late 1960's).

—THOMAS A. JOHNSON

troops had taken part in the attack on Conakry. Whether Portuguese mercenary soldiers did is something that may be learned by the United Nations team that has gone to Guinea for a first-hand investigation.

But President Touré has enemies far beyond Portuguese Guinea and a number of neighboring states have exile communities of Guineans afraid to go back home. From time to time, exile groups plan to go back and try to take over; in fact, one report from Conakry last week said that one target of the invaders had been the prison from which a number of President Touré's political opponents were freed.

Besides the political exiles, there are hundreds of thousands of Guineans scattered around West Africa in a kind of economic exile—people who left the country to escape one of the highest costs of living in the world, and a precarious economy characterized by a debased currency and empty shelves in the grocery stores.

Rich in Minerals

Because it possesses diamonds, gold, iron ore and one-third of the world's known reserves of high-grade bauxite, the ore that yields aluminum, Guinea is potentially one of the richest lands in Africa. Many authorities think Guinea cannot miss becoming one of the most powerful African countries — eventually. But its short-term economic prospects are dim, for reasons related

Armed Forces

Tighten Racial Guidelines

Co

12/18/70

Associated Press

WASHINGTON — The Pentagon issued new get-tough directives Thursday to rub out racial discrimination in the armed services.

Problems between black and white GIs have reached a critical point and "the level of frustration and anger among blacks" higher than anticipated, declared Frank W. Render II, the Pentagon's chief civil rights officer.

Acting on recommendations made by Render after he toured U.S. bases in Europe, Secretary of Defense Melvin R. Laird authorized the removal or transfer of civilian officials and military officers "who fail to produce satsifactory results" in dealing with racial discrimination.

Laird armed base commanders in the United States with power to declare off-limits apartment houses, stores, taverns and other establishments that discriminate against blacks and other minority group servicemen.

In the past, commanders first had to receive approval from Washington before acting against landlords and merchants. Now they must only "prove to their own satisfaction" that discrimination exists.

Overseas commanders will still need Washington approval because of sensitive political situations in foreign countries.

The new directive also call for the setting of quotas and timetables to increase the numbers of minority group members in Defense Department jobs.

Beginning next year, Render said, servicewide education programs in race relations will be given to all military personnel from generals to recruits.

"There is an immediate requirement," he said, "to eliminate known discrimination" in promotions, job assignments, housing and the administration of military justice.

Render, a 34-year-old Negro, headed a 15-man Pentagon team which toured Air Force and Navy facilities in England, Spain and Italy. However, most attention was given to Army bases in West Germany where there have been several violent clashes between blacks and whites.

Although aware of the general racial unrest, Render reported, "we did not anticipate finding such acute frustration and such volatile anger" among blacks and to a lesser degree with the whites.

Administration Shapes Policy on Housing Bias

The Nixon administration plans to have a new policy on racial discrimination in suburban housing shortly after the first of the year, Attorney General John N. Mitchell said yesterday.

Mitchell disclosed in a news conference that he and George Romney, Secretary of Housing and Urban Development, have met three times without reaching a "definitive conclusion."

Last week, President Nixon said he was opposed to "forced integration" of suburban housing and his administration would limit its challenges to racial bias to the requirements of the law.

Mitchell said he and Romney are searching for the congressional intent in housing legislation. He said that "definite guidelines and regulations" are needed because government power is usually exercised on regional levels and through more than 70 FHA offices.

Mitchell said he and Romney were not at odds. "We're trying to establish a policy that will be consistent in HUD and the Justice Department," he said.

The search for a broad housing policy, Mitchell said, is the reason no action has been taken on a HUD request to sue officials of Black Jack, Mo., a St. Louis suburb, over the blocking a federally aided interracial housing project through hasty rezoning of vacant land. HUD asked Justice on Nov. 10 to seek a federal court order nullifying Black Jack's rezoning and barring "any further interference with the development of this project."

WASHINGTON POST

Dec 19 1970

Meade, Holabird Areas Held Biased on Housing

BALTIMORE, Dec. 18 (AP) —Black officers and enlisted men at military bases in Maryland still are faced with widespread housing discrimination near almost every major installation, a Maryland Human Relations Commission officer said here.

Hildagardeis Boswell, commission liaison officer to local human relations groups in the state, said discrimination still exists because base commanders "are not pushing anti-discrimination directives issued by the Pentagon three years ago.

Ft. Meade and Ft. Holabird are two areas specifically cited by Miss Boswell

"Black GIs have to live in town. They cannot get quarters around those bases, she said.

Other bases she cited were Ft. Detrick at Frederick, Andrews Air Force Base in Prince Georges County, Aberdeen Proving Ground and Edgewood Arsenal both in Harford County.

She said she has been told by military housing officers that high ranking military personnel have to live in the communities and therefore are reluctant to take firm action against landlords who discriminate.

Miss Boswell said she has received complaints about lack of housing from American and foreign military nonwhites.

G.I. HOUSING BIAS IN GERMANY CITED

4/23/71

N.A.A.C.P. Asks Pentagon to Take Over Leasing

NY TIMES

By ROBERT D. McFADDEN

The National Association for the Advancement of Colored People told the Defense Department yesterday that discrimination in housing had become "the most pervasive problem" confronting black American servicemen in West Germany.

The N.A.A.C.P. urged that the Pentagon immediately assume all leasing responsibilities for housing outside bases in West Germany, subletting units to servicemen who would thus be relieved of the burden of fighting discrimination by landlords.

The recommendation was contained in a report compiled by a three-member N.A.A.C.P. investing team that toured bases in West Germany for three weeks in January and February.

The report, covering the problems of black servicemen in housing, public accommodations, recreation, judicial administration and other areas, was presented to Defense Secretary Melvin R. Laird at the Pentagon by Roy Wilkins, executive director of the N.A.A.C.P., and Nathaniel R. Jones, the association's general counsel, who headed the investigation team.

The team previously had announced recommendations calling for more black civilian lawyers to deefnd Negro soldiers facing military trials in West Germany, and for establishment of an Army "Philadelphia Plan" to recruit more black officers and give more blacks command instead of staff assignments. The Philadelphia Plan is a Government effort to get more blacks in the building trades.

Bias in Heidelberg

The N.A.A.C.P. undertook theinvestigationin response to complaints of discrimination against black servicemen and reports of growing racial tensions in West Germany. Blacks make up 13 per cent of the 300,000 American servicemen in West Germany.

Discrimination in housing, the report said, "more than any other problem caused blacks to regard Germany as an unfriendly country and to wonder aloud why they should be stationed there."

The report said black serv- and were overcharged by many landlords in each of nine cities visited by the investigators, where housing shortages also were found to be acute.

In the Heidelberg area, the report said, Army investigators had found that more than 85 per cent of the landlords listed with the Army's Family Housing Offices discriminated on a racial basis.

Another common complaint among the hundreds of black enlisted men and officers interviewed, the report said, was that white servicemen found housing near their bases, while blacks were forced to accept accommodations up to 20 miles away.

Moreover, commanders have failed to protect their troops against such discrimination, the report said.

The report noted that base commanders had authority to declare housing off limits if landlords practiced discrimination. But it said that, in some cases, this was not being done because commanders chose to ignort the issue.

ARMED FORCES

Army Shifts Author of Bias Report

WASHINGTON POST

4/6/71

BALTIMORE, MD., April 5 (AP)—An Army officer who recently issued a contoversial report on alleged housing discrimination in Germany is being shifted to an equal opportunities post in the Pentagon, The Baltimore Sun said today.

In a dispatch from Frankfurt, correspondent Joseph R. L. Sterne said Capt. Curtis R. Smothers of Baltimore "is returning stateside in a few days."

Last Thursday, the Pentagon rejected the officer's request for a court of inquiry but instituted four other moves suggested by Smothers, 27, in a visit to Washington early this month. They include:

- A requirement that housing agents and owners sign "unqualified assurances" of rental without regard to race.
- A requirement that all servicemen go through Army housing officers instead of making outside arrangements.
- A Six-month ban on landlords who refuse to sign the non-discrimination pledge. After that time, landlords must prove their rental policies have changed to be reinstated in the listings.
- A full scale review of Army housing referral office operations.

Smothers, the only full-time black judge in the U.S. command in Europe, said he learned of the purported bias late last year. After an investigation, the captain asked that a court investigate the alleged failure of Gen. James Polk, recently retired Army commander in Europe, to enforce a non-discriminatory housing policy.

That request was rejected by the Pentagon, but Smothers said he is confident the new "watchdog apparatus" will see to it that the policy is followed in the future.

He added, however, that he resented what he called Pentagon efforts to protect the retired general.

"I don't intend to moderate my position one bit," he told Sterne. "I agree with Gen. William C. Westmoreland that the Army simply isn't going to work as a going institution until it solves its racial problems."

Smothers began his civil rights activity eight years ago while a brigade commander in the Morgan State College Reserve Officer Training Corps.

He was cochairman of the Baltimore Civil Interest Group and participated in demonstrations that resulted in the desegregation of a local theater.

He later held a position with the Student Nonviolent Coordinating Committee while studying law at Georgetown University in Washington under a special Army program.

ARMED FORCES

N.A.A.C.P. Plans Inquiry in Germany

NY Times

4/7/70

By THOMAS A. JOHNSON

The National Association for the Advancement of Colored People announced yesterday that it would send a group to West Germany to investigate racial conflicts and charges of racial discrimination against black American soldiers.

The association's assistant executive director, Dr. John Morsell, said that the action had been prompted by requests from black soldiers, by a Defense Department report detailing "frustration and anger" among black soldiers and by recent news reports.

At a news conference at the organization's Manhattan headquarters, Mr. Morsell said:

"Problems of discrimination in promotion and in disciplinary applications, in accessibility to housing and recreation off base, in job assignments and the like are more and more seen by the Negro soldier, sailor and airman in the context of continuing racial injustice back home.

"The consequence seems to have been a rising tide of intramilitary protest, including formation of semisecret organizations in violation of military regulations. Militant, angry rhetoric has mounted and Negro-white clashes have become more and more frequent.

"The group of investigators is to be headed by the association's general counsel, Nathaniel Jones, and will include Julius Williams, director of the organization's military and veterans affairs department, and Melvin Boldin, an N.A.A.C.P. lawyer.

Mr. Jones said the investigators would leave for West Germany about the middle of January for a two-week to three-week visit to Seventh Army bases.

Asked whether he thought the Nixon Administration would assist in the investigation, Mr. Jones said, "I don't think they will attempt to block us, but I don't think they will attempt to assist us, either."

He was also asked about the Defense Department directives, issued yesterday, to step up programs to enforce racial equality.

"The name of the game is enforcement," he replied. "It can have great meaning if it is enforced."

Pentagon Crackdown Paying Off In Housing Discrimination Figh

Armed Forces

By ROBERT A DOBKIN
Associated Press Writer

WASHINGTON — In 1946, Lt. Daniel L. (Chappie) James, a black fighter pilot home from the war, found himself at Lockbourne Field, Ohio, with his wife, two young children and no place to live.

The only available apartment was in a Negro neighborhood. The landlord allowed only one child under 12, so James left his infant son with his in-laws in Alabama until he found another place.

A NEGRO was a Negro and a uniform meant nothing in those days, recalls James, now an Air Force brigadier general.

Four years ago the Pentagon started using economic pressure to crack down on civilian landlords. Thousands of apartments and trailer camps since have opened to Negro servicemen throughout the country, North and South.

"Today, people look more at the color green than black or white," says Frank W. Render, the Pentagon's top civil rights officer.

Render, a Negro, says that since the Pentagon started its drive to lower racial bars, 1.8 million rental units have been opened up to servicemen of all races.

WHEN THE Defense Department made its first national census of housing areas around military installations that year, only 245,600 rental units were found to be available to blacks and other minorities.

At that time, Render says, only 22 per cent of landlords surveyed said they had an open housing policy. The figure is 98 per cent today.

"On paper this looks wonderful," he says. "But we're not so naive to believe all 98 per cent will actually rent. Some gamble that, with few Negroes assigned to a base in their area, they won't come around and knock on their door."

Blacks make up 9.8 per cent of the 2.9 million persons in uniform. Of these, about 62,000 live in off-base

Gen. James
... no place to live

member of the armed forces in the United States could rent or lease an apartment or trailer if a landlord refused to rent to any servicemen.

This policy of rent-to-all-or-rent-to-none carries a lot of clout, particularly in areas where the civilian community relies on the military for its economic life, Render says.

Clifford's order gave base commanders the authority to declare apartments and trailer camps off-limits wherever discrimination was found.

Every six months a list of off-limits housing is turned over to the Justice Department for possible prosecution under the Civil Rights Act. The Pentagon has no enforcement authority over civilians.

SECRETARY of Defense Melvin R. Laird further strengthened the Pentagon's housing policy by decreeing in December that base commanders who fail to act will be transferred and their reluctance to cooperate noted at promotion time.

Render says housing discrimination problems are almost nonexistent at some bases and spotty at others. It depends, he says, on the base commander's leadership as well as economic conditions and prejudice in the civilian community.

Render says the military's biggest problem in running down discrimination is getting servicemen to report complaints to their base housing referral office.

Airman First Class Charles O Hayes says he and his wife found two landlords who refused to rent during an apartment search near Offutt Air Force Base in Nebraska, but he was "too busy looking for a place to live to complain."

BUT STAFF Sgt. Walter Mitchell, also assigned to Offutt, says he found an apartment in a predominantly white neighborhood. "I only looked at a couple of places, but I had no trouble."

Where discrimination exists, it is usually very subtle. The general practice is to tell a serviceman on the phone a vacancy exists. When he comes to look at an apartment, he usually is told it has just been rented.

In situations like this, base housing offices usually put the landlord on its sanctioned list of off-limit apartments.

In the San Antonio, Tex., area, which has a military population of 55,000, officials have placed two apartment buildings and two trailer parks off-limits.

AT SCOTT Air Force Base, Ill., four apartment houses are off-limits, while owners of five others are under investigation after complaints from servicemen.

Pentagon officials are confident they have brought a turnabout in housing problems in this country and now are turning their attention to Europe.

The authority for base commanders to declare housing off-limits was extended worldwide by Laird last year.

However, the NAACP said in a report last month that housing discrimination in West Germany has become "the most pervasive problem confronting Negro soldi in Europe.

Render says that while American military can clare apartments off-li there is little they can d force a change in attitud landlords refuse to rent blacks.

"There are no anti-disc ination laws in Germa Render said.

around and knock on their door."

Blacks make up 9.8 per cent of the 2.9 million persons in uniform. Of these, about 62,000 live in off-base housing in the United States.

RENDER says blacks have little trouble today in finding housing. Many instances of discrimination still exist, but they are isolated. A nationwide survey drew the same conclusion.

In San Diego, Calif., landlords on the 11th Naval District list of approved housing have signed pledges to rent regardless of race, color or creed.

"People are changing their minds more and more about this," says Letti Rhoden, the 11th District's housing office manager. "At first, some of them thought the government was trying to tell them what to do. Now we don't have any more trouble assigning a Negro family than anyone else."

Julius Williams, director of veterans affairs for the NAACP, also says the Pentagon has made great strides in battling racial discrimination since 1968 when the Secretary of Defense Clark M. Clifford called the situation disgraceful.

JANE P. GORDON, CLERK

BY _____ DEPUTY CLERK

CAPTAIN & MRS. HARRISON P. PEOPLES, Jr.,	:	
Plaintiffs,	:	
- vs -	:	CIVIL ACTION NO. 1150-S
MRS. T.W. DAUGHTIE	:	
Defendant.	:	

COMPLAINT

I.

Jurisdiction of this Court is invoked pursuant to 28 U.S.C. Sections 1343(3) and (4) and 28 U.S.C. Section 2201. This action is brought pursuant to the Thirteenth Amendment of the United States Constitution to redress the deprivation of rights, privileges and immunities secured thereby. This action is also brought pursuant to 42 U.S.C. Sections 1981 and 1982, to secure the rights of plaintiffs to make and enforce contracts and receive the full and equal benefit of all laws and proceedings for the security of persons and property as enjoyed by white citizens, and to enforce the rights of plaintiffs to inherit, purchase, lease, sell, hold and convey real and personal property on the same basis as white citizens. This action is also brought pursuant to Section 810 and 812 of the Fair Housing Act of 1968, 42 U.S.C. Section 3612, to enforce the rights of plaintiffs to obtain rental of a dwelling without discrimination based on race or color.

II.

This is an action for a declaratory judgment as to plaintiffs'

rights and for an injunction enjoining defendant from maintaining a custom, policy or practice of racial discrimination in the rental of housing, which discrimination is a badge and incident of slavery unlawful under the Thirteenth Amendment to the United States Constitution, 42 U.S.C. Sections 1981 and 1982, and the Fair Housing Act of 1968.

III.

Plaintiffs Captain & Mrs. Peoples are husband and wife. They are black citizens of the United States and have one child. Captain Peoples was at the time of the incident complained of herein and is today employed by the United States Army.

IV.

Plaintiffs bring this action on their own behalf and, pursuant to Rule 23(b)(2) of the Federal Rules of Civil Procedure, on behalf of all similarly situated black citizens. Such black citizens are barred or may be barred by defendants from acquiring leasehold or tenancy in an apartment complex because of their race or color. The class represented by plaintiffs is so numerous that joinder of all members is impracticable; there are questions of law or fact common to the class; the claims or defenses of plaintiffs are typical of the claims of the class; and plaintiffs will fairly and adequately protect the interests of the class. Defendant has acted on grounds generally applicable to the class, thereby making appropriate final injunctive relief or corresponding declaratory relief with respect to the class as a whole.

V.

Defendant Mrs.T.W. Daughtie, is a white home owner living in Enterprise, Alabama, at 115 Rosewood Drive. She is in the business of renting apartments contained in a triplex apartment house located at 112 Rosewood Drive and a single family dwelling

at 713 North Main Street, Enterprise, Alabama. The said dwellings are listed with the Off Post Housing List utilized by military personnel at Fort Rucker, Alabama.

VI.

The apartment sought by the plaintiffs was located in the triplex apartment house at 112 Rosewood Drive, Enterprise, Alabama. Said apartment is a dwelling within the meaning of Section 802(b) of the Fair Housing Act of 1968, 42 U.S.C. Section 3602(b).

VII.

On August 29, 1970, Captain Peoples and his family arrived in the Fort Rucker, Alabama, area pursuant to military orders. That afternoon they went to the Enterprise, Alabama, police station and procured a listing compiled by the Chamber of Commerce containing available housing in the Enterprise area. Mrs. Peoples called several individuals on the list among them the defendant Mrs.T.W. Daughtie. Mrs. Daughtie indicated that she did have a vacant single family dwelling at 112 Rosewood Drive in Enterprise. A meeting was arranged at the apartment 30 minutes from the time of the call. Mrs. Daughtie had not arrived at the appointed time but as there was a key in the door plaintiffs inspected the house and found it to their satisfaction. They proceeded to the home of Mrs. Daughtie at 115 Rosewood Drive to tell her that they would like to rent the apartment. Mrs. Daughtie answered the door and told them that while she had been out her husband had rented the house to another couple. She could not remember when asked the name of the couple. At 9:30 that evening a white couple, John and Mary Donnelly, went to the police station and obtained the list of available housing. Lieutenant Donnelly was also reporting to duty that day. He called Mrs. Doughtie from the police station and was informed by her that she had a place availble at 112 Rosewood Drive.

They drove directly to her place arriving at approximately 10:00 p.m. She took them to the vacant apartment and during this time told them how glad she was that they had come because a colored couple had been to see it earlier and "she just couldn't rent it out to them."

The Donnellys and the Peoples were both staying at the Ozark Holiday Inn and had met on their arrival on the morning of the 29th. When they returned from viewing the apartment, they went to see the Peoples to ascertain whether they were the "colored couple of whom Mrs. Doughtie had spoken." The Peoples confirmed that they had in fact applied for the same apartment and had been turned down that very afternoon. The couples decided between themselves that the Donnellys should take the apartment and the Peoples would file a charge of discrimination. At a later point, after the Donnellys had rented the apartment, Mrs. Doughtie informed them that she had rejected black applicants in the past. She also indicated that she was listed with the Army's Off Post Housing list which contains a non-discrimination agreement.

VIII.

On January 21, 1971, Captain Peoples filed a housing discrimination complaint with the Fort Rucker Civil Rights Compliance Officer. The complaint was forwarded to the Department of Housing and Urban Development. On June 16, 1971, Captain Peoples was notified by the Department of Housing and Urban Development that they had attempted to seek resolution of his complaint but were unable to achieve a satisfactory result. The letter also informed him of his right to bring suit in an appropriate Federal Court.

IX.

Defendant's refusal to rent was because of plaintiffs' race or color and was done willfully, intentionally, maliciously

and pursuant to defendant's practice or policy of discriminating against plaintiffs and the class they represent on account of their race or color in the privileges of rental of dwellings.

X.

Plaintiffs have no plain, adequate or complete remedy at law to redress the wrongs alleged herein and this suit for an injunction and a declaratory judgment is their only means of securing adequate relief. Plaintiffs and the class they represent are now suffering and will continue to suffer irreparable injury from defendant's acts and policy or practice of racial discrimination unless relief is provided by this Court.

XI.

As a direct and proximate result of the wrongful acts of defendant alleged herein, plaintiffs Captain & Mrs. Harrison P. Peoples have suffered actual damages in the amount of $200.00 and will continue to suffer damages from (a) humiliation and embarrassment caused by defendant's refusal to deal with them because of their race or color, (b) the deprivation by defendant of plaintiff's constitutional and statutory rights freely to obtain housing without regard to race. Because of defendant's willful, intentional and malicious refusal to deal with plaintiffs or the class they represent, and her practice or policy of discriminating against plaintiffs and the class they represent because of their race or color, plaintiffs claim punitive or exemplary damages in the amount of $3,000.

WHEREFORE, plaintiffs respectfully pray that this Court enter judgment for plaintiffs as follows:

1. Granting plaintiffs and the class they represent an injunction enjoining defendant, her agents, employees and those acting in concert with her from maintaining a policy of discrimination against Negroes seeking to rent housing

accommodations and from maintaining or continuing a custom, policy or practice of discriminating against plaintiffs and the class they represent on the ground of race or color.

2. Granting plaintiffs and the class they represent a declaratory judgment that the acts, policies and practices of defendant complained of herein violate the Thirteenth Amendment to the United States Constitution, the provision of 42 U.S.C. Sections 1981 and 1982, and Section 804(a) or other applicable provision of the Fair Housing Act of 1968.

3. Granting plaintiffs judgment against defendant and each of them jointly and severally for actual damages in the amount of $200.00.

4. Granting plaintiffs judgment against defendant and each of them jointly and severally, for punitive or exemplary damages in the amount of $3,000.

5. Awarding plaintiffs their costs herein.

6. Awarding plaintiffs reasonable attorneys' fees.

7. Granting plaintiffs and the class they represent such further and additional relief as the Court may deem just and proper.

Respectfully submitted,

Demetrius Newton

Attorneys for Plaintiffs

IN THE UNITED STATES DISTRICT COURT FOR THE MIDDLE DISTRICT OF ALABAMA, SOUTHERN DIVISION

FILED

JUL 8 - 1971

JANE P. GORDON, CLERK
BY _____
DEPUTY CLERK

CAPTAIN & MRS. HARRISON P. PEOPLES, JR., Plaintiffs, vs. MRS. T. W. DAUGHTIE, Defendant.	)	CIVIL ACTION NO. 1150-S

ORDER

In this proceeding the plaintiffs, on their own behalf and on behalf of the class they represent, seek an injunction against the defendant and a declaratory judgment to the effect that the acts complained of violate the Thirteenth Amendment to the Constitution of the United States, the provisions of 42 U.S.C. §§ 1981 and 1982, and certain sections of the Fair Housing Act of 1968.

Upon consideration of the complaint, including particularly the relief plaintiffs seek, it appears that the issues involved are of common and general interest to the United States Army officials at Fort Rucker, Alabama, and to Negro servicemen stationed by the United States at Fort Rucker, Alabama.

It further appears that the complaint, by inference, alleges failure on the part of the United States Army officials at Fort Rucker to enforce their nondiscrimination agreement with citizens who are listed on the Fort Rucker Army Off Post Housing List. It is also apparent that complete relief, if granted to the plaintiffs and the members of plaintiffs' class, will of necessity involve the administration of the Army's Off Post Housing List by the United States Army officials at Fort Rucker, Alabama. Therefore, this Court is of the opinion that, in the administration of justice, it will be of assistance to this Court to have the benefit of the views of counsel for the United States as amicus curiae, and that in appropriate cases this Court is entitled at any time to call upon the law office of the United States to serve in that capacity. Bush v. Orleans Parish School Board, 190 F.Supp. 861, aff'd 366 U.S. 212; United States v. Burnett, 330 F.2d 369 (5th Cir. 1962), and Miles v. Dickson, 387 F.2d 716 (5th Cir. 1967). It is, therefore, the

ORDER, JUDGMENT and DECREE of this Court that the Honorable Ira DeMent, United States Attorney for this district, and/or any other attorney with the United States Department of Justice designated by the Attorney General of the

PAGE PARTIALLY ILLEGIBLE

United States, be and he is hereby appointed as amicus curiae counsel in this case to assist the Court in a speedy and just determination of the issues involved.

Done, this the 8th day of July, 1971.

Black War Veterans Plan a Coalition To Press Demands

ARMED FORCES

NY TIMES 8/29/71

The United Black Veterans of America, a New York-based organization formed in April, announced plans yesterday to develop a national coalition of black and other minority-group veterans to seek more educational, employment and medical facilities for discharged servicemen.

The group, which consists of about 100 black veterans, mostly from the metropolitan area, hopes to enlist 20,000 members by the end of the year, according to its president, Byron Foster.

The announcement was made at a seminar in Ferris Booth Hall at Columbia University at which a number of black veterans narrated their difficulties in obtaining employment upon discharge. Another seminar is scheduled to be held today at 9 A.M. at the Mount Morris Park amphitheater in Harlem.

"As blacks and minority-group members we feel we aren't getting a fair share of opportunities even though we have given so much of ourselves in the service of America," said Mr. Foster, who served for a year in Vietnam and who is now a salesman with the American Cyanimed Company.

Mr. Foster said his group was drawing up presenting to Federal, state and city officials this week.

"It ought to be kept in mind that we weren't among those who said 'Hell no, we won't go!'" Mr. Foster said. "We did go and fight but when we came out we discovered that America did not seem to recognize our role in fighting for her, as is evidenced by the lack of fair and equal opportunities for black veterans."

Mr. Foster charged that other veterans' groups, including the American Legion, did relate adequately to the problems of black veterans.

The United Black Veterans was founded in 1968 by Otilio A. Mightly, who had served in the Armed Forces for 20 years.

Racial Tension Worsens In Military, Reports Say

9-19-71 Armed Forces

RTD

By JACK MCWETHY
Congressional Quarterly

WASHINGTON — Racial tension in the armed forces is getting worse, according to Pentagon and civilian reports.

Despite innovative programs designed to curb a growing animosity and polarization between black and white troops, Pentagon investigators keep coming back from the field with reports that the situation is deteriorating.

Eleven per cent of the menin the military services are black: 2.2 per cent of the officers are black.

In 1950 President Harry S. Truman told newsmen equality in the ranks would be achieved "within the near future" as a result of the equal opportunity program he had forced on the military two years before.

But equality has not been achieved and as a result:

(1) NAACP investigators warned after touring European military bases in April that "an uncomfortable number of young Negro servicemen are disenchanted, alienated and have lost faith in the capacity and the will of the armed forces to deal honestly with their problems."

(2) An Air Force human rights team toured 1 domestic training installations and reported in late August that "there is discrimination and racism in the command and it is ugly."

(3) After a three-week investigation of European bases, a report issued by the Pentagon's equal opportunity division last fall said, "We did not anticipate finding such acute frustration and such volatile anger as we found among the blacks."

(4) A second Pentagon civil rights study group toured U.S. installations in Southeast Asia and reported early this summer that racial conditions were deteriorating. "We found that blacks and whites were moving farther and farther away from each other, resegregating through accelerated polarization," the report said.

Further evidence that racial problems in the military have become acute is the increasing high-level agitation over the situation.

Late in August, Defense Secretary Melvin Laird fired Frank Render II, the Pentagon's top civil rights administrator and the highest ranking Negro in the Defense Department.

Although Render, a 35-year-old educator, had launched sweeping programs in race relations education during his one-year enure with the Pentagon, his efforts had not produced any apparent easing of tension.

An Air Force human rights report, which was leaked to The New York Times in August and was not intended for public perusal, read like a point-by-point refutation of Render's innovations.

There has also been increased high-level activity aimed at easing tension caused by the constant irritant of off-base housing discrimination in the United States and overseas.

When it became apparent that many of the communities located near military installations were not going to comply with the open housing law passed by Congress in 1968, the Pentagon began a graduated program of pressure.

First, the Defense Department threatened legal action. Then slowly word was passed to base commanders to use economic pressure, such as placing an establishment or a whole town "off limits."

The most recent effort came from Navy Secretary John Chafee, who issued orders to his base commanders that they were to advise local government and business that fuure base closure decisions would depend largely on how receptive the community had been to all of the military personnel.

The impetus for change of policy in the military regarding racial problems traditionally had come from either the President or from the Pentagon's personnel offices, not from Congress.

An equal opportunity regulation aimed specifically at racial discrimination was put on the books by Truman nine years before Congress passed the first of several civil rights laws in 1957.

There has been little action and no proposed legislation coming from the House or Senate Armed Services committees concerning equal rights in the military.

Since the early 1950s, five men have been in charge of the two committees. They have all represented states from the deep South and all voted against the Civil Rights Acts of 1957, 1960, 1964, and 1968 except one man who retired in 1965 and he voted "no" on the first three.

They are Rep. F. Edward Hebert of Louisiana, Sen. John C. Stennis of Mississippi, the late Rep. L. Mendel Rivers of South Carolina, the late Sen. Richard B. Russell of Georgia and Rep. Carl Vinson of Georgia, all Democrats. Vinson retired in 1965.

In the four services there are 1,328 generals and admirals. Six of the positions are held by blacks; four of the six were promoted in 1971.

Myrtle Beach AFB, South Carolina 29577

Dear Mr. Priest:

I recently learned of the problem that Black airmen stationed at Myrtle Beach Air Force Base are having securing adequate off-base housing. ; Housing discrimination is an area of great concern to me personally and professionally.

I am Co-Director of the Housing and Planning Program for the Southern Regional Council. We recently published a report on housing discrimination in the South and have published several other reports and pamphlets on the subject over the past five years. We have also provided technical assistance to several organizations concerned about this issue. For your information I am enclosing some of our publications.

Presently we are interested in looking into discrimination in off-base military housing. To determine the specific nature of our effort we are exploring the problem to see what might be the most effective and beneficial approach (especially to the Black service men involved).

I would like to discuss this issue with you and would appreciate your calling me to suggest a time that would be most suitable to you. You can call ;me at: (404) 522-8764.

Hope to hear from you soon.

Sincerely,

Arthur C. Campbell
Co-Director
Housing and Planning Program

Atlanta, Georgia 30303

Dear Art:

I was sorry to receive your note stating that you had dropped the study of discrimination around military bases. Perhaps your tentative plans got too ambitious and required too great a portion of your resources. (?) May I suggest that a journalist's look at conditions at just one base--Myrtle Beach AFB, South Carolina--might be worthwhile even if it was just one investigative reporter in town for five or six days. I was a reporter myself for three years, and anyone who couldn't raise a fine feature story out of housing conditions in Myrtle Beach for black servicemen would haveto be deaf, dumb, blind and indifferent. This lesser approach would cost you maybe $300 net in travel-related costs. At least you could get something for South Today out of it. What do you say?

Jerry

• Review surveys from Civil Rights Comm.

Notes

① FAIR HOUSING AROUND MILITARY BASES

- Region III gets 25% of its DISCRIMINATION IN HOUSING COMPLAINTS FROM MILITARY PERSONNEL.

- Case in Ala. where Black officer issued complaint to proper base officials who in turn acted after long delay. HUD office received complaint 30 days before statue of limitation was to expire.
  -- Demetrius Newton, Birmingham attorney, took case in preliminary hearings Judge Frank M. Johnson ordered Justice Dept. to become involved ("joined case")

- Colonel Kane (Pentagon-Dept of Defense) rec'd proposals from Region III E.O. for revamping military off-base housing program.
  (DOD supposedly in process of reforming housing referral system)

- Sanctions against landlords found discriminating →
  ① Blacklist by Base

- Reported hesitancy to blacklist realtors (landlords)

- Civilian runs Housing Referral Office (HRO) - "usually retired military man who is old and unsympathetic toward non-discrimination".

- Initiative with officer to make complaint.

- Bases w/good programs (?)
  1. Black list
  2. Require nondiscrimination pledges

- Ala. Case "one example of mismanagement by the military":
  Sources: ① Justice Dept. Lawyers
  ② EO's files
  ③ Details of handling by Housing office
  ④ Demetrius Newton

- Another Situation to investigate
  Myrtle Beach/Columbia
  Fort Jackson, S.C.

- Kenneth McDaniel white trailer park owner filed complaint.

charge his competitors with failure to adhere to non-discrimination guidelines — while he was sticking to them. Result: McDaniel's trailer park got all black applicants/renters.

(1 Dan McDonald interviewed Blk servicemen) has affidavits available

Files on this case sent to HUD wash (Nov 70) w/ suggestion to have Justice Dept. intervene. They didn't act.
(chain of Authority? → Kenneth Holbert. Director E.O.
Lawrence —— HUD legal

— to date there is no record of affirmative action to breakdown all white character of other trailer parks

McDaniels Park → Rt 3 old Percervial Rd Columbia (between Base & city)

- Park not convenient to base
- Study should disclose → (1) disparitaccio in quality of facilities + discrimination/segregation

(2) proximity to base (3) comparative of cost of predominantly Black/white occupied facilities.

Sources at Myrtle:
(1) Black Captain (lawyer) in Judge Advocate's office. (2) Black Airmens Council

* — most blacks live in section call "Hill". (ghetto housing)

— "concilliation not remedy"

— HUD has right to hold hearings
— find married Blk serviceman determine situation
— Housing also poor for whites
→ varying versions of MYTLE BEACH (M.B) case follow-up on respondents.

— M.B — H.R.O not knowledgeable about nature of discrimination — ~~the~~ no records/documentation
* operation is casual -- ad-hoc

Frank Reuder _ Civil Rights Chief → Pentagon
(Black)

August - 1971 - Melvin Laird (Defense Secretary) Hired
Reuder (35 yr old educator) → after one years

The Pentagon claims that ~~there is only isolated discrimination in this area~~ its policies have ~~completely~~ brought a turnabout in military housing problems. It contends that only isolated discrimination remains. ~~Any study of this kind must take account of the~~ A nationwide survey — years ago supposedly drew these same conclusions.

The equal housing opportunity office here in Atlanta says that 25% of its complaints are from military men which on ~~its surface~~ its face indicates some inequities in the ~~base off~~ off base housing market for Black servicemen. These complaints may be indicative, as Frank Reuder -- former Pentagon Civil Rights Officer -- has suggested, poor leadership by the base commander "as well as the economic conditions and prejudice in the civilian community".

Our study would look at five bases in the South -- four of which have produced most of the complaints filed with HUD in Atlanta. ~~[illegible]~~ -- to see ~~if how well the DoD's housing~~ if extensive housing discrimination still exist, how good a job is being done by the housing referral service, ~~to~~ compare the general quality of dwellings occupied by black service men vis-a-vis whites, examine ~~the~~ conditions that might discourage complaints which are not filed and make an overall evaluation of the efficiency of the referral service. ~~[illegible]~~

EQUAL OPPORTUNITY IN OFF-BASE ~~MILITARY~~ HOUSING

~~PART II~~

Since 1968 at the behest of the Department of Defense military bases around the country have operated an off-post housing referral service. Essentially this service ~~is~~ provides a listing of private housing (apartments, homes and trailers) ~~in close proximity to the~~ that is available to servicemen on a non-discriminatory basis. To develop the listing the Housing Referral Office surveys those housing facilities ~~within some~~ that meet some criteria established by the DOD. One of these specifically ~~states~~ requires an owner ~~[illegible]~~ desiring military referrals must sign a pledge of non-discrimination.

Now, four years since the Pentagon, under Clark Cliffords leadership, ~~made a~~ set forth on the problem of discrimination in off-base housing there is still evidence of widespread discrimination ~~[illegible]~~, around some bases in the South. This contention is based solely on information both public and private furnished by the Atlanta regional HUD office. ~~[illegible]~~ Most complaints of discrimination come from ~~five~~ four bases: Fort Jackson (South Carolina), Ft. Rucker (Alabama) Myrtle Beach AFB (South Carolina), Millington Naval Air Base. A number of other bases ~~[illegible]~~ have been ~~represented~~. ~~[illegible]~~ had complaints filed at ~~[illegible]~~ some point. Near Ft. Rucker a Black sergeant recently ~~[illegible]~~ successfully sued an owner who refused to rent him an apartment. ~~[illegible]~~ Last August a group calling itself the Black Airmen Council at Myrtle Beach AFB requested HUD assistance in dealing with a "serious problem in off-base housing for Blacks."

SECTION D - SPECIFIC REMARKS

1. COMMANDING OFFICER

Establishes and operates the Off-Post Housing Referral Service in accordance with DOD Directives and Regulations. Develops separate listings of houses, apartments, and trailers which may be rented and of properties which may be purchased, in accordance with the DOD policy of nondiscrimination. Maintains working relationships with housing project operators and managers, real estate brokers, news media and property managers to encourage open housing policies (as required for DOD personnel) and to maintain current listings.

Develops procedures for obtaining signed assurances of nondiscrimination for housing listed. Develops standards of location, suitability and condition, prerequisite to acceptance for listing for rental or sale to DOD personnel. As necessary, inspects housing listed for general conformance with standards or to determine corrections necessary to meet standards for listing. Schedules periodic re-inspections in problem areas. Coordinates with proper authorities, when necessary, on correction of health, safety or fire hazards.

Responsible for resolution of major disputes between renters and landlords or property managers. Handles interview of incoming personnel desiring off-post housing and counsels personnel applying for housing as to general practices in leasing, deposits required, responsibility of occupant in normal care of premises and maintenance which may be expected from the owner/management.

(continued next page)

2. SURVEY TEAM

a. The Survey Team concurs with 3 of the 4 spaces recommended in Section A3.

b. There is no Manintick Code applicable as a staffing basis for this activity.

c. Performance data computed in section B supports above recommendation.

d. Workloads used as a basis for appraisal are as follows:

(1) 450 assembling sections monthly pertaining to off post referrals.

(2) 90 personnel referred to off post housing monthly.

(3) 1900 military families authorized on post housing but live on the economy because of a lack of on-post housing..

(4) 7100 family units listed as available off post, and inspections of these units.

-Continued-

PAGE PARTIALLY ILLEGIBLE

Schedule X (Family Housing, Office of Chief)-Continuation Sheet

2. Survey Team Remarks (Con't)

e. The Commander's comments in Section D-1 have been evaluated, discussed on site, and considered in above recommendation. The requirement for two real estate officers in addition to a Housing Referral Officer is not fully justified. One real estate officer is recognized in addition to a Housing Referral Officer to provide an in-office capability for interviewing, counseling, and complaints, and assist the Housing Referral Officer to conduct inspections of off post housing which is not being performed due to a lack of personnel. One clerical space is adequate to perform clerical functions of typing, preparation of reports, and assisting in interviews and complaints. That portion of workloads conducted by the Engineer Technician (Sheet 9, Line 6) pertaining to housing surveys off post and survey questionnaires is considered within the capability of above staffing recommendations, to include related clerical and administrative functions. Recognized requirements for this activity are essential due to the large volume of married basic trainees who undergo hardships locally attempting to find adequate and reasonably priced off post rentals for dependents.

f. Recommended staffing is shown in Section C.

PAGE PARTIALLY ILLEGIBLE

SCHEDULE X (Family Housing, Office of Chief, Off-Post Housing Referral Service Br.) - CONTINUATION SHEET

Section D1. SPECIFIC REMARKS (Cont)

1. Commanding Officer (Cont)

Obtains reports from personnel of housing obtained or reasons for failure to obtain suitable housing. Establishes procedures which will insure positive control of the advertising of rental or sale property in or on official media under the control of the command. Advises personnel displaying interest in home purchases for determination of eligibility for payment by Service Department of mortgage insurance premiums to the Federal Housing Administration under the provisions of the in-service loan 222 program. Also advises on Veterans Administration Home Loan guarantees available to qualified personnel.

Maintains liaison with municipal, county or state agencies having parallel interests in equitable and nondiscriminatory housing of DOD personnel within adjacent communities. Recommends zones of suitability from standpoint of reasonable commuting distance/time for housing to be listed. Periodically checks established zones for changes in traffic patterns, loads and travel time and coordinates with applicable traffic authorities.

Responsible for preparation of a local brochure on available schools, shopping centers, bus routes, and other community facilities for use in counseling housing applicants. Maintains daily records of the number of housing applicants by type of housing desired for statistical purposes. Prepares, maintains and submits to higher headquarters reports as necessary and required by regulations and other directives.

Staffing recommended for the Off-Post Housing Referral Service is as follows:

1 - Off-Post Housing Referral Officer (GS 301) - to act as chief of the Referral Service and to interview realtors and coordinate activities.

1 - Real Estate Officer (GS 301)- to handle in-office interview of personnel requiring off-post housing assistance.

1 - Real Estate Officer (GS 301) - to handle inspections of off-post housing, community facilities, traffic control and complaints.

1 - Clerk Typist (GS 322) - to handle records, files, and reports required by DA and DOD.

MYRTLE BEACH AIR FORCE BASE

1. Total Open Housing

The May 31, 1968 survey figures that Myrtle Beach Air Force Base supplied to the Department of Defense indicated that about 50 percent of the surveyed housing units in the Myrtle Beach area were declared open to Negro servicemen. However, on June 28 the Commander stated that during the month of June, the open housing statistics had improved to 68 percent. Much of this improvement appears to have resulted from the addition of recently constructed facilities. Nevertheless, this progress should be considered valid in view of the special housing problems of the Myrtle Beach area. (These problems will be explained in a later section.)

2. Census

As of June 28, 1968, 450 men were living off-base. The housing survey conducted by Base officials accounted for the residences of only 269 of those men. When questioned about the other 181 off-base personnel, the Base Commander stated that a significant percentage of that number own their own homes. Thus, it appears that this Base has accounted for almost all of its off-base servicemen. This is due in part to the small size of the Base and the effects of the Base official in charge of this program, Captain Saccio, the housing officer, indicated that he had personally visited each multiple dwelling in the area, and has confered with Negro airmen, and with civic organizations and community leaders in an effort to find adequate housing for all Myrtle Beach personnel.

3. Actual Integration

Of the 15 facilities declared open only three actually have racially mixed tenancy. There is a possibility that the other 12 have no intention of renting to Negroes but decided that they need not declare this as their policy.

We were informed that at least two facilities that are listed as being open, and nonintegrated had been tested by Captain Saccio and refused to rent to Negro airmen. There has been no across the board testing, but it is fair to assume that in Myrtle Beach as in Columbia and Sumter many "open" facilities do not in fact rent to Negroes. However, as of June 28, 1968 there were merely 23 Negro servicemen living off base and only 10 of them were directed to their housing by the Off-Base Housing Office. These facts may indicate that the low percentage of integrated facilities could also be due to the small number of Negroes at the Base and the insignificant number who have been referred to open facilities by the Base Housing Referral Office.

4. Deletions from Survey

Since the initial census, the Base Commander has dropped 15 facilities from the survey. The reasons that he provided to the Department explaining his actions varied; some were apparently valid while other appeared to be invalid. Ten facilities were deleted from the survey because it was determined that they had less than five units, would not rent to any military personnel, had gone out of business, were merely open on a seasonal basis, were a bad environment for military personnel or were un-

sanitary. Six of these housing facilities had closed rental policies as did the four facilities that the Commander deleted for such falacious reasons as he was not able to bring about a change in their segregated policies or that they merely rented space for trailers, but not trailers themselves. The reasons given for dropping these four facilities were in overt violation of the DoD program and the Department so indicated in the master list of surveyed facilities. Our interview with Base officials disclosed that one of these five facilities was legitimately deleted because it refused to rent to any military, however, DoD apparently did not allow the deletion because the reasons originally given for the deletion were not sufficiently clear. A deletion accepted by the Defense Department was based on the owner's refusal to cooperate with the Housing Referral Office and the fact that the facility was allegedly too far from the Base. These reasons are entirely invalid since there are other facilities included just as far from the Base and refusal to cooperate requires sanctions not deletion. In any case, the Base has not received any official notice from DoD indicating that any of the deletions were improper. However, the Base Commander and the off-base housing referral officer admitted to us that they were mistaken in deleting four facilities; the one the Defense Department did not comment on (see above), and three others which were deleted because they rented only trailer space and not trailers. These four facilities should now be relisted on the survey.

The Base should be required to carefully consider and submit detailed reasons for the deletion of any facility. DoD must also officially notify

the Base immediately of any deletion they disapprove of, as well as explain to the Base the reason for their refusal to allow that deletion.

5. Housing Referral Office:

The Housing Referral Office at Myrtle Beach Air Force Base is staffed full time by a Captain and an airman neither of whom are minority group members or have had any formal experience relating to housing or civil rights. Captain Saccio, however, exhibited considerable aptitude for, and commitment to, this program. These two men were due to be replaced by three civilians, by fall 1968, but no money was appropriated for the program.

The procedures followed at Myrtle Beach requires that all servicemen, upon arrival, report to the Housing Office and complete a form indicating whether assistance in finding housing is requested. If assistance is desired, the serviceman is then directed to complete a card detailing his housing needs. All appropriate open facilities are then called to determine vacancies. If the servicemen is white, he is given the list of all prospective facilities to contact, but if he is a Negro, he is personally accompanied to each facility which reported a vacancy. Each serviceman is required to report his experiences and eventual choice in housing to the Housing Referral Office. Base officials have taken several other steps which affect the operation of the Off-Base Housing Office. These steps are described in the section on affirmative action.

6. Effect of Program:

Of the housing units listed as open, 72 percent are trailer courts. Clearly, Negro servicemen have a very limited choice in housing facilities in the Myrtle Beach area. In addition, we were informed by Base officials that the living conditions of off-base Negro servicemen are generally far less adequate than are those of white servicemen of equivalent rank. The Base is fully aware that these differences are a result of racial discrimination. Although their efforts to eliminate these inequities have been far greater in number and creativity than those of the other two bases visited, the housing situation has not improved significantly.

7. Affirmative Action:

The Base officials in charge of the Off-Base Housing Program have made the following contacts in order to secure open housing for Negro servicemen:

a. Numerous contacts with the Mayor and city manager

b. Contact with the Myrtle Beach Board of Realtors

c. Contact with individual property owners

d. Meetings with the local ministerial association

e. Contact with the local head of the NAACP and Negro leaders in the community

f. Contact with prominent members of the area business community concerning possible financing and construction of housing facilities which could be used by military personnel

g. Contact with the FHA concerning the possibilities of low-income housing in the Myrtle Beach area

h. The Commander is a member of the Community Bi-Racial Council and this issue has been discussed at their meetings

i. Captain Saccio, Director of the Off-Base Housing Referral Office has personally visited every facility and realty office in the entire Myrtle Beach area

j. Advertising for housing is not allowed in the Base newspaper unless the facility advertised is listed as open to Negro servicemen

k. The Housing Referral Office has tested the open declaration of two facilities by sending a Negro serviceman and then a white serviceman to that facility to apply for housing

l. Negroes are accompanied individually to each prospective housing unit by Captain Saccio following phone calls by the Base to determine if a vacancy exists

m. The Base has shown itself to be interested in and sensitive to the problems of minority group members of the Myrtle Beach community by sponsoring such things as parties and entertainment for underprivileged children and by volunteering and actually lending Base equipment

to help clear a slum lot in a Negro area for a ballfield

n. All servicemen who live off base and leave the base or move into on-base facilities are required to inform the Housing Office of the address of the off-base facility they are vacating (Items N, O and P were initiated because of the acute shortage of year-round adequate housing for servicemen)

o. The Base guarantees that all aspects of the housing unit that servicemen rent shall be maintained. Owners of facilities with military tenants are encouraged to call the Base if any trouble occurs concerning any resident serviceman

p. In order to give servicemen the first opportunity to fill vacancies, the electric company notifies the Base whenever the power is cut off in any facility

The affirmative action program at Myrtle Beach Air Force Base is by far the most extensive we have yet encountered. Captain Saccio, the off-base housing officer, has exhibited creativity in the implementation of the program. His efforts reflect a sensitivity to the problems of Negro servicemen and a desire to work to overcome those problems.

However, the amount of progress achieved by the Base has been relatively slight according to statistics. Furthermore, Base officials stated that the construction of new facilities has been the most effective way to improve the opportunity for Negro servicemen to obtain adequate housing in the Myrtle Beach area. Although in some respects the Base may have a significant impact on the local business community, realtors and housing facility owners are not dependent on the military to rent their facilities and in most cases landlords prefer to rent their property only during the summer season. The total rent charged to tourists for the three month period starting in June is almost the equivalent of what most military personnel can afford to pay for a twelve month rental. This situation has made the imposition of sanctions an impotent threat to most property owners.

However, the Base does not appear to have gone all out in its efforts to overcome what the Commander called the "redneck influence." An example of a lack of forcefulness that occasionally is evident in its program is that a housing facility, which is adjacent to the Base, uses the Base sewage facilities, and is primarily inhabited by servicemen, maintained a "white only" policy from the beginning of the program until March, 1968, when after months of negotiating, the facility changed its rental policy. The change was a result of a civil rights clause inserted in the expired sewage contract. We were informed that the owner of the facility has built his own sewage disposal system and is soon expected to reinstate his closed policy. The Housing Referral Officer tested the open policy of this facility by sending Negro and white applicants and found that the

facility was in fact closed despite its open declaration. Yet, the off limits sanction has not been employed, and the Commander told us the same thing that we had heard at the other bases we had visited; that the selective use of the sanction with regard to this facility, and any subsequent use of the sanction, could have detrimental effects on the progress that has been made with the community and would only worsen the already serious housing shortage in Myrtle Beach. The DoD program with its Secretarial mandate has been in effect for a year and a quarter. It is and has been for that whole period of time the duty of the Base Commander to evaluate the housing market and the extent of discrimination prevalent therein; to attempt to open that market to his Negro personnel; to use sanctions where cooperation is lacking and to develop alternate housing for those men who must move from segregated facilities when the sanction is imposed. Secretary Clifford's recent order recognized these obligations of the commanders and base officials will no longer be able to hide behind the beligerency of the community they are supposed to change. The Commander of Myrtle Beach Air Force Base should have been more forceful in implementing the action part of the DoD program.

Captain Saccio and Colonel Nichols, the Base Commander, have used their influence to encourage the construction of new facilities, but unfortunately these facilities wind up being almost all Negro. In spite of some flaws in their program and their fear of a confrontation with the local realtors, the officials at Myrtle Beach Air Force Base have attempted and succeeded in doing more to further the chances of their Negro personnel getting adequate integrated off-base housing than any of the other bases we have studied.

MEMORANDUM March 29, 1967u

To: Mrs. Ruth H. Alexander; CC: Personnel Files

From: Moreland Griffith Smith
Urban Planning Project

Re: Mrs. Virginia Brown

Mr. John Boone and I have negotiated with Mrs. Virginia Brown to start work for SRC beginning April 1 (this date falls on a Saturday, therefore Mrs. Brown reports to work on Monday April 3, 1967) She is to be paid an annual remuneration of $5,000.00

I have the Personnel Vita Sheet and Pesonnel Information Form which we will have her fill in on Monday. If there is anything else I should attend to in this regard, please let me know.

RE: MAP FOR THE ATLANTA HOUSING STUDY

As you know, I have been most concerned that the Atlanta Housing Study be as good as can be done when it is published! I realize that everyone has put more time on it than it would seem Atlanta or <u>any</u> single city would warrant. Particularly when SRC is a <u>regional</u> Council and not an Atlanta council. This has been a concern of mine also. I have come to the conclusion the time taken by everyone indicates the magnitude and difficulty of the job before us and indicates the excellent buffering and maneuvering the white segment of any U. S. city has done in structuring a community of citizens treated on an unequal basis. It also amplifies the white community's dogmatic commitment to keep the status-quo. In the process of getting this AHS in its present form it has become increasingly apparent the commitment of the Negro business and professional to co-operate with the white institutions. Part of this is due to the Negro to try to protect his extremely hard earned gains. His present menial position was obtained at great cost and one can understand his reluctance to jeopardize it. In addition, it is my opinion, that the Negro citizens by and large are not aware of the magnitude of the problem to obtain equal opportunity and are expecting a simple and easy solution.

If you recall in the <u>NCADH</u> "A City Study" Atlanta's study comparatively stood up well. This was not because Atlanta's was good but rather indicates the universality of the problem. In other words, by doing the AHS <u>well</u> we are doing a study applicable not only to the region but also of national importance!

Memorandum
Mr. Paul Anthony - 2
March 29, 1967

You probably would not recall that the part of the NCADH ATLANTA STUDY which had the greatest impact and really set the tone of the Atlanta section was the accompanying MAP. Only through continued perserverance in prodding Sam and with the co-operation of the "Cartegraphic Laboratory" of the University of Wisconsin, have we come up with 7 negative and positive flaps which go to producing a AHS MAP (see central portion attached.) This map shows graphically the ATLANTA RESIDENTIAL PATTERNS of (1) Negro Areas (2) Transitional Areas (3) Areas in which 50% of the Homes need minor repairs (4) Areas in which 50% of the houses need major repairs (5) Public housing. In other words, this shows graphically and in one fill swoop the important effect of what the powers that be (government, finance, industry, realators, planners) have done and are doing by an artificial control of the Economic Laws of Supply and Demand through a controlled dual market! I don't believe this can be shown adequately in any other way.

Mr. Tommy Waler of Longino & Porter Printing, Inc. has given us the following prices

1,000	$_____
2,000	$_____
4,000	$$_____
6,000	$_____

I got the various quantities priced because I believe 1,000 would give me the supply needed if we just used it for UPP. 6,000 would be needed if it goes with the NEW SOUTH issue (5,000 for NEW SOUTH, 1,000 for UPP)

I cannot too strongly recommend that this be done!

Without it the AHS is not as good as it could be, not as clear and we lose completely the regional impact as a typical study and how drastic our actions must be if we effect Democratic equal opportunity for all motivated by the American sense of FAIR PLAY.

RE: MAP FOR THE ATLANTA HOUSING STUDY

As you know, I have been most concerned that the Atlanta Housing Study be as good as can be done when it is published! I realize that everyone has put more time on it than it would seem Atlanta or <u>any</u> single city would warrant. Particularly is this true since SRC is a <u>regional</u> Council and not an Atlanta Council. This has been a concern of mine also. I have come to the conclusion that the time taken by everyone indicates the magnitude and difficulty of the job before us and the efficient buffering and maneuvering of the white segment of any U. S. City in structuring a community of citizens treated on an unequal basis. It also amplifies the white community's dogmatic commitment to the status-quo. In the process of getting this AHS in its present form the commitment of the Negro business and professional to co-operate with the white institutions has become increasingly apparent. Part of this is due to the Negro trying to protect his extremely hard earned gains. His improved position however minor, was obtained at great cost and one can understand his reluctance to jeopardize it. In addition, it is my opinion, that the Negro citizens by and large are not aware of the magnitude of the problem to obtain equal opportunity and are expecting a simple and easy solution.

If you recall in the NCADH "A City Study" Atlanta's study comparatively stood up well. This was not because Atlanta's was good but was rather an indication of the universality of the problem. In other words, by doing the AHS well we are doing a study applicable not only to the region but also of national importance!

You probably would not recall that the part of the NCADH ATLANTA STUDY which had the greatest impact and really set the tone of the Atlanta section was the accompanying MAP. Only through continued perserverance in prodding Sam and with the co-operation of the "Cartegraphic Laboratory" of the University of Wisconsin, have we come up with 7 negative and positive "flaps" which go to producing a AHS MAP (see central portion attached.) This map shows graphically the ATLANTA RESIDENTIAL PATTERNS of (1) Negro Areas (2) Transitional Areas (3) Areas in which 50% of the Homes need minor repairs (4) Areas in which 50% of the houses need major repairs (5) Public housing. In other words, this shows graphically and in one fell swoop the important effect of what the powers that be (government, finance, industry, realators, planners) have done and are doing by an artificial control of the Economic Laws of Supply and Demand through a controlled dual market! I don't believe this can be shown adequately in any other way.

If SRC could produce a legal brief proving our point we would not need graphic aids. Because we cannot produce an air-tight thesis there is all the more reason we need graphic aids.

Mr. Tommy Walker of Longino & Porter Printing, Inc. has given us the following prices:

1,000	$_____
2,000	$_____
4,000	$_____
6,000	$_____

I got the various quantities priced because I believe 1,000 would give me the supply needed if we just used it for UPP.

6,000 would be needed if it goes with the NEW SOUTH issue (5,000 for NEW SOUTH, 1,000 for UPP.)

I cannot too strongly recommend that this be done!

Without it the AHS is not as good as it could be, not as clear, and we lose completely the regional impact as a typical study and how drastic our actions must be if we effect democratic equal opportunity for all motivated by the American sense of FAIR PLAY.

TO: Mrs. Virginia Brown

FROM: John Boone and Moreland Smith

DATE: May 9, 1967

SUBJECT: Priority on Work Load

Because we have so many that could be bringing work to you, Boone, Smith, Farmar, Ron Seivers, and Walter Anderson, there must be some semblance of consistency in the work flow. Therefore, we will use the following procedure:

1. Priority or approval for work processing will be handled as follows:

   a. Crime and Corrections -- Boone (Farmar only when Mr. Boone is out-of-town)

   b. Urban Planning -- Smith

   c. Any work submitted by/or for Anderson and Seivers, must be approved by Boone or Smith before it is processed.

2. First priority items will be marked URGENT in red pencil, and placed in the basket on Mrs. Brown's desk, marked UP-OUT. Material not urgent should be placed in the basket marked HOLD.

3. All other work will be processed in a routine manner, keeping a reasonable flow of work for C&C, as well as UP. If there is any back log, either Boone or Smith will indicate preference of work to proceed the following day.

Re: Housing and Planning Program Development

Listed below are the things I have completed are am now working on:

- Helped develop a program for two summer interns assigned to the Housing and Planning Project. The interns did an evaluation of Youth participation in Model Cities while actually conducting a program in which young people participated.

- I have begun a survey of the literature on Housing giving special attention to the various definitions of the housing problem. This survey should produce a list of agencies that are involved in some aspect of the housing field.

- To give credence to our efforts in citizen participation in Model Cities and to our efforts in housing and planning in general. I took time to write an article on "Ghetto Residents' Participation inPPlanning Programs." This article is now being considered for publication by the American Institute of Planners' Journal. (Playboy's reply: "too specialized to meet our current needs")

- In view of the need to put our shop in order, I designed a system for organizing our existing supply of planning literature. The system should simplify the process of using information once it is gathered.

Presently, I am focusing my attention on developing a program for the next twelve months. I have not hesitated to think of radically altering the programs bailiwick; based on the assumption that a broadened but well defined program can be successful in attracting funds consistent with its scope. It was from this perspective that I entertain the following ideas:

- By mutual consent of the Council's staff, the HPP should concentrate in housing.

- Notes on evolving a program philosophy:

  1. Sporadic report generation will yield very marginal gains toward solving urban problems.

  2. Reports must lead to action. Any reports generated by this report must be part of a total approach. Before any study is undertaken, an assessment will be made of its probable results and how it will contribute to the overall efforts of the Housing and Planning Program.

  3. We will not be a party to any efforts that simply proposed new bodies or organizations (the proliferation of bureaucracies!) Without total comprehension of how much a proposal would contribute to problem solving.

  4. We will engage in planning that attempts to locate points of maximum leverage that could conceivably trigger other forces which would act to solve a given problem. Consistent with this philosophy , we seek in the HPP to get at basic problems and not attack conditions that are merely symptoms of a problem.

5. Increasingly we are convinced that much of the blame for plans not being implemented must be placed on planners. The reason being planners proposed grandiose schemes but give little attention to indexing available resources according to some time frame. Our emphasis is on making the processes of planning, action and production work together.

- Some Specifics:

1. By January 1, 1970, we shall have completed a survey of low-income housing activity in the region. Presumably, such a survey would create an awareness of the housing problem and suggest ways for SRC's involvement.

2. Our initial assessment of the housing problem provide a temporary conclusion. The Housing problem is primarily one of design, production and delivery. Obviously the client-architect - builder relationship does not work for poor people. A considerable ammonntoofkknowledge has been developed on the design and production of low-cost housing in experimental situation. Delivery of this innovative housing to poor people is still a major problem. It seems that the points of maximum leverage in this situation are the following: (a) strict codes that do not permit innovative housing; (b) a derth of skill labor and (c) financing the production of housing.

Conceivable, we might select a city and conduct a study of the effect that city's building codes have on housing supply for the poor.

3. Develop a compnnent for providing planning education and creating resource awareness in low-income communities. Assumption: The Community Organization Project has discovered groups that are interested in community planning (after organizing themselves) but who do not know what steps to take or what aid is available. Proposal: conduct strategically located planning education workshops that would serve as a forum for communities within a predetermined radiosto familiarize themselves with the advantages and techniques of planning. Long Range Service: Continuous planning assistance to groups requesting it,would be part of research capacity of HPP. (Note: a program of this type, provided funds become available, might mean creating a program in planning similar to VEP.)

4. Will develop a master list of available government and private funds for various kinds of urban development projects. This is a necessary componenomponent of our research function of provideing assistance to community groups.

5. After a twelve minth period we should be sufficiently knowledgeable to propose meaningful and relevant policies on various planning problems, in cities and states throughout the region.

January 6, 1970

To: Moreland Griffith Smith

From: Arthur C. Campbell

Mrs. Pat Connell called Tuesday, January 6th to obtain assistance in raising funds to sponsor a black architectural student on a trip abroad. Pat Connell is an architectural professor at Georgia Tech who is developing an urban design program. She was able to give the following information about the project:

Georgia Tech Y promotes a program that sends students to Russia, Germany, Austria and other foreign countries for a period of 2½ months.

A black student wanted to go in 1968 but was unable to raise the $1,500.00 required.

Mrs. Connell feels that sources exist in the city that are willing to underwrite the cost of sending a black student on one of these trips.

I suggested that if she would send us detail information, you might be able to put it in the hands of some groups or individuals who might be interested in helping to finance such a trip.

Re: Suggested follow-up questions for Robert Affeldt

1. It has been reported that Shermon Unger (the conservative HUD General Counsel) was forced on Romney by the White House. Can you confirm or deny? Do you believe Unger was deliberately based at HUD to keep the EO program "in check." For example: To prevent implementation of an enforcement program? How strong is the possiblity that the new G.C. will be more receptive to more effective enforcement?

2. What other personal changes do you feel are necessary in order for HUD to have an effective program such as you outlined in your resignation statement?

3. You point out that Frank Fisher was fired from his position as Regional Administrator because of "over-enforcement." In what specific programs did he cut funds and for what cities? Is he the <u>only</u> production administrator to do this?

4. You say there is a "pressing need today to publish guidelines defining discriminatory practices upon the part of private institutions such as builders. . ." How would you describe the reason for this inaction? Does it involve a lack of initiative, commitment, and administrative expertise on the part of EO officials? Or, have guidelines been proposed but held up by the White House or, other political considerations? Or, does the strucuture and organization of HUD singly permit the program directors so much power that their objections can't be overcome?

5. On page 7, you indicate that in 1968, many federal agencies sent HUD proposals for abiding by Section 808(d) "A summary of the reports was made by HUD. The matter ended there . . ." Would it be possible for us to get a copy of the summary for background information if not for publication?

As I am sure you are well aware, I very seldom get around to reading the SRC Reading File, what with keeping well occupied at "tilting at my own Windmills." However, I did happen to see your letter to Mr. Bergheim concerning SRC's staff confrontation with the two PCCD staff people.

I must say I agree completely with Miss Friedman's memo and the thought expressed in the New York Times letter to the Editor. Furthermore, although both you and Mr. Harvey Friedman have used the term "group therapy session," the only one that needed any therapy was Mr. Friedman! I felt the SRC staff gave him some material he needed badly, if he was perceptive enough to permit it to register!

As mentioned in my report at the SRC Annual Meeting, I felt this was one of the greatest performances SRC

As you will note from Mrs. Mervis letter, she did not mention expenses or honorarium. Not wanting to bother you during the "pressure time" of the Ford presentation, I telephoned Mrs. Mervis to settle this and time, etc. My memo to her attached will cover everything but the $.

I told Mrs. Clayton that expenses would be covered, but I did not know about the honorarium. I would post her after I knew about that.

Re: Fairfield, Alabama

Arrangements have been made to have William Edwards, a housing specialist with the Foundation for Co-operative Housing, meet with the group in Fairfield.

Edwards' experiences with the Foundation gives him some understanding of how to put together non-profit sponsorship corporations. His experience should meet the groups immediate needs.

The financial arrangement call for us to pay his expenses plus a set fee of $50.00. He will submit a written appraisal of the situation to the citizen group and send a copy to us.

I have asked Horace Barker to attend this meeting.

Re: Request for persons to do research interviews.

I believe graduate students of Social Work is the most feasible source of securing interviews in Atlanta. Naturally, there will be varying degrees of sophistication in their skills of applying this technique. I talked to Mrs. Lillian Wynn about this request and she was interested. She wondered how much time would be involved and wanted to know whether or not the financial opportunity would be appropriate reward for the students. She suggested that you have the researcher to contact the school and provide as much detail as possible.

Mrs. Genevieve T. Hill, the Acting Dean was responsible for the total Casework Program and continues to assume some responsibility in this connection. She may be reached at the Atlanta University, School of Social Work. The telephone

Housing Agency Picks 22 Concerns to Build Models Utilizing Best of Existing Methods

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Department of Housing and Urban Development named 22 winners in the competition to build prototype housing systems under "Operation Breakthrough," the Nixon Administration's major effort to solve the nation's housing problems.

More than 2,000 model housing units for all income levels will be built by the companies on 10 previously announced sites, Housing Secretary Romney said at a press conference. Construction is expected to start this summer, Mr. Romney said, and the units will be added to the nation's housing supply within "a year or two."

Operation Breakthrough seeks to achieve volume production of housing by encouraging state and local officials to aggregate large land areas and by stimulating new cost-cutting housing technology. About 236 housing producers initially entered the technological competition. This number was reduced to 37 last December, and yesterday the 22 final winners were announced.

Winners Are Listed

The winners and their headquarters are Aluminum Co. of America, Pittsburgh; Ball Brothers Research Corp., Boulder, Colo.; Henry C. Beck Co., Atlanta; Boise Cascade Corp., Boise, Idaho; Christiana Western Structures, Los Angeles; Descon-Concordia, Montreal; Forest City Enterprises Inc., Cleveland.

General Electric Co., Philadelphia; Hercules Inc., Wilmington, Del.; Home Building Corp., Sedalia, Mo.; Keene Corp., New York; Levitt Technology Corp., Lake Success, N.Y.; Material Systems Corp., Washington, D.C.; Module Communities Inc., Yonkers, N.Y.

National Homes Corp., Lafayette, Ind.; Pemtom Inc., Bloomington, Minn.; Republic Steel Corp., Youngstown, Ohio; Rouse-Wates, Columbia, Md.; Scholz Homes Inc., Toledo; Shelley System, San Juan, Puerto Rico; Stirling-Homex Corp., Avon, N.Y.; TRW Systems, Redondo Beach, Calif, an operating group of TRW Inc.

The total cost of the awards hasn't been determined, Mr. Romney said, but the amount of money involved in each contract will be disclosed as final contracts are negotiated with each of the winners.

Other Technology Under Study

The 22 winning proposals amount to the best of existing technology, the Secretary said. Still being studied are 365 proposals covering more advanced technology; winners in this category will be announced in a few weeks.

Mr. Romney said yesterday's winning proposals all employ, to varying degrees, industrialized techniques ranging from complete production of modules in a factory, to on-site assembly of completed panels and other components, to on-site poured concrete systems. "Taken together," the Secretary declared, "these systems accelerate the introduction of the industrial revolution for the production of homes."

In appearance, most of the systems are conventional, which Mr. Romney said "is necessary to contribute to current marketability and consumer acceptance." Seven of the systems use concrete, six use wood, five use metal as structural framing, two use plastic foam-core panels or modules and two utilize plastic fiberglass materials. "As a group," the Secretary said, "this represents a (switch) from potentially scarce wood to the innovative use of concrete, metal and plastic systems."

Innovations Highlighted

Mr. Romney mentioned these innovations:

—Material Systems and TRW Systems will build plastic fiber glass systems, each using a different technique. The Material Systems technique involves spraying a mixture of glass fiber, resin and sand onto a mold to form a wall-size panel; the TRW process winds fiber glass cloth and other materials over a large revolving core to produce modules.

—The Keene system involves an innovative configuration that would, in a sense, "create land" in the dense inner-city. At intervals of three stories, concrete platforms are constructed on which dwelling units are placed in a manner that leaves walking space in the front and garden space in the rear, advantages similar to those of ground-level units.

—The Shelley System method offers two advanced techniques. It utilizes complete precast concrete modules and stacks them in an unusual checkerboard manner to create additional usable space and to lower costs.

—Other proposals offer innovative subsystems. These include water-conserving vacuum toilet systems by National Homes; wall-length plywood with glass fiber surface, to avoid plaster and dry-wall seaming problems, by Christiana Western, and totally self-contained mechanical systems for different zones of the house by Republic Steel.

Mr. Romney said most of the selected producers will build their prototype housing units on at least two sites, and all sites will contain a variety of housing types and price levels. "We don't want these units to be identified as units for the poor," he emphasized, "because they are not just for poor people but for all income levels."

The 10 sites, previously announced, are Houston, Indianapolis, Jersey City, Seattle, Memphis, St. Louis, Wilmington, Kalamazoo, Mich., Macon, Ga., and Sacramento, Calif.

MODEL OF BOISE CASCADE'S MACON HOUSING
HUD Paid $680,000 for Steel-Frame Modular Design

JOBS FOR 70

Arabi to Get Plant For Modular Homes

ARABI, Ga.—Boise Cascade's Housing Development Division will erect a 42,000-square-foot plant in this South Georgia town to assemble "advanced concept modular housing."

The facility should be ready by May to start hiring 70 workers, according to W. L. Hooper, division general manager, who is headquartered in Atlanta. The first project will be to produce 50 townhouses and garden apartments for an "experimental showcase" at Macon, he said, with work starting on-site by summer.

The design of the housing was produced by Boise Cascade under a $680,000 grant from the U.S. Department of Housing and Urban Development. Construction at the Macon site will also be under a HUD contract, although final terms have not yet been worked out.

According to Hooper, the division had to meet HUD standards for modular housing than are higher than those in construction requirements. He pointed out the design features high noise insulation and superior fire safety features.

When in full production the Arabi plant will be able to turn out three modules a day. Hooper explained that it takes two units to form an apartment and four for a garden apartment.

A Survey of Existing Open Housing Laws As Related to Private Housing: Their Effectiveness and Limitations

City Planning 600

Prof. Roger F. Rupnow

18 Apr '68

Present open housing legislation in the United States deals with a wide array of housing discrimination and housing policy. Statutes generally apply to public housing, private housing financed with public funds, and "private" private housing, i.e. housing in which no public funds are invested or no public agency has any jurisdiction. This report will discuss only those statutes which pertain to the category "private" private housing. The majority of recent controversy in the U.S has been over this type of legislation and its constitutionality and effectiveness.

Survey of Existing Legislation

At last count, sixteen states in the United States had some statute which dealt with, and prohibited discrimination in the sale or rental of private housing. These states are: Alaska, California, Colorado, Connecticut, Indiana, Maine, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, and Wisconsin. In addition, the constitution of the state of Michigan has been construed by the attorney general of that state as banning discrimination in all types of housing including private housing. The territories of Puerto Rico and the Virgin Islands also have strict statutes prohibiting discrimination in all types of housing.

Source

Many municipalities in the United States also have ordinances or statutes prohibiting discrimination in private housing on the basis of race, religion, color, or national origin. Although it is not possible to construct an exact count, the author estimates that at least one hundred cities now have some form of private open housing law. Among these are: New Haven and New London, Connecticut; The District of Columbia; Chicago, East St. Louis, and Peroia, Illinois; Ann Arbor and Grand Rapids, Michigan; New York, New York; Albuquerque, New Mexico; Oberlin, Ohio; Erie, Philadelphia, and Pittsburgh, Pennsylvania; and Madison, Wisconsin.

All state and local legislation in this area is remarkably similar. This similarity no doubt stems from legislators or municipal authorities "treading lightly" in a politically sensitive area and adopting only previously tried solutions rather than innovating. The following section will illustrate the typical range of discriminatory activities covered, exemptions to the law, and the procedure for its enforcement.

Citation of Typical Legislation

General Clause- All states have a general clause in the statute stating that discrimination is prohibited and usually that it is contrary to the public welfare. The following excerpt from the Colorado Statute is illustrative.

> It shall be an unfair housing practice and unlawful and hereby prohibited: (b) for any person having the right of ownership, or possession, or

> the right of transfer, rental, or lease of any housing: To refuse to transfer, rent, or lease, or otherwise to deny to or with-hold from any person, persons such housing because of race, creed, color, sex, national origin, or ancestry; to discriminate against any person because of race, creed, color, sex, national origin, or ancestry in the terms, conditions, or privileges pertaining to any housing, or the transfer, rental, or lease thereof....[1]

Exemptions- Exemptions to the law apply almost exclusively to owner occupied structures of up to four dwelling units. Almost all states exempt these units with only Alaska and Michigan covering the sale or rental of all types of housing. About one half of the statutes cover both sale and rental of non-exempted dwellings and about one half cover only rental of housing in non-exempted dwellings. The New Jersey law is typical.

> .... the provisions of this act shall not apply (1) to the sale or rental of a dwelling, or of a portion thereof, containing accommodations for not more than 3 families, one of which is maintained by the owner at the time of sale or rental as the household of his family, or;(2) to the sale or rental of a dwelling, or a portion thereof, containing accommodations for not more than 2 families....[2]

Inquiry and Advertising Clause- Most states attempt to prevent circumvention of the law by providing that:

> It shall be unlawful: ... 3. for any owner ... to make or cause to be made any written or oral inquiry concerning the race, color, religion national origin or ancestry of a person seeking to purchase, rent, or lease... for the purpose of violating any of the provisions of this part.[3]

> [or that:] It shall be an unlawful discriminatory practice..For any person to: Print, publish or circulate any statement or advertisement relating to the sale, lease or acquisition of any commercial housing... which indicates any prefer-

> ence, limitation, specification, or discrimination based upon race, color, religious creed, ancestry, or national origin. [4]

Finance Clause- As will be pointed out later in this paper, these provisions attempt to eliminate one of the key means of perpetuating existing segregation policies in housing- that of denying to the negro the economic ability to purchase housing and denying to the builder the economic means to build non-segregated housing. The Washington D.C. regulations are illustrative.

> It shall be a violation of these regulations for any person to ... Refuse to lend money, guarantee a loan, accept a deed of trust or mortgage, or otherwise make funds available for the purchase, acquisition, construction, alteration, rehabilitation, repair or maintenance of real property, or impose different conditions on such financing.... [on the basis of race, color, religion or national origin][5]

Implementation- Almost universally, open or fair housing laws provide for a system of implementation or enforcement as follows. Any person who feels that he has been discriminated against in a manner covered by the applicable statute may file a complaint with the state's anti discrimination (members usually appointed by the Governor), commission, or its equivalent. In this complaint, he must name the person or persons who have allegedly discriminated against him. The commission then makes or has made by one of its officers or agents, an investigation of the charges of the complaint.

at what level?

If the commission finds evidence to support the

claim of discrimination, it attempts to eliminate the practice by "conciliation and persuasion." If the attempts at persuasion fail, formal hearings are convened with proper notice given to all parties concerned. If, on the basis of these hearings, the commission formally decides that discrimination has occurred, the commission can issue, or have issued by a court an order for the person violating the statute to "cease and desist" from such discriminatory practices.

Most states provide that a person so instructed must then sell or rent to the person complaining, the housing in question. All legislation provides for a fine (generally $100 to $500) and some legislation provides for a jail sentence(usually 10-30 days) for non-compliance with such an order. In addition, if the "cease and desist" order was issued by a court, the person failing to comply with it may be held in contempt of court and be prosecuted for contempt.

All statutes provide for judicial review of any decision of a commission and any order issued by a commission or court. Either party to the case, the complainant or the respondant, may appeal , usually to a superior court, for such review.

Constitutionality of Open Housing Laws

Although the United States Supreme Court has not directly ruled on the constitutionality of these laws,

those state and Federal courts which have ruled upon them have generally judged them to be a reasonable exercise of state and local governmental power. For example, the Ohio Court of Appeals, in ruling on a case which challenged the open housing ordinance of the city of Oberlin held that:

> The the ordinance, designed and enacted to prevent discrimination in the field of private housing, bears a substantial and reasonable relation to the health, comfort, safety, convenience, and welfare of the residents of the city of Oberlin, and is not an unreasonable, arbitrary or oppressive exercise of the police power. [6]

In addition, the U.S. Supreme Court, in a recent decision, upheld the judgment of the California State Supreme Court which declared unconstitutional California's controversial Proposition 14. Proposition 14 was an amendment to the California State Constitution (passed by the state's voters by a two to one margin) which would have nullified the state's two anti-discrimination laws relating to private housing. The proposition stated in part that:

> Neither the State nor any subdivision or agency thereof shall deny, limit or abridge, directly or indirectly, the right of any person, who is willing or desires to sell, lease or rent any part or all of his real property, to decline to sell, lease or rent such property to such person or persons as he, in his absolute discretion, chooses. [7]

The U.S. Supreme Court ruled that the proposition

was invalid because it would embody in the state's basic charter the "right to discriminate on racial grounds."[8]

Effectiveness of the Legislation

Open housing laws of the type described above have generally aided in the prevention of discrimination. The laws have "freed the white man rather than the negro" by removing the pressure upon owners of housing who wished to rent or to sell to negroes but faced social and possible economic reprisal if they did so. They have operated in much the same way that the public accommodations sections of Federal civil rights legislation have by giving the pressured owner the argument that " I have no choice- it's the law."

are you talking about "race, color or creed"

A second positive effect of this legislation has been its important but limited effect in giving the negro financial access to housing which he desires. By prohibiting discrimination in financing of real estate(see the Finance Clause above) open housing legislation works at the cause of both the limited supply of open housing and the limited ability of negroes to pay for such housing.

Those developers who have attempted to build on a non-discriminatory basis have usually met with limited access to funds. The with-holding of funds may affect the developer at any one of three levels. He may have trouble obtaining equity loans (for purchase of land), loans for construction costs, or mortgages on the

individual homes in his development.[9] A denial of funds at any one of these points may prevent completion of a development or prevent its financial success. Both these results act to perpetuate existing patterns of racial discrimination.

The main problem with the financial clauses of these laws is that they are very difficult to enforce. Despite the provisions of the Washington D.C. regulations cited above, it was still possible for the President of the Metropolitan Washington D.C. Mortgage Bankers Association to say in 1965, "Applications from minority groups are generally not considered in areas that are not recognized as being racially mixed."[10]

Perhaps the main value of these laws is that they create educational "demonstration cases" in those areas where they can be enforced. These cases drive home to realators and lending institutions the fallacy of the axiom that "when colored move in, values go down." (One study has demonstrated that in areas entered by negroes, prices for real estate actually go up about 44% of the time, remain unchanged about 41% of the time, and go down only about 15% of the time.)[11] If these demonstration cases, which hopefully will be closely watched by realators and lenders, can demonstrate the economic benefits to be gained by open housing, one of the most serious obstacles to open occupancy of private housing may be removed.

Limitations

The major failing of existing legislation is that it does not, in most cases, deal with the most prevalent area of discrimination in private housing. Any laws adopted on a local level have no effect on other political jurisdictions- the traditional problem of the central city being unable to control its surrounding suburbs. Since it is in the suburbs that the "hard core" of the problems lies (most people who move to the suburbs do so at least in part to avoid the racial problems of the central city) local legislation (most of which has been passed by "central cities" and not suburbs) by-passes the largest area of discrimination.

State legislation helps to correct this lack of coverage but its effect is seriously limited by two factors. First, being at a more distant administrative level, the legislation is more likely to be ignored or unenforced than local legislation. Second, most state statutes specifically exempt the single family owner-occupied dwelling and the owner occupied two or three family dwelling. Unfortunately, it is precisely this type of dwelling which comprises the major portion of the suburbs.

The problem of inability to "get at" the suburbs has been compounded by recent trends in the reapportionment of state legislatures. The shift in political

power resulting from the reapportionment of legislatures has resulted in some gains for the central city. However, the suburbs have been the major recipient of the new power. Because of ~~their~~ its added representation the suburban power structure has managed (usually with the aid of the local real estate lobby) to exempt single and two and three family dwellings from legislation.[12]

A significant factor in present resistance to open private housing has unfortunately been created by a portion of the negro community's actions during the summers of 1964-67. The riots and disturbances of these summers (ironically caused in part by housing discrimination) have generally strengthened the arguments of legislators concerning violation of private rights of property and of association by the proposed open housing laws. Private real estate dealers have expressed their concern that previously "neutral" sellers and landlords may have switched from a non-biased or slightly biased stand to a strict policy of "white only," as they have become convinced that integration and the presence of negroes in their area will create discord and possible violence.

Thus, in the area of private housing, a key area for all other aspects of race relations, the negro, realistically speaking, has made little progress. As a result of educational and job discrimination, he lacks the economic opportunity and resources to obtain housing on

What's they got to do with "OPEN HOUSING LAWS"

an equal basis with other Americans. As a result of housing segregation he lacks access to good school systems. Closed housing also deprives him of the opportunity to associate with those persons who are in what one might loosely call the"establishment", the upper middle class businessmen and executives who make a large portion of the employment and economic decisions in the United States. Without an association on an equal basis with these decision makers, it is virtually impossible for the negro to break down the barriers of ignorance and prejudice which confront him in all areas of life. The never ending circle continues.

YWCA STAFF MEETING

October 30, 1970

" A HOUSE - A HOME !??

Panel: Trends in Housing and possible effects on residents - especially; single girls, married women, senior women; youth and children.

1. Present actions affecting Housing mobility, inflation, bias, other.

2. New concepts in Housing, to
   Help poor buy homes
   Cheaper construction
   Sponsoring Agents
   Open Housing
   Types of construction
   Financing Methods
   Other

3. Benefits and liabilities, in
   Renting
   Owning

4. Assistance from an Agency for Residents:

   a) In their present situation

   b) In moving into a new situation

   c) In bettering social conditions

Panelists:

Pat Chatman, Atlanta Community Relations Commission
Arnold Connell, Ga. Tech Prof. of Arc. and City Planning
Arthur Campbell, Southern Regional Conf.

Fred Thompson, Urban League

ATLANTA YOUNG WOMEN'S CHRISTIAN ASSOCIATION YWCA

We appreciate very much your willingness to serve on our Panel.

We will meet at the YWCA DEKALB CENTER, 2362 Lawrenceville Highway, Decatur, Ga. on Friday, October 30th at 9:30 a.m.

The Panel will make their presentation between 9:30 and 10:30. Following will be a question and discussion period, ending at 11 a.m.

There are several routes to our DeKalb Center..... We suggest the following:

From downtown Atlanta.....

Out Ponce de Leon (Scot Blvd) until you get to Highway 29.....Go straight out until you pass Rich's at North DeKalb Shopping Center. About 1/3 mile you will see our YWCA sign - our building is on the left.

ATLANTA YOUNG WOMEN'S CHRISTIAN ASSOCIATION

November 17, 1970

Mr. Arthur Campbell
Southern Regional Council
5 Forsyth Street NW
Atlanta, Georgia 30303

Dear Mr. Campbell:

We do so appreciate your coming and being with us for our Staff Panel on Housing. Your contribution to us was most beneficial.

However, I believe the most valuable part of the meeting was our becoming more closely acquainted in a cooperative relationship and doing a better job in serving the community.

This means, of course, we hope we will be seeing you again in the very near future.

Sincerely,

Virginia Carrier

Nixon's Slow Start on Equal Housing

1/19/71 Wall STREET Journal

By MONROE W. KARMIN

WASHINGTON — The emerging Nixonian policy on equal housing opportunity seems likely to be patterned after the Administration's approach to school desegregation: A cautious effort designed to allay white fears and defuse an explosive political situation.

This is the direction Mr. Nixon signaled in replies to questions in two recent televised news conferences. It seems clear that while the President has yet to determine just what his housing policy will be, he has already decided what it must accomplish politically. It must assure suburbanites that the White House stands steadfastly opposed to "forced integration."

On the surface this promise resembles Mr. Nixon's pledge last spring on schooling: That he would resist all moves to bus children from neighborhood schools solely for the purpose of achieving "racial balance." Yet there is a major difference between schooling and housing.

In education, some states (Massachusetts, for example) and some courts had rendered affirmative declarations in favor of transporting pupils to achieve "racial balance." So the President, under pressure from Congress as well, was obliged to take a stand. He chose to proclaim opposition.

A Detestable Phrase

Housing is another matter. No legislative or judicial body that comes to mind has declared in favor of "forced integration." Nor has Secretary George Romney of the Department of Housing and Urban Development, the Cabinet member who does want to subsidize the construction of open occupancy housing in the suburbs.

Indeed, Mr. Romney has come to detest the phrase. "I think it was very unfortunate to have somebody coin the phrase 'forced integration,'" the Secretary told a recent press conference, "because I don't think anybody can say, with certainty, what 'forced integration' means. It's one of those phrases that mean different things to different people."

To some suburbanites, the phrase links the elements of "compulsion" and "race-mixing" into a spectre so terrifying that anxiety overwhelms reason. Thus, it has been one journalist's experience in travels throughout the country that "forced integration" has become a political code used by those whites who simply believe in racial separation. Many are the same folks who resisted school desegregation on grounds that the more natural way to integrate schools would be to integrate housing first.

Other suburbanites do question the wisdom of Federal housing policy, or what they believe to be policy, on grounds other than racial bigotry. It has been one journalist's experience that what these folks want from the President is enlightenment. What does Mr. Nixon expect from the suburbs to help him cope with the problems of the cities?

By opposing "forced integration," all Mr. Nixon has done so far is to flash a signal that, in housing as in schools, he is not going to move too far too fast. While the President may have allayed the fears of racial separatists, he still has not told other suburbanites what the Administration's desires are.

it is known, also leans toward legal action, but the White House is reviewing the matter.

If Mr. Nixon decides not to file suit, it will be evident that he intends to do very little on housing discrimination. But Blackjack is so "blatant," to use Mr. Romney's phrase, that the President may very well choose to unleash Mr. Mitchell. Yet such a decision, in itself, actually would reveal little about Administration policy. All it would say is that no community can obviously, overtly discriminate and expect immunity.

After all, as far as is known, Blackjack doesn't want Federal aid or, for that matter, anything to do with the Federal Government. The more difficult policy questions involve those communities that do want Federally aided improvements, and what they must do, or not do, to qualify for financial help. That's where the various civil rights laws that the President has promised to carry out come into play, particularly the fair housing provisions of the Civil Rights Act of 1968.

"It is the policy of the United States to provide, within Constitutional limitations, for fair housing throughout the United States," the act opens. And it concludes by directing the HUD Secretary to " . . . administer the programs and activities relative to housing and urban development in a manner affirmatively to further the policies of this title."

Mr. Romney has said repeatedly that he intends not only to move spiritedly against reported individual acts of discrimination, but that he interprets the mandate to act "in a manner affirmatively" to mean that he should bring to bear all the methods at his command to break down the barriers of racial discrimination.

However, this was before the 1970 election, and Blackjack, and discussions with Mr. Mitchell, and White House intervention. Now the Secretary talks in much more compromising tones. And the record of the past year shows some of the areas where Mr. Romney has ventured forth, only to retreat, and where Mr. Nixon has yet to declare himself.

Take zoning, for example. Earlier in his term Mr. Romney spoke out forcefully against zoning practices that discriminated against the construction of Federally subsidized housing open to all low and moderate income families. The Secretary even proposed to the last Congress legislation that would prohibit new communities formed in previously undeveloped areas from enacting such zoning.

Congress demurred, and now the Secretary says he won't re-introduce the proposal this year. The Blackjack suit, if filed, would be the Administration's first such court action against zoning, though it has carried to the appellate level a suit brought by the Johnson Administration against the city of Lackawanna, N.Y., which is trying to prevent the construction of a housing project for blacks in a previously all-white section of town.

Then there is the matter of withholding, or cutting off, Federal funds—the most powerful instrument in the Washington kit to bring about change in communities across the nation. Mr. Nixon's message last spring effectively mothballed this technique in the school desegregation controversy.

The most famous, or notorious, test case in housing came when Mr. Romney moved on Warren, Mich., a suburb of Detroit. HUD told the city that if it wanted to continue to receive urban renewal aid, it would have to take steps to eliminate racial discrimination. The department suggested a list of actions so long that it provoked a citizens uprising. Mr. Romney rushed to the battlefront for a confrontation, then backed down considerably and settled for the simple creation of a human relations commission. In the end, Warren voted to reject urban renewal altogether.

Water and Sewer Grants

Less conspicuously, HUD has been using its water and sewer grant program to pry open suburban areas to integrated low and moderate income housing. Fairborne, Ohio; Stoughton, Mass., and Waterloo, Iowa, all were threatened with not getting Federal funds if they didn't take steps to insure open housing. But now this campaign has slackened, and HUD spokesmen are quick to point out that these cities all were funded eventually and that no community has been denied funds because of racial discrimination alone.

At one point HUD Assistant Secretary Samuel Simmons put together an even more grandiose design that would have brought not only his department's programs but also those of other Federal agencies to bear on communities. But the idea has long since been put on the HUD shelf.

Now the President, himself, may be expected to speak out, not only in terms of what he will not do—force integration—but what he will do to carry out the law. If his school desegregation policy is an appropriate guide, it seems likely that caution will apply to housing, too.

Mr. Karmin, a member of the Journal's Washington Bureau, specializes in urban affairs.

Mr. Nixon knows that various civil rights

laws oblige him to promulgate a positive, as well as negative, policy on the equal housing opportunity issue. "We're going to carry out the law," the President pledged in his last televised press interview. "We're going to open up opportunities for all Americans to move into housing, any housing that they're able to afford. But on the other hand, for the Federal Government to go further than the law, to force integration in the suburbs, I think is unrealistic."

Translation of these broad remarks into precise policy is now in progress, occupying the President, Secretary Romney, Attorney General John Mitchell and the White House staff. The product seems likely to be similar to the one produced for school desegregation last spring.

Then the President, in a 19-page proclamation, promised to root out "de jure" school segregation, the result of law or deliberate acts by school officials. But he also advanced a variety of reasons for leaving undisturbed more subtle forms of racial discrimination and "de facto" segregation, that which arises from residential housing patterns.

The essential message of Mr. Nixon's thousands of words was to pledge action against only the most blatant forms of racial discrimination. Moreover, this action would take the form of law suits, not the more direct route of withholding Federal aid from discriminating school districts. In sum, the President produced a cautious policy designed to allay white fears and defuse an explosive political situation.

Just the other day Secretary Elliot Richardson of the Department of Health, Education and Welfare claimed great success for the policy, contending that it had contributed to the "unprecedented progress" in school desegregation during the current scholastic year and had resulted in the virtual elimination of the dual school system in the South. Yet the HEW report shows that 42% of black pupils in the South continue to attend schools with black enrollments of 80% or more.

The Case of Blackjack

Now the racial issue has reached the crisis point in housing, and another Presidential proclamation might seem to be in order for this spring. The flame that sent temperatures soaring, and brought the controversy to Mr. Nixon's desk, is the case of Blackjack, Mo., a suburb of St. Louis.

Blackjack was once a comfortable suburban community of some 4,000 white working-class citizens (estimated income range: $7,000 to $15,000 a year). But then Park View Heights Corp., a not-for-profit development corporation sponsored by religious organizations, purchased 11.9 acres of land in the area and prepared to build a Federally subsidized housing project for low and moderate-income families (estimated income range: $5,400 to $9,200 a year) of all races.

Originally the parcel purchased was zoned by St. Louis County to permit the construction of multi-family housing. But shortly after Mr. Romney's department approved the Park View Heights application for Federal subsidy, alarmed Blackjack residents incorporated themselves as a city. One of the first acts of the new city council was to zone out multi-family dwellings, including the proposed Park View project.

Secretary Romney has branded the Blackjack move a "blatant violation of the Constitution and the law," and has requested Attorney General Mitchell to file suit. Mr. Mitchell,

FEB 12 1971

JACKSON AREA COUNCIL ON HUMAN RELATIONS

A Chapter of the Mississippi Council on Human Relations

302 First Federal Building

Jackson, Mississippi 39201

Phone 948-0878

February 8, 1971

Mr. Paul Anthony
Executive Director
Southern Regional Council
5 Forsythe Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Anthony,

The Jackson Area Council On Human Relations is concerned about the patterns of housing in Jackson. It appears to be moving in the direction of continued segregation,with areas moving from White to Black rather than towards integration. We therefore, voted at our last meeting to undertake a project of working towards a stabilization of our neighborhoods in terms of both integration and values.

To do this job most effectively, we would like to ask the Southern Regional Council for help in setting up our organizational structure and strategies. In particular we would like to ask that Mr. Art Campbell be made available to us. Mr. Campbell has already been in Jackson for preliminary discussions with Miss Joan Bowman and Mrs. Jane Schutt and has appeared before the full Council when we discussed and voted on this matter.

The Mississippi Council On Human Relations is giving full backing to this program and we hope to enlist the cooperation of other local organizations as well. We feel with the expertise your office can furnish, along with the efforts of our people, that we can help build a positive stable housing situation in Jackson.

Sincerely yours,

Dick Johnson

the dayton view keystone

Dayton View is a neighborhood or group of neighborhoods comprising the Northwest Quadrant of the corporate city. Its roughly 30,000 citizens represent an ideal cross section of urban types. From the extremely poor white and black families in the inner extremity to the very wealthy blacks and whites toward the suburban tip -- there are large homes and small, new and old and comprising some of Dayton's heaviest concentration of Catholic, Jewish and Greek residents. Integration varies widely from 90% negro blocks to 0%. Physical blight, absentee ownership, dependency, delinquency and crime, racial tension and school problems are present in typical proportion to national urban character. Therefore, the City Commission of Dayton established the Dayton View Neighborhood Stabilization Project to effect physical, civic, educational, cultural and racial stability. To aid in these efforts the grant from H.U.D. ($1,200,000) for code enforcement, and H.E.W. Title V, P.A.C.E. grant ($967,000) for innovative school programs are essential tools.

Holding the white families, assuring negro home buyers a taut, healthy neighborhood and firmly committed to integration, we are successfully disproving the historical pessimistic mythology and isolating the virus of blight -- both physical and social. Such a laboratory as Dayton View offers close scrutiny of community systems which have, too long, failed to solve neighborhood and people problems. All of Dayton and the metropolitan area will learn from conclusions we draw. A few of these are the truth about

Realty and bank practices	White-black relations
Taxation and insurance	Racial and cultural integration
Municipal service patterns	Increased citizen interest
Police attitudes and services	Youth attitude and need
Schools' role in community	Behavior and crime patterns
Social service patterns	Need for legislative change
Dependency syndrome	Housing supply and ownership

Through research, observation and daily surveillance our Project promises to help remake the city to become more attractive and appealing. A cosmopolitan center, viable and wholesome as a place fit to enjoy culturally and racially and socially integrated living -- where families will wish to raise their children and find deeper, more gratifying value systems. Already cities for all their travail offer greater stimulation for service and civic opportunities. The schools are even now more vital but still hidden in the clouds of change and cultural revolution. The churches are wrenching their way to new roles and the cities' governments groping for greater relevance. There is promise in the cities compared to nothing in the suburbs. The trick now is to move through the choppy waters of this era to a new role for central cities. The Dayton View laboratory can show the way. It can help importantly to write America's urban handbook for tomorrow.

Joe Wine

Open Housing - Sign Ordinance

SIGN ORDINANCE

FOR

CITY OF DECATUR, GEORGIA

Prepared by the
Decatur Sign Committee
and recommended for adoption.

Mr. Wilmot H. Phillips, Chairman
Mr. Joseph M. Maas
Mr. George Carley
Mrs. William C. Fox
Mr. F.E. Patterson
Mr. David Datry

SIGN ORDINANCE

BE IT ORDAINED by the City Commissioners of the City of Decatur, Georgia, and it is hereby ordained by the authority of the same, that the following sign ordinance be and the same is hereby adopted as the Sign Ordinance of the City of Decatur, to-wit:

ARTICLE I

Definitions

For the purpose of this Ordinance, certain terms and words are hereby defined. Words used in the present tense shall include the future, the singular number shall include the plural and the plural the singular, and the word "shall" is mandatory and not directory.

SECTIONS:

1. Accessory sign
2. Advertising structure
3. Animated sign
4. Area of sign
5. Awnings and Canopies
6. Billboard
7. Building official
8. Bulletin Board
9. Business sign
10. Clock sign
11. Combination sign
12. Directional sign
13. Directly illuminated sign
14. Double-faced sign
15. Flashing sign
16. Free-standing sign
17. Ground sign
18. Indirectly illuminated sign
19. Marquee
20. Marquee sign
21. Nonstructural trim
22. Pole sign
23. Projecting sign
24. Roof sign
25. Rotating sign
26. Shopping center
27. Sign
28. Sign structure
29. Temporary sign
30. Wall sign

1. Accessory sign. "Accessory sign" is a separate unit displaying information related to the principal business conducted on the premises, which is attached to or supported from any other sign and not made a part thereof.

2. Advertising structure. "Advertising structure" is any structure or device erected for the purpose of supporting any sign or other advertising or informational media and the framework of the sign.

3. Animated sign. A sign with action or motion with moving characters or changing colors which require electrical energy, but not including wind actuated element, such as flags or banners. This definition does not include public service signs, such as time and temperature signs.

4. Area of sign. The area within a continuous perimeter enclosing the limits of writing, representation, emblem, or any figure of similar character, together with any frame or other material or color forming an integral part of the display or used to differentiate such sign from the background against which it is placed; excluding the necessary supports or uprights on which such sign is placed; provided, however, any open space contained within the outer limits of the display face of a sign or between any component, panel, strip, or figure of any kind composing the display face shall be included in the computation of the area of the sign, whether such open space be enclosed or not by a frame or border. For projecting or double-faced signs, only one display face shall be measured in computing sign area where the sign faces are parallel ow where the interior angle formed by the faces is sixty degrees (60) or less. If the two faces of a double-face sign are of unequal area, the area of the sign shall be taken as the area of the larger face.

5. Awnings and Canopies. (a) Awning. An awning as regulated by this ordinance shall include any structure made of cloth or metal with a metal frame attached to a building and projecting over a thoroughfare, when the same is so erected as to permit its being raised to a position flat against the building when not in use.

(b) Canopy. A Canopy as regulated by this Ordinance shall include any structure, rather than an awning, made of cloth or metal with metal frames attached to a building, projecting over a thoroughfare, and carried by a frame supported by the ground or sidewalk.

6. Billboard. "Billboard" is any "off-site" or "off-premises" sign (as defined immediately following this statement) advertising a person, business, product, event or subject. "Off-site sign" or "off-premises" sign is any sign not located on the premises of the business or entity indicated or advertised by said sign.

7. Building official. The term "building official" shall mean any person or persons charged with the administration and enforcement of appropriate provisions of this ordinance.

8. Bulletin board. A sign which primarily displays the name of an organization and the upcoming events of that organization.

9. Business sign. A sign which directs attention to a business, profession, product, service, activity or entertainment conducted, sold or offered on the premises upon which the sign is located.

10. Clock sign. Clock sign" is regulated by this title and is any time piece erected outside of any building for the purpose of advertising the business on the premises on which it is located.

11. Combination sign. "Combination sign" is any sign incorporating any combination of the features of pole, projecting or roof signs.

12. Directional sign. "Directional sign" is any sign utilized only for the purpose of indicating the location or direction of any object, place or area.

13. Directly illuminated sign. A sign designed to give forth artificial light directly (or through transparent or translucent material) from a source of light within such sign, including, but not limited to, neon and exposed lamp signs, the overall total height of which does not exceed twenty-five (25) feet above ground level.

14. Double-faced sign. "Double-faced sign" is a sign which has two display surfaces backed against each other or against the same background, one face of which is designed to be seen from one direction and the other from the opposite direction, the overall total height of which does not exceed twenty-five (25) feet above ground level.

15. Flashing sign. A sign, the illumination of which is not kept constant in intensity at all times when in use, and which exhibits sudden or marked changes in lighting effects. Illuminated signs which indicate the time, temperature, date or other public service information shall not be considered flashing signs.

16. Free-standing sign. A sign which is supported by one or more columns, uprights or braces in or upon the ground and is not attached to a building.

17. Ground sign. "Ground sign" is a sign which is supported on one or more uprights or braces on the ground, the overall total height of which does not exceed six feet above the grade.

18. Indirectly illuminated sign. A sign illuminated by an external light directed primarily toward such sign and so shielded that no direct rays from the light are visable elsewhere than on the lot where said illumination occurs. If not effectively so shielded, such sign shall be deemed to be a directly illuminated sign.

19. Marquee. A roofed structure attached to and supported by a building and projecting over public or private sidewalks or rights-of-way.

20. Marwuee sign. A business sign painted on, attached to, or hung from a marquee.

21. Nonstructural trim. "Nonstructural trim" means the molding, battens, cappings, nailing strips, latticing, cutout or letters and walkways which are attached to the sign structure.

22. Pole sign. "Pole sign" is a sign erected on one or more uprights supported from the ground, the height of which is greater than six feet, and which is not a part of any building or structure, other than a structure erected solely for the purpose of supporting a sign.

23. Projecting sign. "Projecting sign" is a sign mounted on the face or vertical surface of a building or structure, the display surfaces of which are not parallel to the supporting surfaces.

24. Roof sign. "Roof sign" means a sign which is fastened to and supported by or on the roof of a building or which extends above the roof of a building.

25. Rotating sign. A sign which is designed to revolve.

26. Shopping center. Three or more commercial establishments which are planned, developed and managed as a unit and which provide free parking facilities on one lot or contiguous lots.

27. Sign. The term "sign" shall mean any visual medium including its structure and component parts, which is used or intended to be used to attract attention to the subject matter or advertising purposes upon which any poster, bill, printing, painting device or other advertisement or identification of any kind whatsoever may be placed, posted, painted, fastened or affixed and including any spectacle, display or other advertising statuary.

28. Sign structure. The term "sign structure" shall mean the supports, uprights, braces and framework of the sign.

29. Temporary sign. The term "temporary sign" shall mean and include any sign, banner, pennant, streamer, whirligig, valance or advertising display constructed of cloth, canvas, light materials, with or without frames and intended to be displayed for a brief and limited period of time only.

30. Wall sign. "Wall sign" is a sign applied to or mounted on the wall or surface of a building or a structure, the display surface of which is parallel to the supporting surface.

ARTICLE II

General Provisions

1. Sign Advisory Committee

There shall be five (5) members, one appointed by each commissioner, to advise or recommend to commission on signs and ordinances. Initial appointments shall be two for 3 years, two for 2 years and one for 1 year. Thereafter the terms of office shall be for a period of three (3) years. These members shall not be in office more than three (3) years and are not to succeed themselves.

The purpose of this committee is to review all applications for sign permits and to grant or deny these on the grounds that they are non-conforming to this ordinance, directly or intentionally circumventing the intent of this ordinance, or that they are out of character with the image of the city.

Appeal of denial may be made by the petitioner to the Board of Appeals. The Sign Committee shall review all applications for permits made up to two days before its scheduled meetings. Those remaining will be reviewed at the next scheduled meeting.

The Sign Committee shall meet no less than once a month and as often as is required or deemed necessary by the chairman to process the applications for permits.

The Committee shall elect its own chairman, and three (3) members shall constitute a quorum for approval or denial.

2. Permit Fees

Permit fees may be issued at the time of the building permit. Application for permit shall be made through office of the building inspector. Petitioner must submit drawing of sign indicating size, type of lettering, configurations, coloring, lighting and any electrical and structural specifications as per requirements of this ordinance and the building code.

The granting or denial of permit shall be made at the next regular meeting of the sign committee. Appeal of this decision may be made to the Board of Appeals.

Notification of approval will be posted in the office of the building inspector and after that time the applicant may pay the fee and obtain the sign permit.

Details:
Signs:
Owner-Identification: Single faced, including channel letter signs and a change of copy $00.10/square foot.*
Double faced, including channel letter signs and change of copy $.20/sq.ft.
Painted wall sign and repaint $.05/sq.ft.*
Minimum fee $5.00

General Advertising
New Construction $.05/sq.ft.
Minimum permit fee $7.50
Sign Repairs $7.50
Embellishment (Initials) $.10/sq.ft.
*Square-footage to be figured in accordance with the smallest calculable geometric figure.
Approved plans required on all structural signs in excess of twenty-four (24) square feet.
Double-fee penalty: If sign is erected or painted before issuance of permits.

3. Signs Exempted from Permits
   a. Official Traffic or warning signs.
   b. Changing of copy of a bulletin board, poster board, display casement or marquee. The moving or relocating of embellishments that does not increase area of embellishments.
   c. Signs of trucks, bus, trailer or other vehicle in normal course of business.

d. Decorative flags or buntings for city-wide celebrations when authorized by the city commission for a prescribed period of time.
e. Symbolic flag and award flag of institution or business - one for each business or one for each fifty (50) feet of street frontage.
f. Temporary, non-illuminated construction signs which do not exceed two (2) feet in height and three (3) feet in width.

4. Who Can Do Sign Work

Contractors:

Building, general engineering, electrical, and electrical sign contractors can do all types of sign work.

Sign Painter: can paint walls, repaint structural signs - no erection or electrical work.

Before a permit is issued, a contractor must file certain documents with the building department:

1. A current copy of your certification of competency issued by metropolitan county building and zoning department.
2. A current certificate of insurance from your insurance company, addressed to the City of Decatur Building department.
3. A current occupational or contractors' license issued by the City.

When these documents are on file, applications for permits may be presented personally or mailed to the building department.

Owners:

A bona fide owner, lessee or tenant can obtain a day-labor sign permit if he can satisfy the building official that he has the ability and knowledge to do the work. The work is to be done by the person liable for all legal claims resulting from work being done.

5. Removal and Phasing out

Within ninety (90) days all of the following non-permitted signs shall be removed:

Rotating-flashing-imitations, temporary signs.

Amnesty

Shall be based on total cost of sign (including installation) and shall be accomplished as follows:

a. Minor signs under $750.00 shall be removed within one (1) year.
b. Intermediate signs under $2,500.00 shall be removed within three (3) years.
c. Major signs over $2,501.00 shall be removed within five (5) years, or ten (10) years from date of original installation, whichever is less; however, if all amnestization has expired, a one (1) year lapse period shall be permitted.

6. Sign and Sign Devices Not Permitted

a. Signs that display intermittent lights resembling flashing lights associated with danger.

b. Signs using the word "STOP" or "DANGER", or imitation of an official sign. (Does not apply when part of attraction titles, or descriptive lines of advertising).
c. Signs which provide background of colored lights blending with traffic signals which might confuse a motorist when viewed from normal approach distance of twenty-five (25) feet to three hundred (300) feet.
d. Any sign attached or applied to trees, utility poles, bus benches, trash receptacles or any other unapproved supporting structure.
e. Spinning, strings of spinning, or similiar type devices.
f. Signs not securely affixed to the ground or otherwise affixed in a permanent manner to an approved supporting structure.
g. Political signs, except if appearing as copy or general advertising structures, authorized campaign headquarters, or political signs as permitted window signs.
Shall not apply to political signs on operable vehicles which are parked on private property for a period not in excess of sixteen (16) hours on any one lot during the time between qualification and election.
h. Signs attached to or placed on a vehicle (including trailers) that are parked on private property.
i. Roof signs after enactment of this ordinance. (No permits shall be issued.)
j. Pennants, banners, streamers and similiar type devices shall be prohibited.
k. Accessory signs.
l. Animated signs.
m. Billboards.
n. Bulletin boards.
o. Clock signs, unless this is used in place of a building sign.
p. Combination sign
q. Flashing signs
r. Marquee signs other than those for theaters.
s. Pole signs unless otherwise noted by instance in this ordinance.
t. Projecting signs.
u. Roof signs
v. Signs extending above the roof line of the building.
w. Rotating signs.
x. Temporary signs unless by provision of this ordinance.
y. For sale, sold, for rent or commercial product signs and all not permitted devices on residentially zoned property or adjoining to residential property.

7. Appearance of Signs

a. All flat and ground signs shall have concealed structural members except for vertical supports or other supporting menbers; shall present good structural appearance; and, shall, when attached to a building, appear to be an integral part of the building.
b. All signs shall be maintained in good condition so as to present a neat and orderly appearance. The building official may cause to be removed after due notice any sign which shows gross neglect, becomes dilapidated, or which has ground area around it which is not well maintained.

8. Vision Clearance
No sign or sign structure is to be placed or located so as to conflict with vision clearance requirements.

9. Vacant Buildings
Any owner-identification signs advertising a service or commodity associated with a vacated premises shall be removed, altered or resurfaced by the owner or lessee not later than thirty (30) days from time the activity ceases.
Commercial-renting-leasing signs shall comply with requirements of temporary sign requirements.
After thirty (30) days if the sign has not been removed, a penalty will be affixed and the city shall remove the sign at the expense of owner and same shall constitute a lien on the property.

10. Non-Store Front and Non-Street facing Businesses
There shall be no permanent or temporary window signs, banners, placards, etc.
There shall be no roof signs or projecting signs.
Signs shall be limited to a lobby directory.

11. Temporary Signs: Commercial
Total window surface area covered by temporary signs shall not exceed one-sixth of window surface area and there shall be no more than three (3) temporary signs per 160 square feet of window surface area.

12. Permanent Window Signs: Commercial
Building front: There shall be no more than one (1) major identifying sign either affixed to the exterior of the building or painted on the window parallel to the street per street facing (permanent window sign may not cover more than 1/10 of window surface.

13. Vehicular Businesses
There may be one sign on the building on each street facing. There may be a single dealer-identification post sign of standard municipal size and height. The supporting post of this sign shall have no other signs or ornamentation affixed thereto.
Service signs shall be noted on bays.

14. Filling and Service Stations
Permitted:
a. One (1) detached pole sign per business
Not Permitted:
a. Portable signs of any type.
b. Pennant and banners - except for two weeks opening of business with permit only.
c. Temporary promotional signs.
d. Tire and oil displays placed outside of building.
e. Any sign displayed without permit.
f. Wooden (combustible) signs.
g. Signs attached to pumps and light poles.
h. Roof signs.
i. Vehicles used as signs.
j. Temporary window signs.
k. Light bulb lines - search lights.

15. Political Signs

PERMITTED:

a. On the premises of an authorized campaign headquarters subject to the limitations of the particular type of sign.
b. Within windows of business, not covering more than twenty (20) per cent of glass area.
c. On moving vehicles.

NOT PERMITTED

a. On residential zoned property.
b. On vehicles parked on private property.
c. On unapproved structures, i.e. utility poles, trees, bus benches, vacant buildings, etc., the message of which does not apply to the premises where sign is located.

16. Construction Signs - Clarification of Zones

Single family and Duplex Districts: One (1) for each street frontage, limited to two (2) feet in height and three (3) feet in width (while work is in progress only).
Multiple family Districts: One (1) for each street frontage, limited to twenty (20) square feet (while construction is in progress only).
Restricted Commercial Districts: One (1) for each street frontage, limited to fifty per cent (50%) of area permitted for permanent signs, same type.

SPECIAL NOTE: Any construction sign larger than six (6) square feet requires a permit. Signs larger than twenty-four (24) square feet requires engineered plans - see permits.

17. Home Occupations

One sign not in excess of 72 square inches placed flat against building wall and without illumination.

18. Multi-Family Dwellings, Town Houses, H.D.S.F. #1 and H.D.S.F. #2, Rooming and Boarding Houses

One sign not more than three (3) square feet in area pertaining to sale or rental posted on wall or in yard not closer to property line than ten (10) feet.
One sign not in excess of seventy-two (72) square inches in area pertaining to home occupations including rooming and boarding houses placed flat against wall of building without illumination.

Hospitals, Sanitariums, Nursing Homes, Day Nurseries and Kindergartens: One free-standing permanent sign or bulletin board not more than twelve (12) square feet in area placed not closer than ten (10) feet to any property line.

19. High Rise Multiple Residential

As above for residential, churches and public buildings.

20. Institutional Uses
One permanent sign or bulletin board not exceeding six (6) square feet in area. Temporary sign of any size announcing special event provided such sign is not placed or suspended closer to side property line or to street right-of-way line than ten (10) feet.

21. Public Buildings
Church, School, public buildings, park or other Public use: One permanent sign or bulletin board not exceeding six (6) square feet in area. Temporary sign not exceeding six (6) square feet in area announcing special event.

Effect of partial invalidity of Ordinance

The provisions of this ordinance are severable, and if any of its provisions shall be held unconstitutional by any court of competent jurisdiction, the decision of such court shall not impair any of the remaining provisions.

Repeal

All Ordinances and parts of Ordinances in conflict with this Ordinance are hereby repealed.

Adopted: December 21, 1970.

BEAUTIFYING URBAN AMERICA

Questions and Answers on FEDERAL BEAUTIFICATION AND OPEN-SPACE LAND PROGRAMS

U. S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT
WASHINGTON, D. C. 20410

HUD IP-6 Revised September 1966

"We must not only protect the countryside and save it from destruction, we must restore what has been destroyed and salvage the beauty and charm of our cities. . . . The beauty of our land is a natural resource. Its preservation is linked to the inner prosperity of the human spirit."

Lyndon B. Johnson

BEAUTIFYING URBAN AMERICA:

Questions and Answers on FEDERAL BEAUTIFICATION AND OPEN-SPACE LAND PROGRAMS

The preservation and provision of urban open-space land to provide outdoor recreation opportunities; to conserve historic, scenic and natural resources, and to help guide desirable urban development, has become a national responsibility.

President Johnson emphasized his implicit belief in this responsibility when he sent his housing and urban recommendations to Congress in March 1965. He said then:

> "We wish to create a city where men and women can feed the hunger of the spirit for beauty and have access to the best of man's work."

The Congress responded with the Housing and Urban Development Act of 1965, signed into law on August 10. This Act provides the authority requested by the President to help American communities to improve the quality of their urban environment and to replace ugliness with beauty in our urban areas.

This pamphlet summarizes in a series of questions and answers the principal Department of Housing and Urban Development aids in the current open-space land and urban beautification programs. This is presented in three sections:

I. The Open-Space Land Program

II. The Urban Beautification and Improvement Program

III. General Information.

SECTION I: THE OPEN - SPACE LAND PROGRAM

1. WHO IS ELIGIBLE FOR FEDERAL AID UNDER THE EXPANDED OPEN-SPACE LAND PROGRAM?

   Any governmental agency, with authority to acquire and preserve land for open-space purposes, that is legally empowered to receive financial assistance from the Federal Government.

2. WHAT IS THE NEW MAXIMUM FEDERAL GRANT FOR LAND ACQUISITION AND DEVELOPMENT?

   The level of Federal aid has been increased, from a maximum of 30 percent of total acquisition cost, to 50 percent of the cost of acquiring and developing the land.

3. HOW IS THE COST OF ELIGIBLE LAND ACQUISITION DEFINED?

   It is the cost of acquiring title to land for open-space purposes, or lesser interests, such as development rights and scenic easements that serve the purpose of preserving the open-space character of the land.

4. HOW IS THE COST OF ELIGIBLE DEVELOPMENT DEFINED?

   It is the cost of development of open-space land for park and recreation, conservation, or historic or scenic purposes. It may include landscaping, basic water and sanitary facilities, walks, small shelters, and installation of certain recreation facilities.

   Eligible development costs, however, may not include such major construction as amphitheatres, dock facilities, swimming pools, golf courses, or other major structures or facilities.

5. ARE ELIGIBLE DEVELOPMENT COSTS LIMITED TO LAND ACQUIRED UNDER THE OPEN-SPACE LAND PROGRAM?

   Yes. A similar type of development assistance, however, will be available for other urban land under the new urban beautification and improvement program, described below in "Part II, The Urban Beautification and Improvement Program."

6. IS FEDERAL AID LIMITED TO THE ACQUISITION OF UNDEVELOPED OR PREDOMINANTLY UNDEVELOPED LAND?

No. Amendments under the 1965 law authorize Federal grants for up to 50 percent of the cost of acquiring developed land in built-up areas and clearing it for urban open-space uses. Thereby, the purpose of the program has been expanded to include the creation, as well as the preservation, of urban open-space land.

7. UNDER WHAT CONDITIONS MAY DEVELOPED LAND IN BUILT-UP AREAS BE ACQUIRED WITH FEDERAL AID?

Wherever a local governing body, applying for such aid, determines that open-space needs cannot be met by preserving existing undeveloped land. This determination must be based on the locality's assessment of its long-term urban open-space needs.

8. IS THE COST OF DEMOLITION AND REMOVAL OF BUILDINGS ELIGIBLE?

Yes. When developed land is acquired in a built-up area, Federal grants may include up to 50 percent of the cost of acquiring, demolishing, and removing buildings.

9. ARE HISTORIC SITES ELIGIBLE?

Yes. Land, and in some cases, buildings determined to have special historical significance may be acquired under the open-space land program.

10. WHAT LANDS MAY BE PURCHASED WITH FEDERAL GRANT ASSISTANCE?

Any land, in an urban area, of value for park, recreation, conservation, or historic or scenic purposes.

11. HOW IS AN "URBAN AREA" DEFINED?

Any area that is urban in character, including its immediate surroundings that form a related social and economic region. There is no minimum population size. Generally, an "urban area" consists of a town or city, together with any urban and urbanizing surroundings.

12. IS LAND ACQUIRED BEFORE AN APPLICATION IS APPROVED ELIGIBLE FOR FEDERAL AID?

Only if the land has been acquired after the applicant receives notification from the Regional Office of the Department of Housing and Urban Development that an acceptable application has been received, and the land is acquired in accordance with all applicable program requirements.

13. IS THERE A MAXIMUM OR MINIMUM LIMIT ON THE SIZE OF A PROJECT?

No. The program can assist in acquiring areas of any size -- from small downtown parks to suburban greenbelts.

14. WHAT ARE THE PLANNING REQUIREMENTS UNDER THE OPEN-SPACE PROGRAM?

Land acquisition and development must be needed for carrying out a unified or officially coordinated program of open-space acquisition and development which must be part of the comprehensively planned development of the urban area.

15. HOW WILL THE GRANTS BE PAID?

Federal grants will be paid to reimburse a local public agency for approved acquisition and development expenses, and can be paid in installments as the project progresses.

16. WHAT ABOUT RELOCATION?

The 1965 amendments provide for relocation payments to be made to individuals, families, and business concerns displaced by the acquisition of open-space land. Generally, the Federal grant will cover the entire amount of authorized relocation payments.

SECTION II: THE URBAN BEAUTIFICATION AND IMPROVEMENT PROGRAM

1. WHO IS ELIGIBLE FOR FEDERAL AID UNDER THE NEW URBAN BEAUTIFICATION AND IMPROVEMENT PROGRAM?

Any governmental agency, with authority to carry out the proposed urban beautification and improvement project, that is legally empowered to receive financial assistance from the Federal Government.

2. WHAT KINDS OF URBAN BEAUTIFICATION ACTIVITIES ARE ELIGIBLE?

Examples of eligible activities are the development of parks, malls, squares, and public waterfront areas with landscaping, walks, and minor recreation and outdoor exhibition facilities. Also eligible are street improvements such as lighting, benches, tree planting, and decorative paving.

3. IS THE URBAN BEAUTIFICATION PROGRAM LIMITED TO PUBLIC LAND?

Yes. The public must own fee title or other controlling interest in the land.

4. DOES A BEAUTIFICATION ACTIVITY HAVE TO BE PART OF A BEAUTIFICATION PROGRAM?

Yes. To be eligible for Federal assistance, an activity must be part of a locality's official beautification program which represents significant and effective efforts involving both public and private resources.

5. WHAT ARE THE ELEMENTS OF A LOCAL BEAUTIFICATION PROGRAM?

The local beautification program should include, as a minimum, three basic elements: (1) a plan with a statement of overall scope and objectives; (2) a description of the organization for putting the program into effect, including government and private involvement, responsibilities and activities; and (3) a summary of present and proposed activities, including cost and completion schedules.

The program should identify other adopted and proposed measures in support of a communitywide beautification effort, in addition to those activities which are eligible for Federal grant assistance. Examples of such other measures are the regulation of signs and utility wires, zoning to prevent auto graveyards in inappropriate places, and school and neighborhood programs to foster pride in maintaining and improving the appearance of the community.

6. WHAT ARE THE GENERAL PLANNING REQUIREMENTS?

The beautification program must be important to the comprehensively planned development of the locality. The comprehensive planning program for the locality must therefore be consistent with the communitywide objectives and priorities established in the beautification program.

7. ARE NORMAL STREET CLEANUP AND PARK MAINTENANCE ACTIVITIES ELIGIBLE FOR FEDERAL AID?

No. Activities undertaken with Federal aid must have "significant" and "long-term" benefits for the community. Federal aid would not be available, for example, to finance increased operating costs to keep a park cleaner or better lighted -- although the cost of acquisition and installation of new, well-designed park furniture or lights might be eligible for Federal assistance.

8. ARE CONSTRUCTION COSTS, IN CONNECTION WITH AN APPROVED ACTIVITY, ELIGIBLE?

Major construction costs, such as those for golf courses, swimming pools, amphitheatres, museums, or waterfront docks, are not eligible. Only the cost of minor construction may be included as an eligible cost of beautification activities. Examples of minor construction which may be eligible are rain shelters, walks, sanitary facilities, and kiosks.

9. WHAT IS THE LEVEL OF FEDERAL GRANT ASSISTANCE FOR BEAUTIFICATION?

Federal grants may cover up to 50 percent of the amount by which the cost of activities carried out by the applicant, during a fiscal year, under an approved beautification program, exceeds its usual annual expenditures for comparable activities.

10. ON WHAT BASIS IS A GRANT COMPUTED?

An applicant will be required to establish a base figure representing its usual expenditures for urban beautification during past years. Only those costs of carrying out an approved program which are in excess of this base figure will be eligible for grant assistance.

11. HOW IS THE NON-FEDERAL SHARE OF ELIGIBLE PROJECT COSTS DEFINED?

The 50 percent non-Federal share of project costs may consist of local public cash expenditures or services in kind. Any non-Federal funds may be used to meet the local share, including funds provided by private donations as well as local or State governments.

12. HOW WILL GRANTS BE PAID?

Federal grants will be paid to reimburse local public bodies for expenses incurred in carrying out approved urban beautification activities. Partial payments of the grant may be made periodically as the work progresses, with a portion of the total withheld until completion of the activities and the final accounting.

SECTION III: GENERAL INFORMATION

1. WHAT RELATED HUD AIDS ARE AVAILABLE TO COMMUNITIES WISHING TO UNDERTAKE OPEN-SPACE AND URBAN BEAUTIFICATION PROGRAMS?

Neighborhood Facilities Program: Grants may be made to local public bodies and agencies to assist in financing specific projects for neighborhood facilities, including neighborhood or community centers, youth centers, health stations, and other public buildings to provide health, recreational, or similar social services. Grants may cover up to two-thirds of project costs (up to three-fourths in redevelopment areas). A project may be undertaken directly by the local public body or agency or through an approved nonprofit organization.

Urban Renewal Program: The provision of outdoor recreation and historic preservation are encouraged as part of assisted urban renewal programs. The urban renewal plan, a prerequisite for Federal assistance, must give consideration to the provisions of adequate park and recreational facilities. Local expenditures for acquisition of land for parks or playgrounds serving a renewal area may be counted as local matching funds toward the Federal grant (generally two-thirds).

Urban Planning Assistance Program: Grants, generally up to two-thirds of costs, may be made to assist comprehensive planning for urban needs, including outdoor recreation. Assistance may be provided for surveys, inventories, and analyses of existing conditions, as well as for the scheduling and location of recreation and other facilities.

Community Renewal Programs: Grants up to two-thirds of costs may be made to communities for the preparation of Community Renewal Programs which assess present and future renewal needs, including neighborhood recreational and park needs.

Advances for Public Works Planning: Interest-free advances may be made to responsible State or local public bodies to assist in the planning of specific public works or facilities, including recreation projects. The advances are repayable when construction of the planned project starts.

2. WHERE SHOULD APPLICATIONS FOR GRANT ASSISTANCE, OR QUESTIONS PERTAINING TO SPECIFIC APPLICATIONS BE ADDRESSED?

All applications and questions pertaining to the preparation of specific applications should be addressed to the appropriate Regional Office of the Department of Housing and Urban Development serving your area -- as shown below.

REGIONAL OFFICES - DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

REGION I: 346 Broadway, New York, New York 10013 (Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont)

REGION II: 630 Widener Building, Chestnut and Juniper Streets, Philadelphia, Pennsylvania 19107 (Delaware, District of Columbia, Maryland, New Jersey, Pennsylvania, Virginia, West Virginia)

REGION III: 645 Peachtree - Seventh Building, Atlanta, Georgia 30323 (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee)

REGION IV: Room 1500 360 North Michigan Avenue Chicago, Illinois 60601 (Illinois, Indiana, Iowa, Michigan, Minnesota, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin)

REGION V: Fed. Off. Bldg., 819 Taylor St., Room 13-A-01, Ft. Worth, Texas 76102 (Arkansas, Colorado, Kansas, Louisiana, Missouri, New Mexico, Oklahoma, Texas)

REGION VI: 450 Golden Gate Avenue San Francisco, California 94102 (Arizona, California, Guam, Hawaii, Nevada, Southern Idaho, Utah, Wyoming) Area Office: 909 First Avenue, Seattle, Washington, 98104 (Alaska, Montana, Northern Idaho, Oregon, Washington)

REGION VII: Ponce de Leon Avenue and Bolivia Street, P. O. Box 1105, Hato Rey, Puerto Rico 00919 (Puerto Rico and the Virgin Islands)

A Council to promote the development of programs of equal opportunity for all peoples in the South

1 July 1971

Mr. Connell,

This outline represents our current thinking on the Pamola Project. We would appreciate any comments on your part: any modifications, additions, subtractions you have in mind. Please let us know as early as you can because time is limited on this project and we need all the input we can get as early as possible. If you could solidify some of your thoughts concerning what you will expect during the design quarter starting in Sept., 1971, we can begin to adjust ourselves to your requirements.

Information and data are slowly trickling in, and we've already gotten some good sources.

Hope to hear from you soon.

— Andy Gray
— Eddie Cazayoux

PROPOSED OUTLINE FOR A
PRELIMINARY REPORT ON THE
PANOLA PROJECT

EDDIE CAZAYOUX, ANDY GRAY, ART CAMPBELL

I. Brief history of the start of the project: the Panola Land Buying Association.

II. Research procedure used in data formulation and collection
- Libraries
- People
- Letters requesting information
- Site trips,
- Etc.

III. Existing Information:

A. Physical site characteristics
- Soil
- Water
- Land configuration
- Floodings, drainage, etc.

B. Demographic Characteristics
- Housing
- Population

C. Economic Data

D. Transportation Configuration
- Roads
- Tenn.- Tom. Waterway
- Bus, railroads

E. Community Facilities
- Available utilities
- Schools
- Parks, recreation

F. Master or regional development plan for the area; how Panola fits in

G. Relationships of the organizations involved in the entire project:
- Federation of Southern Cooperatives
- American Friends Service Committee
- Alabama Council on Human Relations
- Southern Cooperative Development Corp.
- SRC

Art, Eddie, Andy:

After you have gone over my marks on your outline, please give me a call so we can get together for a short meeting.

How is the mapping situation?

Peace,
Pat Connell

A, People: (projections) Who, how many, where, etc: ← The pop. to be accommodated initially, 1st PHASE, 2d PHASE, etc.
→ income groupings
→ age/sex/marital (or household comp.) etc.

IV. Proposed Needs:

A2 Housing program requirements and phasing model

- How related to employment, agribusiness

B. Future programming of Tenn. - Tom. Waterway coordinated with development of Panola Site.

- Recreation
- Industry, commercial
- Agricultural

C. Proposed Transportation (← at what scale – county/region?)

- Tenn. - Tom. Waterway -- Related to possible business, agriculture
- Interstate 59 construction

D. Possibilities of municipal incorporation of Panola Site; other admin. organizations (devel. corp. / commune ...)

- Improved services?
- Able to meet municipal obligations through taxing?
- Implications for receiving Federal aid?

E. Determination of Federal, State and local programs that could financially aid Panola. ← to do what?

- What is needed to be done in order to qualify?
- Time phasing of possible funding (Fed.) compatible with Panola development staging?

F. Proposed General Development Plan, Design Plan and construction ~~and~~ Phasing

- Overall land use plan for 1164 acres
- Initial use plan for 30 acre parcel → Tract #2
- Financial phasing: Coordinate land and development costs and other expenses with expected income from agribusiness, loans and other sources. Try and determine:

INCOME - EXPENSES = EXPECTED PROFIT ?,

for expected life of the mortgage (10 years?).

← what mortgage?

G. Proposals for future income

- Additional opportunities for jobs
- Jobs related to agribusiness (leather tannery, by-products of agriculture, etc.).
- Local or state markets available
- Local contractors that could be employed.

We project most of this work to be done during the Fall, 1971, design quarter at Ga. Tech (except for the 30 acre parcel on TRACT #2). What are your thoughts on this?

← your item F above will need a great deal more detailed listing of design products. We need to confer on this. As a starter, you might construct a CPM for the entire project.

V. Bibliography of Sources and Publications, Annotated

A Project CPM (The planning design process organized by tasks

B Development CPM (Implementation of the proposed plan) ← [block out]

← means give some preliminary thought to what will need to happen* at what points in the process to provide a continuous development and build up of the town, i.e. cumulative quantitative objectives over time

* this may be an "idealized" model that will change as we get more precision into the planning/design approach

this may be an "idealized" model that

PRODUCTS

A. Written, technical (with about 30% graphics) made from products of C.):

B. Written, technical supplement (with "Appendix"-type material: data; analysis of alternative approaches to general plan proposals; summaries of important communications; listing of sources for add. data; summaries of important Fed and or state acts useful to Panola Board; bibliography; project CPM; etc.):

C. Graphics for use in (1) report form and (2) for slide show:

D. Exhibit Boards (preliminary listing):

1. Regional scale: Existing + Proposed:
   - Location with respect to other urban places, counties, etc.
   - Transport net - all modes: quality of service evaluation + usage stuff
   - Tenn-Tombigbee canal: location, use plans, construction; etc.
   - Land use and density patterns; analysis of pop. centers.
   - Major "influences" diagram (an analysis diagram depicting THE important regional influences)
   - Structure + characteristics of the Natural Environment land capability
   - General pattern of exist + est. future land values ($)
   - Proposals
2. Panola Study-area scale
   (generally same kinds of info. as above but in greater detail: more emphasis on analysis and implications for Panola New Community Planning + Design) Major new output is to show the SITE configuration for the New Town + General Proposals
3. Panola NewTown scale; Existing + Proposed:
   - Detailed analysis of natural characteristics of the site (Tree cover, slope analysis, soils, Drainage, geology, etc.) ← PROBS. + Potentials
   - Existing features of the site to be retained, demolished, enhanced, avoided, protected, etc, (Natural and made features)
   - Existing land use | occupancy, classification, intensity, density, condition, etc
   - Existing transport + circulation net | location, classification, condition, probable future, etc
   - Existing status of ~~site~~ infrastructure available to site development. Environmental problems observed and/or reported (pollution
   - Existing (other analytical diagrams as appropriate)

Programmatic data, projections, assumptions etc →

- Proposals, ~~[illegible]~~ diagrams | housing, infrastructure, transport, comm. facil, etc |
- Proposals, design plan ("Master plan", "illustrative site plan", etc) for entire NewTown development.
- Proposals, design details — housing group (neighborhood, precinct, etc)
- " — major center(s)
- Proposed phasing diagrams (maps, diagrams, CPM, etc)
- Cost estimates | public | private.
- Perspective vignettes of town life + proposed architectural character

THIS IS THE CREATIVE PART OF THE WORK AND SHOULD GET THE MOST EMPHASIS

E. GRAPHIC Models

A. Overall site plan (?)
B. Housing area detail
C. Main place for the NewTown

} as appropriate

④

PANOLA INTERN PROGRAM

Probable Activities and Staging

I. Briefing and Project Review

A. Orientation to the Southern Regional Council -- staff and facilities

B. Explanation of the Federation of Southern Co-op's role and its existing programs

C. Field Trip (introductory)

II. Draft Letters of Inquiry to Selected Agencies requesing Background Data

III. Prepare "Schematic" Master Plan for 274-acre tract, locating 30 acres for housing (i.e. incorporating site plan already prepared)

IV. Review Outline of Activities and Analyze the Problem

A. Define Study Area

B. Identify Probable Data Needs/Sources

V. Overview of Sumter County, Panola Study Area and Environs

A. Gathered Selected Data on:

1. Physical Characteristics of Site

a) Soil Type

b) Water Type and Supply

c) Ground Water Sources

d) Soil Capability

e) Visual Survey (Sketches, Photographs)

2. Housing Conditions/Needs/Supply

a) Total Number of Units in study area/county

b) Number dilapidated/sound

c) Owner occupied/renter occupied

3. Population Characteristics/Distribution

a) Total Population

b) Number of families/size

c) Family income

d) Age structure

e) Educational levels

4. Economic Base

a) Major Industries in area

b) Volume of manufacturing and non-manufacturing businesses

c) Jobs: type/availability/skills necessary (labor market)

d) Shipping facilities

e) Lending institutions, technical or trade schools, junior colleges

5. Tenn - Tombigbee Development in Gainsville

a) Timetables for development

b) Annual appropriations/ i.e. flow of capital

c) Plans

6. Transportation Network

   a) Completion of I-59/exit proximity to site

   b) Auto circulation, bus, rail, air (private & commercial

   c) Characteristics of Tombigbee after dam construction. e.g. depth; projected traffic/type

7. Land Ownership Between Panola's Land

   a) Identify owners/number

   b) Size tracts

   c) Establish fair market value/project cost to start of proposed land acquisition program

8. Community Facilities

   a) Schools

   b) Day-care

   c) Recreation

9. Incorporation into Municipality

   a) Procedures

   b) Requirements

   c) Establish timetable for PLBA's incorporation (i.e. should it incorporate now to build and control public housing?)

B. Analyze Selected Data

C. Complete Information Gathering

D. Summarize and write up information

E. Design Graphic Display of Selected Data Useful in Programming

VI. Explore Programming Directions

A. Implications of Tenn-Tom Development for PLBA programming

B. Possibilities of PLBA Recreational Developments

C. Possibilities of providing Housing for nearby Employment

VII. Determination of What Federal Programs can Benefit Panola -- especially "New Communities"

A. Incorporate findings (of item VII) into basic financial strategy for implementing general development plan.

VIII. Develop Basic Planning Studies*

A. Land use plan

B. General Development Plan

C. Site plan staging housing development

D. Job Development Model

Sources of Planning Data

1. Alabama State Department of Industry and Trade

2. Tennessee Tombigbee Waterway Authority

3. Alabama State Highway Department

4. U. S. Corporation of Engineers

*In early September, make determination of resources available to finance production of these studies (excluding consultant fees) e.g. cost of printing, reproduction, _____, _____.

5. U. S. Geological Survey

6. John Hart Company (U. S. - GS Maps) Atlanta

7. _____ Forrestry Service

8. Soil Conservation

9. Regional Council of Governments -- Tuscaloosa, Alabama

Miscellaneous Information Sources

1. Utility Companies in Sumter County

2. Telephone Directory for Sumter County

3.

PROBABLE TASKS AND STAGING plus CPM

A. Overview of Montgomery Metropolitan Area

1. Gather selected data on

X Economic Base → use Gould's paper

-volume of manufacturing and non-manufacturing business

-industrial development land, labor, equipment

-shipping facilities

-labor market

-lending institutions technical or trade schools, Junior Colleges

Universities

X Population Data

-geographic distribution

-social and economic class

-race and ethnicity

-age structure, family status

-disease, crime

-educational levels

Leadership Structure

-decision making influences

-processes of decision-making

-political organization

Transportation Network

-auto circulation

-bus

-rail

air (private and commercial)

note: Should PLBA incorporate into a municipality? Intent - in order to build & control public housing now?

① Survey Form
② Site Development

Land Uses

-industrial, commercial, residential, public

-floor plans, topo, forest, area, buffers

Growth Directions

-transportation and utilities

-land suitable for development

-employment concentration trends

-residential trends - suburbanization and growth

2. Analysis of Selected Information

3. Complete information gathering stage

4. Summarize Information

5. Design Graphic Display of Selected Data useful in programing

B. Overview of State University System

1. History, purposes, physical facilities, funding, present enrollment, student characteristics, types of instructional programs, community services

-educational as a component of State and Regional planning - attitudes and policies

-enrollment trends during 60's ; projections for future

2. Analysis of Information Received

3. Return for Specified Information

4. Summarize Information

5. Develop graphic display of selected data to be used in planning program

Robert & Co. → 525-8411

C. Analysis of Montgomery Campus

1. Gather information on

site (how selected, why)

site (location, site)

building program

instructional program

enrollment projections

characteristics of students expected

surrounding area (University's desires)

2. Surrounding area (existing)

probable future developments

3. Develop graphic display of above

D. Explore Programing Directions

1. explore program implications of intent to develop

related to University

Examples:

-to provide suitable housing for students at low cost and phased according to Auburn growth plans

- to assist Auburn in making its educational facilities more accessable to Montgomery area lower -income and disadvantaged people by seeking to utilize Federal programs for student housing and manpower training facilities

-to help university maximize its potential cultural and economic impact on Montgomery area by providing research facilities , cultural facilities, shipping, staff housing . . . .

2. Explore possibilities of program to develop related to industrial growth in surrounding area

- attract new clean , quiet industries and research labs, provide housing and services for nearby employment, organize new construction to benefit local firms or support new associations

3. Written report on conclusions

E. Site Analysis

1. Location assets

2. Assessibility vicinity maps

3. Land usability

- determine quality of terrain and soils to support structures

-is quantity of land available for unified large community planning

4. Develop graphic display of above

F. Develop Building Program

1. Draft summary of findings and recommended building program

2. Review draft program

3. Revise program

4. Develop graphic display of building program

G. Presentation of Analysis, Findings and Proposed Building Program

PANOLA INTERN PROGRAM

A Housing and Planning intern program in Panola is aimed at developing long-range physical development plans.

Objectives

To document and analyze all the physical and social aspects of 1164 acres of land owned by the Panola Land Buyers Association in Sumter County, Alabama for the purpose of developing comprehensive land use plans and an "economic development model."

Propose in gen. agree — concentrate efforts on short range program } ① share cost of program ②

Proposed Program

Two Georgia Tech graduate students would spend the summer gathering data in the ~~main~~ following categories:

1. People - family size, economic condition, housing needs, general demographic profile.

2. Jobs - availability, type, variety.

3. Physical - site analysis, ecological, ground water sources, soil capability, soil type, flood controls, visual survey -- sketches, photographs.

4. Other areas of investigation:

   A. Comprehensive survey of all plans for the immediate area. For example: corp of engineers, state recreation, health department, regional council of government, etc.

- Is there duplication / of Fed. Interns
- Fed. willingness to share expenses
- one or two men needed
- why is info needed? → promotional; long range development;

B. Major economic developments contemplated for the area.

C. Census data on the county (design area)

D. Transportation facilities

Goals of Program

1. A compilation of background data on Panola to be used as a basis for developing a comprehensive land use plan and an "economic model."

A. It is contemplated that this Background Study will be used by students in the joint graduate programs of Architecture and City Planning at Georgia Tech to develop more detailed and technical documents. For example: land use plans, site design, and a program of development that will include an "economic model."

2. Two types of documents are contemplated:

A. A slick public relations brochure that will be used for promotional purposes.

B. A series of technical studies to help guide development and programming.
(site plan) comprehensive land use plans, Design Concepts
Residential community, Economic Base Analysis

Budget Estimates

The following estimates are based on two interns working a period of 10 - 12 weeks during the summer of 1971.

1. Travel

A. 8 man-trips to Panola via Tuscaloosa, Alabama at $69.00 per trip -- $552.00

no. of trip

B. 1-man-trip to Montgomery, Alabama -- $60.00

2. Hotel and Meals

$200.00 - based on 24 man-days in the field (no hotel cost at Panola

3. Telephone and Supplies

$100.00

4. Salaries

$3, 250.00 -- 650.00/month/man for 10 weeks.

Total -- $4,162.00

Note: Allowance for additional part-time work on the project may be proposed at end of the summer program. However, it is contemplated that our financial commitment would be limited to expenses involved in executing the proposed documents.

Goals:
① New Program
- Land use
- Site Plans (274a)

PANOLA INTERN PROGRAM

② Brochure & Slide Presentation

A Housing and Planning intern program in Panola is aimed at developing long-range physical development plans.

Objectives

To document and analyze all the physical and social aspects of 1164 acres of land owned by the Panola Land Buyers Association in Sumter County, Alabama for the purpose of developing comprehensive land use plans and an "economic development model."

Proposed Program

Two Georgia Tech graduate students would spend the summer gathering data in the ~~main~~ following categories:

1. People - family size, economic condition, housing needs, general demographic profile.

2. Jobs - availability, type, variety.

3. Physical - site analysis, ecological, ground water sources, soil capability, soil type, flood controls, visual survey -- sketches, photographs.

4. Other areas of investigation:

   A. Comprehensive survey of all plans for the immediate area. For example: corp of engineers, state recreation, health department, regional council of government, etc.

1. Econ. Base Analysis — Industries/Exist & Potential
2. Soil & Characteristics
3. Housing Profile for Design Area
4. Transportation Networks → Compl. I-59
5. Explore possibilities Land Purchase to join tracts
   1. who owns / size tracts / No. of landowners
6. Recreation

B. Major economic developments contemplated for the area.

C. Census data on the county (design area)

D. Transportation facilities

Goals of Program

1. A compilation of background data on Panola to be used as a basis for developing a comprehensive land use plan and an "economic model."

   A. It is contemplated that this Background Study will be used by students in the joint graduate programs of Architecture and City Planning at Georgia Tech to develop more detailed and technical documents. For example: land use plans, site design, and a program of development that will include an "economic model."

2. Two types of documents are contemplated:

   A. A slick public relations brochure that will be used for promotional purposes.

   B. A series of technical studies to help guide development and programming.

Budget Estimates

The following estimates are based on two interns working a period of 10 - 12 weeks during the summer of 1971.

1. Travel

   A. 8 man-trips to Panola via Tuscaloosa, Alabama at $69.00 per trip -- $552.00

B. 1-man-trip to Montgomery, Alabama -- $60.00

2. Hotel and Meals

$200.00 - based on 24 man-days in the field (no hotel cost at Panola

3. Telephone and Supplies

$100.00

4. Salaries

offer 600

$3, 250.00 -- 650.00/month/man for 10 weeks.

Total -- $4,162.00

Note: Allowance for additional part-time work on the project may be proposed at end of the summer program. However, it is contemplated that our financial commitment would be limited to expenses involved in executing the proposed documents.

MAJOR PLANNING ELEMENTS OF RURAL HOUSING

SITE LOAN APPLICATION

I. General Location Map

II. Plot Plan

III. Site Plan with Specifications

IV. Design of Water and Sewer System

V. Topographic Map ($1200 - $1500)

VI. Detailed Cost Breakdown for Implementing Proposed Development Plan

VII. Administrative Functions

<u>Cost Estimates</u>

I. Robert & Company - 96 Poplar Street, Atlanta, Georgia (See attached sheet)

II. Valley Forge's Proposal (formerly Modular Sciences)

A. Develop "total package" provided V. F. could have control during development phase.

B. Provide front end money to cover planning cost (e.g. Production of topographic map, site planning design of water and sewer) provided V. F. could receive guarantee that its units would be used in the development.

PROPOSED OUTLINE FOR A
PRELIMINARY REPORT ON THE
PANOLA PROJECT

EDDIE CAZAYOUX, ANDY GRAY, ART CAMPBELL

I. Brief history of the start of the project: the Panola Land Buying Association.

II. Research procedure used in data formulation and collection
- Libraries
- People
- Letters requesting information
- Site trips,
  Etc.

III. Existing Information:

A. Physical site characteristics

- Soil
- Water
- Land configuration
- Tenn - Tom. Waterway
- Land ownership patterns near the Panola Site

B. Demographic Characteristics

- Housing
- Population

C. Economic Data

D. Transportation Configuration

- Roads
- Tenn.- Tom. Waterway
- Bus, railroads
- Airport accessibility

E. Community Facilities

- Available utilities
- Schools
- Parks, recreation

F. Master or regional development plan for the area; how Panola fits in

G. Relationships of the organizations involved in the entire project:

- Federation of Southern Cooperatives
- American Friends Service Committee
- Alabama Council on Human Relations
- Southern Cooperative Development Corp.
- SRC

7/1/71

IV. Proposed Needs:

A. Housing requirements

- How related to employment, agribusiness

B. Future programming of Tenn. - Tom. Waterway coordinated with development of Panola Site.

- Recreation
- Industry commercial
- Agricultural

C. Proposed Transportation

- Tenn. - Tom. Waterway -- Related to possible business, agriculture
- Interstate 59 construction

D. Possibilities of municipal incorporation of Panola Site

- Improved services?
- Able to meet municipal obligations through taxing?
- Implications for receiving Federal aid?

E. Determination of Federal, State and local programs that could financially aid Panola.

- What is needed to be done in order to qualify?
- Time phasing of possible funding (Fed.) compatible with Panola development staging?

F. Proposed Development and Phasing

- Overall land use plan for 1164 acres
- Initial use plan for 30 acre parcel
- Financial phasing: Coordinate land and development costs and other expenses with expected income from agribusiness, loans and other sources. Try and determine:

  INCOME - EXPENSES = EXPECTED PROFIT

  for expected life of the mortgate (10 years?).

G. Proposals for future income

- Additional opportunities for jobs
- Jobs related to agribusiness (leather tannery, by-products of agriculture, etc.).
- Local or state markets available
- Local contractors that could be employed.

V. Bibliography of Sources and Publications, Annotated

Panola Project

Andrew P. Gray,
839 Briarcliff Road, N.E.,
Apt. #A.1.,
Atlanta, 30306.

28 April, 1971

Mr. Arthur C. Campbell,
Southern Regional Council, Inc.,
5 Forsyth St., N.W.,
Atlanta, Ga. 30303.

Dear Mr. Campbell,

Again, I wish to reaffirm my interest in working with Southern Regional Council on the Panola Project this summer. I wonder if, at this time, you can confirm a starting date and the salary we discussed, $650/month. Also, if there are forms or applications to be filled out prior to starting, perhaps I could do this now.

Thank you for expressing an interest in having me work with Southern Regional Council; I enjoyed meeting with you and hope that together we can successfully work out an acceptable development proposal for the Panola development company.

Looking forward to your reply, I remain,

Sincerely yours,

Andrew P. Gray

TO: All Board Members of the Panola Land Buyers Association

FROM: Mr. Lewis Black, Chair of the Board

DATE: April 30, 1971

RE: The Panola Land Buyers Association Board Meeting

We would like to inform you that our next board meeting has been set for May 21 - 22, 1971 starting at 9:00 a.m. As you know, there have been many developments of the Panola Project, and there are several more in process. We would like for the board and all interested people to come prepared to spend two days and help us make some decisions that will be of benefit to the development project.

As chairman of the board, I am asking Mr. Wendell Paris, Mr. Art Campbell, Mr. Meredith Richardson, Mr. John Zippert, Mr. Frank Cooke, Ms. Annie B. Williams, and Mr. Aaron Thomas to serve as a committee in making detail plans for this two day board session. Anybody who will have suggestions or recommendations, please contact these people not later than May 17, 1971.

Contact M. Richardson May 10th

January 19, 1972

Mr. John Zippert
Federation of Southern Cooperatives
P. O. Box 95
Epes, Alabama 35460

Dear John:

Since the PLBA board meeting I have contacted, in person and by telephone, several individuals who might be helpful in pinning down the best approach to a long range Panola housing program. Briefly outlined below is the gist of those conversations:

Jack Drake (Tuscaloosa, Alabama, attorney for the Greene County Housing Authority) said that Greene County's Housing Authority according to Alabama statues can not operate in Sumter County. A representative of HUD's legal department in Atlanta gave me a verbal opinion supporting Drake's contention. However, the Atlanta office would not rule out, "without further research," the possibility of a special arrangement whereby a county housing authority upon consent of the government authorities in an adjacent county might develop a public housing project in that county.

(1)

time →

It took two months to set up Greene County's Housing Authority and from January 1970 to August 1971 to get units approved.

Grover Davis (Birmingham HUD office. He is one of Jon W. Pitts assistants but I don't know his title) remains

why not 515 → rent supplement

non-commital on the prospect of Panola receiving 100 per cent rent supplement. He insists that that judgement can only be made upon detail consideration of a Panola application for "X" number of units but in theory Panola could receive 100 per cent supplement.

Mr. Simmons (Program Management Division of Birmingham HUD office) emphasized the backlog of public housing applications. For the current year the Department has on file applications for 35,000 units but received contracts last year for only 1800 units and expects to receive 2000 contracts for the coming year. He indicated that HUD's legal department would be willing to assist us,i.e. Sumter County, in establishing a (county) housing authority.

Clarence Richardson (Housing Assistance Council, Washington, D. C.) indicated an interest in funding programs designed to develop housing projects on a broad geographical basis, i.e. county, state and region. The Council is willing to provide technical assistance to develop projects and seed money prior to initial closing but will not consider "assisting one specific project." As I understand it they want to fund and assist a mechanism such as a Housing Development Corporation rather than the project itself.

Richardson invited SRC to make a presentation for funding. However, I think the Federation might seek assistance for Panola as a part of its own housing component to assist other member co-ops.

I am meeting with Larry Chekoreff tomorrow--an Atlanta based housing consultant who is to assist Roger Willcox if Techni Coop is to become further involved. The latest I have heard from Willcox is that he is ready to file an application feasibility upon receipt of a written agreement from the PLBA and the arrangement of an option on a specific tract of land.

I will contact you early next week to discuss this matter and at that time give you a definite statement of the Housing and Planning Project's commitment as far as I am concerned.

Sincerely,

Arthur C. Campbell

ACC/rh

SCOPE OF PANOLA ACTIVITIES

Upon review of all the information available to the Housing and Planning Project at this time, it appears that the following course of action is necessary for pushing along the development of a 100 unit housing project for Panola.

I. DETERMINE THE MOST FEASIBLE WATER AND SEWER SYSTEM AND SECURE COST ESTIMATE

A. Options

1. Community water and Sewer System
   -Housing Systems Inc. believe that the $338,000 (estimate by Commonwealth Systems) "cannot be absorbed within a project mortgage". Based on a projected 200 units the per lot cost would run to approximately $1,700.00. However, by going to smaller lots or a cluster development, we would reduce the $300,000. We do not have in hand any "guesstimate" as to the amount of this reduction, whether it is enough to be feasible or not.

   a. Seek a separate grant and/or loan from FHA or FmHA for development of system.

   b. Develop a cluster site plan (if permitted by new subdivision regulations) and get new estimate of water and sewer cost

2. Community Well and Individual Septic Tanks
   -Both Roger Wilcox (Techni Coop Inc.) and Larry Chekoreff (Housing System Inc.) claim that this approach, using the $93,000 estimate from Commonwealth for a community water system, has a much better chance of being absorbed in a 100 unit project mortgage. Before filing for feasibility we would have to undertake the following:

   a. Redo site plan to reflect the use of septic tanks in accordance with the new subdivision regulations and the report from the Soil Conservation Service.

   b. Secure approval from the State Board of Health.

   c. Get a new estimate from Commonwealth and/or an Alabama Engineering Company.

d. Consider cluster development with shared septic tanks--one septic tank for every four houses for example.

e. Secure an engineer's opinion and cost estimate for eliminating ground water flooding by dredging or some other means.

3. A system of Clustered pump and septic tanks
-Do not have cost estimate for this system. Before pursuing should get approval from HUD/FmHA. From there the steps would be generally the same as for option #2 above.

II. SECURE ESTIMATED PER UNIT COST OF HOUSING

A. Modular or Component Housing

1. Select a company and house plans and request cost estimates.
   a. Valley Forge
   b. Alabama Company
   c. Other

B. Stick-built or regular construction

1. Select an Architect
   a. George Hunter - Birmingham, Alabama
   b. Joe Robinson - Atlanta, Georgia
   c. Major Holland - Tuskegee Institute, Alabama

2. Have plans developed by Architect.

3. Select Builder and secure an estimate for construction.

III. PULL TOGETHER PACKAGE FOR FEASIBILITY SUBMISSION FOR A 100% RENT SUPPLEMENT PROJECT

A. Site Plan reflecting the development concept agreed upon -- Housing and Planning Program.

B. The PLBA's Organization capabilities, structure, finances and legal arrangements for releasing the land -- Federation of Southern Cooperatives.

C. Documentation of need for 100 units in the general area of the site -- Housing and Planning Program.

D. Development of Application to file with FHA in conjunction with Housing and Planning

1. Technicoop
2. Other

IV. SELECT FHA APPROVED MORTGAGE BANKER

V. DEVELOP RECRUITMENT PROGRAM

(This would be a method of locating and developing necessary information on potential applicants.)

RATIONALE

The Housing and Planning Program supports the rent supplement approach for several reasons. First, it is legally impossible to have the Greene County Authority apply for public housing units for Panola. This is the firm opinion of Jack Drake, attorney for the Greene County Housing Authority and the legal department of the Atlanta HUD office. (Having no Sumter County authority the possibility of using the Greene County authority was explored because Panola's property is contiguous to the Greene County line whose government is Black-controlled.) Second, the Birmingham HUD office has on file already, applications for far more units (35,000) than the 2,000 contracts it expects to receive. In addition to Panola's dim chances of receiving some units, it would be necessary to promote the establishment of a Sumter County housing authority -- a process requiring the support of the County Commissioners. Third, Housing Systems advises that the structure of the rent supplement is basically the same as Turnkey IV which requires a local housing authority and will allow monthly rents at generally the same level. And, four, rent supplement,providing we solve the sewer problem without seeking a separate grant or loan, can take considerably less time than public housing.

D R A F T

[NOTE: This letter is to describe the property owned by the Panola Land Buyers Association, to authorize an inspection of it by the FHA and others, and to indicate that it is available for an FHA-insured housing development. The following draft language should be comple ted and corrected and signed with this in mind.]

The Federal Housing Administration,
Birmingham, Alabama, and

The Trustees of the Foundation for Cooperative Housing
Washington, D.C.

Gentlemen:

We are the owners of a 273.4 acre tract of land in _____County, Alabama, located on the east side of Highway #39 between Gainesville and Epes, across the road from the intersection of County Road #24.

We hereby authorize you to enter upon and inspect these premises for the purpose of determining suitability for an FHA-insured housing development under the provisions of Section 221(d)3 market rate with 100% rental supplements for eligible applicants.

Very truly yours

The Panola Land Buyers Association

_____ _____
(date)

Meeting - 1 February, 1972 - Roger Willcox, Larry Chekoreff, Bill Edwards, A. Campbell.

Re: Panola Housing Project

Items necessary for filing application for Rent Supplement:

1. Engineering cost for water/sewer
   a. redo site plan with smaller lots and cluster - acquire estimate.

2. State Board of Health preliminary letter of approval of water/sewer plan.

3. Resolution for Rent Supplement.

Site plan

4. Clearance of County Subdivision regulations. (i.e. County Engineer)
   a. one ownership
   b. private roads (requirement of county maintenance)
   c. private utilities.

5. Estimate of Construction Cost
   a. establish unit mix, i. e., distribution (e.g. 25% 2 BR - 50% 3 BR - 25% 4 BR) -- make total less than 100 units e.g. 96 to eleminate environmental impact statement.

6. FHA figures on allowable square feet.

7. Preparation of Application
   a. tax data
   b. electrical utility rates
   c. requirements for building permits
   d. environmental forms
   e. back-up letters relative to necessity of building in an all-black area
   f. decisions about builder

8. Must execute by # 6 above - agreement with TechniCoop
   a. form 46B
   b. option on land

9. Miscellaneous

Willcox - 90% Techni Coop payroll is black
- 50% staff black
- Techni Coop willing to operate on 100% contingency basis. (fees from mortgage after closing.)

Option - Show co-ops to provide additional sewerage capacity or agree to expand capacity upon receipt of funds for additional units.

(a) Sewer & Water Plant On-Site (built with mortgage funds like Little Blue Lake - 72 unit cap) Panola then ~~now~~ sells land at low price and requires coop to agree to increase water & sewer plants later in return for dollars to pay the cost of the additional work Land might sell at $350 per plot (building site -- no subdivision of land in a coop) Coop gets mortgage money to build the plant.

FHA would prefer this (management co. would run the plant)

(b) Coop buys plots with seller (PLBA) agreeing to build water (and/or) sewer plants on some other part of seller's land. Price of plots must then be high enough to cover the seller's costs of building the water and/or sewer systems. These might cost $1,000/unit -- so price of plots might be $1,350/unit. Coop would also have to agree to pay monthly charges for water and sewer service -- Panola would in effect (or actually) become a private utility co. (Lakota Sanitary District provides water and sewer for the Lattota coop)

Unless Panola becomes a legal water & sewer district.

2' topo interval → 10 lot site plan + soil survey } R. Willox

engr. cost →

off-site →

option → show co-op to provide additional sewage capacity or agree to expand capacity upon receipt of funds for additional units.

(a) SEWER & WATER PLANT ON-SITE (built with mortgage funds like Little Blue Lake (72 unit coop) Parola Tire sells land at low price and requires coop to agree to increase water & sewer plants later in return for ~~cost of~~ dollars to pay the cost of the additional water. Land might sell at $350 per plot (building site — no subdivision of land in a coop) Coop gets mortgage money to build the plant.

FHA would prefer this (management company would run the plants)

(b) Coop buys plots with seller (PLBA) agreeing to build water (and/or) sewer plants on some other part of seller's land. Price of plots must then be high enough to cover ~~the cost of~~ the seller's costs in building the water and/or sewer systems. ~~land~~ These might cost $1,000/unit — so price of plots might be $1,350/unit. Coop would also have to agree to pay monthly charges for water and sewer service —— Parola would in effect (or actually) become a private utility co. (Lakota Sanitary District provides water + sewer for the Lakota Coop)

unless Parola becomes a legal water & sewer district.

150 cm

Meeting 1 Feb 72 — Roger Willcox, Larry Chekoroff, Bill Edwards, A. Campbell.

- Technicoop willing to operate on 100% contingency basis. (fees from mortgage after closing.)

April 3, 1972

Mr. David Raphael
Rural Housing Alliance
1346 Connecticut Avenue N. W.
Washington, D. C. 20036

Dear David,

When I met with you in Washington, some time ago, I promised to keep you up to date on our plans for housing in Sumter County, Alabama.

On March 3, 1972, we met with Mr. James Hall and some of his associates from the Farmers Home Administration, State Office in Montgomery. As a result of this meeting we have made application, through the local FmHA office in Sumter County for a Rural Cooperative Housing Loan under Section 515 of FmHA's authorization. We requested a loan for the initial phase of 40-50 units of a total 200 unit co-op housing development on a 274 acre tract we partially own and have options on. The application called for funds necessary to make site improvements like water, sewage, and streets, and community facilities.

We submitted the application on behalf of the PLBA Development Corporation, a non-profit housing corporation set up under the laws of the State of Alabama. A copy of this charter is attached to this letter, along with a list of the board of directors. Mr. Hall said FmHA's legal experts would need to advise us as to whether we could borrow for this type of project under the present charter or whether a new legal entity would be needed. From our reading of FmHA Instructions 444.5 and 444.7, we may need to charter a separate cooperative, composed entirely of persons agreeing to live in the houses. We need some independent advice in this matter and defailed guidance in following and interpreting the FmHA instructions.

Construction of 50 units will require the establishment of a water and sewer system. Under present Alabama law, the water system will need to be comparable to that of a "public water system", this includes drilling of a grouded well, to protect the water from any seepage or contamination.

grouted

There is also a question of the purity of the water. In this area we have an underground salt formation, such that most of the water contains calcium salts and thus has a slightly salty taste. This taste may make our water supply unacceptable, although most of the people in this area enjoy drinking the water.

Our sewage system was planned as a two chambered lagoon, with the effluent from the lagoon draining into Toms Creek, which passes through our land. An inspector from the Alabama Water Improvement Commission would not approve our lagoon site because he said the stream in Toms Creek would not flow fast enough at certain dry period in the year. We will need to submit a plan, either a. pupumping more water in the creek to increase the flow, b. pumping and piping the sewage into the river (4-5 miles), or c. getting easements from all persons with property along the creek until we reach a point where the flow would be sufficient to permit disposal. This poses and additional problem and cost to the project.

The man from the Alabama Water Improvement Commission indicated that the Enviornment Protection Agency made some grants available for situations such as ours. Do you know anything about EPA grant, or other grants for water and sewer needs like ours? Can you send us this information and provide us with other technical assistance needed in pursuring this co-op housing loan.

The members of the Panola Land Buyers Association have a critical need for housing, so anything you can offer in the way of assistance to expedite our project would be appreciated.

On another matter, you should be hearing shortly from Mrs. Barnes and Mrs. Augustine on the problems of the Leonville-Palmetto Self-Help Housing Groups in St. Landry Parish, Louisiana. I recently helped them to compile a detailed and documented report on their problems with self-help housing. They plan to send you a copy as soon as the group has approved the contents and wording of the statement.

I hope to hear from you soon on the above matters.

Peace,

John Zippert

Some of the mineral elements contained in sub-surface water, found in Sumter County, Alabama, are listed below. This list was developed from a list posted in the Town of Livingston.

- Oxide of Iron and Alumina
- Sodium Chloride
- Calcium Bicarbonate
- Calcium Sulfate
- Magnesium Bicarbonate
- Silica
- Free Carbonic Acid

6/7/1972

Dear Art,

I am finally writing on the housing situation and you should have something in hand soon.

In the meantime I am sending some information on the minerals in the water in this area. Let us know how the analysis you took came out.

I am also sending a copy of a letter I wrote RHA in April, to which they never responded which says pretty much the situation as it is now. Maybe you can check

of why they didn't respond
to this letter in
preparation for my
coming information.

Peace,

John

July 21, 1972

Mr. Clarence Richardson
Assistant Director for Technical Assistance
Housing Assistance Council Inc.
1601 Connecticut Avenue NW
Washington, D. C. 20009

Dear Mr. Richardson,

At long last I am able to send you some written documentation on the housing program for members of the Panola Land Buyers Association.

I am enclosing two basic documents with this letter. The first, is the "Report on the Status of Housing for the Panola Land Buyers Association, Sumter County, Alabama (7/15/1972)". The second is an application for a site development loan from your revolving seed money loan fund. The two documents are cross-referenced in as much as possible and relate to basically the same information. To get a better perspective on the situation, I suggest you read the "Report" and its appendixes first, before studying our loan request.

In addition to the loan, we are requesting the assistance of HAC and other organizations committed to housing in rural areas for low income people, in appealing the negative and unfair decisions of the Farmers Home Administration on our application to them for a Rural Cooperative Housing Loan, under FmHA Section 515.

We have not yet filed a formal complaint with Farmers Home. We would like to get the advice and assistance of HAC; Art Campbell at Southern Regional Council; the Rural Housing Alliance, and the American Friends Service Committee, before we act. We want you to support the legitamacy of PLBA's complaint and join with us in an appeal to FmHA at the national level, to reverse their decision, and proceed rapidly in an affirmative manner, to develop a co-op housing program for P.L.B.A. members. After reviewing the enclosed data we would like your input and suggestions on this matter.

A Mr. Elwell, with Multifamily Housing in the National Office of FmHA is mentioned in the letter of rejection, received by PLBA, as a major factor in the refusal of the application. We would like to set up a meeting in Washington with Mr. Elwell and others in positions of influence with FmHA, to see if we can reverse these decisions. Several members of Panola Land Buyers Association, are willing to come and present the case to FmHA, if we can arrange for a fair hearing, that will be followed by meaningful action. We need your help and guidance in setting up this kind of meeting.

The application for a "seed money loan" is made in the name of the Federation of Southern Cooperatives, at our Georgia address. The funds are being requested by the Federation to assist the PLBA Development Corporation, a community sponsor in Sumter County Alabama. By routing the formal request through the Federation's headquarters in Atlanta, I hope we can avoid any legal difficulties you may have, because of the problems with getting approval for your program to operate in the state of Alabama.

In as much as possible we would like our loan request to get priority consideration by your loan committee and board.

I am sure after reading over and studying our material you will have many questions and comments. Please feel free to contact me if you need any clarification or additional information.

For several months, you have been asking me to put our needs and program "down in writing" and send in "an application on HAC forms". I feel this has now been accomplished. There were several major reasons for the delay. The primary reason being, that the Federation of Southern Cooperatives does not have funds to employ a full time housing specialist, to pursue a regional and localized housing program on a continuing basis. We have had to rely on persons like myself and Meredith Richardson, who only have part-time and spare time to devote to this vital housing effort. We are in desperate need of funding for a position at the Federation to develop a regional low income housing program in the South. Perhaps, HAC, in an evaluation of its efforts over the past few months, will come to realize this great need for administrative funds by community based groups, if housing for poor people is to develop and flourish at the grassroots level.

Please give my regards to Fred Cooper, your assistant, who was with you at the Birmingham meeting. I hope to hear from you soon.

Peace,

John Zippert

Washington, D. C.

Dear Mr. Cochran,

I am sending you copies of:

a. "Report on the Status of Housing forthe Panola Land Buyers Association, Sumter County, Alabama (7/15/72)

b. An application for seed money assistance from the Housing Assistance Council, submitted by the Federation of Southern Cooperatives for PLBA Development Corporation

c. A cover letter to Mr. Clarence Richardson, Assistant Director for Technical Assistance of HAC, requesting support in our effort to secure a Rural Cooperative Housing Loan (Section 515) from FmHA

The Panola Land Buyers Association with the help of the Federation, has been trying for over a year to secure assistance from the Farmers Home Administration, for a Rural Cooperative Housing Loan (Section 515). We feel this loan for a housing program is best suited to the objectives and conditions of P. L. B. A., as a cooperative land purchasing association. The fifty year amortization period and the possibility of including community facilities in the total loan, make this program additionally attractive to the group.

We are very interested in securing a loan for co-op housing, under this legislative mandate of FmHA, despite their own unwillingness to make use of the provisions. A break-through on a RCH loan for PLBA, could open the way for cooperative housing in many other communities across the South, where the Federation is operating.

We need your assistance and guidance, along with that of other concerned rural housing organizations, in appealing the decisions of FmHA in our case. As you will see from our documentation in the report, we have ample evidence of FmHA's unwillingness to work with us on this project.

We hope you will be able to assist in gaining a significant commitment to our project, at the national level in FmHA.

As you will also see from the report, we have been pushing the PLBA's housing problems from all angles. Our only small success, has been constructing three demonstration houses for PLBA members.

During this past winter, I was in your office in Washington and talked to Dave Rapheal and Pat Sabelhaus, of your staff, about some of the problems, we were encountering with FmHA, in Sumter County. They may be able to give you some additional background on the situation.

Please feel free to call me in Epes, if you have any questions or comments on the contents of the report.

Peace,

John Zippert
Program Implementation Director

Dear John:

The Alabama situation was debated during our loan committee meeting on August 8. The circumstances which surround the state objection prohibiting our assistance to you was thoroughly presented. A position was taken which would direct attention to this matter at the congressional level. We are in the process of making arrangements for support from Senator Sparkman of Alabama.

Section 242 of the Economics Opportunities Act prevents financial support in a state which has failed to give its approval. The Housing Assistance Council Board interprets this to include assistance within a state by way of another state. If done this will circumvent the intentions of Congress.

You are aware of the homework required. Our main concern up to this time was to make certain that your project be documented. There is no question about need, this speaks for itself in rural Alabama. It is clear that you have exhausted tremendous efforts at the county level, inclusive of the Farmers Home Administration. All this you have substantiated, and with it we seek the Senators support for state approval, and approval for your project in particular. We wish to use this opportunity with the Senator to indicate that the state has failed in two broad areas: 1) To develop a program for financial assistance to rural minorities; 2) to support assistance from available sources out of the state, such as the Housing Assistance Council. The Panola proposal must be the example we need to confront Senator Sparkman.

The loan committee encourage you to present this application package to Mr. Ned Butler, SEOO administrator. Mr. Butler will turn it down, we expect. The objective is to document every effort exhausted both locally and statewide. We will inform you when Senator Sparkman's conference has been arranged for your participation.

With respect to the problems raised concerning Farmers Home Administration's policy interpretation on cooperatives, we will cope with this issue. We are arranging conferences with Farmers Home on August 15. The questions you raised will be discussed,along with central office decision concerning the cooperative. There is no need for you to be present at this conference. If not resolvable at the division level, then we will proceed further.

Sincerely yours,

Clarence A. Richardson

review & include in letter to Zippert

August 11, 1972

Mr. Arthur C. Campbell
Southern Regional Council, Inc.
52 Fairlie Street, N. W.
Atlanta, Georgia 30303

Dear Arthur:

This acknowledges receipt of your August 7th letter forwarding a report by John Zippert on the Panola housing situation.

I will review the report more carefully and comment more in depth later. But I would like to make two points immediately:

1. Possibilities of Farmers Home Financing Under Section 515: Our experience with Farmers Home over a five year period has been completely negative. We once had a $15,000 grant from the Department of Agriculture, arranged directly by the then Secretary, to explore cooperative housing under FMHA I personally handled our work under that program and met many times with senior Farmers Home Administration officials in Washington. We were very far apart on our concepts of what cooperative housing might look like in rural America and what the future of cooperatives could be under the various Farmers Home programs. In brief, we have already come to the conclusion that the chances of a sound cooperative with mortgage financing arranged through the Farmers Home Administration are virtually nil.

2. Alternate Financing Under FHA With 100% Rental Supplements: We have previously recommended and we now again recommend that a much more practical, feasible and immediate financing possibility exists under the FHA Section 221(d)(3) program with 100% rental supplements. We have as you know already developed two projects in Michigan and South Dakota, providing detached houses under this program for families with annual incomes below $2,000 in some cases. There is rent supplement money available and we believe that a program can be put together and we are ready to help you do it.

I am sure you already know our feeling on both of these matters. My analysis of Mr. Zippert's report will definitely reflect our bias in these two regards!

Sincerely yours,

Roger Willcox

Mr. John Zippert
Federation of Southern Cooperatives
Post Office Box 95
Epes, Alabama 35460

Dear Mr. Zippert:

I tried to reach you by phone, but was not successful. Mr. L. D. Elwell, director of Farmers Home Administration's Multi-Family Housing Division, and I had a follow-up discussion concerning the proposed Panola Land Buyers Cooperative. Mr. Elwell said that he would gladly give you an appointment to review your situation, and that it might best be done during the next few weeks. His telephone number is 202-447-7207.

Mr. Elwell mentioned that the normal method of ironing out difficulties would be through the FmHA State office. However, after reading your report, he is willing to consult directly with you. I have always found him to be a fair man, and am sure you will also. This is noted despite the fact that you may not necessarily agree on all positions.

Should you decide not to seek an appointment with Mr. Elwell, please send a card, or otherwise let him know.

Sincerely yours,

Art Collings

September 28, 1972

Mr. Clarence Richardson
Housing Assistance Council
1601 Connecticut Avenue NW
Washington, D. C. 20009

Dear Mr. Richardson,

On the advice of Mr. Art Collins of your staff, I have contacted Mr. L. D. Elwell, of the Farmers Home Administration in Washington, D. C.

Mr. Elwell has given us an appointment for Thursday, October 19, 1972 at 9:30 A.M. in his office, Room 5331, South Agriculture Building.

When we meet with Mr. Elwell, I hope to have all the materials completed for filing a preliminary application for a Rural Cooperative Housing Loan under FmHA, Section 515. We will have a charter for the "PLBA Housing Cooperative" under the proper section of Alabama law. We will have signed "subscription agreements" from the prospective co-op members and hopefully application forms on most of them. With the possible exception of an approved sewage plan, I hope to have all the site development and house plan information available.

I would like very much to bring two or three members of the PLBA Housing co-op with me to this meeting. I feel this will impress FmHA and give the groups' members a chance to participate fully in their own housing program. Because of the present financial crisis facing the Federation, we will not be able to pay the expenses for the PLBA representatives. I am requesting that HAC assist us with expenses for 2-3 PLBA representatives, at a cost of $200 per person. Round trip airfare from Meridian, Mississippi to Washington, D. C. is $136.00, and I estimated other expenses for food and lodging to reach the $200 figure. Please advise me, if HAC can assist PLBA's members to make this trip.

I am also planning to request that a representative of each of the organizations, that are involved in assisting PLBA with its housing development program, attend the meeting with Elwell with us. This would mean a person from HAC, American Friends Service Committee, Southern Regional Council, Rural Housing Alliance, and myself from the Federation of Southern Cooperatives.

Fred Cooper called me today to let me know, Ned Butler in the Alabama SOEO may be reconsidering his position on having the governor sign-off to allow HAC to operate in the state. This sounds good and I hope we can work this together with FmHA potential reversal of their stand on our project.

Please let me hear from you soon on my request for assistance and support in connection with the meeting with Elwell.

Peace,

John Zippert

Multi-Housing Specialist
Farmers Home Administration
Room 5331 So. Bldg.
U. S. Dep't of Agriculture
Washington, D. C.

Dear Mr. Elwell,

In conjunction with our meeting planned for October 19, 1972 concerning the housing situation of the Panola Land Buyers Association, I am forwarding to you a copy of the charter of the "PLBA Housing Cooperative", a corporation chartered pursuant to Title 10, Section 168 of the Code of Alabama. We are in the process of chartering this new application for the purpose of qualifying for a Rural Cooperative Housing Loan from Farmers Home Administration.

Since the question of an appropriate charter was one of the major issues raised in previous objections to our project, we are forwarding this copy to you, prior to the meeting, for the study and review of your legal analysts. We anticipate compiling a set of Bylaws for the cooperative, compatible with the model, in FmHA instructions to Section 515.

Please give this your attention prior to our meeting. Thank you for your kind attention. I remain

Sincerely yours,

John Zippert, Director
Program Implementation Division

MEMO TO: Harry Bowie

FROM: A. Campbell

RE: Panola Housing Project — file (deadfile?)

A meeting with Mr. L. D. Elwell, multi-housing specialist, for the Farmers Home Administration has been scheduled for October 19. The participants in this meeting will include representatives from the following organizations: Housing Assistance Council; American Friends Service Committee, Southern Regional Council; Rural Housing Alliance; Federation of Southern Cooperatives, and the Panola Land Buyers Association.

We seek in this meeting to negotiate FHA's support for a cooperative housing project for the PLBA. The meeting was precipitated by the State FHA Office's (with Washington's approval) failure to give adequate attention to a housing application from PLBA. The gist of the State's position on the application was to question the stability of the PLBA members (i.e., the applicants), reject the charter, question feasibility of providing water to the proposed housing project.

Prior to the meeting with Elwell, on October 19, a strategy session of the participating organizations will be held on Wednesday October 18.

FEDERATION OF SOUTHERN COOPERATIVES
RURAL RESEARCH AND TRAINING CENTER
EPES, ALABAMA

Planning and strategy meeting to prepare for conference with
L. D. Elwell, Multi-Family housing
Farmers Home Administration/USDA
on PLBA Housing Co-op (RCHL) Loan.

*Persons expected to attend:

Ms. Annie B. Williams, Pres., PLBA Housing Co-op
Frank Cook, Pres., Panola Land Buying Association
John Zippert, Federation of Southern Co-ops, Epes, Alabama
Clarence Richardson/Art Collins, Housing Assnc. Council
Art Campbell, Southern Regional Council
Ms. Eleanor Eaton, American Friends Service Comm..
David Raphael, Rural Housing Alliance

Elbert Jones, Federation of Southern Cooperatives, Washington, D. C.

*Points to be Discussed:

1. Background and present status of PLBA Housing Program.

-3 demonstration houses
-Efforts to secure RCHL from FMHA
-History of PLBA (slides)

2. Review of reasons for FMHA rejection of original loan request (4/1972)

-Need for co-op charter
-"Poor People - Poor Risks" for loan
-FSC's participation and T. A. role questioned
-Water and sewage problem
-FMHA's Philosophical opinion of Co-ops

3. Results we want to obtain from meeting with Elwell?

-Specific commitments from FMHA on:-

A. Accepting application for RCHLoan from PLBA.
B. Making PLBA project a demonstration model of Housing for poor rural people.
C. Help on water and sewage problems (Grant?)
D. Timetable for processing loan
(Maximum total, no more than 180 days).
E. Broader perspective on FMHA co-op Loan Policy.

F.

4. What will FmHA most likely objections be:

A. Opposition to Co-ops? Prefer 502 or Rural rental.
B. Water and sewage.
C. Land ownership in relation to mortgage.
D. High reserve for vacancies, repairs, etc.
Because of risk in poor people.
E. No local leadership in PLBA to handle large loan.
F. Opposition to recreational facility plans.
G. People too poor to meet monthly payment.
H. High cost of project (?)
I. Not enough staff to handle request(s).
J.

5. Role of each person/organization in meeting with Elwell.

-Panola Land Buyers
-Federation
-HAC
-RHA
-SRC
-AFSC

Clarence → 202 483/1424

Panola Project

Legal Description Tract #2: Proposed Housing Site

From the intersection of the East-right-of-way of Alabama Highway #39 with the North line of Section 26, Township 21 North, Range 2 West, run East along the North line of said section 26 for 2260 feet; thence South to a point on the South line of said section 26 that is 418 feet west of the Southeast corner of the west half of Section 26; thence west along the southline of Section 26 for 1672 feet; thence North 95 degrees West for 646.1 feet to the East right-of-way of Alabama Highway #39; thence North along said East Right-of-way of Highway to the point of beginning. Said land lies in the West half of Section 26, Township 21 North, Range 2 west, Sumter County, Alabama, and contains 273.4 acres, more or less.

Subject to existing easements for roads and public utilities.

Panola Project

PANOLA LAND BUYERS ASSOCIATION

The short synopsis below of what transpired in Panola over the past two years was provided by the Federation of Southern Cooperatives.

BACKGROUND:

In 1966, the tenants on Roger's Plantation in Sumter County, Alabama (1960 census, population 21,000; 81% Black) with the assistance of civil rights lawyers requested their just portion of the federal cotton price support, subsiding and deferred acreage payment from Mr. Rogers. Rogers was forced to pay his tenants but in retribution, he ceased farming operations and leased his land to the Hammermill Paper Company.

Some of the tenants moved in with local relatives and friends; some seven families were moved by the NAACP to Tuskegee Institute, Alabama and a few of the families moved on to Chicago. Some are still living in their old houses on Roger's land but they have pine trees planted by Hammermill up to their doorsteps.

There is not even enough land available for growing a home garden, the source of the mainstays of southern rural diet: greens and blackeyed peas. These folks also pay two sets of rent, one to Rogers for the house, and another to Hammermill for land.

Various community development organizations, including the Federation of Southern Cooperatives helped to organize the families into the Panola Land Buyers Association (a non-profit entity) and began looking for some land the group could buy and resettle.

The Panola Land Buyers Association has recently purchased 1164 acres of farm and pastureland in Sumter County, Alabama for $186,000.00. With the acquisition of this acreage, several agricultural enterprises are being initiated. A year-round crop rotation program is being developed including vegetables and specialty crops for the commercial market, grasslands for grain and hay and pasture.

The Housing and Planning Program's Role in Developing Housing and Long-Range Plans for the Panola Land Buyers Association

Arthur C. Campbell, Associate Director of the Housing and Planning Program (HPP) was contacted during October, 1970, by Merith Richardson of the Federation of Southern Cooperatives, about the possibility of Housing and Planning assisting the Panola Land Buyers Association to develop a housing project and to develop long-range comprehensive plans for 1164 acres of land in Sumter County, Alabama. Campbell expressed a positive interest in the project. In this regard, he later met with Richardson and Wendell Parish (also of the Federation) to further discuss how HPP~~'s~~ might be of assistance.

Field Trip:

On October 22nd, Campbell visited Panola. The 1164 acres are in three separate tracts, of 200+, 300+ and 500+ acres. ~~and he got to see some of all three tracts~~. Based on a ~~this~~ short windshield survey of the property, ~~it seems that~~ the 200+ acre tract seems ~~is~~ more suitable for housing, mainly because of its gently rolling contour and its access to county roads on two sides. One of these, a paved road, provides direct access to Gainsville -- a small village situated approximately three miles due north of the present site. The 300+ acre

tract borders the Tombigbee river for approximately 1/2 mile and generally seems suitable for industrial development and some row-crop farming. Most of the third tract, 500+ acres is ideal pasture land (with, apparently, an abundant deer population) with some land suitable for row-crop farming.

During the visit, Campbell met several of the members of the Panola Land Buyers Association who indicated to him that their primary concern was "How soon can some houses be built?"

Alternative Courses of Action for Assisting Panola

An initial assessment of Panola suggest two broad approches to its problems:

1. The organization of a development team to make the necessary preliminary studies and to file applications for selected federal programs that would enable the Association to get at least ___ units of housing built at the earliest possible time.

2. The initiation of long-term planning aimed at providing a Master Plan for developing the 1164 acres. Such a plan should sufficiently cover the following areas:

   (a) General Physical development

      1. Comprehensive Land Use Plan

      2. Economic Base Analysis

   (b) Development Control and Incorporation

   (c) Financing

   (d) Goals and Objectives

Within the two broad approaches outlined above there are specific alternatives for action that seem feasible at the moment.

Approach No. I

1. Contact other housing orgainizations in an effort to find seed money and/or technical assistance for Panola to hire professional consultants. Some of the groups we might negotiate with are:

   a. National Corporation for Housing Partnerships/ Washington, D. C.

   b. Non-Profit Housing Center/Washington, D. C.

   c. Rural Housing Alliance/Washington, D. C.

2. Housing and Planning could use its consultants to obtain architectural plans and other preliminary items for PLBA. In this capacity, Housing and Planning would assume the responsibility of "Packaging." i.e. filing applications with the appropriate federal agencies and arranging meetings with builders, mortgagers, and local FHA officials.

3. Housing and Planning could develop a Section 106(b) application, on behalf of Panola, to obtain financial assistance to pay for preconstruction costs, "before the proceeds of the federally insured mortgage loan become available."

4. Seek established consultants who would be willing to provide preconstruction services based on their analysis of PLBA's eligibility for funding, and contingent on being reimbursed after the federally insured mortgage loan become available.

Approach No. II

Only one idea for effectuating this approach has been given some thought.

It is felt that Approach No. II lends itself to student participation. For one thing, time is not as crucial as in Approach No. I, and two, there is precedent for student involvement in community development projects. Perhaps most important is the fact that student labor is less expensive than professional labor -- automatically making it attractive to PLBA with its meager finances. Therefore, student participation is central to the initial proposal for providing long-range planning for Panola.

The following elements comprise the skeletal proposal:

A. Recruit teams of students from various schools in Alabama to prepare specific parts of the comprehensive plan. A faculty member would be engaged in each case to supervise the project.

B. Recruit a panel of architects, planners, economists, builders and other necessary professionals to review the students' work on a specified time basis, HPP would work out the logistics of this arrangement.

C. Hold seminars on housing and rural planning at the participating schools. Lecturers for the seminars would be drawn from the panel of professionals.

D. Housing and Planning would meet expenses associated with the student project. These would include: Production expenses (e.g. maps, reproduction, etc.), travel, cost of convening seminars and telephone and postage involved in student communication with local people.

Charles Hieght, Head of the Department of Architecture, Tuskegee Institute, advises that the major considerations in a project of this type are: (1) student expertise; (2) constraint

of time; (3) available faculty members and (4) the logistics involved in having outside professionals critique student work. He underscores time as perhaps the most crucial factor. A "tricky" factor not to be overlooked is how to combine the project with course work.

The approaches and alternatives above are listed to suggest how we can most effectively assist Panola and to indicate how our involvement might benefit. HPR

We are now looking into items on our present agenda.

Present Agenda:

Each activity is aimed at effecuating, either, the immediate program to build housing or the long range planning program.

1. Check out the availability of seed money for Panola from the sources suggested above.

2. Take a close look at University of North Carolina model where students prepared some preliminary studies for Soul City.

3. Check into the set-up for developing the new town of Greenevers in North Carolina.

4. Check out student interest in the described project and their availability from other Alabama universities.

5. Now reviewing selected federal programs that seem available to meet Panola's needs. e. g. 106(b) technial assistance and FmHA's site development program.

6. Met with Bruce Andrews of the Charter Corporation in Birmingham, Alabama to review the housing units

that they manufacture. Have in hand, basic information on this outfit.

7. Will meet with the Board of Directors of the Panola Land Buyers Association on Monday, November 9, 1970.

Case Study Number 10

URBAN ACTION CLEARINGHOUSE

WINSTON-SALEM PARK PLAN SERVES RECREATION NEEDS FOR ALL

Report in Brief: Public recreation programs in Winston-Salem, North Carolina were already burdened by long-standing apathy when in 1964 the attorney general ruled the city could not spend tax funds for recreation without referendum approval. Leaders of this southern city resolved to propose a major improvement of the recreation system instead of allowing it to die. Voters approved that proposal and a later referendum. The system has become one of the finest in the South, benefiting from neighborhood councils and other citizen involvement that help it to serve the needs of all Winston-Salem residents.

Parks Wage Costly Fight to Clean Up After Growing Crowds

By DAVID BIRD

One of the biggest problems the Parks Department faces today is cleaning up. The department is spending $10.5 million—about a quarter of its budget—just to pick up litter this year.

Peter Aschkenasy, the deputy executive director, estimates that twice as many people are using the parks now as did about two years ago. As use rises, so does the litter.

"You might find," he said wryly in an interview last week, "that the streets are an iota cleaner because more people are bringing their refuse into the parks."

Gone are the days when a park employe armed with only a spike-tipped stave could even begin to make a dent in the accumulating debris.

But Mr. Aschkenasy complained that budget restrictions "have not allowed our forces to grow with our expansion." Moreover, it has been impossible to mechanize much of the clean-up operation, he said, because "any machine that picks up the debris also picks up the grass."

About half of the Park Department's 37,000-acre domain is made up of grass and green areas. The rest consists mostly of beaches, roads and surfaced play areas.

In the non-grass areas the department has made some progress with mechanization. This month, for example, it expects to begin regular mechanical sweeping of roads and paths with the first of seven new motorized sweepers it ordered. Essentially, these are scaled-down versions of the mechanical sweepers that now clean the city's streets.

Another piece of mechanized equipment that has been working out well in trials on the beaches for the last year is a vehicle called a beach sanitizer. It has been sifting debris out of the oceanfront much more efficiently than the manual labor it replaced.

The sanitizer costs about $16,000, and the department has money for two more in the new budget.

Meantime it is still trying to find something that will work on the grass.

"I want a big monster," Mr. Aschkenasy said, "that goes along the grass, picks up the debris and leaves the grass standing."

So far nothing has worked out, although the department has sent representatives all over the country to look at new devices.

Not Enough Receptacles

Part of the clean-up problem is as simple as litter baskets. The department says it doesn't have nearly enough of them.

Jack Goodman, the Manhattan borough director, said the department is limited by the budget to three or four thousand new baskets a year. He said this is not nearly enough to replace the ones that wear out (they last about three years) or are lost to vandalism.

Mr. Goodman said the department has been salvaging old oil drums to provide additional receptacles. In Central Park alone, he said, there are some 200 of these drums—painted blue, orange, red or green—serving as trash receptacles.

The parks' refuse problem was brought into focus most recently after the concert that Barbra Streisand gave at the Sheep Meadow on Saturday night, June 17.

Miss Streisant drew 135,000, and these listeners left a carpet of litter that made the Shaeep Meadow's 90 acres look like a garbage dump.

Although it was caught somewhat off balance by the size of the Streisand crowd, the department never expects to be as unprepared as it was for the hot July 4 weekend at Coney Island last year.

Staying on Top

Then, with the temperatures at 100 degrees and over, people flocked to the beach—and stayed. When they finally left, the miles of debris, ranging from paper cups to old suitcases, created a situation described by a park supervisor as "the worst I have ever seen."

The debris remained for days because the department did not have enough workers to meet even the normal summer rush.

Parks Commissioner August Heckscher said yesterday that careful preparations had been made in recent weeks so that additional men and equipment would be standing ready to move in when the crowds moved out.

"We'll work right through the night, tomorrow night, at the city beaches," Mr. Heckscher said.

The department's staff swells to about 11,000 in the warm months with the addition of more than 4,000 temporary employes ranging from lifeguards to people who pick up litter.

"We're staying on top of the situation this year," Mr. Aschkenasy declared.

Plans for Progress

information

1800 G Street, N. W. • Suite 703 • Washington, D. C. 20006

MALCOLM F. WISE
DIRECTOR OF INFORMATION
961-5555

PFP-66-15 (6/7/66)

Washington, D.C. --- Vice President Hubert H. Humphrey today released statistics showing the progress made over the last two years by the first 100 companies enrolled in the Federal Government's Plans for Progress program.

The report showed non-whites made substantial gains in both salaried (white collar) and hourly paid (blue collar) jobs.

Plans for Progress is a voluntary cooperative program which now enlists some 328 companies in efforts to aggressively promote and expand employment opportunities for minorities.

Compared were the reports filed as of December 31, 1964, and December 31, 1965, by the 100 companies, which have more than 5,000 installations and more than 4.6 million employees.

Here is what the 1964-1965 statistics showed:

--- total employment increased from 4,390,300 to 4,680,557 --- 290,257, or 6.6 per cent. Salaried employment increased from 2,035,651 to 2,131,041 -- 95,390 or 4.7 per cent. Hourly employment increased from 2,354,649 to 2,549,516 --- 194,867 or 8.3 per cent.

--- total non-white employment increased from 275,315 to 327,993 --- 52,678 or 19.1 per cent. Non-white salaried employment increased from 49,307 to 59,125 --- 9,818 or 19.9 per cent. Non-white hourly employment increased from 226,008 to 268,868 --- 42,860 or 19 per cent.

Vice President Humphrey, who used some of the statistics in speaking to some 300 businessmen meeting at the State Department in Washington to mark the 5th anniversary commemoration of the start of the Plans for Progress, congratulated the companies on the progress the statistics showed. But he also had a word of warning.

"Statistics can be read several ways. For example, between 1963 and 1964, salaried employment of these companies increased by 19,276 and non-whites represented 6,629 of that increase.

"But last year, as our economic progress continued and as these companies expanded to meet demand, salaried employment increased by 95,390 overall. But non-whites represented only 9,818 of that increase. Thus, between 1963 and 1964, non-whites represented something over one in three of the increase in white collar employment. Between 1964 and 1965, they represented something just over one in 10.

"In other words, the pie got larger last year, but non-whites didn't get as large a share as they did in the previous period -- despite the affirmative action program of these 100 leading companies."

The Vice President said the statistics may serve to illustrate that the "easy hires" are gone -- the skilled, the educated, the qualified. He said:

"They also show that if we are going to make further progress this year and next, we are going to have to take some new tacks -- we are going to have to reach down farther and extend ourselves a little more.

"We must also recognize that statistics on minority employment are calculated from a low base. Thus we have many years of work ahead of us until the goal of equal employment opportunity becomes a full reality for every American."

In the material released by the Vice President, the 1964 and 1965 reports of the 100 companies also were compared to a composite made up of the initial reports filed by the companies when they joined the program -- between 1961 and 1963.

This table showed the rate of utilization of non-whites in the work force as a whole and in salaried and hourly jobs.

In the initial reports, non-whites made up 199,677 of 3,937,363 employees -- or 5.1 per cent. This represents 51 persons per 1,000 workers. In 1963 the rate of utilization was 5.7 per cent (240,600 of 4,238, 429) -- or 57 persons per 1,000 workers. In 1964, the rate of utilization was 6.3 per cent (275,315 of 4,390,300) -- or 63 persons per 1,000 workers. And in 1965, the rate was 7.0 per cent (327,993 of 4,680,557) -- or 70 persons per 1,000 workers.

In salaried jobs, the utilization rate rose from 1.5 per cent (28,924 of 1,890,570) or 15 per 1,000 in the first report to 2.1 per cent (42,678 of 2,016,375) or 21 per 1,000 in 1963; 2.4 per cent (49,307 of 2,035,651) -- or 24 per 1,000 in 1964; and 2.8 per cent (59,125 of 2,131,041) -- or 28 per 1,000 in 1965.

In hourly jobs, the rates were: initial report -- 8.3 per cent (170,753 of 2,046,793) or 83 per 1,000; 1963 -- 8.9 per cent (197,922 of 2,222,054) or 89 per 1,000; 1964 -- 9.6 per cent (226,008 of 2,354,649) or 96 per 1,000; and 1965 -- 10.5 per cent (268,866 of 2,549,516) or 105 per 1,000.

"We know that the expanding economy and other factors enter into this picture, and we are not claiming all of the credit for Plans for Progress, "the Vice President said.

"But we do know that affirmative action on the part of these 100 major companies does show up in the absolute statistics from year to year -- and in the utilization rates, which are most important."

TENTATIVE REPORT ON 1965 STATISTICS

The First 100 Companies in
Plans for Progress

Initial Report

	Total Employees	Non-White	Percent
SALARIED	1,890,570	28,924	1.5

MALCOLM F. WISE
DIRECTOR OF INFORMATION
961-5555

FOR RELEASE TUESDAY A.M.

Washington, D.C. --- Vice President Hubert H. Humphrey announced today that a $125,000 Federal grant is being made to help the Plans for Progress program finance a series of coast-to-coast seminars to inform high school counsellors who deal with minority youth about jobs available in private industry.

The funds will be provided through the technical assistance program of the Economic Development Administration of the U.S. Department of Commerce. They will supplement a similar amount of financing provided by Plans for Progress companies.

The Vice President announced the joint Federal-private industry project in a speech before some 300 businessmen who met at the State Department Monday to mark the 5th anniversary of Plans for Progress.

Plans for Progress is a voluntary effort by the leadership of American business and industry to aggressively promote equal employment opportunity and to expand job and income opportunities for minority citizens. The program currently enlists some 328 member companies, employing more than 8.5 million persons.

Vice President Humphrey is an ex-officio member of the Plans for Progress Advisory Council, a group of 25 businessmen who help guide the program.

The seminars -- called Vocational Guidance Institutes -- will bring together in an academic setting businessmen and administrators and guidance counsellors from schools with large minority enrollments.

The participating companies will provide instructors and will conduct plant and office tours to provide first-hand information on how employment opportunities are developing in industry.

In addition to job openings for minorities, the Institutes also will emphasize the need to keep disadvantaged students in school to prepare them for furture opportunities.

Participants in the Institutes come out better prepared to help guide and encourage young people to remain in school and improve their earning power with education.

The 18 Institutes will be conducted at Albuquerque, N.M.; Atlanta, Ga., Baltimore, Md., Chicago, Ill.; Cincinnati and Cleveland, Ohio; Houston and Dallas-Fort Worth, Texas; Denver, Colo.; Detroit, Mich.; New Orleans, La.; Philadelphia and Pittsburgh, Pa.; Portland, Oregon; Richmond, Va.; San Francisco-Oakland and Los Angeles, Calif.; and Winston-Salem, N.C.

The Economic Development Administration was created last year to assist areas with high unemployment or low family income. It also provides technical assistance to alleviate or prevent conditions of excessive unemployment or underemployment.

Each of the areas in which the Institutes will be conducted has one or more minorities with employment problems.

INTRODUCTION

City planners are aware that public plans and projects can discriminate against minority groups. In August 1964 during the annual convention of the American Institute of Planners some 100 city planners decided to create a special organization--Planners For Equal Opportunity--to oppose discrimination and to help safeguard the rights of minorities.

Since then nearly 200 planners throughout the nation have joined the organization; in major eastern cities they have formed local chapters of PEO. Members have appeared before official boards holding public hearings on proposals that affect minorities; in some instances PEO volunteers have given technical assistance to civil rights groups and in others they have participated in grass roots organizations concerned with urban renewal, housing, and poverty programs.

Volunteers have stepped forward to undertake some of the work needed in northern cities such as Philadelphia, New York, Newark and Boston. On the west coast individuals are aiding civil rights groups. But in the South it has been difficult to recruit members for similar work. Pressures can be imposed on planners making their jobs untenable and PEO work impossible. In short, PEO activity by southern planners might be ideal but is totally impractical at this time.

Faced with this condition PEO conceived a summer project in which volunteers would go into southern cities to evaluate public plans and programs in terms of their impact on minority groups. The original idea was to use planning student volunteers supervised by working professionals, but a shortage of funds and late notice to interested students prevented realization of this scheme. Instead it was decided that a pilot project during 1965 would be preferable; then using the experience from that effort a more elaborate program could be developed for 1966.

Selection of Knoxville, Tennessee

Knoxville, Tennessee was selected primarily for convenience. During the late fifties I lived in Knoxville while employed by the Tennessee State Planning Commission and therefore had friends with whom I could stay. Moreover, Knoxville is a small enough city (approximately 170,000 pop.) that its programs are not involved in endless complexity; they are straight-forward and clear for the most part. Also, it has had an active planning program. In 1956 the City and County formed a joint planning body, the Metropolitan Planning Commission, which has published more than forty reports. These studies have been partly financed with Federal funds from the Urban Renewal Administration.

More importantly, Knoxville offered none of the extremes the northern press associates with much of the South. Its 18% Negro population in 1960 has been diluted to 12% by annexation. Voting registration has not been an issue; instead there has been a long tradition of "using" the Negro vote in certain wards. Public facilities have been integrated. There has been almost no racial strife--none in the sense of Birmingham and Selma.

Knoxville, therefore, seemed to be an anonymous southern city, one that is neither hard-core, old South nor hypocritically northern. It proved to be ideal for this investigation.

Background

Ideal and anonymous though it may be, Knoxville is not therefore typical. Politically it has always been deviant. When it was founded in 1796 it was Federalist and anti-Feffersonian during the Jeffersonian epoch; then it was Whig during the era of Tennessee's own Andrew Jackson. In the Civil War it was loyal to the Union and has been loyally Republican ever since.

Louis Brownlow, Knoxville's first and last city manager (1923-25), found deep divisions within the community exacerbated by the Civil War. "The result," he said, "was bitter, vindictive, ruthless partisan politics."

He was living in Knoxville during a period when it was still relatively isolated,

when the mores of the mountaineer were dominant. There was suspicion of outsiders coupled with strong family and clan loyalties. For him, this East Tennessee city lying beside the Tennessee River between the Smoky Mountains and the Cumberland escarpment was the scene of his only professional defeat.

Change has been inevitable, for Knoxville is the principle city of East Tennessee; once the New Deal took ppwer the great dream of Nebraska's Senator George Norris was adopted. The Tennessee Valley Authority, authorized to build a system of multiple-purpose dams on the Tennessee River and tributaries, established central offices in Knoxville where they remain today. This brought a flood of young, idealistic and well-educated pwople to the city in the mid-thirties.

In the forties atomic research at Oak Ridge, twenty miles away, brought another influx of outsiders who are still present today.

Ironically, the University of Tennessee which is also in Knoxville is seldom cited as an enlightening influence although it is a highly respected institution. And other factors tend to be ignored: the construction of high-speed highways through this relatively isolated area and wide automobile ownership have enabled Knoxvillians to seek their own enlightenment rather than have it brought to them.

Nonetheless, the "hillbilly" influence in Knoxville politics seems to be declining. A recent unpublished paper prepared by political scientists at the University of Tennessee found that Cas Walker, a local politician whose appeal has been mainly to mountain people, has a waning influence in local elections although in political circles his opposition is often feared.

The same study searched for some explanation of political behavior arriving at the conclusion that Knoxville government is led by many independent leaders with separate spheres of influence. If this is the case, political action occurs only after the formation of coalitions. In a mayor-council government such as Knoxville's, this means that the Mayor is less likely to be a strong leader than a broker between chieftans whose support is required for adoption of any measure.

History of Integration

In the story of Knoxville integration the Mayor seems to have performed the role of mediator, conciliator or broker. The first civil rights crisis occurred in Knoxville in 1960 when students at Knoxville College, a Negro school, sought to integrate lunch counters. In the spring students began laying plans for sit-ins; adult leaders persuaded them to begin negotiations with white leaders instead. The mayor, acting as middleman, formed a committee to handle negotiations, but little happened. In mid-March the students had a "walk-through" in the areas around lunch counters. Merchants said they were going to meet that very day but the "walk-through" had prevented them. In mid-April the students became restive again and developed a plan to withhold trade from merchants who refused to integrate lunch counters; agains adults persuaded them to try negotiations through the Mayor's committee.

The committee arrived at an agreement with the merchants that there would be s ten-day cooling off period and then the merchants would agree to "consider implementing" a plan similar to the one adopted by Nashville merchants. The Negro students found at the end of this period that "consider implementing" was an escape phrase; integration did not take place. So on June 9 they employed direct action, sit-ins and picketing, which lasted until July 18 when the lunch counters were integrated.

The next important integration effort began in 1963. Negro students began noisy and conspicuous demonstrations in front of downtown theaters in January; at times they tried to crash into the theaters. In May of the same year Knoxville was to be presented with Look Magazine's All-American City Award and officials did not wish to have the ceremonies marred by demonstrations. Despite promises extracted from adult and student leaders, fifty demonstrators showed up and were hurriedly carted off by police.

Political and business leaders then realized that Knoxville was not unique, that it could become another Birmingham. Hence, the Mayor, again acting as broker,

brought together some thirty leaders in his office May 13. Two days later a petition carrying the signatures of 55 leading citizens appeared in the afternoon paper alonside an editorial calling for an open city. Thereafter, additional names were acquired and business firms agreeing to integrate were listed. Moreover, theaters were not singled out as were lunch counters in the previous integration experience. The decision was made to integrate hotels, motels, theaters, restaurants, and hospitals.

During the summer of 1965 integration again became an important concern in the Negro community. Job opportunities for Negroes was the concern of an adult-led groups named Citizens For Progress. At one of its meetings in August the Mayor appeared. He outlined reforms he had asked the Civil Service Board to implement. In addition, the practice of having one Negro fire company and the remainder white he said would be eliminated by September 1; discrimination against promoting Negroes in the police department would be stopped; absence of Negroes on the Knoxville Housing Authority would be investigated and changed if possible. He promised to establish an inter-racial committee to work on integration problems.

This time the Mayor, acting more as leader than broker, was moving to head off trouble. (Curiously, this significant speech was not covered in either newspaper.) Earlier in the year the Mayor had sought funds from the City Council to establish a Human Relations Commission with a staff to work on these problems, but the Council refused. As a result he could only establish the inter-racial committee announced in late August with more than fifty members.

On another front, the Knoxville School Board has been under court order to integrate the system since 1960. Many revisions in the integration plan have been required, the most recent having been submitted to the court in August 1965.

Local Contacts

Individuals are not identified in this report. In some cases such as the Mayor, a reference can only refer to one person, but when at all possible I have

refrained from identifying individuals who supplied information preferring instead to mention only the agency involved. The reason is simply that this was to be a search of public programs and activities as they affect minorities and not an attempt to look into the motives of anyone.

Moreover, people did not always make clear the difference between public and private opinions. Then too, there is a possibility that this report will prove unpopular; having one's name in it could thereby invite adverse publicity.

Many people in Knoxville, public officials and private citizens, graciously gave their time to answer my questions for which I want to thank them again. I was prepared for a cool reception, but was, with one exception, treated to genuine courtesy and good manners.

FINDINGS AND RECOMMENDATIONS

All public programs affecting Negroes are not covered in this report. Time being limited, it was decided to emphasize programs related to housing rather than attempt to cover all municipal activities. Primary emphasis, therefore, is on urban renewal and public housing, displacement of families by these and other programs such as Interstate Highways, and the housing pattern emerging from them. The relationship between housing patterns and the school desegregation plan is also examined.

Major findings and recommendations are:

1- Housing in Knoxville is segregated.

2- Public housing projects should be desegregated. This can be accomplished by assigning tenants to projects on some criterion such as nearness to employment.

3- New public housing projects should be scattered throughout the city on small sites to assure integration.

4- The Knoxville Housing Authority should have minority group representation since most of its dealings affect Negro families. At least two members of the 5-man board should represent the interests of Negroes.

5- Urban renewal projects concentrate on Negro areas; they rely on public housing for relocation. This reinforces segregation.

6- The supply of low rent housing is being severely contracted by urban renewal demolition; other areas of low cost housing are not being opened to displaced Negro families.

7- A thorough study of Negro displacement and the private housing market is needed.

8- Use of public funds to condemn Negro homes should be accompanied by open occupancy laws to help Negro families find relocation housing. The Federal government should make this a condition of its grants; the city government should not need prompting in such basic fair-play.

9- New urban renewal plans should increase housing opportunities for Negroes or avoid Negro areas.

10- Federal funds for Yale Avenue Renewal project should be withheld pending tangible evidence that the thirteen fraternities to be located in it do not discriminate against non-"white Christians."

11- The school zoning plan adopted by the Board of Education zones Negro areas for Negro schools. It does not promote integration.

12- The U.S. Commissioner of Education should require school officials to submit a map showing the distribution of the non-white population in addition to the map showing school district boundary lines. De facto segregation by school officials would then be apparent.

13- Various areas of City governmental activity require investigation including employment practices of government contractors; budgetary allocations and equipment supplied to Negro areas; membership qualifications of organizations receiving city funds; and operations of the Civil Service Board.

14- A Human Relations Commission should be established with a staff that can work to ease racial tensions. In East Knoxville where white families are in a panic this group could begin work.

15- The Metropolitan Planning Commission should examine the implications of its recommendations in terms of the impact they have on the Negro community. It should supply policy makers basic information on the economic and social status of Negroes.

PUBLIC HOUSING

Knoxville has 1637 units of public housing adminstered by the Knoxville Housing Authority (KHA) and 749 units under construction (519 of these are for the elderly). These units are divided into four different projects: Western Heights (688), Lonsdale Homes (300), College Homes (320), and Austin Homes (329). Of these Western Heights was originally developed for white families and the other three for Negro families.

The two projects now under construction were planned for racial segregation. Guy B. Love Towers, two 7-story buildings containing 249 units scheduled for completion in April 1966, was planned for white occupancy. The Walter P. Taylor Homes, low-rise buildings with 270 units for elderly occupancy and 230 units for occupancy by other low-income families, was planned for Negro occupancy in a Negro area.

These projects were planned and in execution before Executive Order 11063 (prohibiting discrimination in Federally aided housing) was issued. A spokesman for the Housing Authority acknowledged that the projects were planned for segregated occupancy and indicated there had been criticism on this point. He stated that any future projects would have to be located to encourage integration, that the agency had been giving it some thought, but that no policy had been developed. He cited several difficulties including the tendency of white Knoxville residents to move out of a neighborhood once Negroes began moving in. The agency, he said, wished to avoid creating a situation where white families would move away.

Pursuant to Executive Order 11063 the Knoxville Housing Authority eliminated all references to race in its applications for housing. The five-man Authority has made it a matter of policy that race shall not enter into priority or assignment of housing. It does, however, respect the preference of families seeking housing by allowing them to select the project they prefer to live in.

Not surprisingly, low-income Negroes, who are seldom crusaders, select the three Negro projects where they think they are expected to live, and whites select the white project. Two lone Negro families are in the white project apparently the result of some official persuasion. No whites are in any of the Negro projects.

The Presidential directive banning discrimination was issued November 20, 1962, almost three years ago. During this period occupancy has changed approximately 75% in the white project and 60% in the Negro projects, but these two families represent all the integration that has occurred.

There are no written elibibility requirements for entry into public housing. As a matter of experience, mothers with illegitimate children are considered undesirable and will be refused housing unless they are receiving attention from a social agency. Arrest records are considered less significant depending on the nature of the arrest. The administration of the housing authority appears more in the nature of a simple landlord-tenant relationship than one of big-brother prying into family life.

The Housing Authority Commissioners are appointed by the Mayor for five-year, staggered terms. None of the five members is a Negro. Three-fifths of the public housing units are occupied by Negroes and two-thirds of the urban renewal relocation (for which it is also responsible) involve Negroes.

The lowest rent for any apartment in the units operated by the Knoxville Housing Authority is $25.00 per month. The average rent (based on ability to pay) is $32.50 per month. The rent schedule is based on a formula that calls for 20% of the family income for rent. Income limits of tenants range from $2400 for a single person to $4500 for a family of ten or more with certain adjustments for travel distance, secondary wage earners, etc.

Desegregation of housing projects is not occurring, nor is it likely to occur as long as the Authority remains passive. Selection of projects by prospective tenants prevents integration. With the high annual turnover that takes place

(25% in the white project and 20% in the Negro projects) integration could occur rapidly if occupants were assigned to projects on some rational basis such as proximity to place of employment.

On the question of equal treatment, it seems that Negro families receive the same consideration as white families. In public agencies one constantly gets the impression that officials try doubly hard so that they cannot be accused of racial prejudice.

Minority representation on the Board of the Housing Authority is needed since most of the Authority dealings are with Negro families. There should be two or three Negro members. Appointments are the sole responsibility of the Mayor.

URBAN RENEWAL

Knoxville has undertaken three urban renewal projects in cooperation with the Federal Urban Renewal Administration. The local public agency that executes these projects is the Knoxville Housing Authority, the five-man board that also handles public housing.

Riverfront-Willow Street Redevelopment Project.

This project was initiated in 1954 in a Negro area east of the central business district to provide land for a municipal auditorium-coliseum and a four-lane by-pass of the business district. Site occupants were 508 Negro families, 157 white families and 183 single persons not racially identified. The relocation plan estimated that 427 Negro families would go to public housing and 81 would go to private rental or sales housing. Of the white families 116 were expected to move to public housing while 41 would go to private housing.

This project is finished except for disposition of the land. The auditorium-coliseum has been built and a short portion of the road has been constructed, but there is some question about whether the city or the state will purchase the remaining land and construct other links of the road. A minor portion of the project land was designated for re-use as a middle-income project. Instead this has been developed with 129 units of public housing. It is adjacent to Austin Homes.

Mountain View General Neighborhood Renewal Plan.

Mountain View is a three-stage project that borders the Riverfront-Willow Street project. The first stage, now in execution, covers 183 acres; it contains 818 families and more than 400 individual householders and roomers. There are 1064 structures to be demolished. The area is predominantly occupied by Negroes as the following figures show:

	White	Negro
Families	135	683
Individual householders	41	195
Roomers	34	230

The family size averages more than four persons. Hence, the population involved is about 3800 people over 3100 of whom are Negroes.

Re-use of the project land is projected as follows:

Residential	27.78 acres
Public and semi-public	59.44 acres
Commercial	24.17 acres
Streets, R.O.W., etc.	53.02 acres

The residential re-use will be about 200 units of 221(d)3 housing with rents of $65-$80 per unit to serve families with the following income limits:

Number of Persons	Maximum Annual Income
1	$4250
2	5200
3 or 4	6100
5 or 6	7015
7 or more	7950

(As noted below these middle-income limits established by the Federal Housing Administration for 221(d)3 housing in the Knoxville area exceed the income of most residents being displaced by this project.)

The gross project cost of Mountain View is estimated to be $12,630,000 with the City paying $3,234,000. The Federal Urban Renewal Administration will pay two-thirds of the project cost.

Since this project is located within the largest concentration of non-white residents in Knoxville, some effort was made to examine its impact on this and the larger Negro community.

First, using 1960 U.S. Census of Housing statistics a map was prepared showing the location of non-white dwelling units. This map revealed that there are two major Negro residential areas as well as other minor ones in random locations. The largest area corresponds on the map almost exactly to the boundaries of the Mountain View General Neighborhood Renewal area. Thus, whether it was accidental or intentional, this immense renewal effort is directed at a Negro area.

Second, the first stage of the project is total clearance of approximately 1200 units of low-cost housing. Only 200 units are to be replaced, and these, financed by FHA under Section 221(d)3, will be at substantially higher rents than the majority of displaced families can afford. It is inescapable that the supply of housing available to poor Negro families in Knoxville will be severely contracted as a result of this project.

Third, the quality of the housing in Mountain View is undeniably bad although there are notable exceptions. This points to the fact that code enforcement by the City has been ineffective, and the six real estate firms that held most of the property felt they did not need to meet code requirements.

Fourth, the site occupants were poor people and probably the least able to pay the social costs involved in a project of this type.

The following breakdown shows income by race:

Family Income Per Month	White Families	Negro Families
$ 0- 49	2	32
50- 99	10	95
100-149	16	99
150-199	26	89
200-249	35	86
Federal Poverty Line		
250-299	12	79
300-349	18	87
350-399	9	44
400-449	1	23
450-499	4	13
500 and over	2	34

Another indication of low income is that many families were found to be eligible for public housing. Among these families were 82 white tenants and 365 Negro tenants. Surprisingly, many homeowners fall into this category, too. Twenty-one white homeowners and 138 Negro homeowners qualify for public housing.

The maximum eligible incomes for admission to public housing are:

Family Size	Masimum Annual Income
1 Person	$2400
2 Persons	3400
3 "	3600
4 "	3780
5 "	4000
6 "	4100
7 "	4200
8 "	4300
9 "	4400
10 or more	4500

Another way of viewing the distribution of family income is by noting that of the 818 families being displaced, 490 fall below the $3,000 poverty line used by the President. Four-fifths of these (401) are Negro families.

Relocation and the Private Housing Market.

The housing supply in Knoxville owned privately is segregated. A sprinkling of Negro families exists in certain sections of the city, but they reside in pockets or small concentrations rather than as a mixture within the whole population.

The relocation plan submitted to the Urban Renewal Administration by the Knoxville Housing Authority recognized the problem that would be faced: "Analysis of the rehousing needs of displaced families indicated a deficit in the supply of existing housing and that expected to become available during the relocation period of 36 months." It went on to point out that 129 units of

public housing were to be completed in April 1963 and that 750 additional units were in planning (520 of those for elderly families). This same report indicated that there were 119 elderly persons (not families) in the project area eligible for public housing.

Interviews with officials of KHA indicate that practically all of the vacancies in public housing go to families displaced from the Mountain View Urban Renewal project. (By law these families have priority over other applicants.) These officials also indicated that 87% of the families in Mountain View expressed a preference of staying in East Knoxville instead of moving to the northwest where public housing projects---two Negro and one white--are located.

To accommodate the families that will be displaced, the 750 units of new public housing must be utilized, but because two-thirds of these units are for occupancy by elderly families, KHA will have to play musical chairs with these and existing units. That is, KHA will try to persuade elderly families living in regular public housing units now to move to the new units built for the elderly. Then KHA will use the vacated units to rehouse families displaced from Mountain View.

Since the two new projects were planned on a segregated basis, 500 units in Walter P. Taylor Homes will be available to displaced Negro families. (Two hundred and seventy of these are for the elderly.) Thus, there are 503 Negro families in Mountain View eligible for public housing; only 119 elderly persons, both white and Negro, are eligible for public housing. Assuming that they are all single persons and Negroes, this means that Taylor Homes can be used for relocation only if 151 elderly families are moved from other public housing units into this project.

However, it is doubtful that this will happen for two reasons: elderly families usually avoid moving unnecessarily, and most Mountain View residents wish to stay in East Knoxville. This would preclude their moving to northwest Knoxville where 1300 public housing units are located.

Relocation of Home Owners.

The relocation office reported that over four hundred families are now in the "relocation work load" meaning that they have been interviewed and new residences are being sought by KHA relocation staff. Through the first six months 185 families had been relocated; of them 95 Negro families bought homes and 21 Negro families moved to public housing.

Home owning families are the easiest to help; as in Mountain View they are usually the first to relocate. Already many Negro families from Mountain View have purchased homes nearby in East Knoxville. This formerly white area is now marked by many "For Sale" signs in front yards. The houses are ten to twenty years old and sell normally for $10,000 to $25,000, but a panic among sellers has depressed the market. In block after block there are four to ten signs.

For middle class Negro families the events in East Knoxville are temporarily desirable since a good home is available at a good price. Yet, these families are apprehensive lest the entire area become another all-black ghetto. They and their white neighbors are victims of the block-busting practices of realtors who have sent around representatives soliciting listings. From the large number of "For Sale" signs it is apparent that the realtors have succeeded in stampeding people into selling. They told people that Negro families depress property values and frightened enough white families to make it come true, but the depressing effect has come about because so many houses are for sale at once.

Negroes are quick to state that it costs them more to buy housing than it does white families. While this is usually the case in both rental and purchased housing, as long as there is a panic in East Knoxville, the situation will be temporarily reversed.

Relocation and Rental Housing.

To home-buying middle class Negro families the East Knoxville situation can be a bargain. Homes of comparable quality are not open to them in other sections of Knoxville, but at least this is one section open to them. For the low-income

Negro family the entire housing situation is even less promising. There is no "East Knoxville" for poor Negroes seeking private rental housing.

Through destruction of more than 1200 units of housing in the first stage of Mountain View, private housing available to Negroes has been substantially reduced. (In 1960 there were 5,733 units of housing--both rented and owned--inhabited by Negroes. In Mountain View 1,832 of these units are going to be renewed.)

The KHA acknowledged that housing would be in short supply when it planned the project. To ease the situation it stated that families would be moved to public housing.

As already mentioned this kind of relocation--whether by design or accident--reinforces segregation because the projects are all occupied along racial lines. In Mountain View the ratio of Negroes to whites was about 8 to 1--hardly a desirable mix in the eyes of people wishing to achieve integration. Yet, this ratio is reduced to 8 to 0 with the move to public housing.

The families who do not go to public housing (and the many other families who remain dependent on the private market) are caught in a squeeze. No private rental housing areas are opening to Negroes as the Mountain View project destroys the largest neighborhood previously available to them.

Urban renewal officials are directly responsible for the reduced supply of private rental housing, yet they have taken no action to open up additional private rental housing. Instead they rely on public (segregated) housing. Hence, they are pushing up demand for the remaining private units as well as reinforcing segregated housing patterns. Both conditions work against the best interests of low-income Negro families.

If the Knoxville Housing Authority wished to aid low-income Negro families, it could move forward on two fronts. It could alter admission procedures for public housing to achieve integration, and it could urge open occupancy policies upon the city government so that vacant housing units would be open to Negroes

and whites alike Negatively, it would oppose further destruction of housing available to Negroes until the City acts positively to make other housing available.

Social Disorganization.

To relocation workers familiar with the housing being destroyed in Mountain View, urban renewal is a mixed blessing. First, rental housing in Mountain View was not cheap by Knoxville standards. Forty to fifty dollars per month was a common price for a four or five room house. Moreover, many units lacked adequate toilet and kitchen facilities.

Second, the great bulk of housing in Mountain View was owned by six real estate firms that specialize in slum property, so the City, in effect, bought out these firms.

Third, the method of operation commonly followed was for a real estate firm to rent a house to one party--a Negro--who would in turn, subdivide it and then sub-let portions of it at a substantial profit. In this fashion the white owner was assured his rent because a Negro middleman collected from others and passed a share to the landlord. But in such an operation there is no incentive to provide services or maintenance for the renters.

Fourth, this permissive subdivision of housing has contributed to social disorganization. Many houses "are not homes" in the phrase of Polly Adler. In addition, there are reports of gambling and bootlegging (although Knoxville is now wet). There seems to be no dope problem although heroin is reportedly available; there are unwed mothers and wives and children who have been abandoned; unemployed men drift about; older people with no visible means of support are found in rooming units living alone.

Thus, relocation workers see the Mountain View area as one where social organization is near collapse and anti-social forces flourish. Destruction of such an area seems necessary to them if improvement is to take place. By implication this places much of the blame for social conditions on the physical environment--an argument frequently used to justify destruction of slums.

These relocation workers struggle to help families find decent alternative housing; often they enlist the cooperation of social agencies when they find families requiring special attention. But given Knoxville's segregated housing market it is not clear how better housing can be obtained except in public housing.

Governmental Responsibility.

Urban renewal of Mountain View is intensifying segregation; this is the opposite of announced Federal public policy. Since the Knoxville Housing Authority plans local projects and the Urban Renewal Administration approves them, both agencies are responsible for the situation. The URA, a Federal Agency, should require any community seeking Federal funds that will be used to displace Negroes to have open occupancy laws. Negroes would then have equal opportunity in the housing market and the support of law in their efforts to break out of the ghetto.

The contrast with existing conditions would be dramatic. Now, in order to obtain relocation listings the Mountain View office asks real estate brokers to notify it of units for rent or sale. When real estate men knew they were catering to white families being displaced from the Yale Avenue project at the University of Tennessee, they provided large listings. Now that they are supplying units for Negroes displaced from Mountain View, the number is only a quarter of the former amount. Furthermore, both quality and location of these units are inferior in comparison to the Yale Avenue listings. It is inescapable that real estate brokers offer only the units they wish to have occupied by Negroes.

Either the Metropolitan Planning Commission or the Knoxville Housing Authority should study the local housing market in depth. Among other points that need analysis is the conviction that Negroes pay more for housing than whites--a statistical fact ascertainable with census data. As Robert Weaver pointed out twenty years ago in The Negro Ghetto, "The nonwhite family receives less housing value for the same price than does the white group which has access to an open housing market...even when the colored person can pay an economic rent, he has less chance than a white person of getting decent shelter."

Whatever a study of Knoxville might show, no one interviewed asserted that housing segregation has benefitted Negroes or that they are better off in a segregated market than they would be if all housing in Knoxville were open to Negroes.

Yale Avenue Urban Renewal Project.

This was in no sense a slum clearance project. Most residents were home owners quite capable of finding other homes to purchase, and they eschewed help from the relocation workers supplied by the KHA.

There was some dispute over the quality of the structures demolished; in the forefront of the legal wrangle was a former district judge whose home was in the area. The matter might have become a political issue if city funds had been used to buy and destroy good housing. But from the outset the project was planned for expansion of the University of Tennessee upon the understanding that the University would assume the $3 million costs which would normally have been paid by the City. The only renewal cost not being defrayed by the University (and the Federal Government) is $416,000 that will be spent by the Knoxville Utilities Board for new lines in the area.

Displacement by the project consisted of 218 families, only 17 of whom were non-white.

A variety of new University activities is planned on the 138-acre site including classroom and dormitory space. Eighteen acres will be used for a low-density complex housing thirteen fraternities. The important question that arises is whether land cleared through use of public power (eminent domain) and money (urban renewal funds) should be made available to groups with long traditions of racial discrimination.

The Urban Renewal Administration requires a pledge of non-discrimination from organizations acquiring land in urban renewal projects; both the University of Tennessee and the fraternities have agreed to this condition.

A University official indicated that national organizations of all of the

fraternities involved (list attached) had purged provisions from their constitutions that restrict membership to white Christians. Two exceptions to this rule, Sigma Chi and Sigma Nu, have adopted special provisions that allow individual chapters to make exceptions.

Elimination of constitutional barriers by these organizations is an important step in overcoming racial bias, but hardly an earnest that it has been accomplished. No University of Tennessee fraternity has Negro members.

Several national fraternities have changed bias provisions of their constitutions, then replaced them in the membership oath with a stipulation that only "white Christians" will be recommended for membership. Chapters at several schools have withdrawn from national organizations in protest of these restrictions; others have been dropped by national organizations for pledging Negroes or Jews.

Sigma Nu has received publicity in this respect. In 1962 the Stanford University chapter voted to withdraw because of racial bias. The Wesleyan University chapter had taken the same action in 1959, and the Michigan University student government association threatened to oust the chapter on that campus unless it eliminated discriminatory barriers.

At Bowdoin College the local chapter of Alpha Tau Omega withdrew from the national organization in 1962 protesting the "white Christian" clause in the constitution. In 1961 the national organization ousted the Stanford University chapter for accepting four Jews as members calling attention to the ATO constitutional requirement of "allegiance to Christianity." The University of Pennsylvania ordered it to end membership bias in 1960.

Dartmouth College trustees in 1960 approved a report requiring Delta Tau Delta, Phi Gamma Delta, Sigma Chi and Sigma Nu to end racial bias or sever ties with national organizations.

In 1958 Phi Gamma Delta suspended its Amherst chapter for pledging a Negro. (The chapter was dropped by the national in 1962.) In 1960 the Williams College

chapter threatened to withdraw from the national unless allowed to select its own members on a non-discriminatory basis.

Sigma Chi has been charged with bias since its constitution still contains formal restrictions on membership. The Wesleyan chapter withdrew in protest after the national organization refused to eliminate the clauses in 1959. Look (July 27, 1965) carried a story about the suspension of the Stanford University chapter after it pledged a Negro. This story prompted Francis Keppel, U.S. Commissioner of Education, to warn schools that Federal funds might be cut off if they allow fraternities to discriminate.

Sigma Phi Epsilon in 1959 voted 134 to 37 to remove its membership restrictions on race and creed; its founder resigned in protest.

Many fraternities have removed membership restrictions by similar landslide votes, but the votes in opposition each represent individual chapters many of which are probably located on southern college campuses. It is likely that those chapters still discriminate even though there are no formal barriers to membership for Negroes or Jews.

In light of the discriminatory traditions of fraternities the pledge to the Urban Renewal Administration not to discriminate is hardly convincing. Their white Christian exclusiveness has been an important element in their existence; hence, the burden of proof that they no longer discriminate should be on the fraternities. Many have eliminated bias clauses without accepting Negroes and Jews; the inescapable conclusion is that they continue to discriminate.

If fraternities no longer discriminate and can prove it, they should be as eligible as any other group to enjoy the benefits of urban renewal. Without that proof, the fraternity row now scheduled for the University of Tennessee campus will make a mockery of Executive Order 11063 and Title VI of the Civil Rights Act that prohibit discrimination in Federally-aided projects. The Urban Renewal Administration which pays two-thirds of urban renewal costs might well follow the lead of the Commissioner of Education and demand evidence that it

is not aiding groups that will continue racial and religious discrimination.

Urban Renewal Site Selection.

The non-white population was concentrated in 1960 in two areas--around Knoxville College in northwest Knoxville and in the Mountain View area in east Knoxville. As noted, the Mountain View district was designated as a General Neighborhood Renewal area, a three-stage project. The first and largest stage is in execution and will severely reduce the low-cost housing supply available to Negroes. The later sections will simply intensify the situation.

No areas of privately-owned housing are opening up to poor Negroes; hence, they must double up in the remaining private housing or move to public housing which is segregated. (As noted in the school section segregated housing in Knoxville also means segregated schools.) Viewed from this perspective the poor

Negro family sees its opportunities restricted instead of broadened by urban renewal because its housing options are reduced.

Where will new urban renewal projects be located? What impact will they have on Negroes, particularly low-income Negroes who have been living in high-cost, low-quality ghetto housing? Will the supply be diminished more resulting in higher rents for the remaining small supply?

Site selection seems to be left up to the Knoxville Housing Authority. Thinking in that agency currently leans toward two projects--a downtown renewal project and another one in the University of Tennessee area.

On the other hand, the Metropolitan Planning Commission (MPC) prepared a report November 1961 outlining projects in other areas and assigning priorities to them. Thus, KHA and MPC seem to be in conflict. (The MPC must approve urban renewal sites so any difference in approach must be resolved.)

An internal difference would not be worthy of comment were it not for its potential effect on minority families in Knoxville:

*If the KHA projects--a refurbishing of the central business district and provision of dormitory areas at the University of Tennessee--are the course followed, Negro families will remain relatively untouched.

*If the recommendations of the MPC are followed, the concentration of Negro families around Knoxville College will be among the first people dislocated.

Since the MPC recommendations were published, there has been practically a complete turnover of staff making it difficult to trace the reasoning behind the report's recommendations. Nothing in the report indicates an awareness that Negro areas were being picked for renewal. Instead the report relied upon housing information compiled in the 1960 Census of Housing; emphasis was on condition of structures and the absence of plumbing facilities.

Quality of housing seemed to be the only criterion for site selection. Thus, two of the MPC recommendations--sites 2 and 5--are deteriorating Negro areas around Knoxville College. Who occupied the housing and what opportunities they

would have for relocation housing were not mentioned, and these oversights reflect poorly on the MPC.

Urban renewal planning that relies solely on structural conditions ignores basic economic and social facts. These facts include the relative poverty of Negroes and the discrimination against them by owners of real estate. Responsible planning offers positive solutions to such problems. At the very minimum it would call upon the City to offer non-segregated housing to displaced Negro families, and ideally it would produce a positive program that provides good housing for poor people in integrated communities.

Both scattered public housing sites used for relocation and open occupancy laws--recommendations already made--are again relevant. Small, "vest pocket" housing projects devoid of the institutional appearance and ghetto concentration should be developed in several sections of the city to avoid reinforcing segregation. "Fair housing" or open occupancy laws that prohibit discrimination by real estate men would be recognition that urban renewal uproots Negroes without insuring that they have another place to move. Here again, Federal backing of urban renewal that displaces Negroes without giving them this legal safeguard is irresponsible.

SCHOOL DESEGREGATION

Since 1960 the Knoxville Board of Education has been under Federal Court order to desegregate its school system. A spokesman for the Board of Education stated that he felt this was being accomplished through the plan filed with the court in August 1965. The plan, which is actually a summary of all the desegregation steps taken by the school board over the past five years, calls for the elimination of all racially discriminatory practices in all grades, programs and facilities, but for reasons noted below it will not result in an integrated system.

The plan emphasizes integration of both staff and students. The Board has stated that teachers and other staff members will not be assigned, promoted or given any other kind of evaluation on the basis of race. It was reported that some Negro teachers have been assigned to white schools, but no Negroes have been assigned to headquarters of the Board of Education in supervisory positions. One official commented that Negro teachers are reluctant to take positions in white schools. However, transfer will be necessary for some since small and obsolete Negro schools are being closed.

The number of white teachers in traditionally Negro schools was never disclosed.

Integration of students is proceeding according to a zoning plan which is based on "the location and capacity (size) of school buildings and the latest enrollment studies..." This plan was adopted one year ago and submitted to the State Commissioner of Education, the Federal Commissioner of Education and the Federal District Court (Eastern District of Tennessee, Northern Division).

A basic element of the plan was that parents might select another school for their children to attend. That policy of free-choice was attacked in court and resulted in its revocation. Those students who transferred last year, however, are allowed to continue in the school to which they transferred. Now only a justifiable excuse is proper ground for a transfer. (In Tulsa, Oklahoma, it

was reported that the same system is in effect and that physicians have made requests for transfers to safeguard a child's health.)

Spokesmen for the Board of Education estimate that 800 to 900 Negroes are now in formerly all-white schools. There was no estimate of the number of whites in formerly all-Negro schools. Approximately 40,000 students are in the Knoxville school system.

Two crucial elements that influence the rate of integration are the location of schools and the manner in which school district lines are established. Both elements are related to the question "which children will go to what school?"

Traditionally, school planners have located elementary schools in neighborhoods within walking distance of most students, but there have always been exceptions such as the schools in small towns that serve children living on farms.

The neighborhood school lies at the heart of Knoxville school planning. As one official said, "Evolution of the community determines school patterns." The idea of busing children to under-utilized existing schools in the manner of rural communities was rejected by the Knoxville Board of Education as too expensive and impractical. Rather, older schools are being converted to vocational training while new schools are built in the outlying suburban areas.

Two effects of this procedure are evident: new schools in the fringes will be segregated because the housing is, and poorer children in older parts of the city will attend older schools.

The other important element that influences integration--school zoning boundaries--relates directly to the location of schools and represents the Board's concepts of neighbhorhoods. Since these zones were adopted pursuant to the Court's directive that the system be integrated, it is useful to examine the zoning plan as a device to achieve integration. Several observations can be made in this respect:

1) Officials at the Board of Education offer no evidence that this plan will achieve integration.

2) It is not clear that any of the three official bodies to whom this plan was submitted has any method of evaluating the effectiveness of it.

3) Available evidence suggests the zoning plan will not further integration; instead it will freeze the ghetto patterns extant today.

Until technicians develop a simpler method of evaluation for a plan of this sort, the only way to analyze it is by comparison with 1960 Census data. Among the statistics compiled for each city block in Knoxville is the number of housing units occupied by non-white families. (This figure can be converted to a percentage of the total units in the block. Then by means of a color code these percentages can be put on a city map.) Once a map showing the distribution of the non-white population is prepared, it is possible to evaluate the zoning district boundaries.

The boundary separating the Sam E. Hill and Lonsdale elementary schools is striking because it follows Minnesota, Stonewall and Connecticut Avenues and thus separates the white and non-white populations as they existed in 1960. Sam E. Hill was previously a Negro school and will continue as one under this zoning.

The same is true of the boundary between Beaumont, a white school, and Beardsley and Maynard, two previously Negro elementary schools. The district line here follows Mississippi, Booker and Iredell streets which again is a demarcation between non-white and white housing concentrations.

The Green-Bell House boundary appears to have the same effect as does the Beardsley-Westview Boundary.

In other words the zoning plan has zoned Negro housing areas for Negro schools. Therefore, integration will occur only with those few white families that live in predominantly Negro areas. It apparently never occurred to Board planners that instead of gerrymandering boundaries to contain the Negro population, they could dilute it by reversing their strategy.

The critical element in this integration plan is the method of drawing school

district lines. On the basis of census data one could conclude that members of a white supremacist group could not have more effectively thwarted school integration.

For example, in the Sam E. Hill-Lonsdale section the boundary could have been drawn along almost any other streets and achieved a better racial mixture in both schools. Or the Board could have acknowledged that it has two schools three blocks apart and decided to "pair" them (or operate them as a single unit) to achieve integration of the entire area. Instead it has zoned them to separate white and non-white children to the extent their homes are separated.

Beardsley and West View, divided along Proctor Avenue, are in the same situation. But the most obviously gerrymandered district is Brownlow. This white elementary school district was extended east more than ten blocks to accommodate a white neighborhood two blocks wide that lies between two small Negro concentrations.

Turning to the East Knoxville area--south of Magnolia Avenue and east of First Creek--there is no evidence that the Board zoned to achieve integration. The district for Green School encompasses the oldest part of the Negro residential area which is now being cleared as part of the Mountain View urban renewal project. Since only 200 housing units are scheduled for the area when it is rebuilt, the Board of Education will be forced to alter the district lines for this new school (completed in 1957, capacity 780). Here the Board could achieve integration by creating a district as encompassing as the one for Park City Lowry which is two miles long and a mile wide.

East of Green lies the Mountain View district; it was previously a white school and the district lines were drawn to include most of the white families living to the southeast, but the school will have a heavy Negro enrollment.

Eastport elementary, which was previously a Negro school, lies to the east of Mountain View. Its district covers the section of Knoxville currently in flux, where Negro families are buying homes and whites are leaving. Hence, the

school continues to be primarily Negro because of its past history while its district contains many white children, also. The outlook, however, is for a declining number of white children since no steps have been taken to stem the white exodus.

Here is a case where housing and school policies are operating in tandem to uproot a white neighborhood fearful of being engulfed by Negroes. If Negroes wishing to buy homes could go into other neighborhoods, fewer would be buying in East Knoxville. And if the School Board had been careful to preserve a racial balance--say two thirds white and one third Negro--there might be less fear among white parents of their children getting "an inferior education."

Instead of dealing creatively with the responsibility to integrate schools in east Knoxville, the Board has done as little as possible to change the racial balance in schools. Here, as in the rest of the City, schools that were identified as Negro schools before the order to integrate remain primarily Negro schools. This fact is inescapable and reflects poorly on the Board's "Plan for Complete Desegregation."

Negro children in Knoxville will receive about the same education in the same buildings as before. Even though administrative bars that formerly kept Negro and white children separate have been abolished, the zoning plan will continue the separation, and it will do it in violation of the spirit of the 1954 Supreme Court decision that said separate education was unequal education.

Through acceptance of this school zoning plan, another generation of Negroes will get a segregated education. The history of northern cities bears witness to this fact. Knoxville has adopted a scheme that cities in the East authored twenty and thirty years ago, and it can expect continued de facto segregation the same as New York, Chicago or Boston. The fault lies in the location of the school zoning lines.

VOTING BEHAVIOR

As just mentioned Negro voters opposed consolidation of city and county governments with large majorities. On other referenda they have been equally decisive: they opposed fluoridation of the water supply and a proposal to consolidate the school systems: on the other hand they supported a bond issue for property reappraisal, two bond issues for construction of a municipal auditorium and coliseum and an industrial bond issue. Most significantly, they strongly supported legalized liquor in greater proportion than other wards in the same socio-economic category.

While Negroes have not suffered the disfranchisement in Knoxville so well exposed in other communities, they do not constitute an organized political voice in local politics. Students of local politics observe that turnout of Negro registered voters is poor in comparison to the three other metropolitan areas in Tennessee and that registration lags far behind also. (Estimates for 1964 showed 58% of the eligible Negro population registered. For the white population there was 100% registration because the voting list had not been purged in the last few years.)

When Negroes vote in Knoxville, they vote heavily Democratic. In the 1964 primary only 18% of the Negro registered voters came out, but 15% voted Democratic and 3% Republican. In 1960 Negro wards delivered 92% of their vote to Estes Kefauver and in 1964 it was the statewide Negro vote that barely returned Albert Gore to the Senate.

Among the major metropolitan areas of Tennessee Knoxville falls behind Chattanooga, Nashville and Memphis in Negro participation in elections. This is contrary to the contention of most experts who hold that the smaller the percentage of Negroes in the population, the more active they are in political affairs. In Tennessee the opposite seems to be the case--Memphis with 36% Negro population has a registration of 73.5%; Knoxville's 12% Negro population has 58%.

ANNEXATION

In 1959 Knoxville and Knox County voters resoundingly rejected consolidation of city and county governments into one metropolitan government. Negro wards--1,3,5,12,14,19 and 21--were among those casting the heaviest vote against the proposal. None gave more than 13% of its vote for the proposal. This vote corresponds to the reaction of Negro voters in other cities where similar proposals are made. (In Knoxville they were joined by a majority of white voters.)

Often the Negro votes is the swing vote in an election if the size of the Negro population is very large. In Knoxville, however, the 20,886 Negroes (1960) are 18.7% of the population.

The Negro community which tends to vote as a bloc and which presently has no observable political representation, was probably voting its self-interest on this issue because consolidation has nothing to offer Negroes other than vague planning concepts. For people living in ghettoes where municipal services are lax, community facilities are run-down and housing is deteriorating, it is difficult to get excited about haphazard suburban development especially when practically all of it is segregated.

And to politically alert Negroes aware that there were 137,000 whites but only 2,000 Negroes residing in the county outside Knoxville, it was painfully obvious that consolidation would forever eliminate the possibility of Negroes having an effective political voice in local affairs.

Given these conditions it is surprising that more support for the proposal did not develop among whites with racial antagonisms. However, whites with low education seem to have opposed the merger while voters in wards with high educational attainment supported the issue.

After defeat of consolidation, the "need" for dealing with suburban sprawl was resolved without resorting to the voters again. In 1962 the Knoxville City Council annexed 61,000 people (861 non-white). Now Negroes are 12% of the 173,000 total.

POLITICAL LEADERSHIP

Leadership in Knoxville's non-partisan politics has exploited the Negro vote instead of denying it. The City had a rather high Negro registration when most southern cities prevented their registration, but Negroes have never had an influential voice in political affairs.

No Negro holds elective office. Members of the School Board and the City Council are elected at-large so that Negro candidates have no chance for election. Neither body has representation from the Negro community.

The Knoxville Housing Authority, as mentioned elsewhere, has no Negro member although both urban renewal and public housing have affected the Negro community much more severely than the white.

The Civil Service Commission has no Negro member. It is reported that discriminatory practices are regularly followed including the use of forms that call for an indication of race and inclusion of a photograph. Moreover, assignments in the police and fire departments have segregated employees. There is one all-Negro fire company, but on September 1, 1965 the Mayor ordered its employees integrated into the remainedor of the department. Police are only assigned to Negro residential areas and the business district; they are not assigned to white residential areas. The Mayor stated publicly that he will eliminate all forms of segregation in the police department.

There is one Negro member of the Metropolitan Planning Commission; he is the President of Knoxville College.

Notable for its absence has been a "human relations commission." After having his proposal for such an organization rejected by the City Council, the Mayor appointed a committee of more than fifty people to work on problems of Negro employment.

In East Knoxville a human relations commission with staff members could perform a distinct service by working with the white families now in a panic to move.

Between three and four hundred homes have been thrown on the housing market by these white families depressing real estate values. Some families are determined to stay; others who find that selling involves a financial sacrifice could be persuaded to stay. Yet, there is no organization with staff to go into the area and get people together to stabilize the neighborhood.

(However one feels about integration, it seems obvious that all parties would benefit by stabilization of the situation; only real estate brokers stand to benefit from the panic. Failure to act rest squarely on the shoulders of the City Council.)

Areas of city government which need examination but were not covered in this investigation are: contracts, capital budget expenditures, evaluation of equipment and facilities (fire, police recreation, etc.) and grants to private organizations.

Contracts. The city should check that all contractors doing business with the city agree to equal employment opportunities for Negroes.

Capital budget items. Fast growing suburban areas often receive a disproportionate share of the public improvement dollar. In effect, these are expenditures in white areas which should be balanced against the need in Negro areas.

Evaluation of equipment and facilities. This pertains in part to capital budgeting, but also relates to allegations that the oldest fire equipment is transferred to Negro areas, and that Negro parks and recreation centers have poorer facilities and lower operating budgets than in white areas. All city services--from garbage collection to libraries are subject to evaluation of this kind.

Grants to private organizations. Most city councils make small appropriations to private organizations. A check should be made to assure that they do not discriminate in their membership or activities.

INTERSTATE HIGHWAYS

The $47 billion interstate highway program has necessitated condemnation of large swaths of land through most American cities. Frequently, highway planners are accused of establishing routes through Negro sections because the homes they occupy will be less expensive to condemn than in white sections. This economic motive is in the taxpayers' interest if it does not impose a hardship upon the people dislocated.

In Tennessee the State Highways Department condemnation division acquires rights-of-way. The State Highway Department office in Knoxville indicated that records on condemnation are maintained in Nashville; hence, there was no local record of families displaced by the highway program.

To arrive at some estimate of the displacement by highways in Knoxville 1950 Census maps were compared with the city base map which shows interstate routes built and under construction. (The 1950 census maps were used because much highway work was done in the late fifties; 1960 maps do not show blocks condemned in that period.) From this kind of estimation approximately 1382 housing units were destroyed; only 62 of them were occupied by non-white families. Highway planners did not, therefore, single out Negro areas in Knoxville for new highway locations.

CITY PLANNING

The role of city planning in any community may vary within legal and political limits, but generally the planning agency is the arm of local government that analyzes physical and social conditions and proposes courses of action that will benefit the total community.

In the course of performing this analytical role planners are faced with hard choices because various groups fare differently through any chosen course of action. It is the job of planners to identify both the reasons for instituting programs and the impact they will have on various sections of the community. A popular contention in planning circles however, is that some programs and regulations are above question. In and of themselves they are good. Planning subjects protected by this faith are zoning, subdivision regulation and urban renewal; new highways and parking garages have not yet attracted as wide and faithful a following. Reports on these subjects tend to be more promotional than analytical. Only when confronted by thoughtful opposition do reports deal with dissenting arguments.

Policy makers like the Mayor and City Council depend upon planners to supply insight, understanding and recommendations on many matters, and while the analysis and recommendations may be technically accurate, the decision to implement them is basically political.

As already mentioned, the Negro political voice in Knoxville is not distinct. It has no spokesman holding political office, and it seems to be manipulated in elections. This fact, more than any other, seems to explain the almost total disregard of Negroes in Metropolitan Planning Commission reports.

It would be unfair to accuse the MPC of discrimination or of an intentional slight of Negroes. The fact of race was forgotten, nevertheless, at some critical stages. At others, racial presence was noted without indicating what significance it might have.

Examples of noting the presence of Negroes but leaving the reader to interpret the significance appear in Planning Unit Analysis (April 1960). It has a section entitled "East Knoxville" which encompasses the area bounded by the Southern Railway, the city-county line, Fort Loudon Lake and Third and Central Avenues. Under the heading "Extent and Cause of Blight" there is the following explanation:

> In 1948, 18% of the areas was occupied by colored and 2% by mixed (colored and white) residents. At present, colored people live in 25% of the area, and 5% is filled with mixed inhabitants. Planning Unit 2 Area is :
>
> Blighted - 13%
> Deteriorating - 4%
>
> Part of Unit 2 is now being redeveloped. Then new civic auditorium is now under construction. The deteriorating area has structures that are in disrepair, and is in need of a rehabilitation program. The blighted areas require clearance and the deteriorating areas need rehabilitation.

The inference is that Negroes or a mixture of Negroes and white caused blight in East Knoxville. Standing as it does, this explanation represents neither thoughtful analysis nor political sensitivity for Negroes feelings.

Insufficient editing may be part of the explanation as in the case of the statement, "It will be just a matter of time before Mountain View Elementary School changes into a school for Negroes or colored children." And again , "There are three libraries located in Unit 2. Burlington and Park City serve the white residents and Carnegie is ministering to the colored residents."

These references to Negroes are representative; they are also about half the total number of observations made about Negroes in Knoxville in the 186-page report. A subsequent report Knoxville Supplementary Planning Unit Analysis--Housing (November 1961) was more circumspect. Here the quality of housing reported by the Bureau of Census for 1960 was evaluated. This report identified areas of poor housing but did not mention the racial composition of the residents.

This omission is the same in most MPC reports and can be given two opposite explanations. On the one hand, absence of reference to race can be interpreted as "treating everyone in the same manner." Likewise, it could be argued that the effects of plans on Negroes are being covered up. Which, if either, is true

XERO COPY XERO COPY XERO COPY XERO COPY

has but fleeting importance. The problem is that while Negroes are entitled to first-class citizenship, it is not always theirs to enjoy.

For city planners the desire to treat everyone equally is necessary and laudable, yet it hardly excuses them from knowing how different groups are affected by planning proposals. Equality under the law does not obliterate social, economic and racial groupings established by society. In the case of Negroes pressed into ghettoes there can be no doubt that society is making onerous distinctions between them and others. City planning that does not take notice of this distinction is at best superficial and at worst suspect.

In the larger sense of planning--analysis and advice to the mayor and city council--the omissions in Metropolitan Planning Commission reports are important. From perusal of at least fifteen reports I could find no intimation that integration was a public issue in Knoxville or that the Planning Commission might possess any data that would be relevant to the issue.

A planning tool as elementary as a map showing the distribution of the Negro population has never been prepared by the Metropolitan Planning Commission although it has the information on hand. This kind of map is important in evaluation of any proposal that will be executed on an area basis--zoning, school districting, location of public housing or urban renewal projects, highway routes, etc. The effect on the Negro community can be determined quickly.

Another kind of planning information the Metropolitan Planning Commission could supply easily would be social and economic statistics that compare the white and Negro communities. In August of 1965 the Urban League published general findings that Negroes in Knoxville had higher unemployment rates, lower salaries, less schooling, etc., than the white community, facts that were hardly surprising but which should have been public knowledge for some time.

Still another subject on which planners need to investigate and offer thoughtful advice is housing for Negroes in Knoxville. Not only should some note be taken of housing conditions, but past actions should be evaluated to see what

housing patterns are developing. Elsewhere in this report public housing and urban renewal programs are discussed in some detail, but many points remain to be developed. The relocation program seems to be faced with an impossible task: it must find decent housing for poor Negro families when the supply is being constantly reduced through public demolition. A thorough examination of the real estate market available to Negroes is overdue. Other facts about their conditions are studied as part of urban renewal and public housing programs, but not this crucial question. Superficial evidence suggests not only that they are "forbidden neighbors" in Robert Weaver's phrase, but that they get worse housing and pay more for it in neighborhoods with poor community services. Anyone of these facts would be a community problem; all of them, if true, represent social failure.

In the same fashion that City, County and Federal Governments can provide funds to examine the need for sanitary sewers or a transportation plan, they should be interested in studying the plight of an eighth of the population. Unfortunately, Knoxville planning has treated the Negro community as non-existent, as if it were simply a fraction of the larger white community. The Federal Government is in part responsible since it has furnished over half the funds for MPC studies.

Program Planning Assistant to the Mayor
Office of Housing and Development Coordinator
250 Broadway
New York, N.Y. 10007

Dear Gene:

This letter is in response to the Council for N.Y. Housing and Planning Policy Policy Guidelines and your varied responses to them. While I agree with the general thrust of the Policy Guidelines, I have to admit that they lend themselves much too easily to satisfactory responses. Your comments, taken point by point, suggest that the administration's goals are fairly consistent with those of the Council, but at the end of that little exercise, I'm sure you will agree with me that we have solved very little.

Without going into a long polemic, let me state one of the basic problems about which practically nothing is being done - and I am pretty much aware of everything that is being done. The problem is that perhaps 100,000 households are living in atrocious conditions in this city; too little is directly being done to relieve their conditions. We are permitting landlords to get away with as many as 1,000,000 violations of the law without taking substantial steps to have the law complied with. We are permitting outrageous situations to develop in the housing of welfare clients, Negroes and Puerto Ricans, and we are doing nothing directly to deal with the problem. With the number of recorded-and-uncomplied-with violations now running at about 400,000, and apparently limited only by the number of inspectors available to record more, you can appreciate my utter and complete lack of faith in the code enforcement system as a means of improving housing. While new construction and rehabilitation play an important role in maintaining overall housing quality (including that for low-income groups), at current rates it would take 100 years before the average slum family experiences housing improvement. If the CRP and Logue report levels are implemented, it will still take 25 years to show an improvement for the average poor family.

What can we do about it? Through receivership, condemnation or other legal process, we can take property away from exploitative, incompetent or irresponsible landlords and put it into the hands of non-profit local housing companies who will maintain the property decently and in compliance with the law. We can set aside about $1,500 per unit as a grant to these companies with which they can improve the buildings and make them habitable without raising rents. We can also allocate money to reduce rents in buildings which have been decontrolled (actually or constructively), and we can give tax abatement as necessary in addition to the money grants to insure that the buildings can be properly maintained. The complete program would amount to perhaps $2,500 per unit. For $50 million a year, we could improve conditions for 20,000 families. In 5 years, 1,000,000 violations would be wiped out; the worst landlords would be wiped out along with the opportunities which breed them; the code enforcement system might have a chance to be effective; we would be able to hold our heads up and say that in New York City, building and housing codes are equally enforced for all.

Why don't we do this? Because we are immoral and conscienceless, perfectly willing to impose second-class citizenship on minorities and the poor. Is $50 million a year a lot of money? It is about 1 percent of the City's budget. We now don't spend one tenth that on improving existing housing. While the state and the federal government are certainly not providing cities with enough help, cities could do a lot more to help themselves - but they really don't give a damn.

Improving the housing the poor live in - NOW - is a typical problem. Our current approach to it demonstrates clearly the appalling difference between what the poor actually need and the unresponsiveness of the programs we pursue. Unless we drastically change our attitude and outlook, there is no reason to believe a lessening of racial and economic tension will take place.

Since this letter reflects thoughts which I have been meaning to express for some time, I am sending copies of it to others interested in the housing problem.

Cordially,

Walter

Walter Thabit, President
Planners for Equal Opportunity

A Statement by Walter Thabit, Planning Consultant and Chairman of the Ad Hoc Committee on Rent Control of Planners for Equal Opportunity, New York Chapter, prepared for delivery at the March 16, 1967 hearing of the Finance Committee of the City Council of the City of New York

---

RENT CONTROL AND THE LOW-RENT CRISIS

We are here today because we are concerned with the worsening housing crisis for low-income families, and because we are concerned with the city's failure to deal adequately with the situation on many fronts. Four hundred thousand families still pay more than 35 percent of income for rent; half a million apartments are substandard. Further, we are losing hundreds of low-rent units every week through demolition, abandonment, and rent increases. During the past five years, there has been a loss of 400,000 units renting for less than $80 per month as follows:

Decontrol	20,000
Demolition and vacated buildings	120,000
Rents increased from under $60/month	90,000
Rents increased from between $60 and $80	170,000
	400,000

These losses and rent increases have pushed the average rents in rent controlled apartments from $72 in 1960 to $78 in 1965. But incomes did not rise along with the rents. They remained relatively stable, particularly for lower income families. As a result, the rent-income ratio showed a precipitous rise, from 17.7 to 19.7 percent in rent controlled buildings.

The increased vacancy ratio is not a sign of an easing situation for low-income groups, but of a worsening one. Low-rent vacant apartments are largely uninhabitable today, and are often the sign of impending vacancy in an entire building. In addition, at least part of the higher rental vacancies reflect asking prices higher than the market will bear. In these portions of the rent controlled stock, we have reached free market conditions, the nemesis of the low-income tenant.

It is the city's business to make decent housing available to its low-income families at rents they can afford. It's fair to say that it has failed in this responsibility. We are neither building nor rehabilitating a sufficient number of low-rent units to make up for the losses. Nor are we insuring that existing housing will be decently maintained. Lastly, we are failing to correct inequities in the rent control laws, inequities which primarily affect the rental cost and condition of housing occupied by low-income families.

We would like to address ourselves to these inequities and ask this Council Committee, tenants representatives and landlord groups to seriously consider their adoption. Our basic objective is to gradually abandon reliance on voluntary 15 percent increases as the basis for increasing rents. Some buildings have had few increases and can no longer be operated soundly. Other buildings have been operated atrociously, and their owners have been rewarded with continually higher profits. This has produced a situation in which the value of the apartment bears no relation to its price, and through which the most vulnerable households are saddled with poorly maintained buildings and/or high rents.

The administration has seen the need for continued controls but has seen fit to do little or nothing about these inequities. An analysis of the provision granting rent increases in buildings which have not had an average of 2 voluntary 15 percent increases suggests that no more than 20 percent of the units which have not had such increases will qualify for them. Even fewer scraps have been offered to tenants - where the greater injustices lie. We feel more should be done to correct two basic inequities:

1. Excessively low rent levels in some buildings
2. Excessive 15 percent increases in a still greater number of buildings

1. Rents That Are Too Low

While we favor limiting landlord profits, we see nothing to be gained by forcing landlords to operate buildings whose rent rolls clearly do not provide for proper maintenance much less a reasonable profit. We believe there are landlords who try to maintain their buildings but who are restricted from doing so by very low rents. At least some landlords try to satisfy their tenants and make repairs for them, but are forced by average rents of under $30 or $40 to keep from scheduling basic maintenance and repairs. Ultimately, such buildings become dilapidated and subject to vacate orders or abandonment. While such a landlord can apply for a hardship increase, the procedure is cumbersome for small landlords and does not provide increases for deferred maintenance.

We understand that the Rent Administration has proposed a study to determine the costs of decent maintenance and we would welcome such a study. Nevertheless, action is needed immediately and could be undertaken without reference to such a study. Housing experts would be in general agreement that housing cannot be adequately maintained for less than $50 per unit per month in multiple dwellings. This figure could be the basis for immediate action.

There are today some 84,000 units renting for below $50 per month. Approximately 24,000 of these units now rent for under $40 while the remaining 60,000 rent for between $40 and $50. About 50 percent of the under $40 units and 25 percent of the $40 to $50 units would be affected by an approved minimum average rental of $50 for a multiple dwelling, a total of 27,000 units. Assuming an average of 6 under-$50 units in each multiple dwelling eligible for an increase, about 4,500 buildings would be affected.

It is therefore recommended:

> 1. That a minimum average rent of $50 per unit for all multiple dwellings (except for SRO's) be immediately established.

We also approve the Mayor's proposal to grant increases to buildings which have not received an average rent increase amounting to 32.5 percent since 1943. While 120,000 units may not have had such increases, the number of units eligible for such increases is estimated to be no more than 25 percent of the total based on the overall rent structures in buildings in which such units are found. The number of units actually receiving such increases would also be reduced by the number that would receive higher increases through raising average rentals to $50 as proposed above. This is estimated to be one third of the eligible units, or 10,000 of the 30,000 total eligible. It is believed that rent raises for this group of units is also necessary to permit adequate maintenance and a reasonable return.

It is therefore recommended:

> 2. That increases which will bring the average rent increase to a total of 32.5 percent be approved for buildings which have not yet received increases to that level.

If the above recommendations are approved, inadequate rent levels in some 50,000 units would be responsible for relatively small increases in some 300,000 units. These increases would adversely affect pensioners and other persons on fixed incomes and low-wage and part-time workers. According to our estimates, half those living in units renting for under $50 and 40 percent of those in buildings with less than 32.5 percent increases would be affected. Increases which have to be borne by households already paying more than 25 percent of income for rent would be as follows:

For households in units renting for under $40	$540,000
For households in units renting from $40 to $50	220,000
For households in buildings with less than 32.5% increases	800,000
Total	$1,560,000

If the increases are pro-rated among all tenants living in a building, the numbers which have to share this increase is reduced by the average number of units in the building. Assuming 6 to be a reasonable figure, those adversely affected by the increases would be required to pay the following increases:

Number of tenants	Monthly increase
43,000	$ .50
43,000	$ .50 to $1.00
29,000	$1.00 to $2.00
21,000	$2.00 or more

We would propose that the City of New York begin to assume a greater responsibility for the maintenance of sound housing and for the rents tenants are forced to pay for decent housing. While the rent increases being imposed on a majority of the tenants who would be affected by these proposals is under $1.00 per month, even this could be excessive for some. As a start for increased city responsibility, however, we propose to limit the city's share to those units on which higher rent increases than $1.00 per month would be imposed. Based on the assumed average of 6 units per building, some 8,000 to 9,000 buildings would be affected. For these buildings, we believe that the city should reduce the rent increases through an equivalent tax abatement or direct subsidy. According to our estimates, tax abatement or other subsidy of less than $1. million per year would be required to keep rents from rising more than $1.00 per month per unit. We believe the city should shoulder this responsibility, and therefore recommend:

> 3. That where the projected increase amounts to more than $1.00 per month, the City of New York abate taxes to the degree required to reduce the rent increase to $1.00 per month per unit or less. Further, where tax abatement is insufficient to cover the portion of the projected increase over $1.00 per month, the City of New York is to provide a direct subsidy to the landlord to cover the required amount.

Notes: It is our belief that the above proposals will remove most of the pronounced criticism of rent roll inadequacies and remove as well any reason for failure to vigorously enforce the housing and buildings codes. We fully recognize that many of the buildings which will receive these increases are now and will continue to be poorly maintained. We also believe, however, that the majority of landlords will maintain their properties given an adequate rent structure. If the city eliminates the inequities and assumes its responsibilities, we can hold the rest of the landlords fully accountable for their neglect.

We are determined that the city take its housing maintenance responsibilities more seriously. Where a landlord cannot or will not maintain his property, whether in an existing or developing slum, the city should move immediately to take the property out of his hands and transfer it to competent management, preferably under local community control. We have already proposed, in a letter to Eugenia Flatow dated August 24, 1966 that the city embark on a $50 million per year program to take property over from incompetent or irresponsible landlords and to provide capital improvement grants to put these buildings into habitable condition. We repeat the necessity for this program here, pointing out that higher rent buildings are often more deplorably kept than lower rent buildings.

2. Excessive 15 Percent Voluntary Increases

While landlords are entitled to reasonable profits, they are not entitled to a "killing" out of rent control. The profit levels in 1943 were the profit levels of a free market. According to landlords themselves, costs have risen 100 percent, suggesting that where increases of more than 100 percent have been approved, landlords are being unduly rewarded. Buildings which have received this level of increase are those with high turnover, those which have received 4, 5, 6 and even 7 15 percent voluntary rent increases. Typically, buildings with high turnover have the poorest facilities and are the most inadequately maintained. Such buildings are largely occupied by Puerto Ricans, Negroes and others who have to accept that which is available no matter what its cost. Despite the hardships they cause and the condition these buildings are in, rent control continues to reward their owners with continually higher profits.

In the following table, the estimated percentage rent increase in rent controlled buildings is presented.

Percent Rent Increase	Number of Units 1960	1965*	1970*
0-20%	200,000	120,000	80,000
20-60%	780,000	305,000	200,000
60-100%	290,000	470,000	400,000
100-120%	60,000*	160,000	250,000
120% or more	120,000	200,000	360,000
Total	1,450,000	1,335,000	1,200,000

* estimated

By 1960, 180,000 units had received rent increases equivalent to 5 voluntary 15 percent increases. By 1965, this number had grown to 360,000 and by 1970, it will reach 610,000 if something is not done to prevent it. Today, we estimate that 150,000 units have had increases amounting to 140 percent or more; bv 1970, that number will reach 280,000.

What is happening is this. As the group of long-term occupants who haven't moved since 1953 diminishes (by 1970, it will be half as big as it was in 1960), the tempo of 15 percent voluntary increases tends to rise. We are witnessing an acceleration in the trend, ever expanding the rental differences between those apartments which turn over rapidly and those which turn over infrequently or not at all. With every "voluntary" increase, there is a stiffening of the market, a further inhibition of free movement, an increase in the burden on low-income and minority apartment seekers. Already, the market has made maximum rents a mockery in tens of thousands of apartments. Part of our increased vacancy rate is in apartments which are simply not worth the asking price permitted under the law. It is these units and the tens of thousands like them which are responsible for the major portion of the rising rent-income ratio being paid in rent controlled dwellings.

We therefore recommend:

4. That no unit which has received 5 or more 15 percent voluntary increases be eligible for further 15 percent increases.

The impact of this proposal would be to forestall further rent increases in that part of the stock which needs it least and which has been abused the most. It would prevent landlords who harrass their tenants from having good reason to continue the practice. It would help restrict the rate at which free market conditions are imposed on the rent controlled stock. It would help prevent the continued escalation of rent differentials which work a hardship on the poor and on minorities.

It is the hope of this proposal that some 250,000 units would be prevented from rising into the category of units with more than 100 percent increases by 1970, It is not believed that buildings with such units could possibly be unduly suffering under rent control, nor are 15 percent increases the only way that rents can be raised. The proposal is meant to limit rather than foreclose further rent increase in such buildings. Primarily, the limitation will require owners to do something for tenants for further increase.

This recommendation is the heart of our program, and our most basic recommendation. Without it, we will make no basic attack on the current inequities in the rent control law. With it, we can make a start toward some more rational system for maintaining reasonable rent levels in a private market. An approach to such a system is outlined below.

3. A Rational System of Rent Control

We propose that the city administration, the City Council, the Rent Administration and tenant and landlord organizations consider seriously the establishment of a new system for controlling rents, one which does away with the 15 percent voluntary increase as a way of setting rents. The essence of our approach is that a cost of living increase be gradually applied to the rent control system, phasing out the 15 percent voluntary increase system.

At selected periods, perhaps every two years, the maximum permitted number of increases will be reduced by 1, while cost of living increases, starting with units which have had the fewest number of 15 percent increases, are gradually applied to the total stock. Thus, if our recommendation to limit increases to a total of 5 is enacted this year, two years from now, the limit would be reduced to 4, two years later to 3, and so on. At the same time, a cost of living increase would be granted to all units which had the fewest 15 percent voluntary increases. As the limit for 15 percent increases was brought down, the number of units covered by cost of living increases would rise. By the time the limit had reached 3, for example, all units which had had only 3 15 percent increases would be eligible for a cost of living increase. The process would continue until rents were brought back into balance; increases for refrigerators, stoves and most other items could be eliminated as well.

We do not claim to have worked out the proper system, but only to have devised a reasonable approach for substituting one for the other. Nor do we recommend a specific level for cost of living increases. Both matters should be the subject of immediate study and this or a similar system rapidly implemented. Because cost of living increases would work hardship on some tenants, the city's responsibility for expanding low-rent housing opportunities and for providing direct subsidies to low-income tenants would also increase. We feel that the city should accept this responsibility and expand its construction and rehabilitation programs and initiate direct subsidy programs as needed.

Conclusions and Other Comments

The recommendations made above deal with the major issues as we see them. We do not believe that proposals being made for decontrol or equalization have merit. Vacancy decontrol would be a disastrous acceleration of what we are trying to prevent; lopping off a high-rent category simply weakens a law that needs strengthening; equalization merely sets the stage for another round of rent increases in poor buildings. The Metropolitan Council on Housing and other tenant organization demands for strengthening the law, particularly as regards the roll back of rents on units with excessive rent increases, recontrol of poorly maintained dwellings, increased protection for tenants and an end to perpetual increases for equipment deserve serious consideration. We feel that the Met Council demand for a limit of two 15 percent increases supports our conclusion that the basis for determining rent increases must be changed.

The statistics we have presented here are as accurate as could be made on the basis of available information. We urge the City Council to request more accurate and complete data on these points from the Rent Administrator. We agree that a study of operational costs should be made, but see no reason to delay some action on this point now - if not for units renting under $50 per month, then for units renting for under $40 per month. It is important for the city to get some experience in dealing with this inequity, particularly as regards the hardships which will be imposed on many tenants - even with such low rents.

Two years ago, as a result of a study of rent control from the tenants' viewpoint, the same proposals for elimination of inequities on both sides were made. The situation at that time was already serious. It is critical today, and shows signs of becoming explosive. We ask the City Council to be bold. We ask it to act. If you act to eliminate these inequities, untold thousands of tenants <u>and</u> landlords will have reason to applaud your actions.

PLANNERS FOR EQUAL OPPORTUNITY

76 Reade Street • Room 202 New York, N. Y. 10007

Keynote Speech of Walter Thabit, President of Planners for Equal Opportunity delivered at the PEO Conference, Tuesday, October 3, 1967, Washington D.C.

THE WAR AGAINST THE CITIES

This conference is called to protest the indifference of the American Institute of Planners to the growing threat to the peace, tranquility and prosperity of American cities, and to protest the nation's immorality, Congressional antagonism to Negroes and the poor and the murderous war in Vietnam. We are also calling to try and rally blacks and whites to work together in the cities - against the rest of the nation if need be - to guarantee the Negro and other minorities their rightful place in American society.

If we lie to ourselves, and this is what America is doing, we can conclude that the whole business of race riots and civil rights and Negro revolution and Black Power is merely a storm blown up by an irresponsible press and a handful of black radicals, a minor matter that can be handled with a few hundred million in anti-poverty funds, a few millions in rent supplements, a few thousand better trained troops and policemen and a strong anti-riot law to jail a few dozen Negro leaders.

This lie lets us avoid the truth. The truth is that millions of Negroes hate American whites and American society, and they are getting perilously close to losing respect for it. They hate whites for 150 years of discrimination in every conceivable form, for forcing them to live in ghettoes devoid of every necessity, for keeping the men poor and forcing them from their families. But most of all, Negroes hate whites because the whites are sending troops into their communities instead of the houses, schools, hospitals and jobs they so desperately need. Every anti-riot action inflames Negro hearts against society; every H. Rap Brown jailed or killed is now considered a personal insult by every Negro.

The Causes of Riots and Rebellions

The ghetto starts in the rural slums that pervade America. Negroes are leaving these slums by the millions, bringing with them no education, few skills and poor health. They come north because machines have replaced them on farms, and because they would starve on the $343 a year Mississippi welfare gives them - if they behave.

They come north to join millions of other Negroes in the big city ghettoes, and they find that police are brutal, that the streets are dirty, that their housing stinks but the laws are not enforced, that landlords will not rent to them outside the ghetto, that whites drive cars while they walk, that whites get jobs while they don't, that there are no jobs for the unskilled, that their teachers, welfare investigators and clinic doctors despise them and that their shopkeepers cheat them.

These stinking ghetto conditions exist because we have systematically deprived areas where Negroes live of every decent facility and service, because we immorally and illegally accept second class status for communities in which they live. In 10 New York communities studied by ALPA, the Association for Local Planning Assistance, disastrous social, economic and physical conditions were being ignored by the City. In seven of these communities, filled with varying amounts of rotten minority housing, the city was doing absolutely nothing to improve conditions. In three other areas, urban renewal was on the scene, but not to rescue the Negro poor. It came to provide more space for industry and more housing for middle income families. The poor were being pushed into other ghettoes.

As more Negroes and other minorities are forced off the land and into our cities, we are creatig more of these ghettoes, and doing less about them. East New York in Brooklyn was 80 percent white in 1960. Today, it is 85 percent Negro and Puerto Rican. In the last three years, the combined neglect of landlords, police, sanitation and other services resulted in the destruction and abandonment of 100 buildings out of a total of 450 in one 21 block area. In all of East New York, 350 buildings were vacated during this period, reducing the housing stock by 1,800 units. That is about half a year's allocation of public housing units in New York. In East New York, there is no health center, no head start program, not one public day care center, few parks and playgrounds, not enough schools. The people are broken and sick; 45 percent are unemployed or on welfare in the 21 block area. Yes, they had a riot in East New York in the summer of 1966.

These are our ghettoes, their inhabitants driven to crime, addiction, vandalism, alcoholism. Here is where we force men to live away from their families, where we alienate tens of thousands of youths from society each year. These are the young men and women we have poorly educated, and left without skills, jobs or futures. They hate whites, they hate society, they hate you and me, and they hate themselves.

These are our rioters. They include the newly arrived from the south, the sons of fatherless families, and other young men without a future. Some play they are Robin Hood; they steal shoes from merchants and leave them on the doorsteps of neighbors. Some riot to make money; they rob and sell, they make a living, they go to jail, they are shot. And some become grist for the revolutionary mill. A few like-minded souls riot together, then start their own little revolutionary movement. They arm, they work out strategies, they prepare for the fire next time. Their numbers are growing; their abilities increasing; their forays more frequent. The

police are already incapable of handling the situation. More and more Negroes are supporting the riots - the whole situation is escalating.

The War Against the Negro

What are we doing about the situation? Are we attacking the root causes of the riots? Are we trying to undo 150 years of discrimination and second class status? No we are not. We are preparing to go to war against the Negro. From the lushness of suburbia to the rottenness of the southern rural slum comes the cry to kill, to wipe out, to make war on the Negro. Who can forget the killings in Newark, the trooper saying "Die, you bastard, die." as he pumped bullets into the back of a Negro who had already surrendered. (As reported by witnesses to Tom Hayden writing of the Newark riots in the New York Review of Books.)

What are we doing about the riots? In Chicago, to keep the peace, we arrest hundreds of citizens without cause and keep them in jail. On August 18, the Chicago Chapter of the American Civil Liberties Union told Mayor Daley that "in the past few weeks some 200 or more persons have been arrested, charged with misdemeanors, and given trial dates from 10 days to two weeks thereafter." To keep them out of circulation, bail is set at $5,000 to $50,000 though it is normally $25 to $1,000 for similar charges. Among those arrested were two service station attendants watching an incident from the gas station across the street. That is how we avoided riots in Chicago this summer.

What else are we doing? Do you know that in every city in which Negroes are pressing for reforms, FBI men are assigned to live and work in the community and report on everything that is going on, complete with names, dates and often pictures? Do you know that a presidential task force studying riots has an FBI man assigned to each field team, that the teams use FBI dossiers in their investigations and undercover methods to gather information? Do you know that meetings such as this are probably also covered by the FBI? Yet we too have a stake in our cities, and we must rise to meet this challenge.

Today, every Negro demanding his rights and every white man who helps him to get them is suspect. We are not considered men in search of decent housing, education and jobs; we are considered potential enemies of the state. We are a deviant element in society, a rebellious and even revolutionary element who wants to change the status quo. This is not something to shrink from, but something to be proud of. Our goal is the reformation of this society, and we should be proud that society has finally taken note of our existence.

Here is where we get down to the business of this PEO conference, where we commit ourselves to this struggle. Here is where we accept the risk of ending up in an FBI dossier. We have no alternative. We must fight for Negro equality and the future of our cities, striking at root causes, educating the nation, exposing its immorality.

Nowhere is the national immorality more visible than in the murderous war being conducted in Vietnam. We protest that war because it is killing people instead of helping them, because the subjugation of those peoples benefits only the few who exploit them or who sell weapons which kill them. We also protest this war because it is the current excuse for not giving aid to our cities. We must protest this war because the attitude that lets us kill Vietnamese without a qualm will let us kill Negroes in the same way. We ask an end to this madness. Our nation must learn to put more money into building cities and less into destroying them.

The Responsibility of Planners

What is the responsibility of planners in this situation? Is it really to debate what is going to happen 50 years from now? Is now the time for the profession to visit the all-white suburb of Reston and admire the architecture and little subtleties in the plan? Or isn't it really time that we make the nation familiar with the slums of Washington. Isn't it time to see the hovels, to talk to the people, to see how they have been and are being beaten down, to use the prestige of the AIP to get their story across to the nation? And isn't it time we criticized the all-white Reston suburbs rather than praise them?

Is this a time to discuss subtleties in the Model Cities program or is it time for the profession, for AIP, to call it a fraud and boycott the program? What is Model Cities but a bigger chance to push an urban renewal program which characteristically displaces the poor for the rich? Where is the massive public housing program that should be part of any ghetto rebuilding program? Where are the programs that will give Negroes the chance to get housing outside the cities so the overcrowding and ghettoization can cease? Where are the schools, hospitals, day care centers, employment opportunities? Isn't it time for professionals to face the brute facts about the programs they work with and join the Negro revolution?

It is our responsibility to try and convince the nation of ghetto needs through our conferences and organizations. Why shouldn't a headline read, "AIP Calls for 300,000 Public Housing Units a Year for Next Ten Years at Annual Convention? And there are other things we need:

2. Federal financing of new towns within present metropolitan areas for poor as well as rich, for Negro as well as white.

3. A dozen brand new big cities built for the poor as well as the rich under the direction of the federal government.

4. Federal help to build transportation systems which are fast, efficient and free.

5. Automatic federal allowances for child support, living wages and decent welfare levels.

6. Enough federal aid to produce the schools, hospitals, health centers and other facilities needed by millions of poor people.

It is also high time that we give the brute facts to the nation and to people in the cities. Planners can do this, and thus far they have been shirking the responsibility. We have to get across the idea that unless we learn to live in brotherhood with Negroes, we can look forward to blood, hate, spies, martial law, and soldiers with guns patrolling our cities. We have to get this message across in our reports and our contacts with white communities, and we must become more aggressive in planning more housing opportunities for Negroes - outside the ghettoes.

What else should we planners do? We should help Negroes to become effective in the decision-making processes affecting their lives. We should insist that Negro communities participate fully and publicly in every planning and improvement program. We should frankly tell local communities what the programs we undertake means to them. If they don't like the programs, we should tell them how to register their protests, how to kill programs, how to change priorities, how to insist on what they need and want. We should help them to develop their own plans as was done in Cooper Square, the West Village and too few other areas. It is our duty to do these things, especially in our work for official agencies. It is our duty to act as advocates for the poor because there is no one advocating for them. Unless we help minorities to be articulate, to make their voices heard in the decision-making arena, we are helping contribute to the downfall of our cities. And we are pledged against that.

There is one other thing planners ought to be doing, and that is working to build a Negro-white coalition in our cities. Together we may stand a chance to move the nation. Separated and alone, with Black Power going one way and white liberals another, the forces of status quo will happily demolish the one and ignore the other.

How are we to bring this coalition about? For weeks after the March on Washington, I wore the button that symbolized that meeting. Every day I would meet some Negro on the street and we would stop and talk. That button showed my feeling of brotherhood and it was recognized and understood. We need something like this today, something which will tell a Negro, Puerto Rican, or Mexican who is on his side and who is not. Perhaps we need a new religion, or a brotherhood society, complete with a button the believer is permitted to wear only so long as he demonstrates that he is for equal opportunity in every situation. Then minorities could tell which whites they can trust, and we could establish such a coalition. Our PEO button is not the answer, but it is a sign of our willingness to stand up and be counted. We're for equal opportunity for Negroes and other minorities, and we want everyone to know we're fighting for it.

PLANNERS FOR EQUAL OPPORTUNITY

76 Reade Street • Room 202 New York, N. Y. 10007

10/3/67

To: Members of the Board of Governors, AIP

Following are positions adopted by the Policy Committee of Planners for Equal Opportunity which we request the Board of Governors of the American Institute of Planners adopt as official Institute policy. Most of these positions were first adopted by the participants in PEO's First Annual Conference held in December 1966. This conference, held in New York, was attended by 200 PEO members, planning students and grass roots leaders, mostly from cities along the Eastern Seaboard, but including people from the Midwest and California. We urgently request their consideration and adoption at your meeting Saturday, October 7, 1967.

For Planners for Equal Opportunity

Walter Thabit

Walter Thabit, President

The Vietnam War and Federal Budget

1. Position on the War in Vietnam: As planners and members of allied professions, we direct our skills toward the creation and improvement of man's life and his environmnet. We know the vast quantities of talent, materials and man-hours of labor needed to produce the housing, schools, hospitals, socail and welfare services and the rebuilding of towns and cities, both in the U.S. and throughout the world.

When we see so many of our resources - men and materials - used for destruction in Vietnam, with the danger of war being escalated to uncontrollable magnitude, we must join with our colleagues in the design and planning profession, legislators, members of the judiciary, scientists, educators, clergymen and others who have appealed for an immediate end to the conflict.

Already, the budgetary commitments inherent in the conduct of a war and resulting in the destruction of farms, villages, cities, systems of communication and productive resources of both North and South Vietnam have led to a reduction of spending for housing, health, education and welfare programs in the United States, the Veitnams, and elsewhere in the world.

We urge the government to turn its efforts to humanitarian purposes. We want it to help raise the yoke of poverty, illiteracy, and discrimination from minorities at home and subjugated peoples abroad. We want to see the money now being used for killing to be used for the reconstruction of cities both in the United States and in Vietnam, and for assistance in solving the problems of population explosion and urban expansion in vast parts of the world.

We earnestly urge that you declare an immediate cease-fire, even if that implies some risks. We further urge that negotiations be undertaken with the participation of all combatant forces, including the National Liberation Front and that the basis for these negotiations be the Geneva Agreement of 1954.

2. Position on the Freedom Budget: PEO endorses the general principals of the Freedom Budget developed by the A. Philip R ndolph Institute. The economic gaps between rich and poor and between whites and Negroes and other minorities is widening. Short of massive measures which will redistribute the nation's wealth, we will not close the gap in housing, health, education, employment and income. In line with this belief, we endorse the Freedom Budget.

3. Position on Defense Spending: PEO urges the Federal Government to re-evaluate budget priorities with a view toward reducing defense allocations and enlarging expenditures in cities and for the poor throughout the country.

4. PEO believes that our urban areas are in a state of crisis. This country has the resources and responsibility to mount an effective campaign against poverty, ignorance and discrimination. These goals can be attacked by transferring resources from the Vietnam war to domestic programs.

Housing Recommendations

1. A major and immediate effort should be made to expand the housing supply and improve the quality of environmental facilities available to the poor and minorities.

2. Public policy toward housing for the poor should be reformulated to transfer its control and management to residents.

3. In order to create metropolitan structures which provide equal opportunity for minority groups and the poor, public policy must ensure that there is adequate low-income housing related to employment centers throughout metropolitan areas.

Demonstration Cities

1. The resources presently allocated to or conceived for the Demonstration Cities program are totally inadequate. More money is needed to expand the supply of low-rent housing to be made available to residents of the affected communities; more money is needed to expand departmental staffs and neighborhood efforts to improve the community. More money is needed to extend the program throughout the areas of need in our cities.

2. An intrinsic part of Demonstration Cities programming must be the creation of significant numbers of jobs for local residents of target areas.

3. Sufficient low-rent housing and careful staging of improvement must be

provided to minimize the displacement of poor residents from Demonstration Cities neighborhoods and to increase the stability of such areas.

4. Greater emphasis on expanding housing opportunities for the poor must be built into the Demonstration Cities programs. A metropolitan-wide planning and renewal approach which expands housing opportunities for the poor in central cities, new towns and other suburbs must be built in the Demonstration Cities program.

Responsibilities of the Planner

1. That it be considered unethical conduct for a planner to prepare a planning document that does not evaluate the document's impact on minorities and the poor.

2. The planner must recognize his responsibility extends beyond agency to the persons who are directly affected by his plans and particularly those groups whose interests are most dependent on public policy - the poor and minority groups.

3. All government programs affecting the poor and minority groups should actively promote the cause of equal opportunity.

Advocate Planning Recommendations

1. PEO supports advocate planning whereby many groups and individuals develop plans to be submitted to public debate. Planners are urged to work as advocates of those unrepresented interests in the community.

2. While commitment of resources is the first step, it is not sufficient without a transfer of power. The poor and minority groups must have substantial control over plans and programs which affect their lives, if the problems of our cities are to be solved.

3. As a matter of public urban policy wherever programs are undertaken affecting minority groups and the poor, advocate planners should be provided to the affected groups.

HUD Practices

1. On Elimination of Discriminatory Practices in HUD: The Secretary of HUD should issue a public policy statement to the heads of all operating agencies and all public and private bodies that are benefited by Federal Government activities, declaring it to be the intent of the Department to promote agency practices which directly lead to or encourage equal opportunity in housing and to secure full compliance with the laws, orders and constitutional provisions requiring non-discrimination in all federally assisted programs. (Further, that the membership of PEO be encouraged to read How the Federal Government Builds Ghettoes, published by the National Committee Against Discrimination in Housing.)

OCT 67

Phila. Woman Asks $2 Billion Housing Aid to Poor

By EUGENE L. MEYER
Of The Bulletin Staff

Washington — Mrs. Cushing Dolbeare, managing director of the Philadelphia Housing Association, yesterday proposed a $2 billion annual program of direct grants as the only way to provide adequate housing to the poor.

Mrs. Dolbeare told planners meeting here, "Stop looking for gimmicks, easy and cheap solutions. This is the real key."

The plan calls for Government grants to low-income families equal to the difference between 20 percent of their income and the average cost of renting or buying adequate housing in any given area.

Inadequate Plans

"There is no program today that serves the poor, and none of the programs now being talked about is going to help the poor," she said. "We haven't been willing to accept the fact that housing costs more than low-income families can pay."

Present programs and new ones being discussed, she said, are incapable of aiding families with an annual income of $3,000 or less.

With direct housing grants, she said, "the family can decide where they want to live, whether to own or rent."

She added, "It's outrageous that we're not spending anything significant on urban housing. Current gimmicks are just serving to reinforce segregation."

No Progress

Under the grant program, developed by the PHA, the Federal Government would pay the individual or the landlord he designates.

Assessing Philadelphia's progress in housing, she said there is no more choice for the ghetto dweller than ten years ago, and supply is falling behind growing demand. "There have been a few meager little efforts against segregation but no real dents," she said.

Mrs. Dolbeare's remarks were made to Planners for Equal Opportunity, a splinter group of the American Institute of Planners, which is celebrating its 50th birthday this week with a conference on the next 50 years.

Split in Planners

PEO was formed by dissidents at AIP's Newark conference three years ago. Its workshops here have attracted nearly 200 persons, some of whom came to attend the AIP conference.

Both groups are holding sessions at the Shoreham Hotel here, with the AIP attracting about 2,500 planners from across the country. PEO claims national membership of 3,400.

The splinter group heard also from William Grigsby, University of Pennsylvania professor of city planning. He said low-cost housing is "not a resource but a political problem."

"I don't think ending the war in Vietnam is going to change the political climate," he added, "so as to pick up extra government services."

Ivory Perry, a Negro member of the St. Louis Model Cities Agency, said both housing and employment programs are needed. He said Federal guidelines often eliminate those who most need help.

Expressway Issue

Norman S. Berson, center city Philadelphia state representative, told the maverick planners they must become active in the political process. He said planning grants should include funds for neighborhood groups to employ their own planners.

Berson said of the proposed crosstown expressway, situated in his district, "Naturally, it's through a poor Negro neighborhood. They don't build roads anywhere else in Pennsylvania."

Thanks to neighborhood protests, he said, "It's now so politically unpopular, the city administration is afraid to introduce an ordinance because it won't pass."

War and Planning

Gunnar Mydral, author of the "American Dilemma," a classic study of American race relations, today told the AIP conference that the Vietnam war has "played havoc with national planning."

He said the war has pushed aside "new opportunities for real planning that we could have hoped for."

"The war has developed in a completely unplanned war," Mydrel said. He charged that the war has resulted in falsifictaion of our ideals and distortion of ends and means in our ntaional life.

War Foils Poverty Fight, Myrdal Tells Planners

By ROBERT J. LEWIS
Star Staff Writer

Gunnar Myrdal, the Swedish socioeconomist, told a national conference of planners here today the Vietnam war has deflated the poverty program.

"Under the influence of the large-scale American war in Vietnam, the air has gone out of the poverty program," Myrdal said.

Likewise, he asserted, the war has led to an "inflationary development" and has "played havoc with national planning."

The 68-year-old author of "The American Dilemma," a study of Negro relationships in the United States, was the latest conference speaker critical of the war at the 50th anniversary session of the American Institute of Planners.

Held Cabinet Post

Myrdal served on two separate occasions in the Swedish legislature's upper chamber in the 1930s and '40s, and was minister of trade and commerce in the Social-Democratic government between 1945 and 1947.

The convention opened yesterday before over 1,000 planners at the Shoreham Hotel.

Myrdal said many poverty policy actions in the United States were "rapidly improvised," were "spurious," and "not always well administered."

As for planning generally in this country, he said, "When I think of the metropolitan areas as total entities and the people living there as a part of the whole nation, it is less possible to feel that we have made much progress, except on a small scale and in individual cases."

Asks Major Rebuilding

To reverse what he called a worsening trend, a "tremendous construction and reconstruction problem" must be solved, he said.

"Indeed, the whole material frame of life has to be rebuilt, including houses, streets, parks and playgrounds, public buildings and facilities of all sorts."

Prof. John E. Burchard, of the University of California at Berkeley, yesterday called the war "our fiasco" in Asia.

"It is more important to save Cleveland than it is to save Saigon," he told over 1,000 applauding institute members.

At outdoor sessions on the Shoreham Terrace of a separate organization known as "Planners for Equal Opportunity" — some of whose members also belong to the AIP — a spokesman said an anti-Vietnam war petition would be circulated today. The group is meeting to urge more concern for urban ghetto problems upon the AIP.

McNamara Rapped

At a press conference, Program Chairman David Stoloff said the organization's anti-war stance was adopted by the group's 14-member policy committee "about a month ago."

Paul Davidoff, another PEO member who is director of Hunter College's urban planning graduate program, said the group's position was "left of center."

In other references yesterday to administration defense policy, Harold Taylor, former president of Sarah Lawrence College, ridiculed Defense Secretary Robert S. McNamara as a man "inhabited by demons" who is writing "the scenario for the future of the world."

Last night, another conference speaker, Carl Oglesby—described in the conference program as an activitist who "wanders nomadically from campus to ghetto to help build a force for radical change in America"—told the group the Vietnam war is "pointless."

In a paper prepared for the conference, the bearded Oglesby, former president of Students for a Democratic Society, said, "If nothing else, the coming election year will probably force Johnson to change the game."

Rebel Planners Ask Fair Deal for Ghetto

By Wolf Von Eckardt
Washington Post Staff Writer

While learned scholars droned on in the ballroom of the Shoreham Hotel yesterday about beauty and humanity in the city of the future, a rebellious group of young city planners set up a rival workshop on the hotel's terrace to discuss equal opportunity for the people in the ghetto.

The occasion was the opening day of the week-long 50th anniversary celebration of the American Institute of Planners, devoted to a talk-fest on "the next 50 years."

No less than 14 speakers began the festivities with discussions about the role of art, spirit, science, technology and administration, as well as such esoteric things as "the what-ness of final output."

The rebels, meanwhile, forced to move out into the autumn sunshine because their original meeting place in a hotel suite was soon dangerously crowded, demanded a voice of the poor in city planning, an end to discrimination and the building of new communities rather than the sprucing up of old ghettos.

Calling themselves "Planners for Equal Opportunity," or PEO, the rebels are disillusioned with urban renewal and model cities.

The group calls for "advocate planning," which means providing neighborhood groups with expert planning counsel to counter government renewal proposals. PEO members in various cities have already volunteered such service.

New communities are needed, according to James O. Gibson of the Potomac Institute and a Washington PEO leader, as the only way to end discrimination against poor Negro sections of the city and to bring housing and jobs together. The new communities outside the city should be racially and economically balanced and include industry as well as housing, he said.

Suburban Jobs Available

The jobs needed to end poverty, Gibson said, are no longer in the city but in the suburbs. Suburban industries often work below capacity for lack of manpower.

New York City, he cited by way of an example, lost 600,000 blue-collar jobs in the last 14 years, while a million non-whites in search of jobs moved into the city during the same period.

The rebel group of mostly soft-spoken, clean-shaven and savvy young planners who appear to prefer cold facts to hot slogans, also believe that the urban crisis is more burning than the war in Vietnam. The group was founded in New York three years ago by Walter Thabit, its president, and has chapters in Philadelphia, Boston and San Francisco.

Yesterday's workshop, claims Paul Davidoff, another PEO leader, boosted the membership from 300 to 400.

"We are too old to belong to the New Left," said one member. "The issue is not 'black power' or integration but to create equal opportunities for all," said another.

Many PEO members are also members of AIP, the official organization, and work for government agencies. A few planners seemed hesitant yesteray to put on an Equal Opportunity button for fear it might lessen their own opportunity for government work. Robert C. Wood, the under secretary of the Department of Housing and Urban Development, however accepted a button.

AIP frowns on rival meetings in its convention hotel but no one made any attempt to interfere with the outdoor workshop debates PEO leaders, working without staff or funds, said they went into debt to pay for their hotel suite and exhibit.

'Now Town' Tour

While the official convention will conduct a New Town tour to Reston and Columbia on Wednesday, the rebels will conduct a "Now Town" tour through the Shaw and Adams-Morgan area and Anacostia in Washington.

Meanwhile, back in the ballroom, Postmaster General Lawrence F. O'Brien unveiled a new 5-cent postage stamp for the occasion. It shows a model of an elegant downtown business district and the inscription "plan for better cities."

That, said O'Brien in effect, was exactly what the Johnson Administration was in favor of doing.

What planners are up against was vividly illustrated by an exhibit "Signals in the Environment," put up by the Public Health Service and HUD. Among other displays to illustrate the effect of pollution on the human mind and spirit, it lets you sniff an authentic sample of Los Angeles smog on a sunny day. It is nauseating.

Yet, said Under Secretary Wood, there aren't enough planners to man "the front line of the struggle to guide the catastrophic forces shaping the American city."

While more than 11,000 planning positions must be filled in the next five years, he explained, planning schools are producing only 450 graduates a year.

City Planners Told Whites of U.S. Make War on Blacks

WASHINGTON — White America is engaged in "a war against the Negro," city planners conferring here were told recently.

"WE ARE preparing to go to war against the Negro. From the quietness of the suburbs comes the cry to kill, to wipe out, to make war on the Negro," Walter Thabit, president of Planners for Equal Opportunity, said in a keynote address.

Planners for Equal Opportunity is holding a counter conference to the anniversary meeting of the American Institute of Planners in an effort to align itself with the drive for equal opportunity among Negroes.

Thabit said the older and larger AIP should be called upon to support the aspiration of Negroes and to condemn the war in Viet Nam.

Instead of visiting the new town of Reston, Thabit said the AIP should "make the nation familiar with the slums of Washington. Isn't it time to see the hovels, talk to the people."

THE AIP should be urged to call for 300,000 more units of public housing over the next 10 years, federally financed new towns in metropolitan areas, "a dozen brand new big cities for rich and poor," Federal aid for free rapid transit systems and automatic Federal allowances for child support.

Indicating that the white war on blacks may have gone too far, Thabit stated that some Negroes are "armed," they have worked out strategies, they are preparing for the fire the next time.

"Their numbers are growing, their abilities increasing, their forays more frequent. The police are already incapable of handling the situation. More and more Negroes are supporting the riots; the whole situation is escalating."

Cities Getting Full Hearing in Capital

By ADA LOUISE HUXTABLE

Concern with the urban condition has reached a saturation point in Washington this week.

A group of 2,400 city planners and allied professionals, including a delegation of 100 members from the Town Planning Institute of London, are meeting at the Shoreham Hotel through Friday at the American Institute of Planners' 50th anniversary convention. Their theme is the next 50 years of planning, or "the future environment of a democracy."

A splinter group of young professionals called Planners for Equal Opportunity is staging through Wednesday a kind of vest pocket "counter-convention" in the hotel, called "Planning: Black and White: Today." The group has about 230 members.

The Institute of Planners' New Towns Tour of the Washington area will be paralleled by a Planners for Equal Opportunity Now Towns Tour of Washington slums.

The off-shoot meeting, which is causing some unhappiness among the parent planners, is billed as "a call to the profession to end racial discrimination, the war in Vietnam, and give decision-making power to the poor and minority groups."

House Investigation

At the same time, the Subcommittee on Urban Affairs of the Senate and House Joint Economic Committee, headed by Representative Richard Bolling, Democrat of Missouri, is holding a continuation of hearings on "Urban America: Goals and Problems."

The hearings, also through Wednesday, will complete the first phase of a long-range Congressional investigation of the urban crisis.

The subcommittee hearings are at the Capitol. Planners for Equal Opportunity has its headquarters in a hotel room. The sessions of the Institute of Planners overflow the grand ballroom, where brilliant embroidered and patchwork banners commissioned from Norman la Liberté, the artist, cover the walls, eclipsing conventional crystal and brocade.

Behind the podium, as part of a group featuring birds, butterflies, stars, moons, mermaids and lions, one banner reads, "The best of everything is what I want for everyone but it costs millions."

The items look as if they might have been made by flower children, but they were stitched up by Mr. la Liberté's students at Newton College in Massachusetts.

A group of the colorful banners scheduled for the Rock Creek Park Bridge at the entrance to the Institute of Planners' convention area was vetoed by a recently changed District Commission as "childish."

The opening session this morning was keynoted by Bertrand de Jouvenel, the economist and political philosopher, who edits a journal of writings about the future. Mr. de Jouvenel, an impeccable French intellectual, with silver hair and goatee and starched white collar and cuffs, plunged right back into the 19th century in a discussion of short-term objective.

The broad roles of art, spirit and science in the environment were treated by Dr. Harold Taylor, art educator and former president of Sarah Lawrence College; Joseph Sittler, a theologian of the Divinity School of the University of Chicago; John R. Platt, biophysicist, and Ralph G. H. Siu, chemist. The session was led by Charles Blessing, director of Detroit's Planning Commission.

The afternoon meeting dealt, equally broadly, with the culture of American cities. Papers were given by Carl Feiss, a pioneer American city planner; John Burchard, educator and urban historian, and Robert C. Wood, Under Secretary of the Department of Housing and Urban Development.

The Planners for Equal Opportunity rebels moved their workshops to the hotel's rose garden terrace. The balmy sunshine brought the Institute of Planners' young in heart out of the ballroom to swell the revolution to about 200.

"We are the wayward children of the planners," one clear-faced young woman explained. "We range from liberal to radical. We want to reform our elders." Many are members of the institute.

"It's a grass-roots movement," noted an English visitor. "We've had it in Britain. They want to join citizenship participation to political action in the planning process."

In the ballroom, Mr. Wood observed in apparent harmony: "The basic decisions will be made in the political arena. We need involvement in the political process."

Later in the week specific programs and policies will be discussed. There will be panels on housing, transportation, resources, technology, and the problems of minorities.

Speakers will include Bayard Rustin, civil rights leader; Robert M. Hutchins, president of Center for the Study of Democratic Institutions; Charles Abrams, housing authority; Colin Buchanan, British transportation expert; Lyle C. Fitch, president of the Institute of Public Administration; Orville L. Freeman, Secretary of Agriculture; August Heckscher, New York City parks commissioner, and Gunnar Myrdal, Swedish sociologist.

Hard-Headed Individualists Needed, Planners Are Told

By ROBERT J. LEWIS
Star Staff Writer

August Heckscher, New York's parks and cultural administrator, believes the future may depend on a new rise of individualism.

But the individualist he has in mind, he told a conference of the American Institute of Planners at the Shoreham Hotel here yesterday, is far different from the "rugged individualist" of the 1930s.

Instead of the "wreckers of all our hopes for reform"—as he viewed individualists of that era, he said—the modern individualist is "appealing, and he carries what hope there is for a habitable and human" world.

Such a man is a hard-headed, realistic fellow, said Heckscher, who doesn't like to hear a lot of talk from politicians about such things as patriotism.

"He tends to reject the political candidate who appeals to group emotions under such vague headings as patriotism, Americanism and so forth," he said.

Considering the way the world is going, Heckscher told the AIP's 50th-year session, the individualist is up against a "menacing" society and the odds appear to be all against him, what with machines, computers and other technological progress vying to rob man of his dignity.

Nothwithstanding all this, said Heckscher, individualism seems to be holding its own or gaining, perhaps.

Another conference speaker, David T. Bazelon, a New York lawyer and writer, said technology is not changing society, but "destroying" it.

"What we are doing here in the United States is so wrong that it is nearly obscene. All we ever really accomplished was to build this superb productive machine, and now we spend all day telling everybody —and especially ourselves—that this is all there is to life."

At sessions last night in the neighboring Sheraton-Park Hotel, a smaller, rival organization called Planners for Equal Opportunity circulated an anti-Vietnam war petition and voted to request AIP to require its members to base their recommendations "on a conscious and deliberate effort to provide maximum benefit to Negroes, to other minority groups and to the poor."

Rep. John Conyers Jr., D-Mich., said 40 percent of Negro citizens are "underemployed," including those who have given up looking for work after what he said were rebuffs. He said the government should take steps to bring about "full employment."

Chester Hartman, assistant professor of city planning at Harvard University, said that he did not favor the organization using as an argument against the Vietnam war any claim that the war was damaging domestic programs.

But, he said, "if that's the only level you can reach people with, then that argument can be used."

Planners Told To Do More For the Poor

By EUGENE L. MEYER
Of The Bulletin Staff

Washington—A group of maverick planners last night urged the American Instiute of Planners to adopt a multi-pronged resolution to meet the needs of urban minorities.

Calling themselves Planners for Equal Opportunity, the splinter group passed by an overwhelming vote a resolution urging the AIP, meeting here on its 50th birthday, to:

—"Provide planners to serve as advocates for the poor and minority groups to aid them in identifying and articulating their needs and achieving their goals;

—"Encourage close liaison with the poor and minority groups and representatives and organizations selected by them in order to determine their needs;

—"Expedite the entrance of members of minority groups into the planning profession and report annually on its progress;

—"Recognize only those professional planning schools which include in their curricula field experience with citizen groups."

Dissidents Convene

While most of the 2,500 planners attended AIP's "Futurists Fete" dance in the Shoreham Hotel's Regency Ballroom, the dissidents convened at the nearby Sheraton Park.

For two hours, they haggled over wording and strategy, finally deciding to ask the AIP session to take up the resolution.

The rebels also were circulating a petition, for presentation Saturday to AIP's Board of Governors, asking the AIP to oppose the Vietnam war and urge an immediate cease-fire.

The PEO is holding sessions parallel with those of AIP, according to PEO President Walter Thabit, "to protest the indifference of AIP" on poverty and the Vietnam war as related to planning. The group, which claims 400 members, was formed three years ago at AIP's Newark conference.

Planners Hear Dissidents Blast Government Programs

By ROBERT J. LEWIS
Star Staff Writer

A New York-based dissident group of planners today succeeded in gaining the floor at a national planning conference here for an attack on existing government programs.

The rebels are largely in their early 30s.

Rival Bus Tours

AIP was sponsoring bus tours today of Reston, Va., and Columbia, Md., new planned communities geared largely to upper-income whites; PEO sponsored a rival tour through Washington's ghetto areas.

Thabit declared: "Is it really the time for AIP to visit all-white Reston or is it time to visit the ghettos?

"We are preparing to go to war against the Negro. From the lushness of suburbia to the rottenness of the Southern rural slum comes the cry to kill, to wipe out, to make war on the Negro . . . This is how the nation is responding to our cities' problems . . .

"Everyone who wants to improve housing, etc., is suspect as an enemy of the state. We should be proud of it."

Thabit called for construction of 300,000 public housing units annually for ten years; a dozen new cities for the poor and rich under the Federal Government's direction; free rapid transit systems; and automatic federal allowances for child support.

Vietnam War Assailed

The PEO rebels applauded the remark of Rep. John Conyers, Jr. (D-Mich), a Negro, that the Vietnam war is "the biggest, largest, single most detrimental factor to getting America domestically on the high road."

[The 38-year-old Detroit congressman, asked in an interview to comment on Michigan Gov. George Romney's tour of urban ghettos, said: "Romney is the dumbest guy who ever tried to run for President."

Earlier, AIP's afternoon session considered the future role of the individual. August Heckscher, New York City recreation commissioner, defended youth "who can make a case for the absurdity of technology and affluence and may be ever more effective in making war seem an outmoded method of dealing with international problems."

The criticism came in a sharply-worded resolution presented the Planners for Equal Opportunity.

The group two nights ago discussed picketing as a means to force the 50th year American Institute of Planners national conference to consider the document, which PEO had adopted Tuesday.

But today PEO leaders found picketing was unnecessary. AIP officials voluntarily agreed to the presentation, reportedly after the aid of several clergymen had been enlisted by the dissident group.

'Cry for Power'

Before reading the resolution to the convention, Irving Rubin, a PEO representative from Detroit, told delegates at the session in the Shoreham Hotel:

"Another pie must be cut in this country, and that is the power pie. The message of the riots was a cry for economic and political power."

The resolution Rubin read declared millions of Americans are "being subjected to physical and psychological brutality and humiliation" largely because of discrimination and are "victims of private, semi-public and governmental bureaucracy whose policies and procedures have the effect, and frequently the intent, of perpetuating oppression and inequality."

On Edge of 'Revolution'

The resolution said recent rioting brought "the cities of our nation to the threshold of revolution" and called on planners to "plan with people affected and for their benefit rather than to perpetuate an oppressive discriminatory system."

To allow the resolution's presentation, Martin Meyerson, president of the New York State University at Buffalo, who was presiding, interrupted a program and said that Bayard Rustin, a national Negro leader and one of the speakers, had surrendered part of his time to make the presentation possible.

Later Meyerson said he understood PEO did not wish to require immediate consideration, since today's meeting was not a plenary session but he referred to it as a "clear base mark" for the Institute.

Yesterday more than 1,200 planning officials toured Reston, Va., and Columbia, Md.

Planners indicated they were impressed, in varying degrees, by the "new towns," particularly, as to their scope and daring.

They posed questions dealing with, among other things, the availability of police and fire protection and health facilities, including hospitals.

Last night, AIP delegates heard Pierre Bertaux, University of Paris professor of German Literature and Civilization, assert that man is changing rapidly from generation to generation, as "evolution continues."

Social pressures today, Bertaux said, tend to enforce togetherness.

At a ceremony last night, a number of planners and others allied with the field, plus several organizations and the city of Philadelphia received citations.

Among those cited were Harland Bartholomew, former chairman of the National Capital Planning Commission and one of the two living members who founded AIP 50 years ago.

Units Agree on Ghetto Plan

Wash. Post Oct. 8

The Board of Governors of the American Institute of Planners agreed with the Planners of Equal Opportunity yesterday that professional city planners must give greater consideration to the needs and wishes of minority groups.

PEO had staged rival meetings on ghetto problems during last week's AIP conference at the Shoreham Hotel here. The rival meetings produced a number of resolutions urging "planning advocates" for the people in urban renewal areas, admission of more Negroes to planning schools and a requirement that planners have practical field experience as part of their training.

The AIP governors considered these resolution with PEO representatives for several hours and moved to take speedy action on them.

City Planners Tour Two Washingtons

By Robert Maynard
Washington Post Staff Writer

Washington is a promising area or it's rotten at its core, depending on which city planning group you talk to.

A radical group of city planners, Planners for Equal Opportunity walked through the slums of Washington yesterday on a "Now Towns" tour that contrasted with the American Institute of Planners' New Towns tour of Reston and Columbia.

The dissident planners concluded that Washington is "politically and humanly stagnant, frozen into a sea of smog and traffic, helpless in the grip of malaise. . . ."

The American Institute of Planners, holding its 50th anniversary meeting here this week, was pleased by the version of urbanism they beheld.

"It is high time we started building such handsome and livable communities back home," one of them said, expressing what appeared to be a consensus.

The younger Planners for Equal Opportunity walked the grimy and depressing streets of the Shaw renewal area, the Northwest One renewal area, Anacostia and Adams-Morgan.

They talked to residents who told them they were being displaced for construction for which they were not eligible or which they could not afford.

The Equal Opportunity group, which seeks to align the planning profession with the aspirations of the poor and minority groups, has been holding a conference on what it considers to be the crucial problems with which the profession should be be concerned.

It called on the AIP to repudiate the National Planning Commission's comprehensive plan for Washington and to urge that funds now earmarked for freeway construction be used instead for housing.

About 100 Equal Opportunity planners toured the slums, while 1000 AIP planners toured Reston and Columbia.

William Finley, designer of Columbia, where construction began during the summer, explained that new towns are designed to absorb urban "population overspill" and to achieve a "democratic balance" by offering many types and styles of houses at varying prices.

Houses in Columbia range from $19,500 to $50,000 and apartment rents begin at $135 monthly. Reston's price ranges are a little higher.

Joseph Gross, a community organizer for the Urban League in the Northwest One renewal area, told a group of dissident planners about problems residents have been having with Redevelopment Land Agency.

The key problem, Gross said, is that the area's renewal was not planned with the residents of the community.

As a result, he said, families were displaced long before RLA had a use for the land on which their homes had been.

The "Now Towns" tour ended the dissident planners' convention. AIP will meet today and Friday.

Thursday, Oct. 5, 1967 THE WASHINGTON POST

HOPE FOR THE POOR URGED BY RUSTIN

He Tells Planners the Nation Has Encouraged Riots

By ADA LOUISE HUXTABLE
Special to The New York Times

WASHINGTON, Oct. 5—Bayard Rustin told more than 2,000 of the nation's planners here today that they would be in serious trouble unless they took into consideration the will and advice of those for whom they planned.

The civil rights leader admonished, however, that no plan could be put into operation in the present political atmosphere.

"The system of seniority in Congress brutalizes black men, but it also brutalizes our whole society," Mr. Rustin said at this morning's session of the week-long meeting of the American Institute of Planners.

"There is no party of the left, no party for change," he said. "Neither Democrats nor Republicans can mobilize and utilize sentiments for change."

"Without moral and political commitment," he told the planners, "our society will be torn asunder."

Mr. Rustin, the executive director of the A. Philip Randolph Institute, said that riots were a failure of a democratic society "which has robbed the poor of hope." "Man cannot endure hardship without hope," he added.

Seeks "Hope" for Workers

"This nation is teaching the poor that they ought to riot lest they get nothing," he said. Of the poor, he said: "Tell them [Government officials] in the spring you're going to riot in the summer and they vote money."

"They will give carrot victories up to Point X," he warned, "and at Point X plus 1, there will be repression and backlash."

"I have spoken against riots," he said, "but they are as nothing compared with this society's inability to move. Unless we give the underclass hope and bring it into the working class, it will be more destructive to itself than to anyone."

Mr. Rustin suggested that this would have to be done by a coalition of labor, civil rights and other groups within the Democratic party.

Mr. Rustin spoke to an attentive audience about the necessity of planning on a national scale. The session was titled, "The Urgent and the Important."

"We in America reject planning," he said. "We believe in democratic socialization for the rich and rugged individualism for the poor."

Addresses Dissident Group

"We must reorder priorities," he continued. "It is not more important to go to the moon than to do something about Harlem. We must have full employment, and the Government must be the employer of last resort. I am only for a guaranteed income for those too young, too old or too sick to work. We must put the unemployed back to work."

"We must give people the impression that we are listening to them as real people," he stressed, "and that we accept them as real people, black or white."

Mr. Rustin gave part of his speaking time to the Planners for Equal Opportunity a splinter group of the American Institute of Planners. The splinter group is composed of about 250 young people, mostly whites, who ally themselves with the needs of minorities and the poor. The group had no official place on the program.

Resolutions passed by the dissident group were read to the audience. They will be considered for official endorsement by the American Institute of Planners on Saturday.

Strongly worded, they score "the failures of American democracy to provide equality of opportunity to all Americans, bringing the cities of our nation to the threshold of revolution." The resolution urged the American Institute of Planners to take specific actions.

Among the proposals were a study of Federal and other planning programs in the light of their effect on poor and minority groups and a policy of "advocacy planning." Advocacy planning is a movement gaining rapid momentum within the profession, parjticularly in younger circles, based on the idea of planners serving as "advocates" for the wants and needs of the poor and working in close liaison with them.

Other speakers in the morning session were Sebastian de Grazia of Rutgers University, on free time and leisure; Robert M. Hutchins, prejsident of the Center for the Study of Democratic Institutions, on education; and William H. Stewart, Surgeon General for the United States Public Health Service, on health.

The afternoon program had concurrent sessions on housing, transportation and urban form. The convention will continue at the Shoreham Hotel through tomorrow.

Because of a severe and steadily worsening shortage of planners, recruitment by cities and private companies has become as important an activity of the convention as the professional sessions.

Notices are posted, literature is distributed and suites are maintained in aggressive campaigns known to the planners as a flourishing "slave market."

The New York Times

THE NEW YORK TIMES,

WEDNESDAY, FEBRUARY 21, 1968

A Brake to the Bulldozer

The United States Court of Appeals for the District of Columbia in a decision of far-reaching significance has ordered a halt to all planning and construction of $182-million worth of bridge and highway construction in the nation's capital.

The court's unanimous opinion turns on the procedural question of the District of Columbia Government's failure to comply with a statute requiring public hearings before approval of highway projects.

But as often happens in the law, a procedural question really opens up the heart of the matter. If Washington's local government had had to consult local opinion and take it seriously it would have almost certainly rejected this highway master plan which would slash through existing neighborhoods, destroying homes and businesses and radically altering the face of the city.

The struggle over the Washington highway plan has become a controversy of national significance because the leaders of the highway construction industry and their allies, the automobile, truck, tire, cement and construction equipment companies, and certain of the labor unions, have viewed it as the Dienbienphu of the long guerrilla war between themselves and the anti-freeway forces.

It has long been an open secret in Washington how the highway planners settled upon the location of the North Central Freeway, a major component of this master plan. This freeway would have run twelve lanes wide through neighborhoods that are mostly low-income or Negro or both. Most of the traffic from the suburbs that this freeway would carry, however, really wants to reach the predominantly white northwest corner of the city. But since white citizens did not want twelve lanes barreling through Georgetown and adjacent neighborhoods, they successfully fought to keep it out, and the route ended up being pushed eastward to poorer Negro neighborhoods.

Secretary of Transportation Alan Boyd late last year courageously unmasked the ugly issues of class that underlie this quarrel over route selection when he provisionally vetoed the Three Sisters Bridge, another element of the plan. The Court of Appeals has now, in effect, confirmed his judgment, and delivered a deserved rebuke to the pressure tactics of the highway lobby and its Congressional errand boys, led in this instance by Representative William Natcher of Kentucky.

The decision may set a pattern not only for the capital but for the nation. The bulldozing of Negro and low-income white neighborhoods has to stop. A shift has to come in the use of Federal funds from scandalously expensive freeways—$25 million a mile in the District of Columbia—to more economical mass transit. And those freeways that are built have to conform to existing neighborhoods rather than divide or destroy them. Moving cars and trucks at sixty miles an hour is not the highest human value in the nation's cities.

Saturday Review

February 24, 1968

James M. Gavin and Arthur Hadley

The Crisis of the Cities: *The Battle We Can Win*

A former Army commander, now a prominent management consultant, outlines a bold strategy based on investment of Vietnam war funds on our most urgent domestic needs.

Lt. Gen. James M. Gavin, USA (Ret.), former senior U.S. Army planner and strategist and later U.S. Ambassador to France, is chairman of the board and chief executive of Arthur D. Little, Inc., management consultants in Cambridge, Massachusetts. This article is a preview of his book *Crisis Now*, written in collaboration with Arthur Hadley, to be published by Random House.

DOMESTICALLY, America has begun a new revolution. I use the word "revolution" precisely and not just as a figure of speech. Unless we realize the size and nature of our problem, any answers we make will be too little and too late—and, indeed, quite irrelevant. Violence will increase, and the overall breakdown of our national life will follow as a scientific certainty.

The environment in which more than 80 per cent of Americans live is the great city complexes sprawled across the nation. We face this environment and attempt to deal with it bewildered, confused, whipsawed by the Scientific Revolution. We have the newest tools of science in our hands. We have masses of information available about what we should or should not do. We have inventions, machines, experts, statistics, calculators. Yet the environment in which we live, instead of becoming more and more responsive to our wills, swings and jumps in alarming patterns that seem quite beyond our abilities to control. There is a reason for this. And that reason is basic to the understanding of our domestic crisis. But, unfortunately, the concept is one that many have found hard to grasp.

* * * *

We spray pesticide and the birds vanish; we build a superhighway and start a riot; we extend charity and break up families; we pass a law to renew our cities and spill slums over the land. Each action we take alters the total system in ways we do not understand and makes the next crash program more immediately necessary and more ultimately hazardous.

* * * *

I wish there were some eloquence I could use, some fact I could cite, some verbal Pearl Harbor I could deploy, so that all Americans would rise and say: "That is true. I personally must do something about it." The riots in Watts and Detroit are there for all to look at. A recent report to President Johnson by a White House-appointed board of experts opened with the words: "You are the last President to have the option of governing one nation." I would not be that definite. But I do not believe that the report—at this writing, unreleased—exaggerates by much.

* * * *

Inside this underculture of the poor—20,000,000 people, white and black—the goals and aspirations of American society appear as one vast fraud. Each act of discrimination, each act of violence, each magic program that remains unfunded drives them tighter into their world. A new superhighway is to be built; immediately all the neighborhoods with power in city politics lobby to make certain the highway does not disrupt their lives. In the end, the highway goes through the ghetto, where the residents have no political punch. This recently happened in Washington, D.C., where Congressmen shifted a planned federal highway from the northwest—where most of them live—to the northeast, where the residents are mostly black and in poverty. Too often, "improvements" have been merely words spoken by the dominant society to keep "them" quiet. Until the riots, there was no office of the U.S. Employment Service in Watts. New York City has been much "improved." But there is still no shopping center or cultural center in Bedford-Stuyvesant, an area containing some 400,000 people.

* * * *

Historically, we have been at our best on the frontier or in time of peril. The hydra-headed problems of poverty, discrimination, and urban decay are certainly the greatest challenge we have yet faced. But let those who, appalled by the size of our present crisis, count us out, remember our moments of defiance and triumph in the past. For we, too, have not yet begun to fight.

EMERGENCY COMMITTEE ON THE TRANSPORTATION CRISIS,

Congressional Record

PROCEEDINGS AND DEBATES OF THE 90th CONGRESS, SECOND SESSION

The Court Says the District of Columbia Freeway Program Is Unlawful

REMARKS

OF

HON. WILLIAM L. DAWSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1968

Mr. DAWSON. Mr. Speaker, on February 15, 1968, the U.S. Court of Appeals for the District of Columbia Circuit issued a very important opinion concerning the District of Columbia freeway program.

The court ruled that the District government did not comply with title 7 of the District of Columbia Code in planning four freeway projects; namely, the North Central Freeway, the east leg of the inner loop, the Three Sisters Bridge, and the Missouri Avenue Expressway. The court also said that the congressional appropriation of funds to the District government for highway construction did not ratify this illegal action. The court also ruled that the District's laws regulating the planning and building of highways were not set aside by the Federal Aid Highway Acts.

The court of appeals recognized that the provisions of title 7 requiring preparation of detailed maps and public hearings "are designed to protect property rights by insuring that the highway plans are evolved democratically rather than arbitrarily." These procedures are necessary to permit residents of the District to participate fully in planning highways which vitally affect them.

Two and a half years ago, when this House was considering a bill—H.R. 11487, 89th Congress—to provide additional borrowing authority to pay for these four projects, among others, several of us, including myself, pointed out that those freeway projects were without legal authority. We said, in our minority views, that—

The only discretionary authority given . . . to lay out new highways in the District of Columbia is that contained in the act of 1893, as amended, authorizing a plan for the permanent system of Highways in the District of Columbia. However, the District Commissioners have often ignored the procedures for changes in that plan. (H. Rept. 1135, 89th Cong., p. 24).

The court's opinion concurred with our views.

We also urged that—

Any large public works program must be concerned primarily with people, their needs and their wants.

And we said that the District government's proposed freeway program is "shocking and arrogant in its disregard of the public interest"—House Report No. 1135, at page 22.

The opinion of the court of appeals cited our view that the freeway plans were ruining "the Nation's Capital as a place to inhabit and enjoy"—House Report No. 1135 at page 23; opinion, footnote 21. I hope that the new officials in the District government will take this occasion to plan a highway program that is responsive to the needs and wants of people in the District.

Because the court of appeals' opinion is of great interest to the Congress and the public, I include the full text of the court's opinion at this point in the RECORD:

[From the U.S. Court of Appeals for the District of Columbia Circuit, No. 21416]

D.C. FEDERATION OF CIVIC ASSOCIATIONS, INC., ET AL., APPELLANTS *v.* THOMAS F. AIRIS, AS DIRECTOR OF THE DISTRICT OF COLUMBIA DEPARTMENT OF HIGHWAYS AND TRAFFIC, ET AL., APPELLEES

Appeal from the United States District Court for the District of Columbia.

Decided February 15, 1966.

Messrs. Roberts B. Owen and *Gerald P. Norton* for appellants.

Mr. John P. Hess, Assistant Corporation Counsel for the District of Columbia, with whom *Messrs. Charles T. Duncan,* Corporation Counsel, *Hubert B. Pair,* Principal Assistant Corporation Counsel, and *Richard W. Barton,* Assistant Corporation Counsel, were on the brief, for appellee Airis.

Mr. Edward B. Clark, Attorney, Department of Justice, with whom *Messrs. S. Billingsley Hill* and *Thomas L. McKevitt,* Attorneys, Department of Justice, were on the brief, for appellee National Capital Planning Commission, et al. *Acting Assistant Attorney General Williams* and *Mr. Roger P. Marquis,* Attorney, Department of Justice, also entered appearances for appellee National Capital Planning Commission, et al.

Before BAZELON, *Chief Judge,* and WRIGHT and TAMM, *Circuit Judges.*

No. 21416—D.C. Federation of Civic Association, et al. v. Airis, Director, D.C. Department of Highways and Traffic, et al.

PER CURIAM: The primary question presented on appeal in this declaratory judgment and injunction action is whether the District of Columbia official responsible for the planning and construction of highway projects in the District have been authorized by Congress to disregard the requirements of Title 7 of the D.C. Code, particularly §§ 7–108 to 7–115, in the planning and construction of four links of the proposed District of Columbia freeway system. We find that they have not and reverse the District Court judgment denying injuction relief. In view of this disposition it is unnecessary to reach other issues raised on this appeal.

The appellants [1] have sued the Director of the Department of Highway and Traffic of the District of Columbia, the District of Columbia, the Commissioners of the District of Columbia, the members of the National Capital Planning Commission, the Federal Highway Administrator, and various other District and federal officials and agencies to enjoin the planning and construction of four highway projects known as the North Central Freeway,[2] the East Leg,[3] the Three Sisters Bridge,[4] and the Missouri Avenue Expressway.[5] Although it is not clear to what extent actual construction has begun on any

Footnotes at end of article.

of these projects, planning has gone on for some time, and land is being acquired for the North Central Freeway.

The plans for these freeway projects were initially developed by the District of Columbia Department of Highways and Traffic. The plans were then submitted to the National Capital Planning Commission, who eventually approved each of the challenged projects.[6] Shortly after being approved by the NCPC, each of the projects was approved by the Commissioners for the District of Columbia.[7] Some public hearings were held while the plans were being developed.[8]

I

Title 7 of the District of Columbia Code is entitled "Highways, Streets, Bridges" and the relevant portions of it provide as follows: Section 7–201 authorizes the Commissioners of the District of Columbia "to open, extend, or widen any street, avenue, road, or highway to conform with the plan of the permanent system of highways . . . adopted under sections 7–108 to 7–115." [9] Section 7–108 directs the Commissioners to prepare "a plan for the extension of a permanent system of highways," [10] and section 7–122 empowers the Commissioners to change this plan "whenever in their judgment the public interest requires it." [11] The basic procedure for adopting the initial plan and for adopting changes in the plan is set out in section 7–109.[12] The District Commissioners are directed to prepare a map which shows the boundaries, dimensions, and square-footage of all planned streets and highways; to hold a public hearing for the benefit of landowners within the right of ways of the planned highways after giving notice of the hearing for 14 consecutive days; [13] to submit the plan to the National Capital Planning Commission, which is empowered to "make such alterations . . . as it shall deem advisable;" and to record the plan with the surveyor of the District of Columbia after the plan has received the written approval of the NCPC.[14]

The basic planning procedure highlighted above was enacted as part of the Act of March 2, 1893,[15] which was intended "to provide a permanent system of highways in that part of the District of Columbia lying outside the boundaries of the former cities of Georgetown and Washington." [16] By way of a rider to the 1913 District Appropriations Act, this planning procedure was adopted as the procedure for changing the street and highway plans for "any portion of the District of Columbia." [17] Another rider to the same Appropriations Act gave the Commissioners power to open and widen new streets and highways which conform to the plans so developed.[18] Thus, following the 1913 Appropriations Act, the District Commissioners were empowered to plan and open highways throughout the District, provided the plans were developed in accordance with the procedure now laid out in Title 7 and the highways built in accordance with the plans. This wide power to plan and build highways is the only general authorization the District Government has to build highways.

Footnotes at end of article.

II

The District appellees concede that they have not complied with the procedural requirements of Title 7 but contend that these requirements are not applicable to the challenged freeway projects. To support that contention the appellees rely principally on the argument that Congress has authorized the construction of these freeway projects in disregard of the provisions of Title 7 by regularly appropriating funds to the District for highway construction with full realization that some of these funds would be used for the development of freeways. This argument is without merit.

None of the recent appropriation acts have mentioned by name the challenged projects nor have they contained any provisions relating generally to the District Commissioners' power to plan and build highways.[19] Thus, the lump-sum appropriations for street and highway contsurction did not expressly authorize the construction of these freeway projects. And as the appropriation of money to the District Commissioners for highway construction is entirely consistent with the provisions of Title 7, the appropriation acts cannot be seen to repeal implicitly Title 7 limitations. See *Maiatico* v. *United States,* 112 App. D.C. 295, 800–01, 302 F.2d 880, 885–86, (1962). *Cf. United States* v. *Borden,* 308 U.S. 198–99 (1937); *Ritholz* v. *March,* 70 App. D.C. 283, 284–85, 105 F.2d 937, 938–39 (1939).

Furthermore, it cannot be said that the appropriation acts ratified the administrative action contrary to Title 7. Obviously, Congress cannot intend to ratify illegal action of which it is unaware. Therefore, where the ratification by appropriation argument has been accepted, courts have been careful to demonstrate factors attesting to Congress' specific knowledge of the disputed administrative action. See *Brooks* v. *Dewar,* 313 U.S. 354, 360–61 (1941); *Isbrandtsen-Moller Co.* v. *United States,* 300 U.S. 139, 147–48 (1937); *Atchison, Topeka & Santa Fe Ry. Co.* v. *Summerfield,* 97 App. D.C. 203, 208, 229 F.2d 777, 782 (1956).[20]

In this case there is no evidence to suggest that the appropriations committee nor Congress as a whole was aware of the intention of District officials to plan and construct the freeway projects in disregard of basic Title 7 procedures.[21] General knowledge that the freeway projects were being planned or a general intention to advance the freeway system as a whole is insufficient to support the ratification by appropriation. See *Ex parte Endo,* 323 U.S. 283, 303 n. 24 (1944); *Maun* v. *United States,* 347 F.2d 970, 978, (9th Cir. 1965). In *Ex parte Endo* the Supreme Court, after recognizing the possibility of ratification by appropriation, commented:

"But the appropriation must plainly show a purpose to bestow the precise authority which is claimed. We can hardly deduce such a purpose here where a lump-sum appropriation was made for the overall program of the Authority and no sums were earmarked for the single phase of the total program which is here involved, Congress may support the effort to take care of these evacuees without ratifying every phase of the program. 313 U.S. at 303 n. 24."

Similarly, Congress may support a District of Columbia freeway program without intending to ratify actions in violation of parts of Title 7 of the District of Columbia Code. Obviously Congress, in appropriating funds, has a right to assume they will be expended according to law.

We also note that because appropriation acts generally apply to a limited period of time courts have been reluctant to hold that appropriation acts affect any substantive legislation whatsoever. See *United States* v. *Vulte,* 233 U.S. 509, 514–15 (1914); *Cella* v. *United States,* 208 F.2d 783, 790 (7th Cir. 1953); *NLRB* v. *Thompson Products,* 141 F.2d 794, 798–99 (9th Cir. 1944). This is especially true when the language of the appropriation act is general and contrary to specific statutes dealing with the precise area in dispute. See *Maiatico* v. *United States,* 112 App. D. C. 295, 300–01, 302 F.2d 880, 885–86 (1962). In sum, ratification by appropriation is not favored and will not be accepted where prior knowledge of the specific disputed action cannot be demonstrated clearly.

III

The District appellees also contend that the Federal-Aid Highway Acts provided authority for proceeding with the challenged freeway projects without regard for Title 7 because the acts permit the District to participate for Federal-Aid. This contention also is without merit. The primary purpose of the Federal-Aid Highway Acts is to stimulate and accelerate the construction of the federal-aid highway systems by offering federal aid to state and local bodies who construct these approved highways. See 23 U.S.C. § 101(b). No provision of the Federal-Aid Highway legislation authorizes the District, state, or federal agencies to plan and build highways. The Federal appellees, disagreeing with the District appellees, have stated that the Federal Government has always urged that state and local authorities must comply with their own statutes.

State and federal courts considering the applicability of state laws to federal-aid highways have agreed that state laws regulating the planning and building of highways were not set aside by the Federal-Aid Highway Acts. See *Eden Memorial Park Association* v. *United States,* 300 F. 2d 432, 438–39 (9th Cir. 1962); *Futch* v. *Greer,* 353 S.W. 2d 896, 899–900 (Tex. Civ. App. 1962), *cert. denied,* 372 U.S. 913 (1963); *Cf. Hinrichs* v. *Iowa State Highway Comm'n,* 152 N.W. 2d 248, 253–55 (Iowa 1967). And contrary to the allegations of District appellee, the Federal-Aid Highway legislation is not inconsistent with § 7–108 of the D.C. Code limiting highway width to 160 feet nor § 7–201 directing the District Government to assess land owners abutting newly constructed highways for additional benefits.[22] The Federal-Aid Highway legislation does not specify a minimum width for highways qualifying for federal aid (highways 160 feet wide and under could qualify) and does not concern itself with the manner in which state and District govern-

ments raise the revenue for their share of the costs of the federal-aid highways. Thus, these D.C. Code provisions have not been impliedly repealed by the subsequent Federal-Aid Highway Acts. See *MacEvoy Co.* v. *United States*, 322 U.S. 102, 107 (1944); *United States* v. *Borden*, 308 U.S. 188, 198–99 (1939); *Maiatico* v. *United States*, 112 App. D.C. 295, 300–01, 302 F. 2d 880, 885–86 (1962). Also, past history indicates that if Congress intended to set aside certain provisions of Title 7, such as the width limitation, it would do so explicitly. See Redevelopment Act of 1945, 60 Stat. 802 (1946), D.C. Code § 5–718(a) (1967). Therefore, we conclude that the Federal-Aid Highway legislation does not modify Title 7.

IV

Finally, District appellees argue that the Act of 1893 was not intended to regulate "wide Interstate Expressways." To the contrary, we believe that the procedures set out therein are even more important for regulating the "wide Interstate Expressways," for these projects generally affect more people and larger areas of the District than any other type of street and, therefore, are potentially more destructive of aesthetic values and fundamental property rights.

From the very beginning the aesthetic and functional advantages of planning have been afforded the Nations Capital. The original federal city was conceived as a planned city and developed according to the L'Enfant Plan.[23] This basic plan has been extended throughout the District of Columbia[24] and has been endorsed many times.[25] The continued importance of planning to Washington is evidenced by the Redevelopment Act of 1945,[26] pertaining to the renewal of Southwest Washington, and the National Capital Planning Act of 1952,[27] providing for planning throughout the entire metropolitan region. To allow the District Government to build large expressways without regard for the District highway plan, which was initiated for the express purposes of preserving the L'Enfant street plan, would be inconsistent with history, a strong tradition, and express statutory language.

It should also be recognized that the procedures outlined in Title 7 are designed to protect property rights by insuring that the highway plans are evolved democratically rather than arbitrarily.[28] The public hearing required by § 7–115 offers the public an opportunity to participate in the administrative decision and forces the administrators to spell out the reasons for their decision—a check and balance basic to our entire system of government.[29] The basic procedure established by § 7–109 and § 7–115 whereby the District Commissioners are directed to hold a public hearing before approving a highway plan and the District Commissioners are to approve the plan before submitting it to the National Capital Planning Commission is also very significant. Though the District Commissioners are appointed rather than elected, their primary interest is the District of Columbia,[30] and therefore, they are likely to be more responsive to a group of District residents than is the National Capital Planning Commission whose duties are federal in nature and whose jurisdiction extends throughout the metropolitan area.[31] That is, it is probable that a group of District of Columbia citizens would have more leverage on the final decision if their opinions were presented to the District Commissioners, a local interest group, before the plans were officially approved by the Commissioners or the National Capital Planning Commission. It is then possible that the District Commissioners might endorse their views and recommend them to the National Capital Planning Commission, thus giving added significance to the citizens' opinions.[32] Finally, the provision in § 7–109 requiring District Commissioners to record immediately with the surveyor the plan finally approved by the District Commissioners and the National Capital Planning Commission serves final notice to the public, thereby facilitating public cooperation and planning.

In sum, we believe that the only power the District Government has to build roads is that granted by the provisions of Title 7, and we believe that this power extends to all types of highways built within the District. Nothing we have said is in derogation of this vast power, and nothing we have said pertains to the merits of the challenged projects. Rather, we are reversing the lower court decision because, without authorization from Congress, the District appellees have disregarded the relevant statutes in planning and constructing the four freeway projects in suit here.

Reversed and Remanded.

FOOTNOTES

[1] The appellants are comprised of individual District of Columbia taxpayers, individual landowners affected by the challenged highways, park users affected by the highways, the Democratic Central Committee for the District of Columbia, and 16 different civic associations claiming to represent over 200,000 citizens of the District of Columbia.

[2] The North Central Freeway will run generally along the right-of-way of the Baltimore & Ohio Railroad from the District line to Rhode Island Avenue and Tenth Street, N.E., at an estimated cost of $117,000,000 and will displace about 370 families and ninety businesses.

[3] The East Leg will run from the southern terminus of the North Central Freeway through Anacostia Park to Barney Circle, S.E., at an estimated cost of $55,000,000 and will displace about 350 families and twenty-five businesses.

[4] The Three Sisters Bridge will span the Potomac River at or near the Three Sisters Islands at an estimated cost of $5,800,000.

[5] The Missouri Avenue Expressway will run from 16th Street, N.W., to 8th Street, N.W., along the existing path of Missouri Avenue at an estimated cost of $4,400,000 and will displace about 200 persons.

[6] On September 15, 1966, the National Capital Planning Commission approved a portion of the North Central Freeway, a portion of the East Leg, and the Three Sisters Bridge. The remaining portions of the North Central and East Leg were approved on October 13, 1966, and February 9, 1967, respectively. The Missouri Avenue Expressway was approved on December 5, 1963.

[7] The District Commissioners approved a portion of the North Central Freeway, a portion of the East Leg, and the Three Sisters Bridge on September 20, 1966. The remaining portion of the North Central was approved on October 20, 1966. The record does not reveal the exact dates on which the Commissioners approved the remaining portion of the East Leg and the Missouri Avenue Expressway.

[8] The minutes from the meetings of the National Capital Planning Commission show that public hearings were requested by them. The only hearing on which specific evidence was introduced indicates that the hearing was conducted by the Department of Highway and Traffic of the District of Columbia. *Washington Evening Star*, February 4, 1965, section A, p. 1. Evidence does not show whether or not the District Commissioners also conducted hearings.

[9] Appropriation Act of March 4, 1913, 37 Stat. 950.

[10] Act of March 2, 1893, 27 Stat. 532.

[11] Appropriation Act of March 4, 1913, 37 Stat. 950.

[12] Act of March 2, 1893, 27 Stat. 532.

[13] This requirement is found in § 7–115 rather than § 7–109 and was enacted by the Act of June 28, 1898, 30 Stat. 520.

[14] The most relevant substantive provision of Title 7 is that highways shall not "be less than ninety feet nor more than one hundred and sixty feet wide." Act of March 2, 1893, 27 Stat. 532, D.C. Code § 7–108 (1967).

[15] 27 Stat. 532, D.C. Code §§ 27–108—12 (1967).

[16] This planning power was then limited to the area outside the old cities of Georgetown and Washington because the streets of these cities had been established before one government was established for the entire District of Columbia by the Act of February 21, 1871, 16 Sta. 419. The L'Enfant Plan established the street plan for the original District, and it was this plan which Congress wished to extend to the outer areas of the District by the Act of March 2, 1893. See § 1, 27 Stat. 532, D.C. Code § 7–108. The municipal corporation of Georgetown was permitted by section 12 of the Act of March 3, 1805, 2 Stat. 335, and section 4 of the Act of March 3, 1809, 2 Stat. 537–38, to plan streets.

[17] 37 Stat. 950, D.C. Code § 7–122.

[18] *Id.* at D.C. Code § 7–201.

[19] See, *e.g.*, § 1, 81 Stat. 438–39 (1967); § 1, 80 Stat. 1171–72 (1966); §1, 76 Stat. 1152–53 (1962). Many other special projects were mentioned by name in these same statutes.

[20] Another characteristics of these cases accepting the ratification by appropriation argument is that there was pre-existing statutory language which arguably authorized the disputed administrative action. In the instant case the only relevant pre-existing statutory language was directly contrary to the disputed administrative action.

[21] We know of only one instance where a Congressional committee commented on the District's disregard for the provisions of Title 7 and that instance supports our conclusion that Congress did not intend to give the District a special power to build freeways nor to ratify action contrary to normal procedure. After receiving statements from various parties in this law suit, the House Committee on the District of Columbia issued a report on H.R. 11487, a bill designed to provide additional revenue for the District of Columbia, wherein the majority stated as follows:

"No attempt is made to determine the relative merits of the differing view [concerning the District's authority to proceed with the freeway projects]. Rather, your committee considers this bill as a revenue measure and not an authorization for any project included in estimates for capital outlay. . . . No presumption is to be drawn that the approval of the borrowing authority means that . . . present authority or limitations applying to the planning and construction of highways is changed in any way. *Hearings Before Special Subcommittee on Taxation of the House Committee on the District of Columbia,* 89th Cong. 2d Sess., Supp. 2, at 102 (1966).

In this same report the minority stated that it objected to providing the District with additional revenue for freeway construction because District highway planners were abusing their authority to the ruination of "the Nation's Capital . . . as a place to inhabit and enjoy." *Hearings, supra,* at 111. The minority further stated that "[t]he only discretionary authority given the Commissioners to lay out new highways in the District of Columbia is that contained in the act of 1893 . . . authorizing a plan for the permament system of highways in the District of Columbia." *Hearings, supra,* at 112.

[22] The Federal-Aid Highway legislation appears to be entirely consistent with the provisions of Title 7. Section 116(c) of the Federal-Aid Highway Act of 1956, 70 Stat. 385, 23 U.S.C. 128(a) (1966), endorses the important public hearing requirement by requiring local highway departments seeking federal aid to certify that public hearings have been held.

[23] See generally C. Green, *Washington: Village and Capital,* 1800–1887 (1962).

[24] See Public Buildings Act of 1959, 73 Stat. 481 (1959), as amended, 40 U.S.C. 607(a) (public buildings within the District of Columbia to be constructed in harmony with the L'Enfant Plan); Act of March 2, 1893, 27 Stat. 532, D.C. Code § 7–108 (1967) (street plan for District to conform to the L'Enfant street plan).

[25] See, *e.g., ibid.* See also the frequent endorsement of the L'Enfant Plan by the National Capital Planning Commission in its recent publication entitled "The Proposed Comprehensive Plan for the National Capital" (Feb. 1967). At page 10 of the report it is said that the "L'Enfant Plan continues to provide the strong framework on which the city is organized to meet the needs of a growing resident population."

[26] 60 Stat. 790 (1946), D.C. Code §§ 5–701–19 (1967).

[27] 66 Stat. 781 (1952), D.C. Code §§ 1–1001—13 (1967).

[28] See generally Reich, "The Law of the Planned Society," 75 *Yale L.J.* 1227, 1243–47, 1257–61 (1966).

[29] This type of check and balance is of increasing importance because the more complex our society becomes the greater the quantity of decisions delegated to agencies. As more decisions are delegated, our elected officials are less able to keep watch over the many agency decisions, and decision-makers are less responsive to the desires of the citizenry. See Reich, *supra,* at 1243–44. Congress has recognized the import of public hearings for various administrative decisions. See, *e.g.,* United States Housing Act of 1949, 63 Stat. 416, 42 U.S.C. 1455 (d) (1964) (public hearing before land may be acquired for urban renewal); Federal-Aid Highway Act of 1956, 70 Stat. 385, 23 U.S.C. 128 (a) (1966) (public hearing for federal-aid highway route selection).

It should be noted that this case only raises the question of whether hearings must be held as required by section 7–115 of the D.C. Code and does not present the more difficult question of whether particular hearings fulfilled statutory and due process standards. Cf. *Nashville I–40 Steering Committee* v. *Ellington,* No. 18238, Court of Appeals for the Sixth Circuit, December 18, 1967, *cert. denied,* Jan. 29, 1967; *Scenic Hudson Preservation Conference* v. *FPC,* 354 F. 2d 608 (2d Cir. 1965); *cert. denied,* 384 U.S. 941 (1966); *Road Review League* v. *Boyd,* 270 F. Supp. 650 (S.D.N.Y. 1967).

[30] See D.C. Code §§1–101–03 (1967).

[31] See D.C. Code §§1–1–1 (1967). See also the message of President Johnson to Congress on the transmittal of District Reorganization Plan No. 5 of 1966, Title 1—Administration, Appendix, p. 105–06, where the President states that "[T]he basic responsibilities of the National Capital Planning Commission. . . . [are] to represent the Federal interest in the planning and development of the region."

[32] Another important advantage to following correct statutory procedure is that citizens are then on notice as to the actual decision-making body and may focus their protests and requests accordingly.

A COMMUNICATION to the PLANNERS FOR EQUAL OPPORTUNITIES, in meeting, March 16, 1968:

On February 15, 1968, the U.S. Court of Appeals for the District of Columbia issued an opinion concerning the controversial freeway program in the District of Columbia. Along with some other material relevant to this issue, we have enclosed a copy of this historic opinion, with prefatory remarks by the Honorable William L. Dawson, of Illinois, as it was printed in the Congressional Record of Monday, February 26, 1968. This ruling is a major victory for the many urban communities throughout the nation whose existence has been threatened by massive interstate freeway programs. However, the victory is a legal one and - as one might expect - the highwaymen, with the various institutions and government agencies that they control, are at this hour arranging to force legislation through a Congress desperate to adjourn, which would empower the Federal Government to ram unneeded, extravagant, insulting interstate freeways through the heart of any community regardless of cost, in terms of money or of community upheaval and human suffering. [We have learned that Rep. John C. Kluczynski, of Chicago, is to introduce such legislation this Monday, March 18]

WE CALL IPON THE PEO to demand that the President of the United States convene a national conference on the critical problems of urban transportation. We urge in particular that you insist that such a conference explore all forms of mass transportation. Since the initial outlay for mass transit systems is large, we further urge you to insist that the Federal Government seek and pass the necessary legislation to permit the use of $90/10 monies now dedicated to urban interstate programs to be used for mass transit systems.

We further appeal to the PEO to promote, and perhaps sponsor, a confederation of urban freeway fighters by putting our organization in touch with groups similarly engaged in other communities. It is expedient that we pool our resources, link forces, and cooperate to solve one of the most crucial problems of our nation today... urban transportation.

"Transportation has rarely been listed as one of the urgent moral issues of mankind, but in our world it is exactly that..Movement is characteristic of human life. But the institutions of transportation have often been regarded as part of the given circumstances of life. Now we are increasingly aware that those institutions are the results of human decisions involving major value choices...

... Transportation [has become] an instrument for justice or injustice, a means of opportunity or frustration, a mechanism for confining or releasing those who live in ghettoes." Christianity and Crisis, Oct. 1, 1966

_____

The EMERGENCY COMMITTEE ON THE TRANSPORTATION CRISIS is a coalition of civic and neighborhood organizations devoted to action on the transportation-housing needs of the District of Columbia.

POLICY STATEMENT
PLANNERS FOR EQUAL OPPORTUNITY

Developed in response to its Second Annual Conference held at the University of Pennsylvania Fine Arts Building on March 16, 1968. This statement,adopted on August 31, 1968, is not complete. After additional Policy Committee meetings on the conference, a supplemental statement will be issued.

---

1. What is Planners for Equal Opportunity

This organization, formed in 1964 at the Newark convention of the American Institute of Planners, is dedicated to supporting the civil rights movement and the struggles for liberation, elimination of poverty and for equal opportunity for all people. It was formed to give planners who were working as advocates in the civil rights movement and those who wanted to help in that fight a vehicle through which they could (1) legitimize their efforts, (2) exchange and coordinate information and (3) press the planning profession and the public to change their racist policies, programs and practices.

Among its more specific objectives are the following:

1. The reform of urban institutions and programs so that they adequately respond to the needs of poor and minority groups.

2. The resturcturing of urban institutions and programs to guarantee minority and poor communities a prominent role in planning and program implementation.

3. The design of tools to promote equalization of opportunity.

4. The education of the planning profession to assume greater responsibility in the field of equal opportunity.

5. The expansion of minority people in the planning profession and the education of minority and poor communities in planning and program implementation.

During the few years of its existence, PEO has been stoking the fires of conscience in the profession, calling for changes in planners' ethics, practices, policies and programs. It has called attention to the fact that most planning ignores poor and minority needs - if it doesn't simply ride roughshod over them. It has encouraged blacks and the poor to fight oppressive programs, and to fight for local control of those programs which affect them. It has called for massive increases in federal and local aid to poor communities.

Planners for Equal Opportunity is not a "trade association" of planners working in black and poor areas. Most planners working in these areas are not PEO members. Out of 5,000 to 6,000 planners in the country, PEO has a membership of 400, about half of whom classify themselves as "active" (with the right to vote and an obligation to be active in the cause). Of this membership, only a few are black, over a quarter are students. About 20 percent of the membership is from New York City, with a high percentage of the remainder from other large cities.

2. PEO and the Struggle for Black Liberation

While the role selected by PEO for itslef in 1964 was appropriate at that time, the rapid development of the black power and black liberation movements calls for a reexamination of PEO's goals, policies, roles and purposes. It is not enough to dedicate ourselves to the cause of equal opportunity or to exert pressure on the planning profession and the public to pay more attention to the needs of black and poor people. More positive and direct action in support of the struggle for black liberation is needed. PEO not only supports the concept of black control of black communities, but dedicates itself to actively help those communities gain that control. It must do this through a process of (1) developing the basis on which local control can be transferred to local communities, (2) developing the advocacy concept so that it fully serves the needs of local communities and (3) working to expand the number of minority professionals in the planning and allied professions. To give this support and direct aid, PEO must develop closer ties with minority communities and black leadership and must develop fuller participation by black professionals in the organization so that its policies and programs can reflect the needs and desires of that struggle more accurately and helpfully.

More than local control is at issue in the new dimensions of this struggle. The distribution of national resources and inequities in national policies are basic forces preventing the liberation of black people and other minorities, and of providing the rewards of the affluent society to all its citizens, especially the poor. Changes in the national direction are imperative; wealth must begin to flow into the ghettoes and to the poor and neglected throughout the nation. PEO also dedicates itself to press for the needed redistribution of wealth and opportunity.

3. PEO and Black Power

In forthright statements by black power advocates, PEO has been asked to demonstrate its dedication by making radical changes in the organization. The suggested changes are paraphrased below:

> That the purpose and name of PEO be changed from equal opportunity to black liberation, that leadership be changed from white to black, that white planners no longer work in black communities except as spies and helpers of black "environmentalists" trained in black schools.

While PEO understands the underlying reasons for these proposals, it has basic differences with the concepts espoused by black power advocates. It does not believe there is anything to be gained in the long run - or even in the short run - by limiting black planners to work in black communities and white planners to work in white communities. Planners trained in advocacy, whether white or black, will serve the community - whether white or black - well. PEO does not accept the idea that white planners cannot properly serve black communities; many are doing so with distinction today, often at great sacrifice. Further, as a practical matter, white planners must work in black communities for years to come, because there are simply not enough black planners to do the job. PEO supports a radical increase in the number of black planners so that communities will have a choice as soon as possible. PEO also believes that black planners should not divorce themselves from metropolitan and national planning programs and issues, which have basic

implications for the quality of black and other minority life. Further, as long as the black ghettos are growing and swelling in size, their problems can never be solved by an insular approach to their rebuilding. Black planners can help to destroy the noose of segregation in ways no white can accomplish; it is a waste of indispensable manpower to withdraw from a major battlefield to concentrate on rebuilding the ghetto. PEO therefore does not support the notion of a separatist professionalism for the ghetto and cannot accept reorientation of PEO purposes and a change in leadership to reflect the separatist and isolated philosophy.

PEO wants to be as helpful as it can to the black power and black liberation movements. It is ready to enter into coalitions with black organizations (and other minority liberation movements) for specific purposes, to reach specific goals. It is ready to work with a caucus of black planners, should such a group be formed. PEO is anxious to create coalitions with planning students and the student movement as a whole, to support and aid this movement which is so necessary to the reform of the profession and its practices. PEO is also ready to work with radical professionals, where a joint effort can be fruitful. This has always been PEO's outlook; to work with and to serve those in the battle line through the exercise of the professional skills of its members.

None of the foregoing, however, suggests that it makes sense to adopt black leadership or black control. PEO has always sought to give its black members positions of leadership in the organization ; several were on its first Policy Committee. PEO has further increased minority participation by inviting black leaders to its Policy Committee meetings and by inviting black (and other minority) leaders to its conferences as participants, and it has been increasingly successful. Further steps to increase minority participation in PEO are proposed in the next section of this position paper.

While strongly supportive of the black liberation movement, PEO is not wholly caught up in this single aspect of the struggle. It is deeply involved in exposing and attacking racism in the planning profession and in government; it is rapidly becoming involved in the student struggles for reforms in planning education; it is concerned with breaking down the racial barriers in the planning profession itself. These are issues that whites are deeply involved in. As the dominant force in the organization, as pioneers in planning with communities instead of for them, the white membership has a major stake in the organization and its program. With an emphasis on increasing black and other minority representation, PEO will continue to be led by its active members, black or white.

4. Proposals to Increase Black Participation in PEO

Constitutional changes are now being offered to the membership for the purpose of increasing the participation of black and other minority planners as follows:

1. Professional planning advocate organizations (non-government, non-commercial, oriented toward assisting minority or other poor communities) shall be permitted to join PEO with the same status as PEO Chapters, with the right to representation on the Policy Committee. Since at least two such organization (2MJQ and ARCH) are essentially black organizations, this will increase black representation on the Policy Committee.

2. The Policy Committee shall be empowered to appoint active minority PEO members to the Policy Committee to insure full black and other minority participation. Such members will serve until the following election.

3. The definition of planner and allied professional shall be expanded to include elected heads of grass roots organizations in ghetto or other poor communities, thus expanding the opportunity for black and other minority persons to belong to and be active in PEO without destroying its essentially professional character.

In addition to constitutional changes, the Policy Committee directs the Steering Committee to form a Minority Leadership Advisory Committee to assist PEO in formulating its policies, programs and strategies. This would be one additional way of utilizing the experience and knowledge of people who are either too busy or do not wish to play a more active role in PEO.

The President and the Steering Committee are in the process of adding minority members to the Steering Committee and will continue to do so as rapidly as members willing to accept the responsibility can be added.

5. Employment of Minorities in Planning

The record of the profession in employing and training black and other minority persons in planning and allied professions is scandalous. Though ghetto slums have been torn down for over 30 years, though the urban renewal program has displaced twice as many black families' homes as white families' during the past 18 years, the number of black and minority professionals is still below the 1 percent mark. In the past few years, as the black revolution has developed, there have been some attempts to employ and train black professionals, but these have been largely token efforts. Employment is either offered in low level jobs and advancement is withheld or high salaries are offered for jobs of high visibility and little permanence. Today's high salaried black planner - often unequipped to properly perform his high level post - may be out of a job next year.

New York City's Planning Commission still does not have a black member. There is no high echelon black planner in the NYC Department of Planning. In one recent program, training 60 housing aids in New York City, it was reported, there was not one minority person enrolled. In most other cities, the record is worse; in many planning departments, there are no black people; they are systematically discriminated against. In too many cities, minority people are hired last, accepted in schools last, offered poorer jobs, advanced less often.

In many cases agencies willing to hire black people will complain that there are no applicants. The schools say the same thing. But this cannot be considered an adequate excuse. It is the job of schools and agencies to go out of their way to find, recruit, train, employ and advance black professionals.

PEO calls on planning agencies and schools of planning to give preferential treatment to members of minority groups in employment and training. It calls on agencies to reduce their qualifications for employment, provide career ladders starting at lower levels, give in-service training programs leading

to higher paying and better jobs, do what the schools should be doing in their own offices. It calls on the schools to radically increase recruitment efforts and scholarship aids, reduce admission requirements, provide additional training and special courses, create new career ladders and to increase the available job opportunities.

PEO calls on its members and all planners to do what they individually can to increase the number of minority people in the profession. Members can recruit minority members into schools, fight to have them accepted in their agencies, help people to qualify for jobs (helping to prepare resumes, for example), help provide minority applicants with the needed credentials.

There are other ways planners can help in the job field. In the course of their work, they can often open up opportunities to black or minority professionals through assembling lists of local builders, architects, contractors or planners. They can point out to employers how to provide employment to residents of ghetto communities.

PEO will pursue the objective of a radical increase in planning employment for black and minority people until there is a redress of the unbelievable inequity in the profession today. It calls on the AIP and all planning agencies, planning schools and individual planners to join this fight.

6. Position on Planning Education

PEO supports current student struggles for greater power in the university and for changes in the university system which will educate students to solve domestic and international problems rather than turn out servants of the existing establishment. PEO supports student demands for:

1. More black and minority students in universities, in undergraduate programs leading to professional education; and in planning and allied professional graduate schools;

2. Systematic means of finding, financing and otherwise assisting black and other minority students;

3. Examination of requirements for the planning profession and for planning education to insure that these are relevant to the needs of the day and do not exclude minority members;

4. Development of alternative means of entering the planning profession, including such devices as extension work, adequate summer and evening programs, and internships;

5. Continuing curriculum review and revisions worked out jointly by students, faculty and community representatives;

6. Increased involvement of planning students in black and poor communities;

7. Strengthened emphasis on social aspects of planning, especially as physical changes and public policies impinge upon the lives of the black and minority groups;

8. New forms of research which emphasize the human aspects and empirical studies.

Urban universities must begin to relate to the communities in which they are situated. This means (1) giving up the concept of the monolithic campus, expanded at the expense of the community (2) carefully examining the impacts of "university community life" which isolates students from the community and making appropriate modifications in policy, (3) developing its expansion program with full community participation and approval, (4) using university resources to aid surrounding communities and (5) basing recruitment policies of the needs of the country and community (rather than on supposed needs for skills and professionals) by increasing black and other minority student numbers to the level of white participation.

PEO does not agree that planning is irrelevant until society has changed. It believes that planning and planning techniques can and should be oriented to be responsive to the needs of the black and white communities, to poor as well as rich ones. It does not agree with those who believe it is only necessary to go into the community and find out what it wants; there is a discipline and technique in planning which must be learned as well as a need to develop effective communication with the community. PEO supports changes in the schools and curriculum which will enable students to learn to respond to and to plan for satisfying the needs of poor and minority communities, and for changes which will permit students to participate in the decisions as to how their training will take place and what problems they will study.

7. Position on Model Cities

The Model Cities program, as originally coceived, could have been a major positive force in eliminating poverty. For the first time it brought together social and physical planning and city and community in a coordinated attack on the problems of minority and other poor areas. But programs are only as good as they are funded and operated, and in both these areas, the Model Cities program has proven grossly inadequate.

As it now stands, the Model Cities program is accepted by many local communities, not because it promises substantial benefits, but because they must desperately grasp any straw which may benefit the community even a little. For this reason, PEO will not oppose the program where it is locally accepted. However, PEO believes that major funding and administrative reforms must be made in the program if it is to become a practical alternative for rebuilding the ghetto. Among its chief inadequacies are the following:

1. Federal commitments of new money to Model Cities areas, ranging between $25 and $50 per capita, is an insult to the communities receiving them considering the claims made for the program. The program amounts to nothing more than a repackaging of traditional HUD programs, with a little anti-poverty money on the side.

2. Practically no assistance is being provided for enhancing the economic power of Model Cities communities. Where chances for local participation exist, red tape and lack of seed money prevents participation. No real assistance is being given in the development of local capability, no expert advice or how it should be organized, no venture capital is being made available. Job and training programs are rehashings of older and ineffective efforts.

3. Opportunities for effecting significant structural changes in the way poor communities are run are not being provided. Cities are not opening ways for the poor to run their schools or other services, nor is the federal government demanding that they do so. Despite HUD guidelines on citizen participation, most cities are not sharing power with the local Model City communities.

4. Only in exceptional circumstances have local ghetto communities succeeded in getting full power in the Model Cities program. PEO knows of only one case (Cambridge, Mass.) in which local community residents have been given complete control over the program. In a few other cases, cities have retained the ultimate power, but have at least agreed that no programs will be promulgated without the approval of a local Model Cities Committee. In several such cities, the communities choose their own local committee representatives and acceptable experts are made available to them. But in too many cities, the Model Cities Committee is selected by the Mayor or Council; the experts are assigned by the city and are not responsible to the community; the community is only promised that it can "participate" or will be "consulted" on the plans being prepared (Chicago is one example).

5. Cities have generally failed to make citizen participation work in Model Cities communities, either through willful intent or through neglect and indifference. The formula for the establishment of Model Cities communities proves unbelievably complicated, often results in internal community squabbles and erodes the status of existing community organizations. Considering meager federal commitment and city unwillingness to share power with the community, Model Cities Committees are as much a harmful encumbrance as they are a help.

Before PEO will endorse the program, major new resources have to be allocated, real local control must be built into the program, and cities must establish their willingness to share power with the local community.

8. Position on Advocacy

Definition: The term advocacy as applied to work in local ghetto and other poor communities requires definition and clarification. Some define advocacy as adversary proceedings, alternate plans, a constant fight between community and government. Others think the term can only be applied to work for a local community or group. But advocacy is more than this; generically, it is the process of working to satisfy a community's needs and desires in collaboration with that community. This can be done more easily when working for the group, but it is even possible when working for government. The key is to satisfy the community, to make plans which meet with their approval. Where the community is fighting city hall, advocacy can be adversary; where city hall is offering facilities or services, advocacy can be organizing those facilities and services to the satisfaction of the community. Advocate planners placed at the service of the community should be acceptable to the community. In the final analysis, an advocate planner should bow to the community wishes although its demands may be incongrous with his professional views or leave the project.

Advocacy, as applied to work for minorities and the poor, is not limited to working for specific communities. Issues of general importance to the struggle for equal opportunity on a city, state, regional or national level are equally susceptible to advocacy work. The work of formulating positions, programs and strategies as well as that of enlisting support for them in political and other arenas can readily be considered advocacy.

Democratizing the Planning Process: General statements regarding the democratization of the planning process and the importance of advocacy simultaneously suggest certain directions for action by which the participation of the community in planning can be improved and heightened.

It is evident from many experiences that the ordinary development of the planning process does not call for community participation at an early enough time. In the worst case, plan development is kept secret from the community in order to crystallize plans in opposition to community desires. In the best case, planners who endorse objectives of equal opportunity sometimes overestimate their own understanding of needs and desires of the community or underestimate the creative possibilities which can be realized through early community participation.

In addition to early involvement, community and interest groups should at all times have access to a clear understanding of the planning process and the basis for planning decisions. This means that citizen groups must have access to the information used for planning, to the means used to manipulate this information, and to the bases for recommendations which are used by the planner. Wherever the information used in the planning process is to be manipulated by community groups studying, challenging, or supporting the recommendations of planners, the information and methods necessary for this manipulation should be made available, in machine-processable form when appropriate.

From this view of a democratic planning process, it also follows that advocate planners, where assigned to assist community groups as part of a public program, must have the necessary skills for making use of modern planning concepts, computer programs, and data sources. In addition, advocate planners should have available the necessary computing facilities to make use of these data and to do a complete job of advocacy.

One of the main objectives of this proposed mode of operation should be an enhanced opportunity for citizen groups to develop, present, and test their own alternatives to official plans, aiming at a relief of inequities and the resolution of conflict.

REGISTRATION FORM AND PRIORITIES INVENTORY

Second Annual Conference
Planners for Equal Opportunities
March 16, 1968, Saturday
University of Pennsylvania

(Please complete priority inventory
items and return to:
PEO, 76 Reade Street, N.Y., N.Y. 10007
even if unable to attend Conference:

✓ I plan to attend ✓ Enclosing Fee ($5.00 or $2.00 for students)
___ Unable to attend but wish to express my views on PEO priorities for subjects listed below

Name Moreland Smith PEO member ✓

Address 38 Peachtree Street NE, Atlanta, Georgia 30309 Phone 892-7850

Agency or Institution Southern Regional Council

Professional Affiliation or Degrees B-Arch — M. Arch

AIP (p) Other American Institute of Architects

Chartered bus from and to NYC (if sufficient requests)
$4.00 bus fee enclosed ___ (Departs 76 Reade Street, 7 A.M.)

PEO Membership or renewal fee enclosed ___ ($10.00 or $2.00 students)
Will bring pertinent reports or statements for display ___

Geographic Orientation (Number in order of interest or experience.)

4 Metropolitan Core
3 Metropolitan Region
1 Cities under a million
2 Rural or depressed areas

Action Level Priorities (Number as you would choose to serve.)

1 Communication projects for urban affairs advocates (Conferences, Newsletters)
2 Research projects (survey and analysis of advocate issues.)
___ Synthesis and presentation (Policy statements, project lobbying)
3 Organizational cooperation (including stimulation of other professional groups)
___ Direct Action (Hearings, court action, demonstrations)
___ Your thing ___

Time Orientation (If you have a strong inclination)

____Favor priority to immediate, crisis action.

✓ More concerned with long-range, basic solutions to priority.

Program Priorities (Number as you would choose to participate in Conference Workshops, PEO Committees or projects.)

Workshops

I	Planning Education Reform	(AM and PM)
II	Advocacy in Model Cities Programs	(AM and PM)

August 20, 1968

Dear PEO Member:

Inasmuch as the response of AIP on several of the issues which PEO raised in Washington has been unsatisfactory, PEO will continue its confrontation with AIP at its conference in Pittsburgh, October 12. We intend to ask critical questions related to equal opportunity at various workshop sessions. We are also considering mass meetings and picketing on such issues as model cities, local control, the war and urban spending. The effectiveness of our confrontation will depend on a large number of us participating in the workshop sessions to raise these questions and demand acceptable answers. The list of workshops is enclosed. Please return this sheet and check the panels you would be interested in attending. Also let us know if you wish to participate in other parts of our planned confrontation. If you are unable to attend the conference, could you return the sheet with questions which you would like to have raised at these meetings. We will hold a series of briefing sessions in the PEO suite before the workshops.

Looking forward to seeing you.

Marcia Marker Feld
Charles Kaswan

P.S. If you are interested in working on the Conference Committee, please check the box on the return sheet.

PRESIDENT'S REPORT TO PEO MEMBERSHIP
September 10, 1968

Let me start with an apology for the lack of communication and activity in PEO for the past six months. Our annual conference coming soon after the Washington AIP conference absorbed much of our collective energies; also many of our most active members (including your President) were swamped with other work. But we have not been entirely inactive and a lot has happened on a lot of fronts. This is a report on the events and activities of the past six months, throwing together news, actions of PEO and reports on Policy Committee activity.

PEO Elections: These were held late, and it was recently pointed out that we had never informed the membership of the results except at the March Annual Conference which only 100 of our 400 members attended. Here, then, are the results. A new election is scheduled before the end of the year.

PRESIDENT
Walter Thabit

PEO Annual Conference in March: We hope to send out the conference proceedings to all participants and to all members within the next three weeks. It has been very troublesome to put the proceedings together due to the laxity of the reporters of the various sessions. We will still be short reports on two sessions, one of them an important one. Here, just let me mention some of the bare facts. About 400 people attended the sessions, almost 40 percent of whom were students. Most were from New

York, Philadelphia, New Jersey and Washington, but people from Conn., Mass., Ohio, Virginia and six other states were also present.

It was a wild conference, with black militants challenging PEO to become a tool of the black liberation movement. Sharp questions and criticisms of planners were raised throughout the conference. Carlos Russell discussed his view of black-white separatism and coalition and defended the need for black power. This general theme dominated the workshops, many of which came up with new and challenging approaches and ideas. Increasing black representation in PEO and giving leadership in PEO to black professionals was a major discussion point at the final plenary session.

PEO Policy Committee Meeting in May: On May 25th and 26th, the PEO Policy Committee met to take up conference resolutions and draft positions on matters dealt with at the conference. Fourteen black and other minority leaders known to PEO were invited to participate. At that meeting it was decided not to give the organization over to the black liberation movement since the problems of equal opportunity were of wider scope than the black power movement and since the white leadership in PEO was its life blood at present. Steps were adopted to increase black representation in PEO leadership including appointment of active minority people to the Policy Committee, giving Chapter status to groups of professionals (many of whom are minority) which carries with it Policy Committee representation and broadening the definition of professional to include grass roots leaders. The Policy Committee also asked the Steering Committee to set up a committee composed of 50 percent PEO and 50 percent students and minority planners to consider representation on PEO's Policy Committee. Strong positions on bringing minority members into the profession through expanded enrollments in schools and through ending discrimination and preferential treatment in planning agencies were also proposed. Sharp criticism of Model Cities and strong support for local control and democratization of the planning process were also approved.

Since only 8 of the 17 Policy Committee members attended the meeting, a mail ballot has been circulated among all members of the Policy Committee on the position paper. Approved portions will be circulated to the membership shortly. The Policy Committee also agreed to meet again in October at the AIP conference to continue its deliberations on subjects not covered in May.

New Chapters: We welcome two new Chapters to our midst. One was organized in February as the Rutgers University Chapter of PEO with 7 members, Matthew Rudikoff, Chairman. A second was started with almost 40 members in Lansing, Michigan, through the efforts of Effat Mansour and others at

Michigan State University. Robert R. McCabe is its first President. Not as good news comes from Philadelphia where Janet Reiner reports the demise of the Philadelphia Chapter because it was getting to be a "talking" outfit; nobody was ready to do any work reports Janet.

The problem of Chapters is a big one. Efforts to start chapters are now being made in San Francisco, Chicago, Washington, Cleveland and other places. Questions are often raised as to why a local group should become a PEO chapter. Equally grave is the question of what the chapter does after it is formed. While there are examples everywhere of what a chapter can do and has done (N. Y. and Philadelphia are examples), our membership is confused on the question. The Steering Committee and Policy Committee will be giving this matter careful consideration in the coming months and hope to provide substantial help to chapters in the future.

PEO Action:

1. Support of Columbia Students: Telegrams of support to the Student Strike Coordinating Committee and to Mayor Lindsay were sent. Several PEO members including Peggy Latimer and Frances Piven were active in the fight. Walter Thabit spoke to architectural and planning students seeking new approaches to education and working with the community.

2. Incorporation: Incorporation papers for a PEO tax exempt fund, leaving the organization free to lobby, have been filed.

3. Elimination of Tax Exemption for Industrial Development: Sent letters to Treasury Department and City of New York (at suggestion of a member) opposing the granting of tax exemption on industrial development bonds used in cities. Received sympathetic reply from Secretary and unsympathetic reply from City of New York Dept. of Commerce.

4. Position on Urban Development Corp.: Rockefeller's bill which grants private enterprise complete freedom to redevelop and develop without public hearings or accountability, and with the right to ignore local law and desire, is receiving careful analysis by Marcia Feld of PEO. Other states are considering similar laws. Bills such as this may destroy local community power in housing.

5. National Committee for a Confrontation With Congress: Decided to withhold support of this organization for massive aid to low income housing until the group eliminates its policy of insisting that all such housing be built in the ghetto.

We are also exchanging newsletters with the Radical Education Project and other groups, are supporting the new National Association of Student Planners and Architects organized by Richard Hatch, and supported the workers strike against the grape industry in California. Though we have been actively seeking funds from foundations, we continue to be less than successful; efforts in new directions and evaluation of our program and approaches will continue.

PEO and AIP: As a result of PEO's pressure at the Washington conference and through the AIP's Committee on Minorities, AIP has given a relatively great deal of attention to matters of equal opportunity in recent months. The report on equal opportunity adopted by the Board of Governors at the ASPO convention was a fairly good one, but it was soft on the issue of local control. The task force assigned to housing resolutions of PEO refused to support a massive public housing program or local control. And, of course, the Institute continues to duck the Vietnam war issue. While we will continue to press these concerns with the AIP, we are now beginning to demand more substantive action. More details on these demands will be forthcoming as they are developed.

AIP Pittsburgh Conference: The AIP conference in Pittsburgh will be the scene of PEO's next effort. Scheduled for October 12-15, the AIP conference is concentrating on the NOW challenges of the profession, a theme lifted from PEO. Many of our members have been asked to participate in the AIP program, but we want to make sure equal opportunity issues really get discussed at the conference. PEO members going to the conference will be asked to concentrate fire on a group of workshops, raising questions and introducing resolutions of importance to PEO. We are also planning a meeting on Model Cities in Pittsburgh, jointly sponsored with the Model Cities community. The objective of this action will be to expose the weaknesses of the Pittsburgh program and to get the city and federal government to improve it. Within a few days, details on these and other program details will be mailed to all members.

Help Needed: If PEO is to grow and prosper, we need more active participation by the membership. A new associate editor of our newsletter Equalop is needed, more active help on the Steering Committee is needed, people interested in substantive areas like planning education, employment in the profession, Model Cities and other areas are needed. If you are ready, willing and able to undertake an activity, we want to hear from you.

Planners for Equal Opportunity

Vol. 2 No. 1 Spring 1968

ROUND-UP OF PEO WASHINGTON CONFERENCE

The week of October 1, 1967 witnessed the first direct confrontation between PEO and American Institute of Planners. While the AIP was celebrating its Fiftieth Anniversary convention at the Shoreham Hotel with a look into the next fifty years, PEO called a conference on the theme "Planning: Black and White: Today" to speak out on the pressing issues of discrimination, the redistribution of economic and political power and the impact of the war in Vietnam.

The intention of the meeting was to discuss these issues and develop strategies that would enable planners to play an active role in assisting minorities and the poor, and understanding the interrelationships of these issues with larger questions of national direction and policy. Secondly, it was hoped that these concerns would ultimately be brought to the governing board of AIP so that the largest group in the planning profession might be persuaded to take a stand on them.

The most notable success in reaching AIP came when the resolutions from the PEO plenary session were presented to the AIP at its general assembly. Bayard Rustin, of the A. Phillip Randolph Institute, in sympathy with PEO's goals, relinquished part of his scheduled speaking time for the presentation by Irving Rubin. The resolutions drew considerable interest from the AIP membership assembly, and at the subsequent Board of Governors meeting they were referred to the appropriate AIP committees for study and reporting.

Workshops Held

The first day of the PEO conference consisted of a series of workshops. In the first, "The Community as Client," Robert Jackson of the Washington Planning and Housing Association, Mrs. Sherry Arnstein, of the HUD Model Cities staff and Robert Goodman, from the architectural faculty at MIT considered such issues as achieving effective citizen participation, the planner's role as both advocate and technician and pluralistic planning and plural plans.

In "Planning for Racial Equality" James O. Gibson of the Potomac Institute, Neil Gold, and Harry Schwartz of PEO and Martin Sloane from the Civil Rights Commission, discussed housing and economic development and implications for integration and separatism. The essence of social planning, its relationship to traditional planning efforts and current Federally funded programs which attempt to mesh the two, were examined by Janet Reiner, of PEO, Arnold Katz, from HEW, and Joyce Whitley, of the Model Cities Program.

Michael Mazer, of the OEO Housing Programs, chaired a workshop on "Housing the Poor' with Cushing Dolbeare, Managing Director of the Philadelphia Housing Association and William Grigsby, of the University of Pennsylvania. Mazer offered five suggestions for low income housing policy: subsidies to families through interest rates, write-down and tax incentives; private involvement in housing; increased home ownership and control by the poor; surrogate ownership as in tenant councils and cooperatives and government reforms such as the transfer of 221 (d) (3) housing from FHA to HUD. Mrs. Dolbeare described an HAA proposal that would give all poor families a subsidy equal to the difference between 20 percent of their income and the local rate for standard housing. The estimated annual cost, she said, would be between $2 billion and $9 billion.

Grigsby, in calling poverty a political rather than planning dilemma, named political compromise and timidity as barriers to sound Federal programs. In addition, he noted our inability to see the value of housing in solving social ills, and the low political priority accorded the poor in Congress. The audience, in response, divided between who demanded structural revisions of the dominant "systems" and those who proposed that groups such as

PEO should seek political solutions within the existing framework.

The final workshop, "Planning and Politics," with Norman Berson and Paul Davidoff, was a search for the appropriate role for the planner in an undeniably political profession. It was suggested that broader issues - politics, race and social inequities - be recognized in every plan. Also, planners should be more aggressive in asserting the connections between these issues and traditional concerns of planning, rather than falling back upon their historical position as government officials. In this role, planners could present plans which might be used as political platforms.

It was agreed that PEO needed statement of actions and priorities against which to measure governmental programs. Out of this workshop grew the PEO plenary session and the resolutions later presented to AIP.

Luncheon and "New Town" Tour

A keynote address by PEO President Walter Thabit opened the luncheon session on "U. S. Domestic Policy/A Disaster for Negroes and the Poor". In it Thabit expressed the roots of Negro distrust and the rejection of white society, and the negative role that planning and planners have played in creating and maintaining a ghetto way of life. He claimed that the country has answered the resultant explosion by making war against the Negro, and pointed to parallels between its domestic policy and the psychological effect in the war in Vietnam.

In his words, "We protest this war because the attitude that lets us kill Vietnamese without a qualm will let us kill Negroes in the same way. We ask an end to this madness. Our nation must learn to put more money into building cities and less into destroying them."

He dichotomized the AIP conference and its concerns, with the role of PEO in stating, "What is the responsibility of planners in this situation? Is it really to debate what is going to happen 50 years from now? Is now the time for the profession to visit the all-white suburb of Reston and admire the architecture and little subleties of the plan? Or isn't is really time that we make the nation familiar with the slums of Washington. Isn't it time to see the hovels, to talk to the people, to see how they have been and are being beaten down, to use the prestige of the AIP to get their story across to the nation?"

He labelled Model Cities a glorified urban renewal program and condemned the absence of a massive public housing program, and the chance for open housing outside the ghettos. Thabit called for Federal financing of integrated, in-city new towns, a dozen brand new cities for the poor and rich under Federal direction, automatic Federal allowances for child support, living wages and decent welfare levels, and more Federal aid for schools, hospitals and health centers for the poor.

Politically, he sought involvement of Negroes in decision-making and planning, and for planners to offer their services to the development of community plans outside municipal agencies. Urging that planners work to build a Negro-white coalition in our cities, he noted that, "Together we may stand a chance to move the nation. Separated and alone, with Black Power going one way and white liberals another, the forces of status quo will happily demolish the one and ignore the other."

Panelist Frances Piven, suggested private investment in the ghetto as one means of alleviating the problem but warned that there was insufficient political and economic accountability in this method. Michael Miller, of the Ford Foundation, described the core of the problem as a widening gap between rich and poor, and the juxtaposition of the two groups in an increasingly affluent society, and the failure of ameliorative programs such as training to change the basic framework, for example, to create jobs. He emphasized that the present information revolution was taking place primarily in government and that it was essential for outside practitioners to present counter arguments and explanations to determine policy. He called for a more far reaching understanding of the issues underlying technical assumptions, and this, he implied, was the task of the planner.

George A. Wiley, Director of the Poverty-Rights Action Center and former Associate National Director of CORE, condemned the brutality of the public welfare system, and the lack of power and recognized rights for welfare clients. He sought the creation of welfare-rights groups across the country, that would enable clients to help themselves.

Britton Harris, of the University of Pennsylvania, called for ghetto strength now, but

eventual dissolution. He cautioned planners against being opportunistic, short-sighted, anarchist or unable to replace presently defective programs with constructive ones, and becoming insensitive to the problems of an increasingly technological society that demanded increasingly more complex solutions.

In contrast to AIP's "New Town Tour," PEO staged a "New Town Tour" of the City of Washington and its environs as it works today for its citizenry. Tours included the Adams-Morgan area as an example of an increasingly vital, integrated community with several ongoing experimental programs, the Shaw renewal area with its militant community action center, and Northwest One, a victim of renewal and community dispersal.

"Planning, Peace and Racial Justice" closed the conference discussions with an address by Representative John Conyers, Jr. (of Detroit). He compared our preoccupation with national improvement and justice in Vietnam with our denial of these same rights and benefits to minorities in this country. In calling for a full commitment to redressing domestic inequities, he discussed Negro unemployment and the need to stringently enforce, even against the government, the equal opportunity legislation; the enlargement of housing programs for the poor and the necessity for some form of subsidized home ownership.

One of the key concerns of the PEO conference, Vietnam and domestic policy, was the central focus of Chester Hartman's remarks. He forcefully asserted several parallels between our reaction to the racial crisis and our actions in Vietnam. He cited, for instance, our society's unwillingness, both here and in Asia, to understand the basic changes which a repressed people require; the imposition of outside control on basic issues of self-determination; continuing a tradition of military response to political problems; our insistence on focusing on outside manipulators (e.g., Ho and Carmichael) and insensitivity to different cultures and peoples (the strategic hamlet and urban renewal display similarity).

Hartman also attempted to clarify the recent emphasis on the private sector's role in urban redevelopment. He stated that the private sector was useful in developing housing because of the unwillingness on the part of housing authorities to advocate low rent housing. He also pointed to the necessary restriction of government housing programs to a single jurisdiction which could be surmounted by private programs, and noted the knowledge in the private sector which could contribute to sound programs. On the other hand, he noted the cost factor which he suggested is not necessarily less under private auspices, the problem of excessive gains if the government is proposing to subsidize private involvement at a 15 to 20 percent profit, the unavailability of sufficiently well motivated businessmen to become involved without excessive profits, and the problem of community control which would no doubt be difficult if corporations were to be involved in development.

PRESS REACTION TO PEO CONFERENCE

Press coverage of the Washington PEO conference was substantial and generally favorable, and probably equalled in extent coverage of the AIP conference being held at the same time.

Wolf Von Eckardt, in the Washington Post, wrote "while learned scholars droned on in the ballroom of the Shoreham Hotel yesterday about beauty and humanity in the city of the future, a rebellious group of young city planners set up a rival workshop on the hotel's terrace to discuss equal opportunity for the people in the ghetto."

Von Eckardt found the AIP proceedings rather stuffy but was pleased with "the rebels" (PEO) who "demanded a voice of the poor in city planning, an end to discrimination and the building of new communities rather than the sprucing up of old ghettos."

Von Eckardt described advocate planning as "providing neighborhood groups with expert planning counsel to counter government renewal proposals. PEO members in various cities have already volunteered such service. The rebel group of mostly soft-spoken, clean-shaven and savvy young planners who appear to prefer cold facts to hot slogans, also believe that the urban crisis is more burning than the war in Vietnam. Many PEO members are also members of AIP, the official organization, and work for government agencies. A few planners seemed hesitant yesterday to put on an Equal Opportunity button for fear it might lessen their own opportunity for government work. Robert C. Wood the under secretary of the Department of Housing and Urban Development however accepted a button."

Ada Louise Huxtable, in the New York Times, interviewed some participants. " 'We are the wayward children of the planners,' one clear-faced young woman explained. 'We range from

liberal to radical. We want to reform our elders.' Many (PEO members) are members of the institute."

" 'It's a grass-roots movement,' noted an English visitor. We've had it in Britain. They want to join citizenship participation to political action in the planning process.' "

The Philadelphia Bulletin printed the PEO resolutions urging the AIP to: "Provide planners to serve as advocates for the poor and minority groups to aid them in identifying and articulating their needs and achieving their goals; encourage close liaison with the poor and minority groups and representatives and organizations selected by them in order to determine their needs; expedite the entrance of members of minority groups into the planning profession and report annually on its progress; recognize only those professional planning schools which include in their curricula field experience with citizen groups."

The Washington Post accompanied PEO on its tour of Washington slum areas "...down grimy and depressing streets of the Shaw renewal area, the Northwest One renewal area, Anacostia and Adams-Morgan. They talked to residents who told them they were being displaced for construction for which they were not eligible or which they could not afford."

The Royal Institute of British Architects Journal described PEO as a group that "wants planners to stand up and be counted in the fight for civil rights."

The Architectural Forum was impressed with PEO in its confrontation with AIP. Forum reported the opinion of Harvard city planning professor, Chestor Hartman, who "drew parallels between the responses to Vietnam and to the urban disorders--a similar attitude toward both peoples (as primitive and unable to govern themselves), and unwillingness to see basic change in either society (with land reform, or with an end to ghetto conditions), the reliance on repression (more bombs and more policemen), and the resulting destruction of both cultures (by strategic hamlets and urban renewal)."

THE PRESIDENT'S CORNER

The Washington AIP conference put PEO on the map. Dozens of people worked tirelessly, before, during and after the conference to make it a success. They all deserve the organization's thanks. David Stoloff and a number of others agressively pushed our program at the conference, and it paid off in good press coverage, breaking into the AIP conference program and in other effective ways. Irving Rubin emerged as a new leader in equal opportunity, and of course, Bayard Rustin deserves our deepest appreciation for getting us time at an AIP session.

The rewards of this effort were substantial. We attracted over 100 new members, broke through the reserve of AIP, came to the attention of Washington officials and the nation as a whole. Together with our session last year at the Portland conference, greater importance is being attached by AIP to issues of equal opportunity. In a recent newsletter, AIP gives almost three pages to our resolutions and activity at the conference. The great press coverage helped to get across our feelings about the war, the true nature of the crisis in our cities and the responsibilities of planners. The conference also gave greater legitimacy to those who involve themselves in equal opportunity and to PEO as an organization. Advocacy planning is not quite as dirty a word as it used to be.

While these are great gains, we have not actually won much. We still have only 5 percent of AIP's membership on our lists. We attracted hundreds of participants at the AIP conference to our sessions, but thousands didn't go out of their way to hear our message. Even if AIP adopts most of our resolutions, equal opportunity may not be advanced one whit.

These facts - and they are - should only make us more determined. The AIP turned down our resolutions calling for an end to the bombing and for more money for cities at the expense of the war effort. They sent the remainder of our resolutions to a variety of Institute Committees for evaluation and report, and have called on Chapters to study them and give their recommendations. We have established our own Committee on AIP (Caypake) to watchdog AIP's handling of our resolutions. The Committee will also help AIP's Committee on Minorities (headed by Bob Heifetz, Policy Committee member) to prepare a tough statement on AIP's responsibility in the equal opportunity field. Members of PEO are urged to join in this watchdog pursuit, not only by writing to AIP supporting the resolutions (as Albert Mayer has already done), not only by joining the Committee on AIP, but by getting their local AIP Chapters to discuss the resolutions as well.

It's not the simple resolutions we're after, but what such positive action can lead to. In our

current thinking of what AIP should do, our demands include such items as (1) allocation of large-scale funds for research and support of advocate activity by the AIP, (2) AIP legislative support for specific and positive housing and (3) an Institute monitoring system to see that professionals practise equal opportunity.

We are, of course, elated by our new membership. Our membership total, now equal to our optimistic propaganda handouts, stands at 300 - exclusive of delinquents who are being steadily dropped for non-payment of two years' dues. Second, the high percentage of New York members has been cut from almost a third in 1965 to about 20 percent today. So PEO is really becoming a national organization, less dominated by New York. Third, almost 25 percent of our members are planning students, perhaps the most exciting development. While we have only 5 percent of the profession, we have almost 20 percent of the students.

In fact, student membership may inspire one of the most dramatic thrusts of the organization in the near future. At Cornell, Rutgers, Rhode Island School of Design and Yale, students are thinking of starting PEO Chapters. Not only are they interested in equal opportunity per se, but the interest of students is tied up with questions of planning advocacy and planning curriculum. Students are rebelling against the approach to planning instruction at MIT, Hunter, Columbia and other schools, and PEO may become an important catalyst of student thinking and action on curriculum reform. PEO is also deeply committed to encouraging the entry of Negroes and other minorities into the planning field. The whole subject will come in for significant discussion at our forthcoming conference in Philadelphia this March.

We are at a turning point and a threshold. We have finished one great conference. Our annual conference in March promises to be another exciting event. To be held in Philadelphia, it will cover curriculum and race in planning schools, expand the development of our positions, move into the fertile field of social planning. We will also have a full discussion of new strategies for AIP.

This is going to be an exciting year for PEO, and there is plenty to do for those who want to become active. Work on watchdogging, on a conference committee, on student organizing, on developing positions, on researching the social planning field, on organizing chapters, on raising funds, or confronting AIP. Start doing real things in a real world for people.

ADVOCACY PLANNING EXCHANGE

PEO plans to begin assembling and disseminating information about what its members and others are doing in "advocate planning." It is hoped that this information will help advocate groups in their work while serving to inform interested people in how advocacy planning functions and the possibilities for using it.

In order to make this service a success it is necessary for you to write us about current planning issues and experiences associated with advocate work. We would also like to know your ideas on communicating the information to others. Some possibilities are descriptive sheets on each case mailed out to subscribers as they are prepared, or a news box in the newsletter, or examples of advocate treatment of a certain planning issue or activity. Please send your ideas and material to Advocacy Cases, PEO, 76 Reade Street, Room 203, New York, N.Y. 10007.

Two case studies of advocacy planning, one in New York State and one in Connecticut have already been prepared and are available upon request to the PEO office.

HOW DOES IT FEEL TO ESCAPE THE GHETTO? GOOD!

Most "fair housing" groups lose contact with families after they've been helped to find new housing outside the ghetto, but they are the people who best know the weaknesses of housing integration programs. Accordingly, Operation Open City, an arm of the Urban League in New York City, asked the New York PEO Chapter to survey the first 600 households Open City has helped move.

The single most important feature which ghetto families seek when moving, the survey shows, is a better neighborhood, even more than a better larger apartment. Ninety-four percent of all families questioned picked a good environment for raising children, as the most important item in a neighborhood.

Other items listed as of major importance were better buildings, more space and better schools. Surprisingly, recreation, transportation and integration were regarded as minor considerations.

"Although integration is seldom sought as a goal, it has resulted as a fact for those who have moved into better environment," the survey noted.

The study is a follow up of the earlier report, Planning for Open City, also prepared by the New York Chapter. Tom Gale designed, conducted and evaluated the survey and wrote the draft report for the Chapter. Copies can be obtained from PEO, New York Metropolitan Chapter, 283 Seventh Avenue, New York, N.Y. 10001.

PLANNERS RIGHT TO SPEAK OUT

When is a planner justified in speaking out publically? And when does the professional support this right?

What about the planner who finds himself at work on a plan that will seal off the ghetto with expressways or a plan that will locate new schools in white areas and therefore continue separation of Negro and white children? Maybe he works in a southern city where there is not much support for integration. Does he remain silent? Does he protest? Does he quit?

The trouble with the orthodox view is that is has no relation to morality, conscience or truth. If-you-don't-like-it-quit may leave a moral problem unchallenged or the truth undefended. Planning agencies, after all, do make mistakes.

Finally, the pragmatic question: just how much damage really is done when a subordinate disagrees publicly. Is the public less well served by more discussion? The planning chairman, the housing czar or the mayor may be irritated and fire the dissenter at the first opportunity, but our cities aren't operated for the convenience of officials. The more the argument takes place in public, the more citizens will appreciate planning.

A PEO policy proposal that is generating some controversy suggests the organization should support "the right of staff members to differ with their agencies and to publicly voice their views as individuals."

This is an unorthodox view with serious Jeffersonian overtones. As one correspondent observed, "Anarchy is around the corner if a staff member, having failed to convince the agency internally, is free to state his differences in public. There are ways and means within an agency for a staff member to express his convictions, the final one being to resign. Rather than advocating the administrative chaos that flows from unlimited dissent in public by the staff member of his own agency, PEO should sponsor discussion and training of effective methods of convincing fellow staff members."

This is the traditional answer. If you don't like it, quit! The history of labor-management disputes is replete with language that leads to the same conclusion. If you don't like what the boss is doing, get out, but at least it used to be the boss's money. Now planners are involved in public agencies where wrongheadedness may go contrary to public interests and misspend public money. Do they still have no responsibility to speak out contrary to the boss? Is it the boss's city and money?

In New York City last winter a state legislative committee investigated the city's middle-income housing programs and found builders and their consultants making excessive profits. Did planners with the Housing and Redevelopment Board know of these profits which were pushing up the cost of housing for the occupants? The City's public policy has been to build the most housing for the lowest cost so the planner who kept his own counsel was in effect breaking faith with the public's goals.

We know of another public agency in the re-tion where a planner has been working diligently for integration, precisely in the framework of stated and legislated public policy, but his boss is trying to muzzle him because when the political trading begins this staff member can't be controlled. He keeps feeding civil rights groups technical information that strengthens their case. Should the boss be able to muzzle this person who incidentally does not speak out publicly, but works only behind the scenes?

Should an agency person be able to talk with another member and discourage him from joining PEO "because Planners For Equal Opportunity may criticize some of our policies and programs?"

URGENT FUTURE ASSERTED BY MAYER

PEO member Albert Mayer "has said it all for this decade" wrote Walter Thabit in the Village Voice when reviewing Mayer's new book, The Urgent Future (McGraw-Hill, $16.50). Thabit's review noted that Mayer offered something new and constructive on such issues as public housing (we need to set a goal of 250,000 to 300,000 units a year instead of the current 30,000), urban renewal (it must be limited to our capacity to supply housing for the displaced), local government (more decentralization, less giantism), model

cities (break out of the renewal mold and spend 5 percent, not 1 percent, for renewing and rebuilding cities) and new towns (have government own the land).

Mayer calls for a "Great Debate." So does Thabit. He thinks The Urgent Future should be a public document to get the debate underway.

BOSTON PUBLIC HOUSING SCORED

Appoint new members to the Boston Housing Authority, recruit and train more competent and dedicated staff, end token integration, expand social services, increase subsidies. Point by point the report "Public Housing at the Crossroads: The Boston Housing Authority" reveals the twisted conditions of the public housing program in Boston today.

The report is adapted from the Master's thesis of Mrs. May B. Hipskam, a city planning student at MIT, who worked closely with an advisory committee composed largely of university people including some PEO members.

A 20-page introduction, including fourteen pointed recommendations for reform, was written by Chester W. Hartman for the Advisory Committee. Mrs. Hipsham's text is 72 pages of lively written, direct prose that eschews jargon and insiders' details. Copies are available at $1.50 each from the Citizens' Housing & Planning Association, 50 State Street, Boston, Mass.

RADICAL EDUCATION PROJECT

Students For a Democratic Society has organized the "Radical Education Project" which it terms an independent education, research and publication program to further its "new left" efforts.

The first number of its newsletter, "Radicals in the Professions," carried an account of a "Radical Planners" conference held over the weekend of September 29, 1967 in Washington, D.C. attended by 40 people. The group confronted that perennial problem "how to be a radical," according to the SDS correspondent.

Continuing activities of the radical planners are to be coordinated through the NEW THING Art and Architecture Center, 2127 18th Street, NW in Washington, D.C. Those interested in the Radical Education Project can obtain the newsletter, expected to be a bi-monthly, for $5.00 annually by writing to 510 East William Street, Ann Arbor. Michigan 48108.

JOBS WANTED AND OFFERED

Job Wanted

A principal planner in large New Jersey city seeks a position in a neighborhood level advocacy planning program with personal contact, where small scale urban design and environmental architecture reflecting humanistic values can be practiced. He holds MA in urban planning and has 6 years of experience, 5 with a public agency. Write Job Seeker #1, c/o PEO, 76 Reade Street, Room 202, New York, N.Y. 10007.

Jobs Offered

Regional anti-poverty agency in Appalachian metropolitan area seeks a city planner to undertake advocacy planning assignment on a staff basis. Work includes reivew and formulation of relocation policies on urban renewal, highway, CBD rebuilding and public housing programs being advanced by local government, but considered detrimental to poor and minorities by the agency. Current plans have to be reviewed for public hearings in the Spring, so applicants should be available soon, at least on part-time basis. Salary negotiable above $10,000. Apply immediately with some particulars to Job Opening #1, PEO.

Planning directorship in Pennsylvania city is open; local anti-poverty agency wants to propose a candidate who will give much more attention to the problems and needs of the poor than the city has given up to the present. Job will have to be negotiated with the city, but there appears to be reasonable support for agency's viewpoint on type of planner required. Salary commensurate with experience. Apply with some particulars to Job Opening #2, PEO.

Private fair housing program in New York City is seeking a planner to undertake the following: prepare brief research reports on progress of the program, evaluate impact of municipal housing policies and actions on equal housing opportunity, help prepare funding proposals and represent program at hearings and meetings. Ability in written and oral presentation desired; some planning experience necessary. Salary is about $10,000. Apply to Job Opening #3, PEO.

UNIVERSITY OF PITTSBURGH INTRODUCES SOCIAL ENDS COURSE

Word comes from Professor Clifford C. Ham that the Graduate School of Public and International Affairs at the University of Pittsburgh offers three new programs of interest to PEO members:

*A master's program in "Urban Community Development Administration" that emphasizes objectives, methods and approaches to achieving social ends--given in cooperation with the Graduate School of Social Work;

*Intergroup Relations training for officials and laymen beginning the first year with emphasis in housing; and

*$4,000 stipends to women over 30 (Carnegie Foundation supported) who enter professional fields of planning and public administration.

For details, write Professor Ham, 803 Bruce Hall, at the Graduate School, Pittsburgh, Pa. 15213.

VOL. 2 NO. 2 FALL 1968

PEO AT PITTSBURGH - AIP LEARNED QUICKLY

As everyone had quickly discovered from the flyers sent out for the annual AIP Pittsburgh conference, the Institute was safely back from its empyrean flight into the future at its "consultation" a year ago. Workshops and functional group meetings at much smaller size were announced. Subjects included not only the usual land use/control aspects but the newer (to AIP) issues of race, poverty, and equal opportunity.

It was this AIP about-face that prompted PEO to put up a sly sign above its lobby table:

PEO WELCOMES AIP
TO NOW CHALLENGES

But in spite of AIP's tuned-in programming, there were enough zero items to encourage PEO to hold a meeting on Sunday night with the Model Cities community on the Hill, to hear a report from Cuba, and to send representatives to informal conferences with Irving Hand, AIP President; Dick May, Conference Chairman and David K. Hartley, Director of Institute Development, on how to cure the internal ills of the Institute.

Pittsburgh PEO leader and Pitt professor Clifford Ham made major contributions to the PEO program (as well as to the AIP sessions)

PEO's suggested resolutions to AIP were presented at the Tuesday a.m. plenary session and lafer submitted formally. Excerpts from the Statement introducing the resolutions:

--"the AIP should speak out strongly and effectively on matters of public policy..."

--"At present about 40% of the members - those in the so-called Provisional Category, most of whom are qualified planners occupying key staff positions--are denied voting rights..."

--"Students...are likewise systematically denied participation in Institute affairs."

--We are discovering that people with all kinds of training and background...have important contributions to make to planning and are already making these contributions."

--"There is on the conference program not a single session where membership can discuss and express itself on basic issues of planning and policy..."

Recommended Issues. PEO put forth three examples of the kind of issues AIP should discuss:

1. The ways in which the Vietnam War has reduced our capabilities to deal with national urban problems.

2. The necessity of granting planning and programming funds intended to aid the poor directly to local community groups to use as they see fit.

3. How to implement the program of six million low and moderate income housing units over the next five years.

"CONFERENCE PROCEEDINGS" of PEO's second annual conference at Philadelphia in March 1968 by now should be in the hands of participants. This one-day event, themed as "Urban Crisis = Planning Opportunity," was marked not only by a confrontation between student groups and the then-current PEO policies, but by a series of in-depth workshops, all reported in the 68-page volume.

The revolt statement, presented by Mel Mitchell for 2MJQ, and a report of the guest speech by Carlos Russell are found in the report.

Also included is the often shocking round-up of AIP chapter response to the October 1968 PEO Resolutions presented to AIP, reported by Bob Heifetz.

At the end: an informative report, by status (student? member?) and home state, of the 400 participants.

Non-participants are invited to order the PROCEEDINGS by sending two dollars to PEO, 76 Reade Street, NYC 10007

PEO AT AIP MEETING

THE RESOLUTIONS

1. Resolved, that all provisional members, including students, be given full voting rights in both local chapter and national AIP affairs.

2. Resolved, that the AIP expand its definition of those qualified for membership to include any individual engaged in planning activities for any public or private agency.

3. Resolved, that election procedures for Institute Board of Governors and officers be revised to provide for the following:

   a. that nomination procedures be liberalized to permit nomination on petition of 20 voting members.
   b. that the Nominating Committee offer at least two candidates for each office.
   c. that a system of preferential balloting be used for the election of all Institute officers and board members.
   d. that every nominee be required to make a statement of policies that he will pursue as an officer.

4. Resolved, that business meetings be scheduled during each annual conference in which members have an opportunity to express views and propose and vote on policies of the Institute.

Postponed Issues. Although several other issues were red-hot in the minds of PEO strategists, it was decided to limit resolutions to matters of AIP procedures and administration. The other matters were:

- --a call for an AIP statement on the Model Cities mis-fire in Pittsburgh.
- --a call for a stand on transportation re black/poverty communities.
- --a request for an AIP position on planning education and on an ethics requirement for attention to poor communities.
- --ditto on increasing AIP's aggressiveness with the Federal Establishment.

The NOW Generation. PEO demands at the Conference were paralleled by those from a committee of students. They asked that student membership be extended to young people active in such groups as Upward Bound and Pride, that students be admitted immediately upon application, and that they be given voting privileges. They also asked that the AIP actively recruit minority group members and that funds be set up to help students attend AIP conferences in distant cities.

According to the Christian Science Monitor, some of the militant students told AIP members they were not sure the Institute was worth joining. PEO had earlier decided, with the students, to present separate lists of demands, in order to increase the pressure on AIP.

Workshop Participation. Altho searching questions, centering on equal opportunity, were prepared for use by PEO members in

MEETING ON THE HILL

PEO went up the Hill on Sunday evening to take a look at Model Cities programs. The frustrating story of how City Hall has effectively prevented the emergence of any semblance of poverty/black control of the programs was unfolded by community people. As PEO watched and listened, a heated dialog made it plain that planners of any kind would need to prove themselves before they could be accepted by such a beleaguered community.

Excerpts from the meeting (transcribed by Charles Kaswan from his tapes):

"We haven't any planners, because we didn't have planners we could trust...we need them for consultants but we don't know whom we can get because they are paid by the people we might have to be opposed to" (Robert Isabelle).

"Take our word...to understand us, you've got to understand yourself first..." (Sir John).

"If I came to work for you as your planner, would you think of me as your errand boy - say hey, boy, write this up, hey boy do this, do that, would you think of me as a tool?" (AIP white planner).

Reply from local citizen: "If you want to take that attitude, YES!" (Bedlam)

"This cat is lying - he has been a tool of the white power structure for as long as the planning and architecture professions have existed...we need you to help us solve the problem and not define the problem" (Harry Quintana).

"My fear is that we don't achieve a model city but a false city, if you have a new school but a poor educational system" (Tim Stevens).

"The black community needs help. But go our way. Don't tell us we got to go this way, cause we'll know that this is a white power structure..." (Sir John).

"There's the danger that the community will be divided by community organizations set up by various government programs, that it's really ducking the essential question--how do we get political control?... what the planner can do is tell you how." (Clifford Ham). ■

each workshop, this method of desirably focussing AIP attention was not generally used. The main reasons for this seemed to be the happy circumstance that many of the attendees were noticeably in the equal opportunity groove. Some of the panelists were representatives of agencies active in planning for poverty areas; others were even non-agency advocate planners for such areas.

Minority Affairs Committee. The generally stymied AIP Committee on Minority Relations came in for intensive examination by both PEO and AIP officials. As one report has it, PEO was almost co-opted to carry out the committee's work, but an arrangement was worked out under the continued chairmanship of Irving Rubin. An intensive "retreat" work session to hammer out AIP policy is promised. (In this connection, see "Proposed AIP Policy Statement on Equal Opportunity" -- Bob Heifetz' amendments to the S. Kaufman draft -- in PEO's Second Annual Conference Proceedings, pp. 12-14).

Report from Cuba. Francis Piven and Chester Hartman, along with five other professionals including Max Bond, ARCH director, had spent about two weeks in Cuba as part of the Island's attempt to reach Yankee professionals. A resumé of their observations:

--Cuba is eminently a one-man operation, with Premier Castro's eyes on every revolution project.

--The dominant economic configuration is production of sugar for Russia, with Russia supplying the oil needs of the Island.

--A great deal of quick prefab housing is in evidence.

--A perceived effect is the elimination of the psychology of poverty.

--Dissent is not easy, not frequent, and usually not pointedly expressed.

--Reassignment of dissident professionals to laboring posts has been sometimes done, but salaries have generally been maintained.

Davidoff Campaign. During the conference, a fund-raising party was thrown for Paul Davidoff, a PEO founder and policy committee member, for his campaign for U.S. representative from his district in Westchester County, New York. Davidoff thus effectively illustrates his thesis that planners should participate in political life more fully. As the Monitor described him, he was "active, articulate, hard-hitting."

The post-election news was, shall we say, not positive; Paul lost to the entrenched and popular Ogden Reid, but managed even so to get very nearly 25% of the vote in a 3-man race.

In an AIP panel, "The Planner as Advocate," Davidoff pointed out that one hundred years after the constitutional definition of a black as 3/5 of a man (for voting purposes), he is still 3/5 in infant health, housing, and income. He urged planners to lead white responsibility to meet the needs of the poor in white suburbs as well as in core city advocate planning.

JOBS - JOBS - JOBS - JOBS

CITY OF NEW YORK--HUMAN RESOURCES ADMINISTRATION--OFFICE OF PHYSICAL PLANNING AND DEVELOPMENT

This newly established Office is seeking qualified applicants for the following positions:

Deputy Director	$13,500
Assistant Director (Planning)	12,100
Assistant Director (Design)	12,100
Assistant Director (Research)	12,100
Physical Planner	8,200
Architect	8,200

Appointment above the minimum may be considered for suitably qualified applicants. HRA is engaged in a program emphasizing a creative City-community partnership for the development of multi-functional community facilities. Contact T. C. Pei, Director, 220 Church Street, New York City 10013; (212) 433-4876.

A NOTE ON ADDRESSES

Use 76 Reade Street, NYC 10007 when writing the national PEO, Pres. Walter Thabit, or Steering and Policy Committee members. Membership affairs, Equalop Newsletter subscriptions, and publications of the national PEO also handled there.

Use 289 Seventh Avenue, NYC 10001 when sending Equalop contributions, gripes, suggestions (all needed) directly to Hall Winslow, Editor, (Tel: MY-1-RYAN). If communications are also for Thabit, etc., send first to 76 Reade Street and they will reach the editor eventually.

289 Seventh Avenue is also the mailing address for the New York Metropolitan Chapter, Harry Schwartz, Chairman. Write there about New York affairs, requests for Chapter publications, and offers of help. The phone as above: MY-1-RYAN.

FROM THE STEERING COMMITTEE

At the Nov. 6 meeting of the Steering Committee, main topics for discussion:

--A follow-up program for the dialog begun in Pittsburgh with the Model Cities community. It was agreed to send a Task Force to Pittsburgh to explore with the community the ways it may want PEO to help in reaching its aims. The Pittsburgh committee thus far includes Charles Kaswan, John Edwards, and Felix Obinani.

--A draft letter to AIP pinning down the changes promised by AIP in the matter of nominating and electing officers. The letter raised questions like the following:

--how are members of the Nominating Committee selected?

--by what date are nominations supposed to be submitted?

--when do sponsors hear whether their nominees have been accepted for the ballot?

--if petitions are to be submitted, how and by what date?

--what limitations, if any, will be placed on the position statements required of the nominees ?

--is it possible to nominate a slate of nominees?

--what about existing and future provisional members voting? Are regular examinations being held to upgrade provisionals?

Proposals regarding strategies of dealing with the nomination opportunity will be taken up at the next meeting.

The proper PEO stance in the matter of the Miami Beach AIP conference next year was discussed, but inconclusively. Discussion centered on doing a critical analysis of planning in Miami vs. boycotting the conference.

T'ing Pei, Rikki Kramer, and Felix Obinani are new members of the Steering Committee, while Harry Schwartz and Jeff Offerman have resigned.

THE AMERICAN INSTITUTE OF PLANNERS is in the midst of a two-month Program Revaluation ending Jan. 1. Major decisions on this will be made by Chapters, suggesting that PEO/AIP members must locally watch, criticize, participate to the full in this operation. The draft of goals and objectives with summaries of priority ratings and budgets was to be distributed on Nov. 22 to Chapters, and they would have one week to examine it. After chapter review and response, the draft will be worked over by the AIP staff, the Task Force, and the Board of Governors; all is to be decided and initiated by Jan. 1.

A prior chapter review was scheduled for Oct. 27-Nov. 2. The letter announcing this schedule was dated Oct. 18, but mailings were apparently delayed past the Nov. 2 date set for this first Chapter response.

The Taconic Foundation deserves recognition for its generous support of PEO activities, specifically the wiping out of the deficit from the major and successful PEO efforts to shake up the American Institute of Planners at their dinosaurian nonconfrontation with the Next Fifty Years, a year ago in Washington.

In reply to the PEO President's two letters protesting farm labor conditions in California (stimulated by the grape boycott movement from the Delano, California, United Farm Workers), a form reply from the Delano District Chamber of Commerce was received. (Form letter necessitated by the heavy volumes of protests?).

Their position: the union does not represent a majority of California farm workers", the agriculture industry is working hard for a "highly productive, satisfied labor citizenry," and solutions must avoid raising prices, lessening quality, destroying jobs and producers, and opening markets to "Mexico and similar countries, where an over-supply of cheap labor exists."

FIRST EXECUTIVE SECRETARY APPOINTED

Miss Sidney Abbot has been selected from several promising candidates to be PEO's executive secretary, an officer that the organization has badly needed ever since its formation. The position is part-time, but her steady hand on PEO business is already making itself felt.

She will carry out a variety of essential tasks, among them handling the communications for the national PEO HQ at 76 Reade St., offering help and stimulation to chapters, preparing publications and announcements, offering major help with Equalop, attending meetings and handling liaison with other organizations.

Now a planning student at Columbia, Sidney brings PEO a satisfying assortment of skills. After a B.A. in art history at the University

of New Mexico, she wrote about city development for the Albuquerque Journal and then co-founded a weekly paper, the Albuquerque Review, focussing on problems of that city. The paper won prizes for design and editorial content in its first (and only) year.

After 1-1/2 years in public relations for the oral polio vaccine program, she came to New York first as assistant editor for an engineering trade publication, and then as assistant editor of Architectural Record for three years doing book reviews and feature articles, and acting as production editor.

PEO member Donald Bruce Ardell is Editor of the AIP Minesota Chapter newsletter. If his membership swings with his wayout format (design: John Baymiller) and farther-out news and comments, AIP can't be all that bad.

The November issue, suddenly, contained all the PEO resolutions presented to AIP at the Pitt conference..and a resume of the resolutions from the student committee also.

Ardell advises PEO members to penetrate further into key posts, especially media, within AIP. Quote from an article in the Sept. issue:

> "The American Institute of Planners is not much more representative of member sensibilities than the Democratic (or Republican) party...."

This article, it's not hard to imagine, had something to do with the recent improvements in the election system of AIP.

PEO'S NEW YORK METROPOLITAN CHAPTER is currently developing a broad scale program aimed at obtaining the appointment of a black member of the New York City Planning Commission. Chairman Schwartz has sent out a letter to all concerned organizations, after testing the climate for this move and finding it favorable. The coming vacancy will be caused by the expiration of Elinor Guggenheimer's term.

A list of candidates (long enough to avoid the suggestion of special effort in behalf of one community or one organization) will be prepared and submitted to Mayor Lindsay by the member organizations.

New York PEO met with and discussed equal opportunity matters with sponsors of Westbeth, important West Village factory-rehab project for artists. PEO asked the sponsors to respond to 3 issues: assured minority occupancy, rent support for low income applicants, and continual review of each tenant's need for subsidized rents. Westbeth will apparently use FHA rent-income rules, which are regarded by PEO as insensitive to the realities of this project.

The New York Chapter's role in watch-dogging the moderate income housing administrations (State and City) through its participation in the Committee for Equal Opportunity in Publicly Aided Housing has had a partial payoff. Administrator Nathan of the City's HDA promulgated long-promised stern orders for equal opportunity in construction and occupancy of all city housing. Site and sponsor approval, marketing programs, tenant selection, and vacancies "shall" be scrutinized by the HDA.

PEO nagging worry: will HDA have the staff to do this, and if so, will certain recalcitrant labor union sponsors, among others, be forced to finally stop discriminating?

An 8-page PEO policy statement, developed in response to issues raised at the Second Annual Conference held at Philadelphia in March 1968, has recently been mailed to members. In it, PEO's relation to the black liberation movement and to the black power challenge are set forth.

Three constitutional changes are being proposed, as follows:

1. All professional planning advocate organizations will be admitted to PEO and represented on the Policy Committee. Since some are black, this will increase black representation on the Policy Committee.
2. Interim appointments to the Policy Committee can be made (by the Committee).
3. Heads of grass roots organizations in deprived communities will be considered as planners for membership purposes.

In addition, PEO will pursue all avenues to a radical increase of minority persons in planning schools and agencies.

As for planning education and universities' roles in urban life, PEO outlined proposed remedies.

Model Cities: PEO will work for increased funding, for programs enhancing economic power in the ghettoes, for local control of programs, and for simplified procedures for establishing Model Cities operations.

In addition, advocacy is again defined, and the aim of democratizing the planning profession is announced. A supplemental statement is forthcoming after further Policy Committee discussions on the subject.

RENEWAL magazine continues its pictorial penetration of the radical scene in the churches. Published by the Community Renewal Society ten times a year at a $4 rate, it is available from 116 South Michigan Avenue, Chicago 60603. The September issue plunged into the Chicago convention bloodbath, the real Agnew, and the disgrace of the white churches' cant:

> "Forgive us for pretending to care for the poor, when we do not like poor people and do not want them in our homes..."

The report by David W. Barry, Exec. Dir. of the New York City Mission Society, on the churches' role in Bedford-Stuyvesant devastates current programs. Carlos Russell, assoc. prof. at State University of New York, Westbury, writes on the Black Caucus in the same issue.

ACADEMIC VIEW

The special issue on the Urban Negro of Urban Affairs Quarterly (IV: 1 September 1968) attempts an "impressionistic overview of current thought in the field." Karl E. Taeuber ("The persistence of the poverty explanation of racial residential segregation is puzzling"), Ralph W. Conant ("black self-government must occur in substantial proportion in this country before blacks can integrate"), Helen Icken Safa ("Negroes are actually stressing those values which will promote their acceptance by the white society"), John Kramer and Ingo Walter ("The Black City situation suggests that traditional political machines will be supplanted by competing organizations fostering Negro vs. Negro political conflict, generally along social class dimensions"), Don R. Bowen and Louis H. Masotti ("Cleveland's Poverty Board candidates do not appear to share a well defined view of their social world, certainly not an ideology of revolutionary redistribution of property"), are among the contributors.

Some writers aren't with it, but the whole would be grist for the PEO community.

POVERTY LIKE OBESITY?

"By the time one reaches the end of this book it is sadly clear that the poverty we deplore issues from the same source as many of the pleasures enjoyed by those who have written its various chapters and by the varied readers who consult their contents" — Thus the Bloomberg /Schmandt introduction to Vol. 2, Urban Affairs Annual Reviews: "Power, Poverty and Urban Policy."

"...the world of the urban poor is not some "other America"; it is of one piece with the America of wealth and well-being..." they continue. Their comparison between suggested cures for obesity and our poverty-supporting culture would be amusing if not so cutting. And ...."the medical mainstream in the United States is itself so seriously polluted by inadequacies that only its general reform can hope to bring reasonable opportunity for health to the deprived....

"Only a small minority are prepared to attempt institutional reforms...most people, apart from ritual griping, seem relatively content with things as they are...if democracy American-style means only majority rule, then this generation is not likely to bring about more than very modest gains against chronic poverty."

PLANNING EDUCATION

Michael P. Brooks and Michael A. Stegman believe that a preferred direction is the training of social policy planners who have not only a major interest in the social effects of all urban planning but also the major aim of social development through planning. It's all in their article in the AIP Journal for Sept. 1968. Signboard: "...the planner's primary contribution stems from his knowledge of the urban system, from his ability to design, or implement, strategies for positive intervention within that system."

DESEGREGATED NEW TOWNS

From Weissbourd/Channick article in Center Magazine, Sept. 1968: "An Urban Strategy"--

"...if we build sufficient outlying housing to accommodate Negro and white population growth and sufficient surplus housing to allow an initial movement of one-eighth the ghetto population and three-and-one-half times as many persons from white city neighborhoods and suburbs, more than fifty percent of the ghetto can be eliminated in the first five years ....

"Desegregation can be achieved by building 350,000 surplus housing units a year. We propose that these be built as part of new towns with population of 50,000 to 100,000 each....

"A large-scale new-town program requires withdrawing federal subsidies from suburban-tract development outside the scope of the program and from high-income residential areas .... If public funds for land development and housing are used only for desegregated new towns, only the very wealthy will be able to build white enclaves...

Decisions...ought to be made by metropoli-

tan authorities in each region.... A new-town program costs the least of any program for dealing with the problem...350 new towns would consume only a total of 3.5 million acres, a two-thirds saving over present urbanization."

"What is needed - and what the New York Advocate will provide - is a sense of emergent possibilities in municipal affairs so that people can act to what is happening, and will happen, rather than to what has happened." Thus reads the prospectus for a new monthly tabloid review. C. Richard Hatch, founding director of ARCH (Architects Renewal Committee for Harlem) is publisher; Nelson Aldrich is editor; and the 4-page dummy has a piece by Richard Stover calling for reactivation of the rent strike. Photographs too.

The pilot issue, appearing on newsstands in November, was to have articles on suburban exclusion, economic growth in the ghetto, the failure of rehab, a proposal for total health care, and an interview with Ed Logue, State urban development corporation chief. Write for your special issue and for subscription rates - 2700 Broadway, New York City 10025.

"Model Cities may be accurately described as a Mini-Enrichment Program Planning Effort on a Demonstration Experimental Basis....I'd like to see the fireworks the first time some central city tries to use regional planning to push housing for urban poor into lily-white suburbs....we have to create and lead a lobby that includes the urban poor and is at least as powerful as the gun lobby...."

--Clarence Funnye, at Annual Meeting of the New York Chapter of American Institute of Planners.

FOR THE FEBRUARY 1969 EQUALOP

Help us monitor Washington currents as the new administration takes over. Send your observations, local or national, to EQUALOP by January 31, please. We need more reports from cities across the country. Send in your local experiences to inform and stimulate the rest of us. Tentatively planned for February: a hard-hitting symposium on new towns.

INTELLIGENCE FROM THE OTHER FRONTS

ARCH (Architects Renewal Committee in Harlem), acting as technical adviser to the West Harlem Community Organization, has presented an "elastic proposal" for a natural amphitheater as a substitute for the controversial gymnasium that Columbia University had unilaterally planned for Morningside Park. Put forth as space for both professional and amateur entertainment and as an activity assuring safety in the park, the proposal includes a multipurpose skating rink and pool facility, with a small avant garde theater and a crafts and exhibit building. The design work was done under an OEO demonstration grant. Refinement and development by groups from the entire West Harlem community is the indicated next step.

The SOUTHWEST ALABAMA FARMERS CO-OPERATIVE, a legacy of Selma, asked a Federal court in late October to lift a state court order blocking the use of more than $1.5 million in Federal aid to the cooperative. Mayor Joe T. Smitherman of Selma is reportedly behind the move, which co-op president William H. Harison said was "just another in a long series of harassments and vindictive actions."

A seven-year thrust of advocacy planning in NYC has recently received the backing of Mayor Lindsay. This is the Alternate Plan for Cooper Square, a community response (executed by Walter Thabit) to a slum clearance project proposed ten years ago. Local meetings to update the alternate plan are going on, with Thabit acting as consultant.

At-the-front pamphlets are available from SOUTHERN STUDENT ORGANIZING COMMITTEE P. O. Box 6403, Nashville 37212, at 10¢ each. Write for their list. Their magazine, THE NEW SOUTH STUDENT, is $4 a year (50¢ for a sample copy), but the $5 membership bargain includes a subscription

BLACK POWER--A POSITIVE FORCE is a conference report from the National Conference of Christians and Jews, March 1968. From the closing statement: "We've been talking about a positive black self-image, creative use of black abilities and capabilities, a legitimate part in decision-making power, and above all, legitimate institutions to achieve these...." Address: 43 West 57th Street, New York City 10019.

WHATEVER HAPPENED TO----

The NEW THING Art and Architecture Center, with its promising programs of music, art, architecture, environmental awareness, and film-making for ghetto youth? The PEO Now Towns tour in Washington, October 1967, felt the inspiration--we need further reports from the Adams-Morgan area project at 2127 18th St., N.W., Washington, D.C.

News of other projects for stimulating minority awareness and accomplishment through cultural activities will be welcomed.

The RADIO FREE PEOPLE, announced last July by the Radical Education Project, Ann Arbor, in its newsletter, RADICALS IN THE PROFESSIONS? Set forth as an audio counterpart of The Newsreel, New Left film production and distribution operation. Peter Sutheim, 160 Prospect Place, Brooklyn 11238 is the contact.

Other news from Radical Education Project: a planned confrontation at the American Sociological Association convention in Boston last August... a shake-up of the Asian Scholars cluster... University of Wisconsin's Teaching Assistants Association negotiate the "misunderstandings, mistakes, injustices, and operational inadequacies in their departments"

The by now famous parody of urban planning job announcements by a group of younger New York planners is found in the July-Aug. 1968 issue of Radicals in the Professions.... Ed Silvers, an SDS member of VISTA, laments lack of radical thinking among VISTA volunteers... A NEW MAGAZINE is announced; temporary address: J. McDermott, 838 West End Avenue (6C), New York City 10025....Critiques of textbooks invited at University of Indiana.... Gross National Product Company, Wayzata, Minnesota 55391 will send information about their "great political posters," and invites poster art graphics and slogans.

MFY -- AN EARLY AGING

What she, and most of us, call the "grandest, most imaginative social work experiment of our time--and the model for all poverty programs" has acquired a different and lesser role, says Susan Brownmiller in the Village Voice (Oct. 24, 1968).

Its budget cut by one-third, Mobilization for Youth is down to three storefront service centers from nine. The gas station training program has been abandoned, and the luncheonette training project has closed its doors. The homework helper program, endorsed and recommended even by the NYC Board of Education, and the higher education program ($500 yearly stipend for 40 students at NYC colleges, plus counselling and tutoring) have gone the way of successful "demonstration" projects.

OEO will generously support MFY's new program of experiments with urban cooperative and small-business projects. But gone are the welfare rights movement, the concept of the flat welfare grant, the education efforts, the collective social action attempts, and the whole Community Development division. No community organizers are left. "The end of the neighborhood service centers," says Brownmiller, "marks the end of MFY's role as advocate for the community."

 As Amended 2/10/69

CONSTITUTION OF PLANNERS FOR EQUAL OPPORTUNITY

ARTICLE I. NAME

The name of this organization shall be Planners for Equal Opportunity.

ARTICLE II. PURPOSES

Section I. Purposes: Recognizing the positive contribution which planning skills and concepts could offer to the struggle of minority groups for equal opportunity, and realizing the inequities and abuses against those minorities which too often result either by deliberate intent or conscious neglect - from the programs and actions of public and private agencies and institutions, Planners for Equal Opportunity dedicates itself to use its professional competence to safeguard the rights of minorities, to oppose discrimination, to provide equal enjoyment of the fruits of this affluent society, and to support the increase of political influence and independence of minorities. To these aims, purposes and objectives, we hereby adopt the by-laws as hereinafter set forth.

Section 2. Program: To carry out its purposes, the organization will engage in the following activities:

a. Develop an action program in which individual members will offer advice and professional aid to local or community groups involved in the struggle for equal opportunity, and assist in bringing planners and such groups together for these purposes.

b. On its own initiative and in response to requests, prepare statements or position papers on general issues within its competence related to the struggle for equal opportunity, and reexamine planning principles and practices where they impair equality of opportunity.

c. Publish a newsletter and other materials; act as a clearinghouse for planning efforts to aid the struggle for equal opportunity; communicate with planners, allied professionals and public officials to enlist their support and cooperation and publicize our positions to the general public where appropriate and desirable.

d. Promote the entry of members of minority groups into planning and allied professions and encourage professional schools to recruit minority applicants by making scholarships and other financial aids available to them.

e. Undertake such other activities as its membership may find necessary to carry out its purposes.

ARTICLE III. MEMBERSHIP

Section 1. Qualifications: Planners for Equal Opportunity is open to all members of the planning and allied professions and to elected officials of community organizations who support its purposes and activities.

Section 2. Classes of Membership: Membership shall be of two classes: Active and Supporting.

Active Members: Shall have voting rights in the national organization, may hold elective office in the organization, and have an obligation to participate actively in its program.

Supporting Members: Shall not have the right to vote or hold elective office in the organization, but will receive all publications and may attend all meetings.

ARTICLE IV. DUES AND ENTRANCE FEES

Section 1. Annual Dues: Dues shall be payable annually on the first day of the fiscal year, July 1.

The Annual dues shall be set forth in the By-laws of the Policy Committee and shall be determined by the affirmative vote of not less than two-thirds of the members of the Policy Committee.

Section 2. Delinquencies: Notification of outstanding dues shall be sent by the Secretary-Treasurer to delinquent members not less than once in six months, and the delinquent member informed of the penalty herein provided. If a member fails for one year to pay his dues, he shall cease to be a member but may, at any later time, be reinstated on payment of dues for the current year.

ARTICLE V. OFFICERS

Section 1. Officers: The officers of the organization shall be a President, a Vice-President, a Secretary-Treasurer, a Policy Committee of twelve elected members plus the President, the Vice-President, the Secretary-Treasurer, ex-officiis with vote, plus all duly elected heads of Chapters, also ex-officiis with vote, and a Steering Committee consisting of all members of the Policy Committee in the New York metropolitan area willing to serve plus other Policy Committee members requesting membership in writing to the President attesting their willingness and ability to attend regular Steering Committee meetings in New York plus such other New York metropolitan area members of PEO appointed by the President, from time to time, and at his discretion.

Section 2. Nomination of Officers: A Nominating Committee of five Active Members shall be appointed by the Policy Committee from the membership at large, at least 90 days in advance of the Annual Meeting of PEO. The Nominating Committee may nominate more than one candidate for each office. The Nominating Committee shall endeavor to nominate personnel for the Policy Committee who will be regionally representative in relation to the number of PEO members in each broad section of the country and elsewhere. The report of the Nominating Committee and a secret ballot shall be mailed to all Active Members entitled to vote not less than 45 days before the Annual Meeting. Voting members are privileged to vote for any qualified person whether or not he be nominated by the Nominating Committee. Voting may be by mail.

Section 3. Election of Officers: The officers of PEO shall be elected by the affirmative written ballot of a majority of the members voting. The results of the ballot shall be ascertained by a Teller Committee, appointed by the President, and consisting of not less than three members, who will make a tally at a pre-announced date and report the results of the election to the Annual Meeting. In case no candidate for a particular office shall receive a majority of votes cast, the Policy Committee shall elect one from among the candidates to fill that office.

Section 4. Terms of Office: The terms of office shall begin immediately after the Annual Meeting at which they are elected, and shall end immediately after the Annual Meeting at the end of their term; but officers shall hold office until their successors have been elected and installed.

The President, Vice-President and Secretary-Treasurer shall be elected for terms of one year; the members of the Policy Committee shall be elected for overlapping terms of two years, six members being elected each year. Chapter heads serving on the Policy Committee shall serve so long as they are heads of their respective Chapters. Members of the Steering Committee shall serve so long as they are members of the Policy Committee.

Section 5. Vacancies: The Policy Committee may temporarily fill vacancies in office occuring between the Annual Meetings, officers so selected to hold office only for the balance of the current year until their successors are elected and installed.

Section 6. Duties of Officers: The President shall call and preside at meetings of PEO, the Policy Committee and the Steering Committee (if he is from the New York metropolitan area. If not, the Vice-President shall preside over the Steering Committee. If neither the President nor the Vice-President are from the New York metropolitan area, the Steering Committee shall elect a Chairman from among its own members, who shall be acceptable to the President and who shall exercise the powers of the President in the Steering Committee), shall, except as otherwise provided, create and discharge all committees and serve as a non-voting, ex-officio member of all committees, and perform such other duties as are customary to the office.

The Vice-President shall act as President in the absence or incapacity of the President.

The Secretary-Treasurer shall perform such duties as are customary to the office, including responsible direction of such secretarial and fiscal duties as are assigned by the Constitution to the Steering Committee.

The Policy Committee shall adopt By-laws for the regulation of its proceedings, shall adopt general policies and positions for PEO, shall provide general direction and guidance to the Steering Committee, shall fix the annual membership dues and approve the annual budget. The Policy Committee is empowered to appoint active minority PEO members to the Policy Committee to insure full black and other minority participation. Such members will serve until the following election.

The Steering Committee shall adopt By-laws for the regulation of its proceedings, shall undertake activities designed to implement the purposes and program of PEO, shall administer the day-to-day affairs of the organization, shall prepare an annual budget, shall authorize all contracts and expenditures (but shall not incur liabilities in excess of unappropriated funds in the hands of the Secretary-Treasurer), and shall act for the Policy Committee at the Policy Committee's discretion.

ARTICLE VI. MEETINGS

Section 1. Annual Meeting: There shall be an Annual Meeting at a time and place to be determined by the President, which shall best serve the convenience of the greatest number of PEO members.

Section 2. Additional Meetings: Additional PEO meetings may be called by the President or by a majority written vote of the Policy Committee.

Section 3. Notice of Meetings: Thirty days notice of all meetings of PEO shall be mailed to all members, except in an emergency, when, with the approval of the Policy Committee or Steering Committee, the President may call a meeting at shorter notice.

Section 4. Minutes of Business Meetings: Minutes of all business meetings of PEO, of the Policy Committee and of the Steering Committee shall be kept by the Secretary-Treasurer.

Section 5. Meetings of Policy Committee: Meetings of the Policy Committee shall be called by the President as frequently as, in his judgement, the accumulation of business to be transacted shall demand, and at times and places to be determined by him. There shall be, each year, at least two meetings of the Policy Committee.

Section 6. Meetings of Steering Committee: Meetings of the Steering Committee shall be called by the President (or Vice-President or New York metropolitan area Chairman elected by the Steering Committee as the case may be) as frequently as, in his judgement he deems necessary, and at times and places to be determined by him. There shall be, each year, at least six meetings of the Steering Committee.

Section 7. Quorum: A majority of the Policy Committee or of the Steering Committee shall constitute a quorum for the transaction of business at meetings of either committee.

Ten voting members shall constitute a quorum at any meeting of PEO; but any vote passed at a meeting of PEO shall be regarded only as expressing the collective judgement of those present unless and until approved by the affirmative written ballots of a majority of those entitled to vote and voting.

ARTICLE VII. LOCAL CHAPTERS

In any city or region of the United States or elsewhere, any group of three or more Active Members of PEO may form a Chapter of Planners for Equal Opportunity. Professional planning or allied professional advocate organizations (non-government, non-commercial, oriented toward assisting minority or other poor communities) are permitted to join PEO with the same status as Chapters and with the right to representation on the Policy Committee. To be formally recognized, Chapters must formally accept PEO's purposes and program as the basis for formation of the Chapter, and must transmit to the Steering Committee a list of its members, a copy of its By-laws or rules of procedure which are in conformity with the Constitution and By-laws of the national organization, a list of its officers and the date on which they were elected. The Steering Committee is to be informed of the results of each subsequent election within thirty days of the election.

At least one copy of all formal publications of the Chapter, including such materials as annual reports, adopted reports of Chapter committees, newsletters, rosters, and other similar reports, shall be filed with the Steering Committee at the time they are distributed to the Chapter membership.

ARTICLE VIII. SPONSORING AND ADVISORY COMMITTEES

Section 1. Purpose and Composition: Sponsoring, Advisory or similar committees whose purpose is to improve the effectiveness of PEO may be created by the Steering Committee, as hereinafter stated. Such committees will be composed of notable persons in the fields of planning, housing and civil rights, or recognized experts in those fields, or combinations of both, who publicly endorse the organization and its purposes. Such Committees may be formed for the purpose of public endorsement, or for giving aid and advice to the Policy and Steering Committees.

Section 2. Formation of Committees: Sponsoring or Advisory Committees will be designated by the Steering Committee after approval of the specific form and purpose of such committees by the Policy Committee, and after consultation with the Policy Committee on the initial group to be invited to join them. Such committees are to continue to serve only at the discretion of the Steering Committee. From time to time, the Steering Committee may name new members of such committees to replace departed members or to extend such committees, as it sees fit.

ARTICLE IX. AMENDMENTS

Upon authorization of the Policy Committee, any proposed amendment shall first be submitted by the Policy Committee to the membership and to the Chapters in preliminary form for consideration and comment for a period of not less than 60 days. After that time, the Policy Committee shall issue a report summarizing the comments received, and presenting its final recommendation in the form of a ballot. Adoption of the amendment shall require the affirmative written ballots of two-thirds of those voting, which majority shall not be less than 25 percent of those eligible to vote. Decision shall be determined by count of the ballots as cast as of the thirtieth day after the ballot mailing date.

ISR

CENTER FOR RESEARCH ON UTILIZATION OF SCIENTIFIC KNOWLEDGE / INSTITUTE FOR SOCIAL RESEARCH / THE UNIVERSITY OF MICHIGAN

ANN ARBOR, MICHIGAN 48106

May 1, 1971

Dear PEO Member:

We are beginning a study of innovation and change in the planning profession, with an emphasis on advocacy planning, and would like your help. The enclosed questionnaire, which is being sent to the PEO mailing list has a dual purpose: first, we want to get a sense of the kinds of work you've been doing in the past several years, and your view of the field and some of the issues facing it; and second, we need your help in suggesting names and addresses of people who have been engaged in advocacy work in the same time period.

You may wonder about the purpose of this work -- is it merely "more research?" We hope not. Our view is that in the last few years, especially toward the end of the Johnson presidency, a number of experimental approaches to planning -- including various forms of citizen participation and advocacy -- were tried. Now is the time, before that period retreats too far into the past, to try to retrieve and analyze that experience in a more or less systematic fashion. We think our work will have relevance in evaluating some of the strategies for change which have been current; and perhaps most important, we hope our research can be fed back to the professionals and their clients in a fashion which will help, on the basis of relatively hard data, in the assessment of training needs, institutional changes, and so forth.

The research is being conducted at the Institute for Social Research's Center for Research on Utilization of Scientific Knowledge, at the University of Michigan. Funding has been granted by the Metro Center at the National Institute of Mental Health.

Your questionnaire will not be identifiable as to name: the enclosed post card, which you should mail separately from the form, is our only means of knowing whether you have completed it. If you have been engaged in <u>any</u> advocacy type projects, will you please list yourself in that section.

Thank you very much for your cooperation.

Sincerely,

Robert Ross

Robert Ross

Sharon Rosen

Sharon Rosen

RR,SR:dlc

P.S. If any of the questions are objectionable to you, please just leave them blank.

PEO QUESTIONNAIRE

1. Please complete the statement at the bottom of this card, and place the card in the mail at the same time as the questionnaire. This will make it possible for us to know that you have returned the questionnaire without affecting the anonymity of the questionnaire itself, and will facilitate any necessary follow-up to obtain the needed high rate of responses.

2. We would appreciate your filling out the questionnaire at your earliest convenience. THANK YOU!

I mailed my questionnaire on _____, 1971

Dear Member:

It has been agreed to let the people at ISR (see accompanying material) send a questionaire to all our members in an effort to identify advocate planners - both among our members and others. Once they are identified, interviews would be held with the advocates and the findings compiled and shared with PEO.

A number of us have read the research outline and background paper and find it a realistic and reasonable document. We are therefore asking our members to cooperate with this survey and to recommend the names of advocates you may know to ISR.

We will be sending out follow-up cards to those who do not return the enclosed postcard to us, so please fill out the questionaire and return the card soon.

Sincerely,

Walter Thabit

Walter Thabit

1. Listed below are different kinds of opportunities which a career in planning might afford. In seeking a job, how much importance do you personally attach to each of these? (Check one column in each line.)

	Importance I attach				
	Slight or none	Mod-erate	Consid-erable	Great	Ut-most
To make full use of my present knowledge and skills.	___	___	___	___	___
To contribute to social change.	___	___	___	___	___
To earn a good salary	___	___	___	___	___
To work with highly competent colleagues. .	___	___	___	___	___
To help disadvantaged sectors of the society	___	___	___	___	___
To design new methods of planning and service delivery.	___	___	___	___	___
To build my professional reputation	___	___	___	___	___
To further develop new knowledge and skills.	___	___	___	___	___
To help others gain new knowledge and skills.	___	___	___	___	___
To have freedom to carry out my own ideas .	___	___	___	___	___
To be in a low pressure environment	___	___	___	___	___
To work on problems of value to the nation's well-being	___	___	___	___	___

Would you please go back and put a 1 to the left of the item which you would consider the most important and a 2 to the left of the second most important item.

2. We would like to know what you've been doing professionally for the past five years. Include projects you worked on for which you were not paid. Please start with your most recent position and work backwards.

Name of agency: _____

Dates of employment: _____ to _____

Who pays your salary? _____

Indicate the two or three most important aspects of your work; give examples of activities you engage in.

_____

_____

_____

_____

(This question is continued on the next page.)

2. Continued ...

4. Here are some statements which express various attitudes relevant to planning. Please indicate how you feel about each statement by circling the appropriate number.

-1 slightly disagree	+1 slightly agree
-2 disagree	+2 agree
-3 strongly disagree	+3 strongly agree

(Although the format of the next two sets of questions is useful and convenient to us as researchers, we do realize that closed-type questions and the wording of some of these items do not necessarily allow you to express an opinion as fully or subtly as you might wish. So we've left space after each item, which we hope you will use to express reservations, explanations, qualifications or (even) protests.)

The planning process requires too much technical knowledge these days for the average citizen to participate meaningfully. Qualified planners should plan for people, taking their needs and desires into account. -3 -2 -1 +1 +2 +3

_____

_____

One important aspect of the planner's role is the teaching of his (her) skills and knowledge to community residents. -3 -2 -1 +1 +2 +3

_____

_____

Although Black people clearly should run their own organizations, the help of White people with technical skills is still a necessary component of Black community development. -3 -2 -1 +1 +2 +3

_____

_____

continued on next page...

4. Continued ...

I get many of my ideas about planning and urban problems:

___from colleagues at my workplace	-3	-2	-1	+1	+2	+3
___from friends and acquaintances around the country	-3	-2	-1	+1	+2	+3
___from client or community groups	-3	-2	-1	+1	+2	+3
___from professional journals or meetings	-3	-2	-1	+1	+2	+3

_____

_____

For the last question, would you please go back and rank each of these 1, 2, or 3, going from most (1) to least (3) important to you.

5. Here are some statements which express various attitudes about the country as a whole. Again, please indicate how you feel about each statement by circling the appropriate number.

-1 slightly disagree	+1 slightly agree
-2 disagree	+2 agree
-3 strongly disagree	+3 strongly agree

(If you have any additional comments about any of the questions, please write them on the back of this page.)

We could solve most of our country's urban problems by shifting the funds now being spent on defense to programs for urban and other human needs.	-3	-2	-1	+1	+2	+3

_____

_____

We cannot hope to solve our urban problems in the context of a private profit economy.	-3	-2	-1	+1	+2	+3

_____

_____

The attainment of racial justice in the cities will come about only as the result of a mass movement.	-3	-2	-1	+1	+2	+3

_____

_____

While direct action has proved useful in some instances, the electoral system should nevertheless be ultimately depended upon to bring about social justice.	-3	-2	-1	+1	+2	+3

_____

_____

PLANNERS FOR EQUAL OPPORTUNITY

URBAN CRISIS = PLANNING OPPORTUNITY

Saturday
16 March 1968

Walnut and 34 Streets
New Fine Arts Building
University of Penna.
Philadelphia

This conference has been called to assist urban affairs professionals to sieze the planning opportunity facing our cities and our nation in a time of growing urban crisis. It is sponsored by Planners for Equal Opportunity, a national organization of city planners and allied urban affairs specialists committed to the principle that the facilities and opportunities of this society should be made available to all citizens through positive public policy and action. Its members seek to apply their energy and skills to the investigation, exposure, and correction of programs which are discriminatory or which fail to meet the needs of the urban crisis.

PLANNERS FOR EQUAL OPPORTUNITY
76 Reade Street / New York, New York 10007

workshops

I REVOLUTION IN PLANNING EDUCATION

A proposal for reform of planning education will be presented including the following elements: curriculum, recruitment of minority group members into the profession, community involvement and research. The proposal has been prepared by a special PEO ad hoc committee made up of students and faculty from Hunter, Columbia, Pennsylvania and Pratt planning schools.

Alan Kravits, Workshop Moderator, Hunter College
Paul Davidoff, Hunter College, PEO Policy Committee
Chester Hartman, Harvard, PEO Policy Committee
Peggy Latimer, Columbia University, PEO Steering Committee
Paul Niebank, University of Pennsylvania
Michael Stegman, University of North Carolina
David Stoloff, Hunter College, PEO National Coordinator; Panel Reporter

II ADVOCACY IN MODEL CITIES

Objectives of advocacy planning in Model Cities, the drive toward local control of Model Cities programs, accountability of city staff and consultants to local communities, the use of advocacy programs in cities where there is no local control, problems of white planners in black communities. A program will be developed for local and national action to insist on full community participation and appropriate local control.

Walter Thabit, Chairman, President PEO.
Justin Gray, Director, Model Cities Cambridge Program
Mrs. Muriel Johnson, Chairman, C-12 Committee, Hartford
Leo Lillard, Chairman, East New York Housing and Urban Planning Committee
Louis Mitchell, Assoc. Director of Division of Christian Social Concern, American Baptist Convention
Hans Spiegal, Assoc. Prof. of Urban Planning, Columbia University
Bill Toole, Director, Hartford Model Cities program
Junius Williams, Director, Newark Area Planning Assoc.
Mike Abeloff, PEO Steering Committee; Workshop Reporter

III HIGHWAYS VS. THE POOR

Urban highway plans being fought by advocate planners in Philadelphia, Baltimore, Newark, Cambridge and elsewhere will be reviewed with constructive renewal and public transit alternatives. Transportation plan evaluation criteria will be developed as well as strategies to force changes in highway-transit priorities and to block particularly destructive projects.

Hon. Norman Berson, Chairman; Attorney, Representative Penna. Legislature
Reginald Booker, Chairman, Emergency Committee on the Transportation Crisis, Washington, D.C.
Britton Harris, University of Pennsylvania; PEO Policy Committee
Chester Hartman, Harvard University; PEO Policy Committee
Yale Rabin, Planning Consultant to NAACP Legal Defense Fund
Robert Goodman, MIT
Harriet Johnson, Advocate Planner, Philadelphia; Workshop Reporter

IV HOUSING AND METROPOLITAN DEVELOPMENT

Metropolitan and national programs will be considered including public housing, rent supplements, housing allowances, 221(d)(3) programs, racial and economic integration of all communities and all projects, provision for the poor in new towns and other housing action beyond crisis amelioration in Model Cities areas. Use of federal Sections 204 and 101(e) reviews in the guidance of metropolitan and regional development for equal opportunity will be described.

Neil Gold, Chairman; Hunter College Urban Research Center

Cushing Dolbeare, Philadelphia Housing Association
Paul DuBrul, Housing Director, University Settlement, New York
Thomas Elijah, Chairman, New York Metro. Association Fair Housing Committees
William Grigsby, University of Pennsylvania
James Harvey, National Representative, American Friends Service Committee
Charles Kaswan, PEO Steering Committee, Workshop Reporter

V ECONOMIC DEVELOPMENT OF POOR COMMUNITIES

Dangers of proposed corporate involvement in ghettos will be considered as well as public programs of local business incentives, job training programs, employment opportunities and potentials for application of international economic development concepts.

Frances Piven, Chairman; Columbia University; PEO Policy Committee
Max Bond, Director, ARCH, New York
Leland Hazelwood, Director, Mayor's Task Force, Economic Development of Harlem
Ron Schiffman, Pratt Center for Community Development, New York
Thomas Vietorisz, New School for Social Research
Thomas Reiner, University of Pennsylvania, Workshop Reporter

VI ADVOCACY & COMMUNITY CONTROL OF COMMUNITY DEVELOPMENT

Blocking destructive projects and forcing government response to community needs throughlobbying, court action, community organization, demonstrations and disruptive action will be discussed as well as related technical assistance and collection of advocacy case studies. Strategies for the long - range decentralization of city decision - making and administrative functions with consideration for functions properly city-wide, and alternative structures for such local governing bodies will be proposed.

Janet Reiner, Chairman; University of Pennsylvania; PEO Policy Committee
Peter Abeles, Housing Director, Mobilization For Youth, New York
Marion Barry, Director, PRIDE, Washington, D.C.
Colin Carew, THE NEW THING, in Arts and Architecture, Washington, D.C.
Paul Davidoff, Director, Urban Planning Dep't., Hunter College; PEO Policy Comm.
Alvin Echols, Attorney, Executive Director, North City Congress, Philadelphia
Robert J. Sugarman, Attorney, Philadelphia
Jerome W. Lindsay, Director of Planning, United Planning Organization

VII NATIONAL PROGRAMS TO ELIMINATE POVERTY

This workshop will review the proposed federal budget in relation to the Freedom Budget seeking priority shifts which would begin to meet the needs of the poor. Required levels for housing, health, education, family income subsidies and full employment programs will be put in perspective. Strategy for achieving Congressional action is to be proposed.

Norman Hill, Chairman; A. Philip Randolph Institute
Bob Bogen, PEO Conference Chairman
David Cohen, Legislative Rep., Indust. Union Dept., AFL-CIO
Frances Goldin, Metropolitan Council on Housing, New York
Richard Hatch, Founding Director, ARCH, New York

VIII COMMON STRATEGY FOR ADVOCATE PROFESSIONS

Health, education, architecture, law, planning and other welfare professionals advocating equal opportunity will discuss their common goals of local control, more adequate program levels and inter-disciplinary programs in order to form strategies for cooperative action.

Carla Cohen, Chairman; Consultant, Metro. Study Center, Wash., D.C.; PEO Policy Comm.
Thomas Gilhool, Community Legal Services, Philadelphia
Mark Heyman, Chairman, Planning Dep't., Pennsylvania State University, Harrisburg
Herbert Lukashok, Medical Committee for Human Rights
Rhody McCoy, Unit Administrator, Ocean Hill, Brownsville, New York
Rev. Lucius Walker, Exec. Dir. Interreligious Fndtn. for Community Organization

IX VIETNAM WAR AND AID TO CITIES

Published statements of PEO position on the war and impact on urban aid will be reviewed for affirmation or modification by the PEO Policy Committee. Closer ties with the Committee of the Design Professions will be considered.

Harry Schwartz, Chairman; Mobilization For Youth, New York
Morton Lustig, Fels Institute, University of Pennsylvania
Joseph Hayman, Planner, Fels Institute, Univ. of Pennsylvania, Workshop Reporter

X ORGANIZING LOCAL PEO ACTION

Activities of local PEO groups will be reviewed. Minimum organizational requirements will be suggested as well as methods for recruiting active members, local chapters and student chapters, reconnaissance of opportunities for action and cooperation with other groups. Strategies for public hearings and press relations will also be suggested.

Bernard L. Segal, Chairman; Attorney; Co-Chairman, Philadelphia PEO
Rosalyn Doggett, Marcou O'Leary & Assoc.; Temp. Steer. Comm., Wash., D.C. PEO
Hall Winslow, Co-Chairman Housing Comm. N.Y. PEO; Workshop Reporter

Reporters in each workshop will record major findings for publication in a set of "Conference Proceedings" and for action by the PEO Policy Committee. Workshop members will be encouraged to participate in any continuing PEO functions related to the workshop topic.

CONFERENCE OBJECTIVES

This Second Annual Conference of Planners for Equal Opportunity has been organized to facilitate more vigorous and effective action by our members, local chapters and by our national organization. Many battles have already been joined. We now seek the additional knowledge, strength and strategy to achieve success in each of the varied areas of our concern.

What is The METROPOLITAN COUNCIL ON HOUSING ?

. . . . . THE REALIZATION, AS SOON AS FEASIBLE, OF THE GOAL OF A DECENT HOME AND A SUITABLE ENVIRONMENT FOR EVERY AMERICAN FAMILY. . . . . .

DECLARATION OF NATIONAL HOUSING POLICY - 'HOUSING ACT OF 1949'.

THE METROPOLITAN COUNCIL ON HOUSING IS A FEDERATION OF TENANT ORGANIZATIONS AND INDIVIDUALS WORKING TO BRING GOOD HOUSING TO THE PEOPLE AT RENTS THEY CAN AFFORD.

WHAT IS OUR PROGRAM?

* We stand for a stronger City rent control law, which means:

  ....No 6 plus 2 'hardship' increases to landlords.

  ....No perpetual and exorbitant increases to landlords for improvements of their property.

  ....An effective provision to prevent landlords from harassing tenants out of their homes in order to demolish or rehabilitate a building.

* AN OVERALL PLANNED APPROACH TO HOUSING, BASED ON TENANTS' NEEDS RATHER THAN REAL ESTATE PROFITS. A new urban renewal approach which would build sufficient and transformed low-rent public housing jointly with genuine middle-income housing to prevent economic and racial segregation. Build on vacant or badly-used commercial land and, where necessary, in stages, to prevent the need for relocation. Broad utilization of the vest pocket and smaller site approach for community renewal. Site tenants should be beneficiaries, not victims of renewal.

* A City moratorium on the demolition of structurally sound, habitable housing linked to the vast building program referred to above until there is an end to the shortage of low and middle-income housing.

* A stronger anti-discrimination housing law without exempting cooperatives, and with meaningful penalties for violations of the law.

HOW CAN THIS PROGRAM BE REALIZED?

* We inform the public on current housing issues by distributing leaflets throughout the City, holding street meetings, organizing demonstrations and publishing studies and reports.

* We testify at public hearings on City, State and Federal levels on all matters pertaining to housing.

* We analyze all housing legislation and organize an annual mass tenant lobby to Albany.

* We meet frequently with City, State and Federal officials to promote the tenants' viewpoint and program.

* Our affiliated Housing Clinics and Councils battle constantly to eliminate violations, improve services, stop demolitions, defeat rent increases and reduce rents.

* We help tenant groups to organize in houses and establish new Councils in local communities to defend tenants' interests.

* We hold an annual conference of all interested organizations and individuals to forge a housing program and to plan related city-wide activities.

* We issue a monthly publication - Tenant News - which provides up-to-date information on housing legislation and activity.

Landlords and real estate groups have their organizations to protect their interests. Businessmen have their associations. Tenants must have their spokesman.

The Metropolitan Council on Housing is the only federation in New York City fighting for the needs of the tenants.

If you agree with our program, join us. Organizational affiliation is our base. Individual membership is also welcome.

Tear off the coupon below and mail it in.

Potential Purposes and Functions of a PEO Chicago Chapter

Objectives

1. To provide a means whereby planners and planning students can gain practical experience in the requirements and methods of working with low-income and civil rights groups.
2. To assist community groups in articulating their needs.
3. To advise community groups regarding the availability of federal, state and local programs and how they might be applied in specific situations.
4. To assist in the delineation of a specific project desired by a community group.
5. To serve as a meeting ground for planners already involved in serving inner-city communities, so that they may exchange ideas and initiate mutual action, if necessary.
6. To ehlp in initiating special studies and investigations needed to clarify selected issues, and in encouraging and assisting university personnel in the conduct of such studies.

Premises

1. Services made available through the PEO Chapter would be directed primarily to community groups having little or no resources, consisting of people with modest or low incomes and minority groups.
2. Activity would be restricted to live and substantial issues. Comprehensive plans or in-depth studies would not be undertaken, although they might be recommended.
3. Assistance to community groups would be provided only in response to a specific request and/or a display of substantial interest. The citizens being assisted would be the prime movers to the fullest extent, whereas the role of the planner would be kept to that of a technical advisor. Decisions to take action would rest with the community group.
4. No fee would be required from groups receiving assistance. Funds which might be contributed by third parties (foundations, etc.) would be accepted only if they permit the continuation of an unhindered direct relationship between planner and community group.
5. Should there be a clear or potential conflict between the planner's personal interests and those of the group being assisted, the interests of the common effort would have priority. Where necessary, the planner's services would be withheld (or withdrawn) from the particular project, rather than violate this priority of purpose.

Chapter Functions (in the provision of direct assistance)

1. Seek out groups requiring assistance and receive their requests.
2. Determine the nature, extent and feasibility of the request, through initial contacts with the community group.
3. Select a planner who is willing and able to assist the applicant group.
4. Locate additional assistance for the planner, if that become necessary.
5. Provide general guidance and review.

Arthur Bassin, Chicago

INFORMATION REPORT FOR PEO ADOCACY CATALOGUE

I would like to report a situation which may be suitable for inclusion in the advocacy Catalogue and the Advo-Cases studies.

New York City, New York 10028

FROM: COUNCIL OF 12

RE: CITIZEN PARTICIPATION IN MODEL CITY PROGRAM

I Statement of Problems

We want total, meaningful, citizen participation at every stage and every level of the plan. Citizen participation has been zero and the current proposals grossly inadequate. The word is out and we want in.

We, the twelve (12), duly authorized representatives of the four (4) Model Cities Neighborhoods are submitting this proposal to insure that we are not only heard, but involved.

II Goals of Neighborhood Participation

1. Clear majority control on Model City agency (by Target area residents)

2. Twelve (12) representatives to be elected by the residents of the four target areas, (within each target area).

3. Local veto power for each neighborhood by target area representatives.

4. Representative to Council (Model City Agency) to communicate two ways but has power to vote and act. (Must attend Model Cities Agency's meeting and be responsible to report to target area residents.)

5. Need an attorney present at all times, (and technical adivsors or advisor.)

6. Neighborhood representatives to be paid.

7. Committee of twenty-one (21) - 6 city appointed members, 3 Board of Education members, 12 neighborhood representatives, to constitute the Model City Agency.

8. Each target area representative will select their own paid planner for their area.

9. No target area will be cut out of the funds.

10. The selection of the neighborhood representatives should be by an open election, by target area residents namely South Green, Sheldon-Charter Oak, Clay Hill and South Arsenal.

11. The League of Women Voters would be requested to administer the election in the target areas.

January 15, 1968
jh

All of these elements in this chart would be in communication with each other.

AVAILABLE TO ASSIST MODEL CITY AGENCY AND NEIGHBORHOODS:

1. City Manager and all city agency personnel
2. Technical Advisory Committee
3. Committee for Hartford

NEIGHBORHOOD REPRESENTATIVE AND STAFF

1. 12 Primary representatives
2. 24 additional representatives
3. 4 Neighborhood Planners
4. 1 Neighborhood planning coordinator

1/15/68
jh

DRAFT DISCUSSION OUTLINE
CITIZEN PARTICIPATION IN MODEL CITIES

Purpose of the Workshop: To review the Model City program and to outline an advocate planning approach to it.

Background: The Model Cities program offers only $10 to $20 per capita per year for three years in extra monies for the 63 cities approved by HUD. This is a minimal - and token - amount of new money coming into the Model Cities areas. In addition, housing and other governmental programs are to be concentrated in these areas. Cities are also expected to coordinate their own programs and services. Maximum participation of the poor offers the hope that local control and influence on on-going and new programs can be substantially increased. Starting with this basic framework, discussion will concentrate on the following questions and issues.

1. Policies on Citizen Participation: Should model cities areas accept or reject the program. A basic question is whether new housing will be for the people who might be displaced. Acceptance or rejection should also depend on the degree of local control possible in any city and on the relationships between the city and the local community.

2. Local Control: Model City neighborhoods should have a clear majority of members of Community Development Agency (CDA) appointed by neighborhood. A large neighborhood planning and implementation committee should also be established, with approval or veto power over plans. There may be separate committees for separate neighborhoods. In cities where applications have not yet been filed, local community should demand a full voice in the development of the program and provide for local control at that time.

3. Local Communication: Neighborhood representatives on CDA's should accept as part of their responsibility keeping the community fully informed of progress. Community planning committees should accept as part of their responsibility keeping the larger community informed through mass meetings, etc. Continuous communication and accountability of neighborhood representatives as buffers between the city and the community.

4. Forming Model City Committees: In areas which are stable and well-organized, no problems with structuring a representative committee are anticipated. In areas which have recently had population shifts, where different ethnic and racial groups compete, where institutions do not serve the current population, there may be difficulties. One answer is a carefully weighted system of representation; another is the establishment of a completely open committee, open to whoever desires to participate.

5. Employing Staff and Consultants: If the local neighborhood controls CDA, it should have authority to appoint staff and consultants and supervise their work. If not, it should seek right to approve top staff and consultants. If it does not win this demand, it should demand expert assistance, in the several pertinent fields, which is responsible to it as federal regulations provide. In cases where satisfactory technical assistance is not made available, the community should move to get advocacy assistance as well as complain to HUD.

6. Staff and Consultants: Staff and consultants should engage in a continuous dialogue with a large community committee - perhaps on a weekly basis - to insure that mutually acceptable plans will be prepared. Staff to present findings, test community ideas and report results, help community to develop non-profit sponsors and organize other ventures, assist in confrontations with official agencies, and develop the Model Cities plan in accordance with community wishes. Many communities will want to employ black planners, but they will not always be available. In such communities, white planners will have to build credibility, slowly and perhaps painfully. Both black and white planners must involve residents in the planning process, educating and teaching as well as planning.

7. Employing Residents in Planning: Depending on the size of the program, one or more qualified residents should be employed in the program, and subsidized to undertake planning training on the graduate or undergraduate level. Use of local residents on surveys and other work should also be maximized. Non-professional jobs in the program should be filled by local residents.

8. Program: The program is open-ended, calling for housing improvement and any of a dozen different varieties of social, economic, educational, health, recreational and similar improvements. New regulations will make it possible to move on renewal without total plans; adequate housing for those displaced may become the critical factor in such plans. Enormous problems are already emerging in attempts to coordinate and integrate the physical, social and economic programs in large cities. New bureaucracies are springing up, and may create more difficulties than they solve.

9. Local Enterprises: Community should initiate non-profit sponsorship of 221d3 FHA housing, turnkey public housing and other construction, both profit and non-profit, and should seek to employ local architects, builders, contractors, legal assistance and management. Business enterprises including cooperative food and other retail establishments and manufacturing enterprises should also be programmed. A start on identifying contractors, other entrepreneurs and non-profit sponsors should be made as soon as the program gets under way. Ways to confront unions with demands for use of local labor should also be initiated early.

10. Strategies for PEO: A guide to the advocate approach in Model Cities should be prepared and transmitted to the 63 Model Neighborhoods. PEO position on Model Cities should be adopted.

11. Strategies and Actions for PEO: Following are several possibilities for PEO and other organizational action:

a. Development of an advocate's guide to the Model Cities program.
b. Development of a position paper on the Model City program.
c. Transmittal of positions on Model Cities to HUD and other federal agencies.
d. Direct advocate assistance to Model Cities neighborhoods.
e. Participation with Citizens Crusade Against Poverty, the ~~International Federation of Church Organizations~~ and other national groups in regional workshops and other educational and advocate efforts.

Interreligious Foundation for Community Organization

PEO Inaugurates New Service

In view of the growing volume, diverse origins and scattered locations of advocacy planning situations, PEO feels that utilization of accumulating knowledge would be substantially enhanced by the existence of a central repository information sharing and contact agency advocacy planning experience. With this objective in mind, PEO is currently undertaking the development of a catalogue of advocacy planning situations, including pertinent facts about them, and the collection of a series of advocacy case reports. It is intended that the catalogue and case studies eventually provide a foundation for comparative analyses and generalizations on the handling of advocacy situations.

Sutstantial progress in the development of this project depends, to a great extent, on the contributions of PEO members. A form on which to report advocacy situations is being distributed at the second annual conference and by mail. It is urged that all members aware of such situations complete and return these forms. Persons desiring to make a greater contribution will be encouraged to a more complete narrative; and analysis of a case. The first ADVO-CASE is available for distribution at the conference and upon request.

Leaving the debate upon the proper interpretation of advocacy planning to the conference and academic halls, a rather unrestricted view of advocacy is being utilized for the purpose of obtaining a catalogue of broad scope. Cases will be included whether or not they adhere to current PEO policy positions and other political orthodoxies, whether they involve professional city planners or other substantive specialists as advocates. So it dosent't appear that the method completely lacks madness, it is requested that submissions be concerned with public planning or policy situations which involve the specific interests or participation of groups outside the official planning bureaucracy . The ADVO-CASE reports will focus on instances in which the viewpoint or plan of a particular interest.

We thank you for your cooperation.

David Stoloff, National Coordinator, PEO

PLANNERS FOR EQUAL OPPORTUNITY

Purposes: Recognizing the positive contribution which planning skills and concepts could offer to the struggle of minority groups for equal opportunity, and realizing the inequities and abuses against these minorities which too often result - either by deliberate intent or unconscious neglect - from the programs and actions of public and private agencies and institutions, Planners for Equal Opportunity dedicates itself to use its professional competence to safeguard the rights of minorities, to oppose discrimination, to provide equal enjoyment of the fruits of this affluent society, and to support the increase of political influence and independence of minorities.

Organization: Planners for Equal Opportunity is a national membership organization of approximately 300 planners and allied professionals. PEO activities are carried out primarily through chapters organized in metropolitan areas, states and regions. The Policy Committee, which represents various regions of the country, proposes national policy and oversees the organizational and constitutional structure. The Steering Committee, appointed by the President from members in the New York area, carries out the directives of the Policy Committee, publishes EQUALOP, the newsletter, and provides assistance in organizing and activating local chapters. There are 2 categories of membership: Active and Supporting. Active members have voting rights and accept an obligation to participate in PEO programs. Supporting members do not vote. but can attend meetings, join in policy discussions and receive all publications.

Planners for Equal Opportunity will seek the support and cooperation of professional bodies such as the American Institute of Planners, but will in no way seek to compete with or speak for those organizations, nor be bound by their official policies or scope of activity.

Program: To carry out its purposes, the organization will engage in the following activities:

1. Develop an action program in which individual members will offer advice and professional aid to local or community groups involved in the struggle for equal opportunity and assist in bringing planners and such groups together for these purposes.

2. On its own initiative and in response to requests, prepare statements or position papers on general issues within its competence, related to the struggle for equal opportunity, and re-examine planning principles and practices where they impair equality of opportunity.

3. Publish a newsletter and other materials; act as a clearinghouse for planning efforts to aid the struggle for equal opportunity; communicate with planners, allied professionals and public officials to enlist their support and cooperation and publicize our positions to the general public where appropriate and desirable.

4. Promote the entry of members of minority groups into planning and allied professions and encourage professional schools to recruit minority applicants by making scholarships and other financial aids more available to them.

5. Undertake such other activities as its membership may find necessary to carry out its purposes.

MODEL CITIES IN PITTSBURGH

This meeting will be PEO's major activity at the AIP Convention. We will jointly sponsor with Model Cities community people in Pittsburgh a look at their program. The meeting will be held Sunday, October 13, 1968 at 6:30 P. M. at a local church. Among the topics that will be up for discussion:

1. The needs of Pittsburgh's Model Cities area and the possibilities for satisfying them through the Model Cities program.

2. The relevance of planning in Model Cities; the lack of trust in planners and city agencies; the need for planners.

3. The problems and possible hangups in planning and execution and ways of dealing with them.

4. Problems of conflicting local organization and possible solutions.

A panel of local Model Cities residents and PEO planners will discuss these and other relevant issues, and develop whatever positions or action seems desirable.

Conference participants and neighborhood people will be invited.

Planners for Equal Opportunity Resolutions to AIP

WHEREAS democracy and technology have created in America the most affluent society in the history of mankind, and,

WHEREAS our society is fully capable of providing adequate housing, full employment, increased mobility, quality education and equality of opportunity for all, and,

WHEREAS millions of Americans, largely because of racial discrimination, lack the skills to enable them to secure decent jobs, are served by schools which provide little more than custodial care, are forced to live in dilapidated, blighted housing, are subjected to physical and psychological brutality and humiliation, are the victims of private, semi-public and governmental bureaucracies whose policies and procedures have the effect, and frequently the intent, of perpetuating oppression and inequality, and that these create the poverty, frustration, hostility and tension which are used as excuses to justify perpetuation of the system, and,

WHEREAS the federal, state and local funds which will be invested in housing, transportation, sewer and water, welfare and other programs within the next decade, and the policies of governmental agencies providing incentives to and restraints on the private sectors of the economy will have major impact on the allocation of benefits and the distribution of opportunities among the people of America, and,

WHEREAS members of the American Institute of Planners will play key roles in developing the plans for the location and design of these facilities and systems and establishing and administering the guidelines for these programs, and,

WHEREAS it is the obligation of the planner to plan with the people affected by his plans and for their benefit rather than to perpetuate an oppressive, discriminatory system or to satisfy the narrowly perceived best interests of the planning profession, and,

WHEREAS the theme of the 50th Anniversary Conference of AIP is "Optimum Environment with Man as the Measure," and,

WHEREAS the failures of American democracy to provide equality of opportunity to all Americans have brought the cities of our nation to the threshold of revolution,

NOW THEREFORE BE IT RESOLVED, that the considerations cited above shall be the major criteria on which AIP nationally and through its chapters shall evaluate existing and pending legislation, and shall support, seek to amend or oppose such legislation on this basis, and,

BE IT FURTHER RESOLVED, that these considerations shall guide the conduct of the professional planner in encouraging participation of the poor and members of minority groups in the development of plans which affect them and which are, presumably, for their benefit, and

BE IT FURTHER RESOLVED, that these considerations shall guide the professional planner in evaluating alternative courses of action, and that the planner shall base his recommendations on a conscious and deliberate effort to provide maximum benefit to Negroes, to other minority groups and to the poor, and,

BE IT FURTHER RESOLVED, that in order that the policies stated above be implemented, the following specific actions be taken by AIP:

1. That a special committee be appointed and charged with the responsibility to utilize the considerations cited above in developing criteria for the evaluation of the character, adequacy and effectiveness of existing governmental Policies and programs, to evaluate those programs and to present these findings to the next annual conference;

2. That these criteria and evaluations be presented to the membership for acceptance or modification at the next annual conference and become the basis of AIP positions regarding existing and proposed legislation;

3. That AIP find ways and means to provide planners to serve as advocates for the poor and minority groups to aid them in identifying and articulating their needs and achieving their goals;

4. That AIP encourage close liaison with the poor and minority groups and representatives and organizations selected by them in order to determine their needs as the basis for planning;

5. That AIP expedite the entrance of members of minority groups into the planning profession and report annually on its progress;

6. That AIP recognize only those professional planning schools which include in their curricula field experience with citizen groups; and,

BE IT FURTHER RESOLVED, that the President of AIP be called upon to provide opportunity for presentation and discussion of this resolution at the Thursday morning conference session -- "The Urgent and the Important."

MEMORANDUM

To: PEO Membership

From: T'ing C. Pei
Secretary-Treasurer

Re: 1970-1971 Dues

The Policy Committee has adopted a revision in the dues structure of the organization. Henceforth, dues will be established in relationship to income. A graduated dues schedule is employed by numerous other organizations, and it is particularly appropriate in an organization such as ours.

There were several compelling reasons for making this change. The operating expenses of PEO have been rising in response both to an increasing level of activity on the part of the organization and to inflation. A corollary of this problem has been the absence of resources with which to expand the level and quality of services to our members, to our Chapters, and to community groups seeking our assistance. Income is derived almost entirely from dues and now no longer covers expenses.

Despite our growth, we have been persistently plagued by the presence of some members who will not contribute anything to the organization. Indeed, with these members, dues collection itself has been difficult. We will be much more strict in the future with delinquent members, many of whom may in fact belong to PEO only as a means of salving their guilty social consciences. We have accepted the likelihood that this revision in dues will result in a reduction in the total membership, but we feel confident that we will retain those with a real commitment to the purposes of PEO.

Attached to this memorandum is the dues schedule and information concerning your present dues status. Members with a long history of delinquency will also find enclosed your address plate, signifying your removal from our membership files. Such members may be reinstated by returning the plate with the amount in arrears and dues for the forthcoming 1970-1971 fiscal year. As a result of the graduated schedule, there will no longer be a category of student membership.

Because of the change in policy, this year's dues notice is going out late. We would appreciate it very much if you could respond promptly to this request. Thank you very much for your cooperation.

Potential Purposes and Functions of a PEO Chicago Chapter

Objectives

1. To provide a means whereby planners and planning students can gain practical experience in the requirements and methods of working with low-income and civil rights groups.
2. To assist community groups in articulating their needs.
3. To advise community groups regarding the availability of federal, state and local programs and how they might be applied in specific situations.
4. To assist in the delineation of a specific project desired by a community group.
5. To serve as a meeting ground for planners already involved in serving inner-city communities, so that they may exchange ideas and initiate mutual action, if necessary.
6. To ehlp in initiating special studies and investigations needed to clarify selected issues, and in encouraging and assisting university personnel in the conduct of such studies.

Premises

1. Services made available through the PEO Chapter would be directed primarily to community groups having little or no resources, consisting of people with modest or low incomes and minority groups.
2. Activity would be restricted to live and substantial issues. Comprehensive plans or in-depth studies would not be undertaken, although they might be recommended.
3. Assistance to community groups would be provided only in response to a specific request and/or a display of substantial interest. The citizens being assisted would be the prime movers to the fullest extent, whereas the role of the planner would be kept to that of a technical advisor. Decisions to take action would rest with the community group.
4. No fee would be required from groups receiving assistance. Funds which might be contributed by third parties (foundations, etc.) would be accepted only if they permit the continuation of an unhindered direct relationship between planner and community group.
5. Should there be a clear or potential conflict between the planner's personal interests and those of the group being assisted, the interests of the common effort would have priority. Where necessary, the planner's services would be withheld (or withdrawn) from the particular project, rather than violate this priority of purpose.

Chapter Functions (in the provision of direct assistance)

1. Seek out groups requiring assistance and receive their requests.
2. Determine the nature, extent and feasibility of the request, through initial contacts with the community group.
3. Select a planner who is willing and able to assist the applicant group.
4. Locate additional assistance for the planner, if that become necessary.
5. Provide general guidance and review.

ADVO-CASE #1

St. Catherine's A.M.E. Church and Other Groups; New Rochelle N.Y.; Low and Moderate Income Housing

As an outgrowth of the field work program at Hunter College, in August 1967, a second year graduate planning student was seeking a local group in need of planning assitance. From his vantage point as a city planner in New Rochelle, the student was well acquainted with the local planning environment and political atmosphere in the community. In brief, there was a lack of any positive community efforts to expand the supply of adequate housing for low and moderate income residents, in general, and the Negro community, in particular. Any public action which could be labeled, correctly or incorrectly, "public housing" was an anathema. In this dormant context, the planner took the initiative and approached two prospective clients, the Housing Subcommittee of the New Rochelle Human Rights Commission and St. Catherine's A.M.E. Church, a small, active, Negro congregation interested in sponsorship of housing under Sec. 221(d)(3) of the National Housing Act. The chairman of the Housing Subcommittee requested and received written permission from the Mayor for the planner's services as a voluntary consultant. After two weeks of exploratory conversation and investigation, the pastor of St. Catherine's formally accepted the planner's offer of assistance in planning and promation of the housing project which the church had heretofore been handling in a passive manner. As part of the understanding, the pastor agreed to introduce the planner at a congregational meeting and let him outline the formal requirements and responsibilities of the project, as well as some of the unofficial complexities of the program, for the purpose of gaining a greater degree of committment from the membership.

In this fashion, the planner acquired two clients to foster the objective of expanding pressure for low and moderate income housing. The activities of the two groups were to complement each other in the following manner: The subcommittee would launch a general compaign for community support of a low, moderate and middle income housing program

and function as a supporting lobby for specific proposals which St. Catherine's would initiate. Subsequently, the activities of these two groups stimulated other parties interested in better housing to come forward on an individual and collective basis. As an unforseen by-product, a housing lobby group previously organized but dormant, was activated; a new coalition group of ministers was created; and three new sponsors for low and moderate income housing were available. All of these groups together now constitute an active lobby that can be mobilized to pressure for low income housing in a community where the issue was a dead one six months ago.

The planners work with the housing subcommittee consisted od a documented report on the shortage of low income housing accompanied by specific recommendations for action. This report was deliberately released during the mayoralty campaign and it was covered in front page articles in the New Rochelle Standard Star. Political contestants felt obliged to comment on the situation but after the election, reaction to the report was absent and the dialogue that it was intended to stimulate never materialized. Certain members of the housing subcommittee wish to confront the City Council with the issue directly and miletantly. However, this action has been temporarely deferred until council reacts to several proposals for housing sponsored by the additional groups that have become the clients of the planner.

Of particular interest in this case is the planners relationship to St. Catherine's leadership. Although the planner entered the situation believing that he would work on a second 221(d)(3) project for the church, initial investigation revealed that the procedual steps necessary to implement sponsorship of the first project had not been undertaken. None of the following prerequisites had been completed: A zoning change; tax abatement; retention of an enpeditor; submission of FHA documents. The church was unaware of the crucial need for tax abatement by Council prior to serious consideration of the project by FHA. The seemingly logical sheft in emphasis towards achievement of some progress in implementing the first project required delicate handling on the planner's part. The drive to grind through the FHA requirements was not naturally forthcoming because the church leadership had embarked on sponsorship of the housing as a

means of financing a new church building from the proceeds of the sale of the site that they had acquired at an earlier date. Thus, the 221(d)(3) was a strategic objective rather than a primary goal of the church. Moreover there was a reluctance to shift emphasis and initiate the necessary action both for fear that the advocate planner, seen as a young white, professional by the client, was putting unnecessary obstacles in the path and for fear of appearing ignorant of the complexities that the planner outlined.

Once the church leadership become convinced of the importance of achieving progress on the first project, the planner had to decide on just how much of the work had to be undertaken by the client in order to ensure their continued committment to the project and their ability to see it through. The planner chose not to carry out the work completely on his own initiative because he felt that a weak envolvement of the client in the gradual promotion of the project would lessen its ability to handle problems associated with the 40 year project and reduce its committment to the project. Adopting this strategy meant that the planner informed the church leadership of all steps necessary to implementation, posted the client on his progress as he went along indicated activities in which the client could take the initiate or participate whenever possible, introduce the client to his contacts and arranged meetings between the group and other parties involved. Although the planner did a great deal of the prepatory work leading to the tax abatement or prodded the church's lawyer to complete necessary tasks, the pastor made the presentation to City Council requesting the tax abatement on 80% on the assessed value. By informing and involving the pastor, the planner eventually secured the pastor's more active interest in the success of the undertaking. This result was demonstrated when the pastor pressured the lawyer-congregant, who was slow about preparing his part of the FHA submission after the grant of the tax abatement by council, to do the work

or to give it to the advocate planner to complete.

Several important facets of advocacy emerge from this case. It is quite clear that the planner's position inside or, at least on the fringe of the establishment facilitated his activities as advocate planner and benefited the client. Specifically other Westchester communities could be asked for data on tax abatements granted and information secured from FHA and other HUD officials while wearing his "City employee hat". The assessor, the coporation council, and the city manager were all accessible to him for conversations concerning the benefits that such a project would bring to New Rochelle which would justify the present tax abatement. Certain official parties who favored a certain policy or action but who declined to support it openly, could let their views be known quietly through him. On the whole, the advocate had access to information and to people that would have been difficult to duplicate had he been outside the system.

An interesting feature to note is that the advocate planner's need to "sell" himself did not disappear once the prospective client agreed to his services. The advocate had to lay a foundation for client trust before he could proceed with substantive work with any speed and before he could with any speed and before he could successfully render advice. Once this confidence in the planner existed, it was possible for him to modify both the clients goals on plans while working harmoniously with the goup.

At the same time, the planner's objectives also altered as he become educated. The planner gradually realized in this case that helping the client to become an effective pressure group and a stronger institution superceded the importance of immediate sponsorship of the housing project. The principal role of the advocate planner may be to develop the potentialities of the group - showing it how to get information, apply pressure etc. - so it functions without his aid. If this case be representative of what kind of assistance such groups may need, the concept of planning in such instances and the preparation for it must differ from traditional and current ones, whether

physical or socio-economic in orientation.

Perhaps the most important accomplishment of this case is not the implementation of the specific objective, which may be considered a "sap" to placate the Negro community, but the reopening of the low income housing issue and the creation of a supporting lobby. While the planner acted as an advocate in the community, other individuals and groups interested in such activity heard of it and volunteered their aid. The opportunity was present to create a new sponsor and lobby group for low income housing and a bigger network of contacts was established. Here, again, the planner is seen as an entrepreneur in institution building rather than as a substantive advisor.

New York City, New York 10028

PEO Inaugurates New Service

In view of the growing volume, diverse origins and scattered locations of advocacy planning situations, PEO feels that utilization of accumulating knowledge would be substantially enhanced by the existence of a central repository information sharing and contact agency advocacy planning experience. With this objective in mind, PEO is currently undertaking the development of a catalogue of advocacy planning situations, including pertinent facts about them, and the collection of a series of advocacy case reports. It is intended that the catalogue and case studies eventually provide a foundation for comparative analyses and generalizations on the handling of advocacy situations.

Sutstantial progress in the development of this project depends, to a great extent, on the contributions of PEO members. A form on which to report advocacy situations is being distributed at the second annual conference and by mail. It is urged that all members aware of such situations complete and return these forms. Persons desiring to make a greater contribution will be encouraged to a more complete narrative; and analysis of a case. The first ADVO-CASE is available for distribution at the conference and upon request.

Leaving the debate upon the proper interpretation of advocacy planning to the conference and academic halls, a rather unrestricted view of advocacy is being utilized for the purpose of obtaining a catalogue of broad scope. Cases will be included whether or not they adhere to current PEO policy positions and other political orthodoxies, whether they involve professional city planners or other substantive specialists as advocates. So it dosent't appear that the method completely lacks madness, it is requested that submissions be concerned with public planning or policy situations which involve the specific interests or participation of groups outside the official planning bureaucracy . The ADVO-CASE reports will focus on instances in which the viewpoint or plan of a particular interest.

We thank you for your cooperation.

Barbara Z. Sedin, Project Developer, ADVO-CASES
David Stoloff, National Coordinator, PEO

Day Long Demonstration for PUBLIC HOUSING

Why? We need one million apartments nationwide for each of the next ten years to replace the sub-standard housing in the United States. President Johnson has recommended 75 thousand public housing apartments for 1968. This is an insult to the millions in need!

Where? HOUSING & URBAN DEVELOPMENT BLDG. (HUD)
346 BROADWAY (Between Canal & Chambers Streets)

When? WEDNESDAY - APRIL 10TH - 9 A.M. TO 5 P.M.
Come when you can .... Stay as long as you can.
Highlights at 12:30.

Demand Low-Rent Public Housing for EVERYONE who needs it.

Listen to speakers from all over the City.

Burn your worthless Housing Authority application card at noon.

HASSLE WITH HUD FOR HOUSING!

For more information, contact:

METROPOLITAN COUNCIL ON HOUSING
219 Seventh Avenue, New York City 10011 AL 5-8455

DEMOSTRACION PARA CASERIOS PUBLICOS TODO EL DIA

Porque? Necesitamos un millión de apartamientos para toda la nación cada año durante los próximos diez años para reponer las viviendas inferiores en los Estados Unidos de América. El presidente Johnson ha recomendado 75 mil apartamientos para el 1968. Esto es un insulto hacía los millones de personas necesitadas.

Donde? Frente a la agencia:
HOUSING & URBAN DEVELOPMENT BUILDING (HUD)
346 BROADWAY (entre las calles Canal y Chambers)

Cuando? MIÉRCOLES, 10 DE ABRIL, de 9 de la mañana hasta las 5 de la tarde. Venga cuando pueda y quédese el tiempo que pueda. Procure estar a las 12:30 para mayor concentración y dramatización.

Demandemos Caserios públicos con rentas bajas para TODO EL QUE ESTE NECESITADO!

Oigan Oradores de todas parte de la ciudad.

Quemaremos Las tarjetas de la Autoridad de Caserios al medio día, ya que estas no representan valor alguno.

219 Septima Avenida, Ciudad de Nueva York AL 5-8455

The Hunter College planning students' movement began with a lunchtime conversation among four students in the school cafeteria. Dissatisfaction with school had been growing since the end of the initial orientation period, and as students started to know each other better their conversations had begun to revolve increasingly around their complaints about graduate school education in general, and our own program in particular. At that time we still thought that our troubles were unique, and that other programs must be better, but we have since learned that many of the problems which we faced are common to many, if not all, planning schools.

On that particular day a new element was added to the discussion when someone raised the possibility of doing something more than complaining. Perhaps, he suggested, if the students could organize themselves and specify what they wanted, they could actually get some changes in the curriculum. The four decided to ask some other members of the class how they felt about school and whether or not they would be interested in trying to change things. Over coffee that afternoon, ten students agreed that something should be done, but rejected the idea that any subgroup of the class should take it upon themselves to do it. (This "democratic", or atleast anti-elitist sentiment has characterized subsequent activities and led to heavy reliance on meetings of the class as a whole to decide most policy questions. This has proved to be a source of both strength and weakness -- strength from the near unanymity of decisions, but weakness when when responsibility for follow-up was not clearly defined.)

A meeting of the first-year class proved that the dissatisfaction was general, and it was agreed that those who were interested in working on a proposal for changing the curriculum would spend the weekend producing a draft proposal, which would be submitted to the class as a whole for revision and formal adoption, and then presented to the faculty.

On Monday morning a mimeographed copy of the proposal was given to the Chairman of the department. He had already been notified of the nature of the discussions and had agreed to meet with the class Monday afternoon to discuss the proposal. At the afternoon meeting the Chairman said he welcomed the proposal, since similar ideas had already been discussed by the faculty-- perhaps the students' pressure would provide the push needed to get things moving. After agreeing to accept the proposal as a

basis for discussion about curriculum reform, he asked that a committee of five students be elected to meet with the faculty and work out details of implementing it, starting with the spring semester, if that were at all possible.

The text of this initial proposal is as follows:

The Proposal

The first-year planning students present the following proposal as an alternative to the present approach to planning education. We believe that this proposed program is necessary and desirable in light of the needs of the community and the developing involvement of the university and its students in the process of social change.

This program constitutes a radical departure from contemporary graduate education because it changes the focus of the educational process from the formal classroom to participation in the process being studied. At the same time, this innovation has been tested at several other institutions with highly satisfactory results.

The specific program we propose is the result of many hours of intense and sometimes passionate discussion in which many policies were debated and several alternative proposals considered. We have selected the following as the plan we advocate because it is a workable alternative to the formal classroom method; because it is specifically designed to provide for flexibility in meeting the distinguishable needs of individual students; because it provides a realistic context in which to study and learn the subtleties of dealing with community organizations, while having the benefit of guidance by the faculty; because it provides a realistic and interest-motivated starting point for individual study and research; and because it provides an immediate opportunity for responsibility in the dynamics of social change.

I

A. The planning department constitutes a consulting planning organization which contracts with community organizations and other clients for specific planning projects.

B. A student-faculty operations committee makes contact with potential clients, gathers preliminary information which it presents to the group for consideration. If sufficient interest in a project exists, the interested people form a team to undertake the project.

C. Team operation: The work of each team is coordinated by a student project director. Each student should be a project director at least once. Students may decide to devote all of their time to one project for its duration or may work on several projects at the same time. There will be a member of the faculty participating on each team.

II

A. Each member of the team has the professional guidance and tutorial services of the faculty member of the team.

B. Lectures and seminars by the faculty and guest lecturers will be scheduled as the need for specific information or techniques arises or is anticipated.

C. Exchange of information throughout the class will be accomplished through the distribution of team progress reports, individual annotated bibliographies, and project histories.

III

A. The faculty is responsible for overseeing the individual projects in order to maximize the educational opportunity in each project. As part of the tutorial process a faculty member may suggest independent reading or related research.

B. The students will be responsible for ascertaining the client's goals, establishing the dimensions of the problem, dividing up the work, carrying out the assignments, making the reports and presentations, finishing up the project, and writing the project history.

C. The faculty member of the team and the project director are responsible for the planner-client relationship.

One of the advantages of this program is that it involves the students in a wide variety of planning experiences. It has, at the same time, the advantage of being able to use a tutorial relationship to guide and stimulate academic interests against the background of actual problems. The team structure provides an opportunity for students to work together and it places a premium on responsibility and cooperation. The focus on participation provides a realistic context within which the students and faculty can evaluate individual and team performance.

This proposal provides an opportunity to break with the classroom focus of contemporary graduate education and its inherent weak points, such as the apathy and intellectual stagnation which results when a student has no responsibility, other than grades, for the quality of his work. Specific information is necessary, however, and this is provided for by the opportunity for lectures and seminars devoted to specific topics. These may be scheduled on an ad hoc basis or as a series, depending on the nature of the material, as the need arises.

We believe that the opportunity is present for an immediate constructive advance in planning education. We also feel that it is our responsibility to ourselves and to the community, as its future planners, to advocate this change.

Faculty-student committee meetings began at once, with an emphasis on the problems of selecting appropriate clients and projects which would have maximum learning value.

In the mean time, the Chairman approached the higher administration to ascertain the official attitude toward departure from the straight 15-credit course system. He was informed that, in effect, "Harvard can afford to innovate; Hunter can not." He suggested to the committee, however, that it should be possible to retain the form of the old curriculum, but introduce the spirit of the new. He proposed that classes be scheduled, as usual. Each faculty member would be responsible for his class plus one "project". He would meet students at his two scheduled class sessions per week, using one of them for the materials which he wished to present in the form of lectures for those who signed up for his class, and the other to meet with those signed up for the project under his supervision. For their part, students would attend the once-weekly lectures in the classes they had signed up for, but might choose to work only on one or two projects, using them to integrate the factual information, methods of analysis, and planning techniques which had been artificially separated into specialized "courses" in the old curriculum.

This compromise seemed to be acceptable to both the Chairman and the student committee, and a faculty member was assigned to begin screening potential clients and projects. Believing that some agreement had been reached, and that meaningful changes were in store, the students retired to catch up on assignments and to prepare for final exams. It was assumed that details would be "taken care of," but no one thought to ask how.

The new semester began with the students waiting to see how their ideas would work out in practice. It was obvious from the beginning that little had actually changed. One course (Social Planning) did have a client and a project arising from some work the professor had been doing in the Bronx. Another (Urban Structures) included in its format a hypothetical client, the Borough President of Manhattan, and as a project, a plan for Manhattan for the year 2000, though it was suggested that any student who had found another project around which to organize the course material would be free to do so. The course in Methods which was scheduled to begin with an introduction to computer programming allowed each student to write his own FORTRAN program, so he might devise

one relevent to a project, if he had one. Other courses were virtually unchanged, and there seemed to be some doubt whether or not some part-time professors had even heard about the new curriculum.

After several weeks, accumulated grievances, plus the growing feeling among students that they had been "bought-off with a word change" threatened to lead to another explosion. There was talk of a boycott of classes, of picketting. and similar protest action. One of the original committee members announced a class meeting to discuss ways in which the students could take over responsibility for their own learning, and avoid, if possible, the inevitable retreat into apathy and non-involvement.

That meeting never took place. Instead, the Chairman suggested a "moratorium on classes for a week" in which students and faculty would examine together the report of the President's Commission on Civil Disorders, to see if they could develop an action-oriented plan for helping to implement it in our own city and region. The students, however, insisted that any talk of examining the report should include a committment to re-examine the school's program and planning education in general, and that these issues should, in fact, take priority.

The class elected another committee, which took up the idea of a moratorium and proposed an agenda for meetings during the following week. During those meetings it soon became clear that those who were most involved in drawing up the first proposal were not the opinion-leaders this time, and that the proposal that would emerge would differ in both form and content from the original one.

As of today, March 14, it is still too soon to predict the outcome of this second round of student meetings, or of the negotiations which might follow them. There is less unity in the class this time, but on the other hand, the emerging proposal is less radical than the first one in many respects, and might, therefor, have more chance of being implemented.

STUDIES IN THE SOCIAL PSYCHOLOGY

OF RACE AND HOUSING

Papers prepared for the Commission on Race and Housing

Claire Selltiz and Stuart W. Cook
Research Center for Human Relations
New York University

March 1957

Chapter One

How People Feel and Act about Interracial Housing

CHAPTER ONE

HOW PEOPLE FEEL AND ACT ABOUT INTERRACIAL HOUSING

How does it happen that so many nonwhite families in the United States live in inadequate dwellings, crowded into areas where most of their neighbors are also nonwhite? Is it because they cannot afford better housing? Yes, in part. Is it because they prefer to live near other nonwhite families? Perhaps, in part. But the array of devices for restricting Negroes to certain areas, for keeping them out of "good" "white" neighborhoods, is striking evidence that these factors in themselves would not account for the establishment and maintenance of residential segregation. To a very considerable extent, Negroes live in segregated neighborhoods because white Americans have taken steps to keep them there.

Why should this be? In a free economy, other goods are available to anyone who can afford to buy them. Television sets do not bear signs, "For whites only." If a dark-skinned woman wants to buy a coat and can pay for it, the salesman does not consult the other women who have bought coats from him to find out whether they might object. The man who sells a car does not specify that it can be driven only in certain neighborhoods. Why is housing treated differently than other commodities?

Housing differs from other commodities in several obvious, and important, respects. It has a fixed location; its purchase, or rental, ordinarily leads to the physical presence of the owner or tenant on the premises; it is the setting for many activities which have strong emotional value - the raising of children, entertaining of friends, and the like. The owners or renters of adjacent homes are necessarily in physical proximity; they may also enter into some sort of social interchange.

They are seen by others as a group, belonging together in some way. In other words, the sale or rental of housing without regard to race has different consequences - for the majority as well as the minority group - than does the sale of other commodities. Clearly, the exclusion of minority group members from a neighborhood is an attempt to prevent these consequences.

In Chapter ~~Ten~~ Two we shall discuss the variety of influences which may lead white Americans to exclude Negroes from "white" neighborhoods. First, however, in the present chapter, we shall review the evidence about: (1) what white people say as to whether or not they are willing to live in racially mixed neighborhoods, (2) what they say they would do if a nonwhite family moved into their neighborhood, and (3) what they actually do when a nonwhite family moves in.

In both this chapter and the next, the discussion is focused on the beliefs, feelings, actions, and motivations of white Americans. There are two reasons for this emphasis. First, it seems clear that it is the white group which has set up the major barriers to mixed neighborhoods; thus an analysis of the behavior of this group and the reasons for it seems most relevant to an understanding of the social and psychological forces working toward segregation or desegregation. To be sure, the behavior of minority group members - in particular, the extent of their activity in seeking housing outside areas of nonwhite concentration - affects the maintenance or the breaking down of segregation. However, to the extent that the white majority maintains rigid practices of excluding nonwhites, the ability of the minority group to bring about patterns of unsegregated living is limited.

The second reason for the focus on the white group is the simple one that much more information is available about the views and the behavior of whites than of nonwhites. However, a few studies have included nonwhite as well as white respondents; where this material seems relevant to the discussion, it has been included.

What People Say about Acceptance or Rejection of Interracial Neighborhoods+

+ In this section of the chapter we have drawn heavily on a summary of studies of feelings and opinions about interracial living which was prepared by Dr. Helen Amerman for the Commission on Race and Housing. We wish to acknowledge our debt to Dr. Amerman for many of the points made here.

Over the past thirty years, there have been a number of studies in which people were asked questions about interracial neighborhoods: eight surveys on a nationwide basis, and a larger number in local communities. Different studies have asked different questions, and they have brought somewhat different replies. Respondents have been asked whether they think there should be separate sections of the town for Negroes and whites to live in, whether they think white home owners' agreements to sell their houses only to whites help or hurt in solving the Negro-white problem, whether they would be willing to live in the same general neighborhood with Negroes, or on the same block as Negroes, or next door to a Negro family. Some studies have asked only one such question, others have included several. Although the proportions of pro- and anti-segregation answers vary according to the wording of the questions, they fall within a range which is narrow enough to permit reliable estimates of the proportion of the population which expresses approval of segregation, and the proportion which expresses approval of integration or willingness to accept it.

Since these studies cover a period of three decades, they provide a basis not only for conclusions about how people feel about mixed neighborhoods, but -- more interesting and more important -- for tracing changes during these thirty years. Two facts are unmistakable: (1) There is considerable expressed opposition among whites to mixed neighborhoods; but (2) The amount of expressed opposition has declined sharply, to a point where, considering the nation as a whole, people are about evenly divided between those who express willingness to live in mixed neighborhoods and those who express opposition.

How People Say They Feel about Mixed Neighborhoods

The first nationwide study which included questions about willingness to accept minority group members as neighbors was carried out by Bogardus in 1926.**

** Although the 1,725 persons included in this study came from all sections of the country, they constituted neither a random nor a representative sample. According to Bogardus' description, all were native born; they were relatively young, mostly from the middle class, and had a high school or college education. On these grounds, Bogardus concluded that they "speak for the more thoughtful and forward-looking members of American life rather than for narrow-minded, older, or conservative Americans." If Bogardus' interpretation is correct, his figures should be taken as a minimum estimate of opposition to integration at the time.

---

* Emory S. Bogardus, Immigration and Race Attitudes, pp. 23-26. D.C. Heath and Co., Boston, 1928.

It revealed overwhelming opposition to the entry of nonwhite families into white residential neighborhoods. Eighty-eight percent of the respondents were not willing to admit Negroes "to my street as neighbors"; 87 percent were not willing to admit Japanese as neighbors; 80 percent were not willing to admit Filipinos.+

+ The questions were asked in the form, "Would you be willing to admit...?" The response figures were: 12 percent said they would be willing to admit Negroes as neighbors, 13 percent said they would be willing to admit Japanese, and 20 percent to admit Filipinos. For purposes of comparison with the extent of opposition to mixed neighborhoods found in subsequent studies, we have transposed these figures into the proportions who would not be willing to admit nonwhite families. In assuming that all those who did not express willingness to accept families of a given group were thereby expressing unwillingness to do so, we have probably exaggerated somewhat the extent of opposition, since undoubtedly some persons who did not express willingness were uncertain rather than opposed.

Thirteen years later, attitudes showed little change. A nationwide survey conducted by Roper for Fortune magazine in 1939 found 83 percent of

white Americans favoring segregation, either through laws compelling Negroes to live in certain districts or through less formal social pressure.*

* Source: Eugene L. Horowitz, "'Race' Attitudes," in Characteristics of the American Negro, ed. by Otto Klineberg, pp. 203-4, Harper and Bros., New York, 1944; and letter from Beverly Friswold, Secretary to Elmo Roper, New York, June 5, 1956.

Four surveys conducted during or shortly after World War II found a drop in resistance to residential mixing; in these studies, on the average, two-thirds of white Americans expressed opposition to mixed neighborhoods. Specifically, in 1942, 84 percent of a national sample said they thought there should be separate sections in towns and cities for Negroes to live in; but when the question was put differently - "If a Negro with just as much income and education as you have moved into your block, would it make any difference to you?" - the number who answered "Yes" dropped to 62 percent.* In the same

* Unpublished tabulations contained in letter from Richard D. Johnson, Librarian, National Opinion Research Center, Chicago, Illinois, March 28, 1956. Referred to by Hyman and Sheatsley, op.cit.

year, four national samples of labor groups were given a list of nationality and racial groups and asked which ones they would most like to see move into a vacant house in their neighborhood, which ones least. Between 60 percent and 75 percent of the respondents -- the figure varying with the labor category -- named Negroes as the people they would least like to see move in; between 11 and 20 percent said it would make no difference to them which of the kinds of people listed moved in.* In 1944, another national sample of

* Unpublished tabulation contained in letter from Beverly Friswold, Secretary to Elmo Roper, New York, N.Y., June 5, 1956

adults was asked, "Would it make any difference to you if a Negro family moved in next door to you?" Sixty-nine percent said that it would.* In 1948, a

PAGE PARTIALLY ILLEGIBLE

national cross-section of white adults was shown a card listing several minority groups, and was asked: "Would you prefer not to have any of these kinds of people move into your neighborhood to live, or would it make no difference to you?" Sixty-seven percent of the interviewees said there was some group they would prefer not to have in their neighborhood; 62 percent specified that they would prefer not to have Negroes.*

PAGE PARTIALLY ILLEGIBLE

Table 1

Responses to Questions about Segregation or Integration*

Nationwide sample of white respondents, 1955-56

Question	Replies (in percentages)			
	Bring together	Keep apart	No opinion	
Most suggestions for solving the Negro-white problem seem to be of two general kinds - one is to keep the two races far apart and the other is to bring them close together. Which do you think is the better idea - to keep them apart or to bring them together?	48%	42%	10%	
	Yes	No	No opinion	
Would you be willing to live in the same general neighborhood with members of the other race?	52	44	4	
	Yes	No	No opinion	
Would you be willing to live next door to members of the other race?	41	53	6	
	Help	Hurt	Neither	No opinion
If every tenth house in all neighborhoods was occupied by a Negro family, do you think that would help or hurt in solving the Negro-white problem?	32	40	14	14
	Both races	Separate	No opinion	
Do you think that to help solve the Negro-white problem, a housing project should be occupied by both whites and Negroes or that the two races should have separate housing projects? [This followed a question about low-rent housing and presumably was understood as referring to public housing.]	28	63	9	
	Help††	Hurt	Neither	No opinion
Do you think that white homeowners' agreements to sell their houses only to whites help or hurt in solving the Negro-white problem?	34	43	9	12

*From survey by Ben Gaffin and Associates for Catholic Digest.

††Note that here the left-hand column represents the pro-segregation reply, whereas the answers to all the other questions have been presented in such a way that the left-hand column represents the pro-integration reply.

PAGE PARTIALLY ILLEGIBLE

Almost all of the questions showed a nearly equal division of opinion, with the balance shifting to one side or the other depending on the specific question. On the one asking for a general point of view, the edge was slightly in favor of non-segregation. With respect to the question already cited - "Would you be willing to live in the same general neighborhood with members of the other race?" - acceptance was not quite as evenly matched by opposition as might have been inferred from the figure of 52 percent expressing willingness to live in the same neighborhood with Negroes: 44 percent said they would not be willing to live in such a neighborhood, and the remaining 4 percent stated no opinion. When the question was changed to specify living next door to a Negro family, the proportions of answers were reversed. Interestingly, the question which brought the lowest proportion of answers favoring restriction had to do with white homeowners' agreements to sell their houses only to whites, and the only question which brought proportions of replies similar to those commonly found a decade earlier had to do with public housing.

Summing up these nationwide studies: they indicate a steady and rapid trend, over the past thirty years, toward a stated readiness to accept integration.

Prediction of future trend

It seems reasonable to expect that this trend toward increasing acceptance of integration will continue. This expectation is strengthened by data in one of the 1956 studies which reports the answers given by people in different age groups; the figures are shown in Table 2.

(Insert Table 2 here)

On every one of the questions, in both the North and the South the "pro-integration" answer was given more often by young people than by older ones. In both North and South, the greatest difference among age groups was on the general

question of preference for solutions which involve keeping the races apart or those which involve bringing them together.

It is, of course, a matter of common observation that young people are likely to have "liberal" or "radical" ideas, which are modified as they grow older. But in a case such as this, where the general level of the "climate of opinion" is moving in the "liberal" direction, it seems reasonable to suppose that the younger people, even though they may lose some of their ardor, will not show a marked increase in "conservatism" as they grow older.

Community studies

Studies carried out in specific communities report findings similar to those of the nationwide studies, except that they do not so clearly point to a reduction in segregationist attitudes. Some twenty studies, carried out between 1944 and 1956, have been examined.* The communities in which these

---

*This represents the total number of studies we were able to locate which reported the distribution of answers to questions concerning opinions and feelings about mixed neighborhoods. It is, of course, quite possible that there have been other studies which have not come to our attention. The studies examined were:

studies were carried out are not in any sense a representative sampling of communities throughout the nation. Most of them are fairly large cities. They are clustered in three general areas of the country - the Pacific Coast, the Midwest, and the Northeast; the Rocky Mountain area and the South are not represented, except for one border city. One may speculate that they include a disproportionate number of situations where there was interracial tension, since such situations would be likely to attract the attention of investigators. Moreover, different questions were asked in different studies. For all these reasons, it would not be surprising if the results of community studies did not correspond very closely to the findings of studies based on nationwide samples.

Nevertheless, it is interesting to compare the findings of these community studies with those of the nationwide surveys. As might be expected, the community studies show a considerable range in the proportions of interviewees giving replies favoring segregation, depending on the specific question wording and particular local situations. However, when they are divided into two groups - those conducted between 1944 and 1952, and those conducted in 1953 or later - they show a trend similar to that revealed by the nationwide studies, though less marked. In general,

the studies conducted between 1944 and 1952 show approximately two-thirds to three-quarters of the respondents as favoring segregation, although in one or two studies the proportion ran as high as 90 percent. In the five available studies which were conducted in 1953 or later, the proportions favoring segregation are somewhat smaller; in every case, less than two-thirds of the respondents. In one, only one-third of the respondents said they would object to having Negro neighbors; in two, more than half but less than two-thirds expressed opposition to living in a neighborhood where there were Negroes. Two others reported attitudes in three categories: approval of or indifference to living in a mixed neighborhood; qualified replies indicating elements of both approval and disapproval; clear disapproval. Both of these studies found approximately a third of their respondents in each category.

Regional Variations

Are there differences in attitudes toward mixed neighborhoods in different parts of the country? One thinks first, of course, of possible differences between the North and the South. Both of the nationwide studies appearing in 1956 report such differences. One study, that conducted by Gaffin, found that 59 percent of Northern white respondents, as compared with 32 percent of those in the South, said they would be willing to live in a neighborhood where there were Negroes.* The NORC findings were similar:

* Ben Gaffin and Associates, op. cit.

58 percent of Northern white respondents, and 38 percent of those in the South, said it wouldn't make any difference to them if a Negro with the same income and education moved into their block.*

* Hyman and Sheatsley, op. cit.

From Table 2, it is apparent that there were similar differences between North and South on other questions asked in the Gaffin study. The regional difference was most marked on the general question of preference for solutions involving keeping the two races apart or those which involve bringing them together. Well over half of the Northern white interviewees (58 per cent), but only 17 percent of those in the South, favored solutions bringing the races together.* +

---

* Ben Gaffin and Associates, op. cit.

+ It would be interesting to compare North and South in terms of the changes which have taken place over time. Unfortunately, this is not possible, because earlier studies give inconsistent information. Three of the nationwide studies mentioned earlier reported data separately for different regions of the country. However, the two studies by Elmo Roper, in 1939 and 1948, showed no significant differences from region to region, whereas the NORC study in 1942 found marked differences between North and South. In view of this inconsistency and of the lack of any clear explanation for it, speculation about changes from earlier positions would be hazardous indeed.

These differences between North and South cannot be checked against studies carried out in specific communities, since, so far as we have been able to discover, no studies of opinions about residential segregation have been conducted in communities in the Deep South, and only one in a border state. However, the studies in communities scattered throughout the Northern and Western part of the country make possible a rough comparison of feelings expressed in the Far West, the Midwest, and the Northeast. Although, as we have said, individual studies show a wide range of results, these do not seem to be a reflection of broad regional differences. Rather, they seem to spring from differences in the particular questions asked, or in specific local situations, or in the time of the study. For example, a study of attitudes of 100 white housewives in a war housing project in Detroit in 1944 - that is, in a city and at a time when racial feelings were running high - found 95 percent saying that they would object to buying a home in a mixed neighborhood, 86 percent saying that they would object to renting a home in a mixed neighborhood, and 71 percent saying that they opposed "equal opportunities for Negroes in home location."* At

---

*Freda Siefert Fenney, op. cit.

the other extreme, a survey of 230 families in a "good middle-income residential area" in Providence, Rhode Island, in 1953, found only 34 percent saying they would object to having Negro neighbors, 46 percent saying they would accept them, and the remainder uncertain or expressing no opinion.*

* Urban League of Rhode Island, Neighborhood Housing Committee, op cit.

An estimate of attitudes in broad geographic regions can be made by grouping the community studies according to region, listing for each study the proportion of respondents who expressed opposition to residential integration, and selecting the median figure as the most representative for the region. On this basis, six studies of communities in the Far West (Washington and northern California), from 1945 to 1955, showed a median of 63 percent of interviewees opposed to mixed neighborhoods. Six studies in the Midwest (Minnesota, Michigan, and Illinois), from 1944 to 1949, also showed a median of 63 percent opposed. Ten studies in Northeastern states (Pennsylvania, New Jersey, New York, Connecticut, Massachusetts, and Rhode Island), from 1945 to 1956, showed a median of 55 percent opposed. As we have already noted, these community studies do not provide a firm basis for generalization; there is no way of knowing whether the particular communities are representative of the broad geographic areas in which they are located. Nevertheless, the figures do not suggest any marked differences in views about residential segregation between the Far West, the Midwest, and the Northeast.

The only available study of a Southern community - Louisville, Kentucky, in 1948 - used questions somewhat different from those in other studies, and thus the findings are not entirely comparable. Sixty-nine percent of the white Louisville respondents said they thought property owners are justified in refusing to rent to Negroes property now rented to whites, and 80 percent said they would not be willing to live in a government housing project with Negroes if they needed housing.* While these figures are higher than the medians in the other regions,

* J. Harvey Kerns, op. cit.

several of the specific communities studied in the

Northeast, Midwest, and Far West showed equally high proportions favoring segregation.

What People Say They Would Do If Negroes Moved into the Neighborhood

On the basis of the two nationwide studies in 1956, taking the country as a whole, about half the white residents say they would feel willing to live in a neighborhood where there are Negroes, about half say they would prefer not to. But from the point of view of predicting whether mixed neighborhoods can be established, the question of what people are likely to do may be more directly relevant than how they are likely to feel. What evidence is available about what people are likely to do when they are faced with the possibility of a mixed neighborhood, either through the moving of one or more Negro families into a white neighborhood or through the offering of homes on an open occupancy basis? The most conclusive evidence, of course, would be a record of what people actually have done in such situations. In a later section we shall review some recurrent sequences of events. Unfortunately, however, this review will be quite limited, since reports are available for scattered communities only.

Another approach is to ask whites what they would do if Negroes moved into their neighborhood, or if they had the opportunity of buying a house in a good location where some Negro families were living. While replies to a hypothetical question cannot be interpreted as indicating what people would do in an actual situation, they may provide a better basis for predicting behavior than do inferences based only on stated feelings or beliefs. Relatively few studies have included questions about what action respondents would take if they were faced with the presence of Negroes in a neighborhood. However, at least nine studies - one nationwide survey, and eight in communities scattered from one coast to the other - have included such questions. Moreover, four of these studies provide a direct comparison of people's reports of how they would feel if a Negro family moved into their neighborhood and their predictions as to what they would do.

These studies show a wide variation in the proportions of people who say they would take various steps, but very little variation in the kinds of action they would take. The proportions of respondents saying that they would take some sort of

action ranges from 15 to 64 percent.* By far the most frequent action prediction

* We have included predictions of moving away as action, but have not so classified ignoring or having nothing to do with the Negro family.

is that the white family would move (or would not buy a house in a mixed neighborhood); proportions making this prediction range from 13 percent to 64 percent. Non-violent opposition, such as signing petitions, is the next most frequent prediction. Predictions of violence are almost absent; only in two studies did as many as one percent of the interviewees say that they would take, or that they would like to see someone else take, violent action of any sort. Three studies provided lists of alternative actions which included treating the Negro family like any other neighbor; in each of these studies, this was by far the most frequently chosen single response, given by half or more of the interviewees.

The one nationwide study which asked respondents to predict what they would do provides the best single summary. To the question, "If a Negro with just as much income and education as you have moved into your block, would it make any difference to you?", 62 percent replied that it would make a difference. However, to the further question, "What would you do about it?", only 40 percent said they would take any action. As in the community studies, the most frequent prediction was of moving away; 25 percent gave this answer. Fifteen percent said they would undertake various kinds of non-violent action in an attempt to get the Negro family to move; only 1 percent suggested violent action of any sort.*

* Unpublished tabulation contained in letter from Richard D. Johnson, Librarian, National Opinion Research Center, Chicago, Illinois, March 28, 1956.

This study was conducted in 1942. In view of the shift in attitudes toward mixed neighborhoods since that time, the exact proportions of respondents predicting that they would take one or another action cannot be taken as indicative of what the replies to such a question would be at the present time. What can probably safely be generalized, however, is the relation between the number of people who would object to having a Negro neighbor and the number who believe they would do

anything to prevent such a situation, either by moving away or by trying to keep the Negro family out. From the studies which included questions both about feelings and about probable actions, it is clear that many fewer persons believe they would take action against having a Negro neighbor (including moving away) than feel they would prefer not to have such neighbors. In the nationwide study just discussed, the difference between the two figures was 22 percent; 62 percent would object, but only 40 percent would expect to do anything. The four local studies, all in the state of Washington, in which the comparison of feelings with predicted actions was possible, had similar findings: in each one, the number of people who said they would do something to avoid having Negro neighbors (including moving away) was smaller than the number who said they would prefer not to have such neighbors.

As we have noted, replies to such questions are not necessarily accurate predictions of the behavior which will actually occur. Moreover, if even a small number of white families move away or organize protests against the Negro family, the situation for the other residents is changed. The family which would not move away when one Negro family comes into the neighborhood may move when three or four houses on the block are occupied by Negroes. This sort of development is discussed later in this chapter and in the following one.

Summary of Studies Which Ask People Their Reactions

From studies in which white persons were asked how they would feel about living in a neighborhood where there are Negroes and what they would be likely to do about such a situation, two major conclusions can be drawn:

1. Within the past thirty years, there has been a marked shift in feelings about mixed neighborhoods, to the point where approximately half the white population, taken on a nationwide basis, now voices a readiness to live in mixed neighborhoods. There are regional differences: in the North somewhat more than half, and in the South approximately one third, of the white population say they are willing to live in a neighborhood where there are some Negroes.

2. The number of persons who believe they would take any action to avoid living in a mixed neighborhood - either by moving away or by attempting to keep Negroes from moving in - is considerably less than the number of persons who view the prospect of living in a mixed neighborhood with distaste. On the basis of studies which ask people what they would do, the conclusion seems to be that most people believe they would do nothing either to welcome a Negro family, to bar them, or to move away from them. Of those who say they would take any action, moving away would be the most frequent course. Only a tiny fraction say they would be inclined to use violence to keep Negroes from moving into a neighborhood or would approve such action on the part of others.

How People Act about Interracial Neighborhoods

If one were to judge solely on the basis of what people say about how they feel about having nonwhite neighbors and what they would do about such a situation, one would conclude that there has been considerable change in recent years in the direction of accepting nonsegregated living.

Yet there continues to be a common assumption, held by both advocates and opponents of segregation, that most white people will not accept interracial neighborhoods: that they will not sell homes in white neighborhoods to Negro families, that they will not buy homes in neighborhoods where Negroes are living, that if a Negro family does move into a white neighborhood the white residents will move away as soon as possible.

What is the reason for this disparity? Are the general assumptions about the behavior of people toward interracial living incorrect? Or are there important considerations which influence behavior, other than what a person says about how he feels and what he would do, so that conclusions based on such reports are an inadequate basis for prediction of behavior?

We shall discuss the second of these questions in the following chapter. In the rest of this chapter, we shall examine the available evidence regarding the kinds of behavior which in fact occur. Unfortunately, there is little systematic evidence to be had. We do not know how often the arrival of a Negro family is followed by the moving out of white families, nor at what rate; neither do we know how many white families rent or buy homes in neighborhoods where some Negro families are living. We know that sometimes attempts by Negro families to move into white neighborhoods are met by violence; we have no way of knowing whether this happens in ten percent of the instances where Negroes try to move into white neighborhoods, or in one percent, or one-tenth of one percent, or one-hundredth of one percent.

Although the relative frequency of various reactions is not known, it is possible - on the basis of general knowledge and of an increasing number of studies of specific communities - to describe a few patterns which have recurred sufficiently often to be considered among the more probable reactions. These include the ones which are generally assumed to occur: attempts to keep neighborhoods all-white by refusing to sell or rent to nonwhite families; in the event of a breach in this "protective" system, moving away from the neighborhood; occasional threats or acts of violence. But other patterns, not generally taken into account, have occurred as well. One is the gradual transition from a white to a Negro neighborhood, brought about not by any precipitate flight of white residents but by replacement in the course of normal move-outs. Still another - completely contrary to the accepted view - is the establishment of stable mixed neighborhoods, with white families continuing to live in the area after the Negro family's arrival and with new white families moving in also.

In this section, each of these patterns is discussed.

These descriptions of what takes place in communities with regard to residential segregation or desegregation seem to us to demonstrate clearly that the assumption that white families will not live in mixed neighborhoods is incomplete; it does not take account of the wide range of behavior which actually occurs.

Refusal to Rent or Sell Homes to Nonwhite Families

The simplest way for residents of white neighborhoods to avoid finding themselves living in mixed neighborhoods is to see to it that no homes in the neighborhood are offered for sale or rent to Negro or other nonwhite families. That this is a common practice needs no documentation here. There may be highly formalized arrangements to guarantee this exclusion, or there may be no arrangements at all, but simply an unspoken understanding on the part of all residents

that none of them should be guilty of exposing the community to "invasion" by nonwhites.

In the 1890's and early 1900's, several cities - among them San Francisco, Louisville, and New Orleans - attempted to establish segregation through zoning laws. When such laws were declared unconstitutional, they were supplanted by restrictive covenants - agreements, frequently written into the deeds to land, prohibiting sale to or use by members of specified racial, religious, or nationality groups. As has been pointed out in Chapter , such covenants were encouraged by the Federal Housing Administration during the 1940's, and a substantial portion of the new neighborhoods developed during those years were covered by covenants. Although covenants were less frequent in already-established neighborhoods, they found some acceptance there as well. In many large cities, areas of good housing adjacent to Negro neighborhoods were solidly blanketed with covenants. A detailed study in Chicago in 1947 found that more than half the residential area of the city not already occupied by nonwhite families was covenanted against them; this included all the areas of desirable housing surrounding existing Negro concentrations.*

---

* Letter from Loring B. Moore to Thurgood Marshall of the NAACP, dated April 4, 1947; cited by Robert Weaver, The Negro Ghetto, p. 247; New York, Harcourt Brace, 1948

Weaver points out, however, that the spread of covenants was by no spontaneous development; he reports that they were actively promoted by property owners' and neighborhood improvement associations and by the developers of subdivisions. To illustrate this, he quotes the 1944 report of the president of the Oakland-Kenwood Property Owners' Association, which he describes as "but one of at least 70 property owners' and neighborhood improvement associations reported actively engaged in the spread and enforcement of racial covenants in Chicago during 1944".*

---

* Weaver, op. cit., p.250

> It is the aim of your Association to cover each block of the entire area south of Oakwood Boulevard with the new type of agreement / a covenant which could be enforced with a minimum of litigation and expense /. This means we will have to cover approximately 2,800 properties. We are pleased to report that up to December 31, 1944, 709 parcels, or over 25 percent of the total had been signed up, and your Association is proceeding diligently to secure the balance at the earliest possible date. While the percentage obtained so far may seem small compared to the total, the true progress may be appraised better when it is realized that most of these properties signed up are in the area directly threatened at this time....
>
> It was originally planned to work the area and obtain signatures through volunteer workers but it was found that under such an arrangement the work did not progress very rapidly. Accordingly, the major part of this re-signing effort is now carried on by the employees of the Association. *

* President's Annual Report (for 1944), Oakland-Kenwood Property Owners' Association, 1945, p.3; cited in Weaver, op. cit., pp. 250 - 251.

With the Supreme Court decision that such covenants are unenforceable through the courts* and the FHA ruling that insurance would not be granted on

properties where racial restrictive covenants were recorded after February 15, 1950*, the rate of adoption of new covenants presumably decreased. Nevertheless,

* See Chapter

existing covenants, and both existing and new "gentlemen's agreements," though legally unenforceable, continue as an expression of the determination of white residents to keep Negroes out of their neighborhoods. How common such "gentlemen's agreements" are is not known, since, not being legal documents, they are not recorded.

Other chapters in this book make it clear that, whether with or without formal agreements, there is frequent and widespread refusal to make homes in white neighborhoods available to Negroes. The refusal may be made by real estate dealers, by individual home owners, or by groups of home owners. Only a few instances will be mentioned here, by way of illustration.

New York City. In the fall of 1953 and the spring of 1954, the Committee on Civil Rights in Manhattan tested the practices of real estate brokers by having a Negro applicant ask for an apartment of two to four rooms, renting for $120 to $150, in a specified section of midtown Manhattan (a desirable white neighborhood); half an hour later, a white tester requested an apartment of the same general description. Prior telephone calls to 200 brokers had established the fact that 27 of them had apartments meeting this description. In 22 of the 27 cases (81 percent) there was clear evidence that the brokers were not willing to rent to the Negro testers; the usual method of refusal was to tell the Negro tester that the broker had no apartment anywhere near his rent range, while the white tester was offered one or more apartments which roughly met the specifications both testers had stated. Whether the other five brokers would actually have been willing to rent to the Negro tester could not be determined, since neither the testers nor the Committee were prepared to carry the procedure to the point of paying a substantial deposit.

In a supplementary test in the spring of 1954, the Committee sent applicants to 17 apartments advertised directly in the New York Times - the total number advertised on a given Sunday which were of the same size and rental and within the same area specified in the broker survey. This time there was clear evidence of unwillingness to rent to the Negro applicant in 10 of the tests (59 percent); again, it was impossible to carry the remaining tests to the point of actual rental.*

* "Summary of Procedures and Findings in Housing Surveys, January 1953-April 1955," Committee on Civil Rights in Manhattan, Inc., 386 Fourth Avenue, New York 16, N.Y., mimeo.

These findings made it clear that at least four-fifths of the real estate brokers who had apartments available in a desirable white neighborhood, and at least three-fifths of the owners or managers who were offering apartments for rent without the services of a broker, would not accept Negro tenants. Whether the lower figure in the case of the directly-advertised apartments

actually indicated somewhat less resistance on the part of owners than of brokers could not be determined. It might have reflected simply the greater difficulty of denying the availability of an apartment; had it been possible to carry the transactions further, additional obstacles to renting both the directly-advertised and the broker-handled apartments might have been encountered.

"Suburbia." A group of sociologists used essentially the same technique to test whether real estate dealers would sell homes to Negroes in a relatively new all-white suburb.* The authors of the report do not identify the community;

* James H. Kirk and Lane D. Spane, "Private Housing Boom - for Whites Only," mimeo, 1955.

they present it as typical of "thousands" of suburban communities all over the country.* Here

* Idem, p. 1.

the evidence was even more conclusive than in the New York City study. All twelve of the realtors visited offered homes for sale to the white couple, but the Negro couple did not succeed in being shown a single home. Here again the most frequent technique for refusal was to say that nothing was available within the price range specified by the applicant; ten of the twelve realtors quoted down payments two or three times as high as those quoted to the white couple. Supplementary techniques were to suggest that the Negro family would not be happy in Suburbia, and to suggest that they look in one of the Negro areas of the adjacent city. Four of the twelve realtors said directly that they could not sell a home in Suburbia to a Negro family, in each case saying either that the local real estate association would not allow it, that the builder would not sell to Negroes, or that opposition by the residents would be so great as to put the dealer out of business. There was an impression in at least three of these four cases that the realtor was genuinely concerned about the problem and that his statement of opposition from these other sources was not simply a cover for unwillingness on his own part to sell to the Negro family.

California. Two incidents in California involved out-of-the-ordinary manifestations of community organization to keep out nonwhites: in one, a town-meeting vote; in the other, a direct appeal to the prospective nonwhite buyer.

In a middle-class neighborhood of South San Francisco, in 1952, Mr. and Mrs. Sing Sheng, a young Chinese couple, both college-educated, put a deposit on a small home. As soon as word got around, protests and threats were made both to the Shengs and to the white owner who was selling his home to them. Sheng, thinking that the objectors were in a minority, proposed that the residents of the neighborhood vote on whether he should move in. After two weeks of extensive campaigning, neighborhood agitation and letter writing, the vote was held; the count was 175 "I object," 28 "no objection," and 14 "no opinion." The Shengs accepted the decision, but people from all over northern California - including the City Council of South San Francisco and the Governor of the state - expressed indignation and apologized to the Shengs. In spite of the wave of criticism, the home owners of the community held a second meeting on the following week and reaffirmed their stand by a six to one vote.*

* Earl Raab, "Where bigotry won an election," A.D.L. Bulletin, March 1952, pp 4-6; Robert Lee, "Community exclusion: a case study," Phylon, Second Quarter, 1954, pp 202-205.

Dr. and Mrs. Satoru Larry Aikawa, a young Nisei couple, had been looking for a home for some time; on several occasions, it looked as if arrangements were just about to be completed, but each time something went wrong. Finally, in 1955, they located a house in San Leandro, California. Negotiations were proceeding smoothly, when some of the neighbors became concerned over the possibility of an "Oriental invasion"; there was one Chinese-American family already living in the neighborhood. Dr. Aikawa received a letter signed by 28 residents of the street on which the house was located. It read in part:

> As Christians, we believe that man is a personality composed of body and soul, equal in the eyes of God, regardless of race or color.
>
> As citizens of this great democracy of the United States of America, we stand by the principles which our forefathers laid out for us in the Declaration of Independence, namely: "We hold these truths to be self-evident, that all men are created equal..."
>
> We have applauded the Supreme Court in its decisions of recent years which have tended to place the application of these principles on a firmer basis.

But the letter went on to express the fear that the neighborhood might become all-minority in occupancy, and that purchase of the house by the Aikawas would "hinder, rather than help solve, the problem of racial misunderstanding." The writers suggested that the Aikawa family should endeavor to find a home in another area, but concluded with an assurance that if Dr. Aikawa should, despite all this, decide to buy the house in their neighborhood, he would be made welcome. The Aikawas decided not to buy the house.*

* Reported in "Housing and the Problems of 'Minority Groups' Other Than Negroes," by Robert B. Pitts; unpublished.

California, protest and reversal. In Hayward, California, in 1954, Mr. and Mrs. Santiago Ramos, American citizens of Puerto Rican birth, bought a home in a white neighborhood. Before they moved in, about forty residents of the neighborhood attended a meeting called by one of the home owners, and expressed their objection to the Ramos family moving in. An informal poll showed a vote of 37 against their moving in, 3 in favor. But other local people, including the three who had voted that the Ramos family should move in, began mobilizing sentiment in their favor. Within a few days, the spokesman for the opposition called the local paper with this statement: "The committee, following further investigation, feels that it had not been appraised of the complete facts in regard to the Ramos family, and as a result rescinds any and all protests against their establishing a home in this community."*

---

* Reported by Pitts, op.cit.

Connecticut. More than 200 Negro families living in stable, predominantly white neighborhoods were interviewed about their experiences in finding homes. Of those who had had dealings with real estate agents, three-fourths reported that they had encountered difficulties: outright refusals to show them ho , being shown only run-down houses, being told that the owners or neighbors did not want Negroes. One-fourth, however, felt that they had received unqualified co-operation from real estate agents. Of those who related their experiences with white home owners, about two-thirds reported difficulties. One-third said that they had encountered no difficulties, though in several cases the former owners had sold to Negroes in order to spite their neighbors because of some grievance. In any case, all of these families had succeeded in buying homes in predominantly white neighborhoods: one-third of them through real estate agents, mostly white; somewhat more than one-third through direct dealings with white owners, and another one-seventh through white or light-skinned intermediaries who dealt with the owners.*

* Henry G. Stetler, op.cit., pp. 33-36.

Some conclusions. It seems beyond question that there very often develops an understanding among real estate dealers and white home owners that nonwhite families are not to be admitted to desirable white neighborhoods. There is some indication that the policy is both more explicitly formulated and more uniformly followed by real estate dealers than by home owners. To the extent that there is organized agreement among home owners, it would appear that the activity is usually stimulated by a small number of people. Even though the great majority of white residents of a community may be brought into such an agreement, it is probably seldom unanimous; almost always there are at least a few who refuse to sign the petition or who vote in favor of admitting the non-white family. Usually these people are much less vocal than the objectors, but

when they do speak up they may even, as in Hayward, California, persuade the protesting group to withdraw its objections. And some of those who try to keep minority groups out of their neighborhood may, as in San Leandro, do so with a guilty conscience.

In any case, it is apparent that the effort is not always successful. Some nonwhite families do succeed in moving into white neighborhoods. What happens then?

Flight

It is generally assumed that after one or two nonwhite families move into a neighborhood, there will be a hasty exodus of white families. That such a reaction occurs, and often, is beyond question. It is a common phenomenon in cities all over the country. Again, figures for only a few cities will be given by way of illustration.

Denver. A study was made of an area of 70 blocks in Denver which was undergoing transition. It was estimated that in 1950 only eight nonwhite families, all Japanese-Americans, had lived in the area. In August of 1954, it was found that 182 nonwhite families - mostly Negro, some Japanese-Americans - were living in the area; there were also 27 Spanish-American families. These families occupied 19 percent of the dwelling units in the area. There was a clear movement of white families out of the neighborhood; 12 percent of the dwelling units in the entire area had "For Sale" signs, as compared with an average of 2 or 3 percent of dwellings in non-minority neighborhoods where houses were of similar age and value.*

---

* Charles Gray, Transition Zone: A Survey of the Minority Density, Minority Length of Residence, Integration of Minorities and the Real Estate Selling Patterns in an Area North of City Park in Denver. Denver, Lisle Fellowship, Fall, 1954.

San Antonio. An even more dramatic shift took place in San Antonio, Texas.

Eastlawn Addition, a project of bungalows selling for $5,800 to $8,500, was built in 1949 as an all-white development, and was quickly occupied. The development was adjacent to San Antonio's main Negro district, separated by a half mile of vacant land. In mid-1952, a Negro family bought a home in Eastlawn. By the Spring of 1955, the development was almost completely Negro-occupied; it was estimated that only about 3 percent of the 200 homes in the tract were still occupied by white families.*

---

* Reported in "Open occupancy housing," House & Home, April 1955, p. 3.

Detroit. A rapid increase in the Negro population of Detroit since 1940 has led to the entry of Negroes into a number of formerly all-white neighborhoods. One observer has reported that the pattern in most such neighborhoods in the city is "one of total or almost total Negro occupancy following the breaking of the racial color line."* Intensive studies have been carried out in two

---

*Richard Kerckhoff, "A Study of Racially Changing Neighborhoods," pp 47-8 (first draft); November 1956, unpublished.

---

such neighborhoods. One is a middle-class section of small single and two-family houses, into which Negroes first moved in 1950. By 1956, the neighborhood was almost solidly Negro; in a study of three blocks within the area , only six white families were found.* In the other, an upper-middle-class neighborhood

---

*Ibid., p 9.

---

of about 700 large single homes, the first house was sold to a Negro family in the summer of 1955. During the ensuing year, it was reported, about 40 houses were sold to Negroes, and perhaps another 100 were for sale; only about five white families moved into the area during the year.*

---

*Albert Mayer, "Russel Woods: Change without Conflict", p 10; special research report to the Commission on Race and Housing, February 1957; mimeo.

Philadelphia, flight checked. Census figures for the city of Philadelphia summarize the increasing concentration of Negro families. In the decade from 1940 to 1950, the number of blocks occupied solely by Negroes almost tripled, rising from 124 to 320; the number of blocks in which 90 percent or more of the households were Negro doubled.*

---

* A Report on the Housing of Negro Philadelphians, Commission on Human Relations, Philadelphia, Pa., 1953.

But Philadelphia provides also an example of panic selling being halted. In August 1954, a Negro family, Mr. and Mrs. Wiley Clark, moved into a dilapidated house in a lower-middle-class section of small homes. An incipient riot was stopped by the quick action of the police and the Commission on Human Relations, but neighborhood opposition continued. The story has been reported by a member of the Commission:

> Two days later twenty-three Irish and Italian homeowners ... met at Commission quarters....It was an even angrier meeting than the one with the Negro delegation....They resisted both fact and logic. But after a couple of hours of bitter argument a local real-estate dealer named DiGregorio, a forceful personality his neighbors are used to listening to, began talking sense. Already a dozen houses near the Clarks had FOR SALE signs. Enterprising realtors reading of the riot had rushed soliciting letters to every homeowner in the neighborhood. If a panic set in and everybody tried to sell they would all lose money. Take it easy, DiGregorio counseled.

....

On November 8, the Clarks brought their children up from Virginia and moved back into their completely renovated house.... A gala housewarming was held which the president of the North Penn Civic Improvement Association attended - perhaps more to inspect than to offer friendship, but there he was. The house looked good to him, even though the Clarks did not. People began taking down their FOR SALE signs and fewer and fewer police were needed in the district.

From November to January everyone marked time, watching and waiting. Not a single family sold its house and moved away, DiGregorio says, but not a single family moved in either. Since January, however, DiGregorio's office alone has sold twenty-six houses at an average of $7,000, all of them to relatives or friends of the old-time settlers. Values haven't dropped and the community has settled down to its old tranquillity.*

---

* Hannah Lees, "How Philadelphia stopped a race riot," The Reporter, Vol. 12, No. 11, June 2, 1955.

A few instances in which panic selling has been at least temporarily checked through counter-activity have been reported elsewhere. When the entry of a Negro family into a white neighborhood in Kansas City, Mo., led to a rash of "For Sale" signs, a white minister placed a sign in front of his home saying:

> Not for Sale. Neither my home nor my convictions.
> I believe in my neighborhood and my neighbors.

His church is reported to have sold more than 150 such signs to other home owners.* In Teaneck, N.J., in a similar situation, a group of residents organized

---

---

a campaign to stabilize the neighborhood; one-third of the white home owners were reported to have signed an agreement to remain in their homes.* However,

---

* "Negroes Greeted in Teaneck Area," New York Times, July 3, 1955.

---

as far as the writers are aware, only in the Philadelphia instance mentioned above has the success of the anti-flight campaign been documented by reports on subsequent purchases of homes in the neighborhood.

Some conclusions. The examples from Denver, from San Antonio, from Detroit, Philadelphia's census statistics, can be multiplied a dozen times. Data presented elsewhere in this volume show that, in city after city, blocks which were predominantly white in 1940 had become predominantly nonwhite by 1950. Do we know anything about the circumstances under which the arrival of a Negro family is likely to be followed by a flight of white residents and a quick transition to a Negro neighborhood?

The San Antonio example points to one of the conditions - proximity to an area of Negro concentration. Both of the Detroit investigators emphasized the fact that the neighborhoods they studies were bordered on at least three sides by areas which had become racially mixed or predominantly Negro. Probably the most frequent way in which the living area available to nonwhites is expanded is by pushing out the boundaries of existing nonwhite neighborhoods. The entry of a Negro family into a previously all-white block adjacent to a predominantly Negro neighborhood is likely to lead to a swift change in the racial composition of that block.

The story of the Clarks in Philadelphia provides another clue: "Enterprising realtors reading of the riot had rushed soliciting letters to every homeowner in the neighborhood." One of the Detroit investigators also reported that real estate dealers were active in soliciting houses for sale, once the first Negro families had entered the neighborhood.* This seems to be quite

---

*Kerckhoff, op. cit.

---

common practice; similar activity has been reported as occurring in, among other places, Baltimore, St. Louis,

Teaneck, N.J. Once a minority group family moves into a block, real estate dealers approach the other homeowners, telling them that property values will fall, urging them to sell quickly. Among a small sample of real estate brokers queried in Denver, one-fifth stated that they followed this practice of canvassing listings in blocks where families of minority groups had purchased or rented.* In some

* Denver Inventory of Human Relations, September-October 1954, p. 121; Denver Commission on Human Relations; mimeo.

cases this "block-busting" technique has been carried still farther; an enterprising real estate dealer chooses a white district next to a Negro section and informs all white homeowners that Negroes are about to move in, although in fact no home has yet been sold or rented to a Negro family. A Negro broker in Norfolk, Virginia, is reputed to have engineered the sale of perhaps a thousand homes on this basis within the past decade, and to have become wealthy in the process.*

* Nicholas J. Demerath and Associates, "Private Enterprise Housing for Negroes in Seven Metropolitan Areas: A Survey of Experience, Beliefs, and Customs in Housebuilding and Housing Finance," p. 59; special research report prepared for the Commission on Race and Housing, September 1956.

The Detroit investigators suggest still other characteristics of a neighborhood which may lead to its rapid abandonment by white residents once Negro families have moved in. Especially in the case of the upper-middle-class neighborhood, they point out that the neighborhood had declined in prestige even before Negroes moved in, and that the houses were relatively old. More modern houses were being built in more fashionable neighborhoods and could be afforded by the residents of the neighborhood being studied. In other words, the availability of housing that seemed more desirable at least to some of the residents hastened the exodus.+

+The Detroit studies, both of which involved detailed interviews with residents in the neighborhoods, provide some interesting insights into reasons for staying and for leaving. They are discussed in more detail in the next chapter, where influences on behavior regarding mixed neighborhoods are analyzed.

Gradual Transition

Perhaps the least dramatic sequence of events is the gradual shift, over a period of years, from white to increasingly nonwhite occupancy. There seem to be almost no studies of this process; what evidence we have about it has been gathered in the course of studies focused primarily on other questions. For example, the Committee on Civil Rights in Manhattan studied a lower-middle-class neighborhood in the north Bronx section of New York City, for the purpose of gathering evidence to counteract the frequent assumption that the presence of Negroes in a neighborhood leads to a drop in property values and an exodus of white residents. The area was selected for study because it had been reported that white and Negro families had been living there as neighbors for as long as fifty years. Interviews with 64 residents of the area - 44 white, 20 Negro - confirmed the Committee's expectations: Negro families had been living in this predominantly white neighborhood for thirty years or more, and there was no suggestion that there had at any time been either a decline in property values or a flight of white residents from the area.

Nevertheless, a number of interviewees commented that there had been a gradual increase in Negro occupancy, especially within the last few years. This change seemed to be taking place in the normal course of events rather than through any mass exodus. As a family moved because of death or the growing up of children or a change of job location, it seemed that the new family taking its place was increasingly likely to be Negro. White families continued to move into the neighborhood, both into the existing houses and into several new developments. But as the original houses became older, they were less attractive to white purchasers, to whom newer housing was available elsewhere; the pressure of Negroes to get away from the city's congested slums made them more willing buyers.*

---

*Committee on Civil Rights in Manhattan, "Bronx Survey," April 1957, mimeo.

It is extremely difficult to guess how often this process of gradual transition occurs. It may well be quite common. One of the Detroit investigators, in providing background for his study of a changing upper-middle-class neighborhood, gives sketches of five areas which are similar in general type. One of these seems to be in a process of gradual transition:

> The present residents of the Boston-Edison area are proud that it is still racially mixed after eight years. Nevertheless, each year sees fewer and fewer white families remaining.*

---

*Mayer, op. cit., p 20.

The scarcity of reports of such situations makes it hazardous to attempt even tentative generalizations about the circumstances under which gradual transition from white to nonwhite occupancy takes place. On the basis of the description of the Bronx neighborhood, however, and in the light of general knowledge, it seems possible to suggest what some of the conditions may be. It seems probable that the change-over is less rapid when the neighborhood is relatively distant from an area of Negro concentration, and when it has characteristics which are sufficiently desirable to hold the present white residents and attract new ones. The Bronx neighborhood we have described was far from the major areas of Negro concentration.

Interviews with the residents, both white and Negro, revealed one strong source of attractiveness: although the neighborhood had convenient cheap

transportation to the central city, it had a small town atmosphere, with a good deal of open space; people liked the lack of crowding.

If the attractiveness of the community decreases, while the restrictions on housing for Negroes in other parts of the city remain, it seems likely that the racial composition will change, as white families are less drawn to the neighborhood but Negroes seek it out as one of the few places available to them. Again, this seemed to be the case in the Bronx neighborhood; the loss of the country-like atmosphere as the area became more built up, and the aging of the original houses, made the neighborhood less desirable.

Violence

While it is impossible to establish how often attempts by Negroes to move into white neighborhoods are met by violence, newspaper reports testify that this reaction occurs with sufficient frequency to be taken seriously. Any casual reader knows of large-scale riots in Detroit and Chicago over the introduction of Negroes into public housing in white neighborhoods, and in Cicero, Illinois, over the entry of a Negro family into private housing in a white neighborhood. Scanning of newspapers over a period of twelve months, from the fall of 1955 to the fall of 1956, revealed: threats of personal injury to the white seller of a home in Brooklyn, N.Y., and to a Negro home buyer in North Bayshore, Long Island; burning of crosses outside homes bought or rented by Negroes in Columbia, Ohio, and in Milwaukee; rock-throwing and similar vandalism in the Bronx and in Brooklyn, N.Y., in Long Beach, Long Island, in Philadelphia, Detroit, and Chicago; bombing or burning of homes bought or built by Negroes, or attempted shooting of the Negro residents, in Atlanta, Ga., and in Pensacola, Fla., in Cleveland and in Chicago. In many of these instances, the violence seemed to be the work of only a few persons; but in others - in Long Island, in Ohio, in Detroit - mobs of several hundred people were on hand,

to watch if not actively to participate.

A riot that was headed off. The story of the Wiley Clarks in Philadelphia, referred to earlier as an example of how panic selling was halted, provides also an illustration of the nipping in the bud of an incipient riot. The day after the Clarks moved into the home they had bought in a lower-middle-class white neighborhood, a crowd gathered outside, shouting and throwing stones. The police arrived, followed shortly by members of the staff of the Commission on Human Relations. While the police concentrated on dispersing the crowd - a job which took several hours and lasted far into the night - members of the Commission staff mingled with the crowd, picking up leads. For the next three days, some hundred policemen patrolled the area, preventing violence on the part of mobs which at times numbered as many as five or six hundred persons. In the meantime, the Commission staff circulated through the neighborhood, talking with people and gathering the names of local men who carried weight. A meeting was held with leading Negro citizens of Philadelphia; another with a group of white neighborhood leaders. An open letter, designed to help counteract the rumors which were spreading, was distributed in the local churches. Not only was a riot headed off; eventually, as described earlier, the situation calmed down and new white families began moving into the neighborhood.*

* Hannah Lees, "How Philadelphia stopped a race riot," loc. cit.

Some conclusions. Clearly, violence can erupt anywhere; it is not limited to the South, nor to cities with a history of turbulence in racial relations, like Chicago. Accounts of situations in which violence has followed the attempt of a Negro family to move into a white neighborhood do not reveal any clear single pattern of conditions likely to give rise to violent reactions. The Philadelphia Commission on Human Relations has some practical pointers:

...a Negro family moving into a white neighborhood will encounter less resistance if they move in the winter rather than the summer and during the week rather than on a weekend. Women sitting on front porches and teen-agers loose on the streets seem to brew up most of the storms.*

* Hannah Lees, "Not Wanted," The Atlantic, January 1956, p.59-63.

But these observations give little insight into the dynamics of the situation.

Analyses of violence over racial issues other than housing lead to apparently contradictory conclusions. Lee and Humphrey, in their discussion of the Detroit riots of 1943, maintain that riots are the culmination of a multitude of irritations, that they have their source in such basic conditions as inadequate housing and discrimination in employment, and that attempts to place the responsibility on a single individual or group of individuals reflect a desire for simplification or for scapegoating.* They hold that a riot does not start "out of the

* Alfred McClung Lee and Norman Daymond Humphrey, Race Riot; New York, Dryden Press, 1943.

blue," but is preceded by an accelerated occurrence of rumors and of incidents of hostility; "a race riot does not occur without clear-eyed and well-informed observers predicting it in advance, sometimes months in advance."*

* Alfred McClung Lee, Race Riots Aren't Necessary, Public Affairs Pamphlet No. 107; New York, Public Affairs Committee, 1945.

However, the course of events in Clinton, Tennessee, where rioting occurred in the fall of 1956 over desegregation of the local high school , does not seem to fit completely with this view. A team of sociologists who spent some time in the community shortly after the riots reported that local officials and members of the school board, who had conducted a series of meetings with parents to prepare them for the coming desegregation, had not expected any trouble.* On

*Anna Holden, Bonita Valien, and Preston Valien, A Tentative Description and Analysis of the School Desegregation Crisis in Clinton, Tennessee. Published by the Anti-Defamation League of B'nai B'rith in cooperation with the Society for the Study of Social Problems, December 1, 1956; mimeo.

the basis of the sentiments expressed at the public meetings, the officials had concluded that, although practically no one liked the idea of desegregation, the overwhelming

majority were prepared to "go along with the law." Trouble was anticipated in neighboring towns where sentiment was believed to be stronger, but these towns were not scheduled to desegregate until later. Negro citizens reported that "race relations were good in Clinton before the violence."* Both white officials

---

* Idem, p.19.

---

and Negro parents were of the opinion that "the trouble did not stem from the white people of Clinton but from outside agitators and from persons who lived outside of the town in the rural sections of the county."* The mayor was even

---

* Idem, p.19.

---

more specific:

> He thought before Kasper [the executive secretary of the Seaboard White Citizens Council] came in that the people were reconciled to desegregation and that they [the local officials] had done a good job of preparation. "Everybody seemed to understand what it was all about." Then when Kasper came, they "forgot everything else."*+

---

* Idem, p.12

+ It is possible, of course, that a more astute or a less involved observer might have seen signs of impending violence. However, no available reports suggest that there were clashes or inflammatory rumors of the kind described by Lee and Humphrey as precursors of rioting.

If we consider acts of vandalism or violence by one or a few individuals, as well as mob action, the difficulty of specifying predisposing conditions becomes even greater. However, a few tentative suggestions may be offered. The first is that, the greater the racial tension in a community, the more likely is any given incident to provide the spark that leads to an explosion. Another is that, whatever the level of tension in a community, if there is any interracial hostility at all (and where in the United States is there not?) there is a possibility that one or a few individuals bent on provoking violence can stir up con-

siderable trouble. A closely related point is that violence can occur even when the overwhelming majority of the community frowns on it. Finally, it seems that whether latent hostility will erupt into large-scale violence depends to a considerable extent on the adequacy and the alertness of law-enforcement agencies. Persons who would like to express violent opposition are more likely to do so if they believe that the police department and other responsible agencies will not take strong steps to curb rioting or other expressions of violence.

In some situations

there are advance indications of impending violence; constructive action may head it off. The Philadelphia Commission on Human Relations, for example, reports two cases in which it was called on at the first hint that a Negro family might be moving into a white neighborhood. In both cases, it is reported, the white neighbors reacted first with threats to run the Negro out, but after several meetings with a member of the Commission staff, accepted the actual moving in of the Negro family without overt protest.* Once vio-

* Hannah Lees, "Not Wanted," loc. cit.

lence has erupted, speedy and forceful action is called for to halt it; not only firm policing to disperse the crowd and provide physical protection, but accompanying steps to help the community handle the situation in some other way.

Acceptance of Interracial Neighborhoods

All the things that are generally believed to happen when a dark-skinned family moves into a white neighborhood do happen: frequently the white residents attempt to keep the Negro family out, occasionally resorting to violence in the attempt; if they are not successful, they may desert the neighborhood and turn it over to Negro occupancy, either abruptly or over a period of years. But there is another, and very important, response which is seldom taken account of: the coming of the nonwhite family may be accepted without any disruption of the neighborhood. White families continue to live there; as they move out in the normal course of events, other white families, along with perhaps a few nonwhite families, move in.

How often this happens is even more difficult to estimate than how often there is violence, because this quiet moving in doesn't make the papers. Almost certainly it happens more often than is generally believed, either by those who

oppose the entry of minority groups into white neighborhoods or by those who protest their exclusion. The fact that, in most cities with a nonwhite population of any size, nonwhite families are concentrated in a few small sections, while other neighborhoods are closed to them, draws attention away from another fact - that in many cities there are sizeable areas which are neither all-white nor all-Negro.

Census figures present ample evidence of this fact. Again, data for only a few cities will be presented by way of illustration. In Philadelphia, in 1950, although there were 320 blocks which had only nonwhite households and some 9,000 blocks which had only white households, there were roughly 3,600 blocks which were mixed. Of these latter, slightly less than half were predominantly nonwhite, slightly more than half predominantly white. There were almost 1,000 blocks where some, but less than 10 percent, of the households were nonwhite.* In Birmingham, Alabama, though there is a "black belt" in the

* City of Philadelphia, Commission on Human Relations, Philadelphia's Negro Population, October, 1953; pp. 10-11.

center of the city, almost half of the Negro population in 1950 lived in census tracts where at least 25 percent of the residents were white.* In Denver, while

* Nicholas J. Demerath and Associates, op. cit. pp.62-63.

most of the Negro population in 1950 lived in 10 of the city's 50 census tracts, there were only 5 tracts which had no Negro households; each of the remaining 35 tracts had at least one but less than 15 Negro households.* In Westchester

* Denver Commission on Human Relations, Denver Inventory of Human Relations, September - October, 1954, p.142.

County, New York, although almost half of the Negro population in 1950 lived in 10 of the county's 150 census tracts, there were 62 tracts in which Negroes con-

situated between one and five percent of the population.*

- - - - - - - - - - - - - -

* Harold S. Goldblatt, Open-Occupancy Housing in Westchester County, November 1954; p. 8.

- - - - - - - - - - - - - -

But census figures of this type do not tell the full story. The 10 percent of Negro families in a census tract often do not indicate a mixed neighborhood; such families may be clustered in two or three blocks. The one Negro family in another tract may be the janitor in an apartment house. What appears to be a mixed neighborhood may be in transition from white to Negro occupancy, caught at a point when white families have just begun to leave. Or the block which is occupied half by Negro families, half by white families, may be in the heart of a slum, where no one would want to live if he could find and could afford a better home. In Southern cities, Negro families may be living in the alleys behind the homes occupied by whites - a residential pattern remaining from the days of slavery.

In order to be sure that we are dealing with stable, genuinely mixed neighborhoods, we need more specific descriptions. An if the finding that one, or a few, Negro families can be integrated into a neighborhood without disruption is to have any general significance, it must be shown to hold true for desirable residential areas as well as for slums. A number of studies in communities scattered from one end of the country to the other provide evidence that this can happen.

Examples are available in existing multi-family apartments, in established neighborhoods of private homes, in new developments where homes are initially sold or rented on an open-occupancy basis. Elsewhere in this book a number of successful new developments designed for open occupancy are discussed. Only a few examples of communities where nonwhite families have moved into formerly all-white neighborhoods without disruption, or where white and nonwhite families have been living as neighbors for many years, will be mentioned here. We have selected as our examples communities on which there are reports which

give some information as to the number of families involved, the length of time they have been living in the community, the rate of home purchases by white and nonwhite families, or similar quantitative information which provides a basis for judgment as to the composition and the probable stability of the neighborhood.

Nesbitt, discussing the entry of Negroes into previously all-white areas in Washington, D.C., states:

> Little or no overt manifestation of tension has accompanied the recent movement of nonwhites into new areas. "For sale" signs have occasionally "sprouted" with some thickness in blocks containing lower-priced row housing. But the signs generally come down and the listings thin out within a few days. Moreover, initial nonwhite possession in areas of more costly residences rarely provokes flurried offerings. In such sections, salesmen point out blocks in which the second nonwhite purchase followed the first by as much as two years. They identify other blocks still with a single Negro resident after a year of possession with no active offerings elsewhere in the block.*

* George B. Nesbitt, Race Relations Specialist, Housing and Home Finance Agency, "Non-white residential dispersion and desegregation in the District of Columbia," Journal of Negro Education, Winter 1956, pp.4-14.

A member of the National Capital Housing Authority makes a similar point with regard to rental housing:

> A great deal of voluntary, interracial, private housing exists in Washington. I have made inquiry of a number of real estate dealers handling rental apartment property. One agent alone had over 600 white tenants, most of whom lived in apartment houses with interracial occupancy. The addresses of these apartments indicate that they are located in the better sections of the city, as well as in sections where middle income people live....Not one of these agents had a disagreeable situation to arise.*

A study of eight neighborhoods in Minneapolis where a single Negro family lived in an otherwise white neighborhood concluded that in such situations "there is a tendency to accept or to accommodate to the Negro as a neighbor."* A survey

---

* Arnold M. Rose, Frank J. Atelsek, and Lawrence R. McDonald, "Neighborhood reactions to isolated Negro residents: an alternative to invasion and succession," American Sociological Review, October 1953, p.506.

in Syracuse, N.Y., found 45 Negro families living outside the area of Negro concentration; some of them had been in their present homes as long as fifty years. For the most part, there were only one or two of these families in a given neighborhood; where there was greater clustering, it was attributed to the tendency of real estate dealers to offer homes to Negroes only in neighborhoods where at least one Negro family was already living.*

* "Survey of Negro Families Living Outside 15th Ward Area in Syracuse, N.Y. and Surrounding Areas," Friends Housing Committee, Religious Society of Friends, Syracuse, N.Y., July 1955, mimeo.

Weaver describes an upper-middle-class suburb in Westchester County, N.Y., the Pinecrest section of Hastings-on-the-Hudson:

> This is a community of about 45 families living in houses valued from $20,000 to $45,000. At present, there are seven Negro residents... Since the advent of non-white occupants, three houses in the community have been sold to white purchasers---one by a Negro. The colored residents are doctors, business men and college professors. In an adjoining area of somewhat lower-priced homes, four or five houses in the $17,500 range have recently been built by, or sold to whites....*

* Robert C. Weaver, "The effect of anti-discrimination legislation upon the FHA- and VA- insured housing market in New York State," Land Economics, November 1955, Vol. XXI, No. 4, pp. 303-313 (quote on p.310).

In Connecticut, the State Commission on Civil Rights estimates that 600 Negro families, or 4 percent of all the Negro families in the state, are living in neighborhoods which are predominantly white or which are stable in their interracial composition. The Commission interviewed 219 of these Negro families and 390 of their white neighbors. Half of the families interviewed, both white and Negro, had been living in their present neighborhoods for eight years or more, and roughly a quarter of the families of both races had been living there for twenty years or more. Although somewhat more of the Negro than of the white families had moved into the neighborhood within the two years prior to the study (that is, during 1954 or 1955), there was no indication that the neighborhoods were shifting toward nonwhite occupancy. Half of the white neighbors, both those living immediately next door to a Negro family and those living a few doors away, had been in their present homes when the Negro family moved in and had remained there. The other half had moved in after the Negro family; presumably most of them, especially those who moved directly next door to Negroes, knew of the presence of the Negro family at the time they decided to buy or rent their homes.

White respondents who had been living in the neighborhood when the Negro families moved in and who were still living there at the time of the study (anywhere from a few months to thirty or more years later) were asked whether anything had been said or done in the neighborhood with the idea of keeping the Negro family out. Thirty-nine percent said there had been neither activity nor talk directed toward keeping the Negro family out, and another 13 percent said they didn't know or didn't remember. Thirty percent reported only talk about protesting. Twenty percent reported some type of any organized activity: circulating petitions, protesting to the real estate agent or the owner,

trying to chip in to buy the property. Less than 1/2 of 1 percent reported that threats had been made to the Negro family.*

* Henry C. Stetler, op. cit., pp. 14-17, 41-46.

In the San Francisco Bay Area, white residents were interviewed in 35 neighborhoods which contained not less than one nor more than five nonwhite families, all of whom had moved into the neighborhoods since 1940. These were urban areas, but in all of them at least half of the dwelling units were owner-occupied; they covered a range of economic levels, except that slum and heavily industrialized areas were excluded. Of the 549 residents who were interviewed, 150 had moved into the neighborhood after at least one of the nonwhite families; four-fifths of these said that the presence of nonwhites in the neighborhood made no serious difference to them at the time they moved in. Among those who were living in their present neighborhood before the nonwhites moved in, more than 70 percent described their initial attitudes toward the newcomers as either favorable or neutral. Of the 30 percent who were unhappy over the coming of the nonwhite family, the majority said that nevertheless they did not consider moving.

A question about neighborhood activity at the time the nonwhite family moved in gave a picture very similar to that in the Connecticut study. Eighteen percent of the interviewees reported the circulation of petitions or other non-violent action to try to keep the family out; 1.5 percent reported violence or threats of violence. Another 8.5 percent reported talk but no action. Almost three-quarters, however, reported that there had been no attempt either by word or deed to keep the nonwhite family out.*

* Davis McEntire, "A study of racial attitudes in neighborhoods infiltrated by non-whites," Bay Area Real Estate Report, Second Quarter 1955.

Studies such as this and the one above probably overestimate slightly the degree of acceptance of the nonwhite families, since the white families who objected most strongly might already have moved by the time the studies were conducted. However, the fact that most of the families who moved were replaced by other white families establishes the point that, even though the presence of a nonwhite family may lead a few white families to leave a neighborhood, it does not necessarily lead other white families to avoid the area.

Perhaps the most interesting finding of all is that sometimes there is so little reaction to the presence of a nonwhite family that some of the white residents of a neighborhood do not even know that there are nonwhites living in the area. In Seattle, three months after a mixed Negro-white couple had moved into a suburban community of about 400 homes, almost two-thirds of the white residents did not know that there was a Negro family living in the neighborhood; "neighborhood" was defined for the respondents as meaning "within one-half dozen blocks or so."* In the San Francisco Bay Area study referred to above, more than

* Stuart C. Dodd and Robert W. O'Brien, "Racial attitude survey as a basis for community planning," Journal of Educational Sociology, Vol. 23, No.2, October, 1949, pp.118-127.

three-fourths of the interviewees made no spontaneous mention of the presence of minority group families in the course of fifteen or twenty minutes of conversation about their neighborhood. In reply to a direct question, it appeared that one-fourth did not know there was a nonwhite family in the neighborhood, although in this case all the respondents lived within about a block and a half of a nonwhite family.*

* Davis McEntire, op. cit.

Some conclusions. Clearly, the entry of one, or a few, nonwhite families into an otherwise all-white neighborhood does not always lead to a flight of the white families living there, nor to avoidance of the area by other white families, nor even, within the span of years for which information is available, to a gradual shift from white to nonwhite occupancy. The arrival of a nonwhite family may cause little stir; white families living in the neighborhood may continue to live there, and additional white families may move in. There is no way of estimating how frequently this is the case. Do the instances which have been reported cover most of the communities where this uneventful acceptance has taken place? Or,

for each such community which has been described, are there dozens or even hundreds of others which have escaped the notice of social scientists?

This unflurried reaction has been reported in communities scattered across the country. And it is not an entirely new phenomenon, if we are to judge from the studies which report that some of their respondents, both white and Negro, had been living in their present neighborhoods for thirty years or more. One may speculate - without any solid evidence - that the spread of restrictive covenants and the emphasis on "exclusive" suburbs during the 1930's and 1940's exaggerated the "flight" reaction, and that we may be about to witness a return to an earlier unpanicky acceptance of occasional neighbors of different skin color.

Under what circumstances does this staying-put response occur? One favorable condition seems to be that the neighborhood is inherently desirable, or that the housing it provides is of better quality than that which can be secured for an equivalent price elsewhere. The studies of new open-occupancy developments reported elsewhere in this book point strongly to this factor. Weaver has noted its operation in an area of existing multi-family rental housing in New York City, where several blocks along Riverside Drive have remained interracial for a number of years, even though the area is directly adjacent to the city's major Negro concentration and might have been expected to give way rapidly to Negro expansion. He points out that the existence of rent controls has "meant that whites, who normally might have moved out rapidly with the advent of the first colored occupants, remained in tenancy because comparable shelter was either nonexistent or priced out of their ability to pay."*

---

* Robert C. Weaver, "Integration in public and private housing," Annals of the American Academy of Political and Social Science, March 1956, pp. 86-97 (quote on p. 92).

A second possibility is that calm acceptance of one, or a few, Negro families may be facilitated by any condition which lessens the likelihood that substantial numbers of nonwhite families will attempt to move into the neighborhood. A variety of circumstances may have this effect: remoteness of the area from centers of nonwhite concentration; a small nonwhite population in the total community; an adequate supply of housing for nonwhites or the existence of a number of areas into which they can move without restriction, thus lessening pressure on the single neighborhood; housing which is so expensive that only a few Negro families can possibly afford to move into the area.

Third, there are some hints that socio-economic characteristics both of the white residents and of the entering Negro families may be relevant to the outcome. Negro families living in predominantly white neighborhoods are likely to be above average in education, income, and occupational status. The chances that a Negro family will be accepted in a neighborhood without disruption seem to be greater if the family is at least of the same socio-economic level as most of the white residents, or even of somewhat higher educational and occupational status. In the Connecticut study referred to above, it was found that both Negroes and whites living in neighborhoods where there were a few Negro families were more highly educated than the average white population of the state.* It is not entirely clear, however, whether these characteristics make

---

* Henry G. Stetler, op. cit., pp. 17-23.

---

for greater probability of successful integration or whether they merely reflect two other factors: the greater likelihood, mentioned above, of acceptance of a Negro family in an area of such expensive housing that there is no realistic prospect of an influx of other Negro families; and the interest of social scientists and community investigators in checking on the possible existence of mixed racial patterns in areas of desirable housing rather than in slums.

Summary of Evidence on How People Act about Unsegregated Housing

These accounts of community reactions to the possibility of mixed neighborhoods make it clear that there is much greater variation than is usually assumed. Although it is impossible to determine how frequently various reactions occur, it seems likely that the two which are usually assumed to take place almost without exception--attempts to exclude Negroes from a neighborhood, and exodus of white residents from the neighborhood if these attempts fail - are in fact the most frequent. Nevertheless, there are neighborhoods where the moving in of one or more nonwhite families has not been followed by precipitate departure of white families. In some of these instances, the coming of the Negro family or families has not led to any further change in the composition of the neighborhood over a period of years; it has become stabilized as a mixed neighborhood or as one where a few Negro families live among white families. In other instances, there has been a gradual shift toward increased Negro occupancy: as white families leave - not to avoid having Negro neighbors, but in the ordinary course of changes in life circumstances - they are replaced by nonwhites. At the other extreme, there are neighborhoods where the moving in of a Negro family is met neither with acceptance nor with simply moving away, but with violence.

Comparison of What People Say and What They Do

At first glance, it may seem that the wide variation in what takes place in different neighborhoods when nonwhites move in corresponds to the wide variation in what whites report about their feelings about living in mixed neighborhoods. However, although no conclusive figures about the frequency of various community reactions are available, it appears that exclusion and flight occur more often than one would predict from people's expressions of their views in current studies, and that acceptance of nonwhite neighbors occurs less often than one would predict. It is probable, of course, that the apparently

even division of opinion reported in the most recent nationwide studies does not represent a real balance for and against segregation; many of the people who say they would be willing to have Negro neighbors may be expressing indifference rather than active approval of interracial neighborhoods, while those who say they would not be willing to have Negro neighbors may hold their position more strongly. Even with this qualification, however, there seems to be a discrepancy between the amount of expressed willingness to have Negro neighbors and what people actually do about unsegregated housing.

Moreover, the fact that individuals' responses to questions about unsegregated neighborhoods range all the way from approval to disapproval does not explain the fact that community reactions range all the way from acceptance to violence. In order to explain the marked differences in behavior from community to community in terms of the views of the white residents, it would be necessary to assume that a community in which Negroes are accepted without disruption had, even before the coming of the Negro families, a high proportion of residents who would have expressed willingness to accept Negroes, while a community in which exclusion or violence or flight occurred had a high proportion of people who would have expressed unwillingness to have Negro neighbors. Although we do not know the distribution of opinions in communities where different reactions have occurred, from the available evidence it seems quite unlikely that they would be such as to account for the differences in community reaction. While there are clear regional differences in the proportions of people who express willingness to accept racial integration, and some variation from community to community within a given region, there seems no reason to believe that the differences in community behavior would correspond very closely to these differences in expressed opinion.

In this chapter we have suggested some of the circumstances under which one or another reaction seems especially likely to occur. In the following chapter we shall consider in greater detail what factors other than expressed opinion help to determine behavior with regard to interracial housing.

Chapter Two

Factors Influencing Actions regarding Interracial Housing

CHAPTER ~~TEN~~ TWO

FACTORS INFLUENCING ACTIONS REGARDING INTERRACIAL HOUSING

It is commonly assumed that people act as they do because they hold certain attitudes. In the case of segregation, this would mean that white people avoid living in mixed neighborhoods because they have unfavorable attitudes toward Negroes - because they do not like Negroes, or believe that Negroes have undesirable qualities, or disapprove of association between members of different races. In many cases, of course, this may be so. But the assumption that an individual's refusal to sell or rent a home to a Negro family or to live in a racially mixed neighborhood stems only from his attitudes toward Negroes or toward interracial living is, as has been indicated in the preceding chapter, an oversimplification.

The simplest examination of everyday experience makes it clear that behavior is not determined solely by attitudes toward the object of the behavior. Suppose a man is polite and respectful toward his employer. He may really feel respect for him; on the other hand, he may consider him a fool and yet behave respectfully because he wants to keep his job. A Christian may dislike Jews, but if he falls ill with some rare disease, he is likely to go to a Jewish doctor if that doctor happens to be the outstanding specialist in the field. A white woman who is genuinely fond of a Negro friend may leave that friend out of a party because she is afraid some of her white guests would be uncomfortable. A white traveler in an area where there is segregated seating on buses may take a seat in the "white" section, not because he objects to sitting next to a Negro - he may even strongly disapprove of segregation and be acutely uncomfortable over participating in it - but he sits in the "white" section because going along with local law or custom seems the simplest thing to do. Similarly, in the refusal of a white landlord to rent an apartment to a Negro family, of a real estate dealer to show a Negro family a house in a white neighborhood, of a banker to lend mortgage money, the individual's own at-

titudes toward Negroes or toward mixed neighborhoods may play little part.

The number of specific influences that enter into the determination of any given action related to interracial housing may be considerable, and their possible range is enormous. Many of them may be unique to the particular individual and the particular situation. However, they may be grouped into a few general categories. The following list presents a classification of the major types of influences on behavior regarding mixed neighborhoods, with a brief illustration of each; the remainder of the chapter will consider each type of influence in more detail.*

- - - - - - - - - - - -

*For a somewhat different set of categories based on very similar concepts, see: Murray Horwitz and Gerald Gurin, Public Attitudes toward the Cause and Cure of Mental Health Problems, University of Michigan, Survey Research Center Monographs, publication forthcoming.

For an application to a different field (that of community organizations) of a general point of view similar to the one underlying this chapter, see: John P. Dean and Alex Rosen, A Manual of Intergroup Relations, University of Chicago Press, Chicago, 1955.

- - - - - - - - - - - -

The individual's own attitudes toward nonwhites and toward unsegregated living.

A white person may, for example, believe that nonwhites are inferior in intelligence; he may also believe that whites and nonwhites should live in separate areas. On the other hand, he may believe that there is no essential difference between whites and nonwhites, and that segregation is not sound policy. The surveys of feelings and opinions discussed in the first part of the preceding chapter dealt with factors in this category.

Values which the individual holds as general guides to conduct.

He may, for example, consider it important to obey the law, whether or not it coincides with his own disposition toward the matter in question. Or he may try to put into practice in his behavior the principles of the religious group to which he belongs.

Concern for the feelings and opinions of other people.

This may include the desire to be thought well of by the community at large, to win or to retain the approval of persons or groups who are important to the individual, and not to hurt persons whose welfare is important to him. A man may refuse to sell his house to a Negro not because he has any objections to Negroes or to residential integration, but because he believes that his neighbors will be displeased.

Expected consequences other than those of social approval.

An individual may decide to buy or to sell a house on the basis of more tangible consequences which he foresees - acquisition of a comfortable and well-built home at a moderate price, or financial loss in selling under certain conditions. Or he may be influenced by the expectation that other persons will express their disapproval of his behavior in such concrete ways as by boycotting his business or firing him from his job. Much behavior which appears to have a direct racial reference may in fact have its roots in considerations of this sort.

The availability of alternative courses of action.

Obviously, regardless of what a man may be inclined to do on the basis of one or another or a combination of these considerations, what he does will be determined also by the courses of action which are in fact open to him. A white home owner may be reluctant to sell his house to a Negro, but if it is important to him to sell it within a certain time and the only willing buyer who appears within that time is a Negro, he is likely to overcome his reluctance.

In the last chapter we summarized the evidence as to the proportions of the white population who express certain attitudes. In this chapter, we shall consider the other kinds of influences which must be taken into account in understanding actions regarding mixed neighborhoods, and shall try to analyze how the various kinds of influences - including the individual's own racial attitudes - may affect his behavior.

In order to understand how any given influence may affect an individual's action, we shall need to know more than just the nature of the influence. We need to know, for example, whether a given influence is very important to the individual or whether it is quite unimportant to him. We need to know also whether he considers it as highly relevant to a decision about some action which may have consequences for residential segregation or desegregation, or whether he sees it as having little bearing on such a decision. Moreover, the importance to the individual of a given factor, and the extent to which he sees it as related to behavior regarding mixed neighborhoods, each may be affected by specific circumstances. Thus, in order to understand any specific action regarding interracial housing, we need to know at least the following information about each

of the factors which influence it:

> How important the given factor is to the particular individual, regardless of its relation to the issue at hand. For example, a person may be very much concerned with what other people think of him and may be very eager for social approval; another individual may care relatively little about other people's opinions of him.
>
> Whether there are any circumstances or conditions which increase or decrease the importance of the given factor to the individual. For example, a person who has been poor and perhaps without much education and who has rather suddenly made a good deal of money may become quite concerned about establishing himself as a member of a higher social class, and thus may be especially sensitive to what other people think of his behavior.
>
> How closely the given factor is related to the issue at hand, in the individual's view. A person whose religious faith includes a belief in the brotherhood of man may see this belief as having a bearing on how he should act toward Negroes; on the other hand, he may not see the two as in any way related.
>
> Whether there are any circumstances or conditions which make the factor appear to the individual to be more closely related or less closely related to the issue at hand. For the person who has not seen any connection between his religious faith and questions of segregation or desegregation, a sermon presenting the view that segregation is incompatible with brotherhood may establish a relation between religious values and behavior toward nonwhites.

Since there will almost always be a number of influences converging on a given decision or action, it is important not only to analyze each one separately but to consider their relations to each other: whether one is more important to the individual than another, whether he sees one as more closely related than another to the issues at hand, whether two influences operate to weaken or to strengthen each other.

In the discussion to follow, we shall examine the major classes of influences which may determine behavior regarding mixed neighborhoods. As we discuss these influences, we shall try to suggest possible circumstances or conditions which may affect the importance of a given factor to the individual or his perception of its relevance to the decision he is making.

The major part of the discussion will be concerned with influences as they

may be expected to affect a white home owner or tenant in behavior which could affect the establishment of a racially mixed neighborhood. He may be a home owner contemplating the first sale to a Negro family in a previously all-white neighborhood; or a resident of a neighborhood which one or more Negro families have entered, making a decision whether to remain in the neighborhood; or a prospective home buyer or tenant, making a decision whether to move into an area of either new or existing housing, where some nonwhite families are living or are expected to live. For the moment we shall not consider persons who have an institutionalized role with regard to housing, such as real estate dealers; special considerations affecting their behavior will be discussed later.

Attitudes toward Nonwhites and toward Unsegregated Living

Attitudes have many facets. They include beliefs about characteristics of a group (that Negroes are irresponsible, for example); feelings toward the group (fear, or liking, or respect);and views as to the appropriate behavior toward the group or proper relations between groups (that Negroes and whites should be kept apart as much as possible, or that everyone should have equal access to all facilities regardless of race). The beliefs and the views as to appropriate behavior may be held with little certainty or with great conviction; the feelings may be weak or strong. The issues involved may seem to the individual to be relatively unimportant or of crucial significance. All of these aspects may have a bearing on a decision whether or not to sell a house to a Negro family, or whether or not to move into a neighborhood where some Negro families are living.

Since these attitudes have as their object, by definition, members of the minority group and behavior toward them, there is no need to inquire how they become connected with an individual's decision about helping to establish, or remaining in, or moving into, a mixed neighborhood. In view of their obvious relation to the issue, it is not surprising that they are frequently assumed to be the only,

or at any rate the major, determinant of decisions and behavior with regard to unsegregated living. But, as we have already pointed out, action frequently does not correspond to attitudes.

The responses to questions about mixed neighborhoods in the studies summarized in the first part of the preceding chapter may be considered as indicative of people's attitudes on the subject. Although there is always the possibility that the answer given to an interviewer does not reflect a respondent's "true" attitude, such answers are usually as close as we can come to finding out what people think and feel. We noted at the end of the preceding chapter that such expressions of attitude are not sufficient to explain the behavior which actually occurs when people are faced with the possibility of mixed neighborhoods.

In his study of a changing neighborhood in Detroit, Mayer emphasizes this point:

> ...the relationship of prejudice to neighborhood change is not simple and direct. If it were, the most prejudiced people would move first and the remainder would leave the neighborhood in rank order according to the degree of prejudice they have.
>
> ...the blindly and unreasoning prejudiced have long since moved to...places at present completely removed from any possibility of a threat of Negro invasion. The remaining persons are not without prejudice, but often prejudice is tempered by a considerable understanding. Many people in Russel Woods realize that (a) whites and Negroes can live together, (b) all Negroes are not alike, (c) there are many middle class Negroes who are much like themselves, (d) many Negroes are good neighbors, (e) they could be or are friendly with some Negroes, (f) the Negroes who will be moving into Russel Woods will doubtless fit in economically. Knowing and believing all this ultimately matters not one bit; <u>they still move</u>.*

- - - - - - - - - - -

*Albert Mayer, "Russel Woods: Change without Conflict," pp 31-32; special research report to the Commission on Race and Housing, February 1957, rimeo.

- - - - - - - - - - -

The question becomes: under what circumstances are an individual's own feelings and beliefs about minority groups and about appropriate behavior toward them likely to be major determinants of his actual behavior, and under what circumstances are they likely to be relatively uninfluential? Clearly, the conditions which

determine the weight of his own attitudes in the decision may be of two sorts: characteristics of the racial attitudes themselves, and the strength of other factors. As Mayer has suggested in the statement quoted above, in a hypothetical case where no other influence had become connected with the question of whether to live in a mixed neighborhood, presumably the individual's own racial attitudes would be the only determinant of his decision. However, it is hard to imagine an individual who would not experience any other considerations as relevant to the decision, although for different individuals the importance of these other considerations and the strength of their connection with the issue may differ considerably.

Assuming that other considerations are relevant for the individual, the extent to which his own racial attitudes determine the direction of his actions is likely to depend on their intensity and on the extent to which various aspects of his racial attitudes coincide in their implications for behavior.

Attitudes may be extremely complex, and different aspects of an individual's racial attitudes may point toward different kinds of behavior. A person may believe, for example, that educated Negroes engaged in professional work are quite similar to white people of the same social class in certain characteristics which have a bearing on their desirability as neighbors: that they are equally likely to be quiet, respectable, orderly, that they are likely to take just as good care of their property, etc. By themselves, such beliefs would dispose him to accept such Negroes as neighbors. At the same time, he may feel uncomfortable in the presence of Negroes - a consideration which would, in the absence of other considerations, dispose him to avoid having Negro neighbors. And, perhaps quite independently of his feelings about Negroes or his beliefs about their characteristics, he may hold the view that as a matter of social policy it is desirable that the two races remain as separate as possible - or, on the other hand, that sound social policy requires that members of all races have equal access to all facilities.

A striking instance in which views about public policy with regard to racial segregation were at variance with feelings toward at least certain individual Negroes was reported to the group of sociologists who went to Clinton, Tennessee, shortly after the riots over school desegregation there. The incident was told to them by one of the Negro parents.

> Mrs. Allen /the Negro parent/ reported that ...she felt badly about...the participation in the mob action of a white woman who lives across the street from the Allens and to whom the Allens had been very helpful as neighbors. Mrs. Allen stated that she could not resist the temptation to speak to the white neighbor about it, and when she did she /the white neighbor/ began to cry and said, "You and your people have been nicer to me than my own relatives, but I just don't believe in mixing of the races in school."*

- - - - - - - - - - -

*Anna Holden, Bonita Valien, and Preston Valien, A Tentative Description and Analysis of the School Desegregation Crisis in Clinton, Tennessee, p. 18. Published by the Anti-Defamation League of B'nai B'rith in cooperation with the Society for the Study of Social Problems, December 1, 1956; mimeo.

- - - - - - - - - -

This is, of course, an extreme illustration. But the Gaffin study, referred to in the preceding chapter, provides evidence that it is not at all uncommon for a white person to entertain simultaneously a variety of specific attitudes which carry different implications for behavior toward Negroes.** Of the large number

- - - - - - - - - - -

**How to Solve Our Race Problem: "Opinions of White and Negro, North and South," A Social Problems Study for the Catholic Digest. Vol. 2, detailed tables, Ben Gaffin & Associates, Inc., 141 West Jackson Blvd., Chicago 4, Ill. (For fuller reference, see preceding chapter.)

- - - - - - - - - - -

of questions asked in that study, let us consider five:

> Most suggestions for solving the Negro-white problem seem to be of two general kinds - one is to keep the two races far apart and the other is to bring them close together. Which do you think is the better idea - to keep them apart or to bring them together?
>
> Would you be willing to live in the same general neighborhood with members of the other race?
>
> Would you be willing to live next door to members of the other race?

Would you say that you like most members of the other race or that you dislike them?

Do you think there are many, a few, or practically no members of the other race who, except for their color, would fit in with your friends?

Dividing people in terms of their reply to the first question - that is, in terms of their view as to the desirability of separation of whites and Negroes as general social policy - the following chart shows the proportion of respondents whose replies to the other four questions seem to have implications not completely in line with their views of social policy.

Among white people who said bringing the two races together is the better idea

In the North:

17 percent said they would not be willing to live in the same neighborhood with Negroes

24 percent said they would not be willing to live next door to Negroes

1 percent said they disliked most Negroes

44 percent said they thought few or no Negroes would fit in with their friends

In the South:

35 percent said they would not be willing to live in the same neighborhood with Negroes

46 percent said they would not be willing to live next door to Negroes

1 percent said they disliked most Negroes

64 percent said they thought few or no Negroes would fit in with their friends

Among white people who said keeping the two races apart is the better idea

In the North:

23 percent said they would be willing to live in the same neighborhood with Negroes

16 percent said they would be willing to live next door to Negroes

44 percent said they liked most Negroes

16 percent said they thought many Negroes would fit in with their friends

In the South:

24 percent said they would be willing to live in the same neighborhood with Negroes

11 percent said they would be willing to live next door to Negroes

64 percent said they liked most Negroes

5 percent said they thought many Negroes would fit in with their friends

Such complexity within attitudes is not necessarily evidence of confusion or even of inconsistency, since the questions refer to quite different matters. Nevertheless, if an individual holds with approximately equal intensity two or more specific attitudes which have different implications for behavior regarding association with Negroes, it seems likely that the influence of his racial attitudes on his behavior will be lessened by the fact that the combination of these attitudes does not point unmistakably toward one or another course of action. Other things being equal, we should expect racial attitudes to be a stronger influence on the behavior of persons who answered all of these questions in a way which would suggest a disposition to avoid such association, than on the behavior of persons who answered some questions in one way, some in the other.

Individuals differ not only in the extent to which the various aspects of their racial attitudes converge toward a single direction of behavior, but in the intensity of the attitudes. The more intense the attitude, the more likely it is to influence behavior. There may be some few people to whom the prospect of living near Negroes is so distasteful that, so long as they have any choice at all, they will not do so under any circumstances. There may be others - perhaps still fewer - who so heartily believe in the desirability of interracial mixing that they will go

out of their way to live in an unsegregated neighborhood if it is at all possible. There is probably a larger group who, though not so intense in their attitudes, nevertheless feel strongly enough, one way or the other, so that only under fairly strong counterpressures will they behave differently than their attitudes would dictate. But, as we have already suggested, it is probable that many people simply do not feel very strongly one way or the other about mixed neighborhoods; for these people, other considerations are likely to be the major determinants of the decision.

Values which the Individual Holds as General Guides to Conduct

Most people subscribe, more or less explicitly, to some set of values which serve them, in principle at least, as criteria for guiding their own behavior and evaluating that of others. These values are likely to be in the form of somewhat abstract concepts: ideals of justice or fair play, of law and order, of Christianity, of non-violence; respect for tradition, or, on the other hand, advancement or progress. The very abstract nature of most values means that they do not, without interpretation, provide unequivocal guidance as to appropriate behavior in many practical situations. In some instances, this interpretation may be provided by a source which is recognized as authoritative with respect to the given value. If no such authoritative statement is available, some individuals may develop for themselves a connection between the value and behavior in given situations; others may not. And even among those who see the value as having a bearing on a given situation, there may be disagreement as to what kind of behavior it indicates as desirable.

Some devout Christians, for example, believe that the tenents of their religion with regard to the brotherhood of men include all men, regardless of their color, and that brotherhood involves participation on equal terms. Others, equally devout, cite biblical texts in support of the argument that God intended men of different skin color to live separately. Or, in the case of the ideological

struggle against Communism, some persons hold that, if the United States is to convince the people of Asia and Africa of the sincerity of its position, it must treat its own colored citizens as equals. Others see in the sale of a home in a white neighborhood to a Negro family evidence of a Communist plot. Still others make no connection at all between political ideology and behavior toward Negroes.

One might suppose that values having to do with the maintenance of law and order would be less open to conflicting interpretations. But the study of the town of Clinton, Tennessee, referred to earlier, provides an interesting observation to the contrary:

> Practically everyone /in Clinton/ professes to be in favor of law and order and opposed to violence and mob rule -- the differences come in the interpretation of what violence and mob rule consist of. In the eyes of community leaders and those who did not participate in Kasper's and Carter's gatherings, some instances of violence were taking place down at the school and on the courthouse square, and the mob was taking over the town...
>
> As to the people who participated in the meetings and the demonstrations many do not seem to see any mob action or violence in what they did. Kasper himself stated under oath that he had not advocated violence or mob rule and that he and the other people were only exercising their constitutional rights of free speech and freedom of assembly....
>
> There is another factor involved in insistence that nothing disorderly was happening. When the interviewer pressed questions about attacks on Negroes during the week and the damage done to Negroes' cars, several members of one family who had been very much involved snickered, and one member, a high school girl..., replied, "That? Oh, it was just niggers." Their code apparently does not hold them responsible for the same standards in their treatment of whites and Negroes.*

- - - - - - - - - - -

*Holden et al., op. cit., p. 10.

- - - - - - - - - - -

People who favor integration tend to assume that most of the generalized values which people hold as standards would, if connected with questions of interracial relations, operate in the direction of desegregation. But Robert Penn Warren suggests that some of the opposition to school desegregation in the

South stems from generalized values. Reporting on a trip through the South, he says:

> Now and then, I encounter a man whose argument for segregation, in the present context, has nothing to do with the Negro at all. At its simplest level its spokesman says: "I don't give a durn about the niggers, they never bother me one way or another. But I don't like being forced. Ain't no man ever forced me."
>
> ....
>
> At another level, the spokesman will say it is a matter of constitutionality, pure and simple. He may even be an integrationist. But this decision /the Supreme Court decision on public schools/, he will say, carries us one more step toward the power state, a cunningly calculated step, for this decision carries a moral issue and the objector to the decision is automatically put in the role of the enemy of righteousness. "But wait till the next decision," he will say. "This will be the precedent for it, and the next one won't have the moral facade."
>
> Precedent for what? you ask.
>
> "For government by sociology, not law," he will say.
>
> ....
>
> And I hear a college student in the Deep South: "You know, it's just that people don't like to feel like they're spitting on their grandfather's grave. They feel some connection they don't want to break. Something would bother them if they broke it."*

- - - - - - - - - - -

*Robert Penn Warren, Segregation: The Inner Conflict in the South, pp. 31-32. Random House, New York, 1956.

- - - - - - - - - - -

Warren's first respondent seems to be talking about the value of independence or individualism; the second is thinking in terms of a value of constitutional government. For the value being expressed by the college boy, Warren suggests the term "piety."

A dramatic example of how the connection of a value to questions of interracial behavior can be strengthened, and its prescriptions as to appropriate behavior be drastically changed, has been provided by the Supreme Court decisions with regard to public education. In the South, schools have been segregated by

law. Thus the value of "law-abidingness" would lead to acceptance and support of segregated schools. But for most people, probably, the fact that school segregation coincided both with personal preference and with local custom tended to push into the background the fact that it was also prescribed by the value of law-abidingness. It was not until the Supreme Court handed down its decision that the value of law-abidingness became clearly associated in the minds of many people with the question of patterns of behavior between the races. At the same time, the prescription as to appropriate behavior was completely reversed. Previously, for the Southerner who was concerned with obedience to law in matters of race relations, acceptance of segregated schools was "proper" behavior. Now, if he accepts the proposition that Supreme Court decisions express the basic law of the land, the value of law-abidingness dictates acceptance of unsegregated schools.

In Clinton, Tennessee, this process was intensified by the fact that the general terms of the Supreme Court decision were reinforced by a decision in a district court specifically instructing the school board of the county to proceed "with reasonable expedition" to desegregate its high schools. It was on this basis that the school board decided to desegregate and that city officials supported the move. Both journalists and social scientists report that most people in Clinton, including most of the officials who made and who are enforcing the desegregation decision, are personally opposed to desegregation. But both sources also report that most people in the community favor obeying the court decision. The team of sociologists who spent some time in the community shortly after the violent events in the fall of 1956, reported:

> Community leaders in Clinton tell you that nobody--or very few people--want desegregation, but most people in the town want law and order and will accept desegregation under court order until such time as the law is changed. Several leaders stated that if a poll were made, it would show that at least 90% of the people would prefer segregation over integration, but it would also show that 98% would be in

favor of obeying the law, if the law called for desegregation.*#

- - - - - - - - - - -

*Anna Holden et al., op. cit., p. 8.

#The authors of the report point out that the fact that there had been mob violence in the community had crystallized the "law and order" aspects of desegregation.

- - - - - - - - - - -

One of the major ways, then, in which a general value becomes connected with a specific issue is through an explicit statement by an authoritative source. Until very recently, there has been little attempt to make an explicit connection between general values of this sort and the specific question of residential integration. Within the past few years, however, steps have been taken which, for many people, may link both respect for law and religious beliefs with residential desegregation.

Since 1955, state laws have been passed in New York and in Washington barring discrimination in housing which receives any form of government aid, including private housing covered by FHA or VA mortgage insurance.# The Connecticut Commission

- - - - - - - - - - -

#The New York State law in effect at the time of this writing does not apply to the sale of private homes in developments of less than ten houses; thus it does not directly affect the individual home owner. However, the embodiment in the law of the principle that private housing should be available to all qualified purchasers without regard to race, religion, or national origin, may help to establish an atmosphere in which nondiscriminatory behavior with regard to housing becomes identified with lawful behavior.

- - - - - - - - - - -

on Civil Rights has interpreted that state's law banning discrimination in all publicly assisted housing as applying to private FHA- or VA-insured housing. As of March 1957, bills with similar provisions had been introduced or were being prepared for introduction in nine other states. In addition, bills outlawing discrimination in all private housing, whether or not it had received public aid, had been introduced in Connecticut, New York, and Minnesota.#*

- - - - - - - - - - -

*"Fair housing bills readied in 12 states," Trends in Housing, Vol. 1, no. 4, February-March 1957; New York, National Committee Against Discrimination in Housing.

#Again, the New York State bill does not apply to the sale of homes in developments of less than ten houses.

- - - - - - - - - - -

In 1956, the national conventions of two major Protestant denominations made statements emphasizing the implications of the tenets of their faith with regard to interracial housing. The General Assembly of the Presbyterian Church passed a resolution calling upon Christians "to see as of first importance the need of minority families for equal housing opportunities and adequate housing, and to make their houses available to all qualified purchasers without regard to race," and urging Christians to come together "in covenants of open occupancy which will stem the tendency toward 'panic selling,' and stabilize their neighborhoods on a non-segregated basis."*

*Presbyterian Church in the United States of America, 168th General Assembly, Minutes, 1956, Part I, pp. 227-8. Italics in original.

- - - - - - - - - - -

The General Council of the Congregational Christian Churches called upon members of the denomination to "support non-segregated practices in selling, buying and leasing property," and urged "real estate dealers, builders, mortgagees, and government housing agents to follow non-discriminatory practices in their businesses."*

- - - - - - - - - - -

*Social Resolutions Adopted by the General Council of the Congregational Christian Churches, Omaha, Nebraska -- June 20-27, 1956; Council for Social Action of the Congregational Christian Churches, 289 Fourth Avenue, New York 10, N. Y.

- - - - - - - - - - -

Statements by national conventions may take some time to enter into the thinking of members in communities throughout the nation. However, in some communities local churches have taken initiative in explicitly linking religious values with interracial neighborhoods. For example, in Albany, New York, the Federation of Churches has urged church members to make housing available to Negroes, and has sponsored tours of the slums and of public housing projects to dramatize the housing problems of Negroes; in San Jose, California, the Council of Churches and the Council for Civic Unity have solicited housing for minority families from church members with property, and are reported to have placed "a considerable number" of families

in rental and purchased housing.*

The Society of Friends has for some years been active, both nationally and in local communities, in support of integrated neighborhoods.

Concern for the Feelings and Opinions of Other People

The conditions of human living mean that no one acts in isolation. Each individual is constantly affecting other people and being affected by them. The child growing up within this web of social interaction develops a sensitivity to the responses of others. He gains satisfaction from their affection and approval; he is made uncomfortable by their dislike or disapproval; he learns to be concerned for their welfare.

Individuals differ, of course, in their sensitivity to the opinions of others, and in the extent to which they depend on the approval of others to support their own self-esteem. They differ, too, in the extent of their concern for the welfare of others. Perhaps the most important difference, from our present point of view, is in the reference groups which are important to them: whose opinions do they value, and whose happiness do they take into account in evaluating the consequences of their actions?

Regardless of these differences, the consideration of any proposed action is likely to include such questions as: Will this action lead people generally to respect me, or to look down on me? Will it be approved or disapproved by the individuals or groups whose opinion I especially value? How will it affect the people I care for - will it add to their happiness, or is it likely to cause them suffering? Of course, the questions are not usually formulated so explicitly; they may, in fact, not even be consciously recognized. But there are few individuals so self-sufficient, or so insensitive to others, that such considerations about the reactions of other

people do not enter at least dimly into their decisions about many aspects of behavior.

In the United States, behavior with respect to living in an interracial neighborhood generally involves all of these kinds of social considerations: it is frequently taken as an indication of social status, it is generally considered to be within the range of behavior about which other people may properly express their approval or disapproval, and it is considered to have direct consequences for the other people living in the neighborhood. Moreover, although we have no systematic evidence, it appears that the connection between social considerations and living in an interracial neighborhood is usually negative; that is, the white individual tends to expect that his social status will be lowered by living in a mixed neighborhood, that the people whose opinion he values will disapprove of his living in such a neighborhood or of his making it possible for a Negro family to move into a white neighborhood, and that his neighbors will feel that they have been hurt if he makes it possible for a Negro family to move into the neighborhood.

In his analysis of the forces influencing people to remain in or to move away from a changing neighborhood in Detroit, Mayer lists considerations of social status as among the important influences impelling white families to leave the neighborhood. The neighborhood was a relatively old one, which had been fashionable thirty years earlier; even ten years ago, living there implied a degree of prestige. But with the passage of time, this prestige had declined; even before the first Negro family moved in, Mayer's interviews showed that the neighborhood had completely lost status. The newer suburbs now had the prestige which Russel Woods had enjoyed in the past. Mayer comments:

> The net effect is an enormously powerful pull out of a neighborhood which carries little prestige to an address which signifies that its owner is achieving the American dream.*

- - - - - - - - - - -

*Mayer, op. cit., p. 30.

- - - - - - - - - - -

To this loss of prestige through the aging of the neighborhood was added the loss of status associated with living in a mixed neighborhood, once Negro families had begun to move in. In considering why even people who were not themselves prejudiced against Negroes were moving out of the neighborhood, Mayer suggests a number of contributing factors, and concludes:

> For the person who cares about collective opinion, living in a mixed neighborhood is taboo.*

- - - - - - - - - - -
*Idem, p. 33.
- - - - - - - - - - -

Traditionally, in the United States, non-white-ness has been associated with low-class-ness; to a considerable extent, obviously, this is still the case. The fact that many Negro neighborhoods are in slums, and that mixed neighborhoods are often in areas of substandard housing, is a constant reminder that sections where Negroes live are "low-class." Emphasis in sales appeals on the "exclusiveness" of "restricted" suburbs serves to intensify this association. The fact that there are some areas of desirable housing where white and Negro families live as neighbors has not yet become part of general knowledge.

Nor are most people aware of the general shift in expressed attitudes during the last few years. Even keeping in mind the fact that a person who says he is willing to live in a neighborhood where there are Negroes may not be strongly in favor of unsegregated housing, the fact that in the most recent studies half of the white respondents said they would be willing to live in such neighborhoods indicates a marked change from thirty years ago, when only one white person in eight said he would be willing to admit Negroes to his block. Yet people's estimates of other people's attitudes correspond more closely to the attitudes expressed thirty years ago than to those expressed today.

A survey carried out in a good middle-income residential area in Providence, Rhode Island, provides an interesting illustration. Two hundred thirty families

were asked:

> We know that colored families are moving into other neighborhoods. How do you think your neighbors would feel about having Negro families in this neighborhood?...Are you of the same opinion?

The following table shows the replies.*

	Estimate of neighbors' reactions	Report of own reaction
Willing to accept Negro neighbors	13%	46%
Would object to having Negro neighbors	50	35
Don't know, uncertain, no answer	37	19

- - - - - - - - - - -

*Urban League of Rhode Island, Neighborhood Housing Committee, "A survey made in the Elmwood section of Providence, 1953," unpublished.

- - - - - - - - - - -

The number of people who said they would be willing to accept Negro neighbors was more than three times as large as the number who believed that the other white residents of the neighborhood would be willing to accept Negroes.

Interpretation of such studies, in which respondents are asked how they would think and feel and also how they believe other people would think and feel, is complicated. It is frequently assumed that the answers about "other people" really reflect the respondent's own feelings, while his reports of his own feelings reflect either what he believes to be the "right" answers or what he thinks the interviewer would approve. On the other hand, Wilner, Walkley and Cook, after a detailed consideration of alternative interpretations of white housewives' reports as to whether their friends approved or disapproved of association with Negroes, concluded that, in the situation they were studying, the estimates of other people's attitudes did not represent simply a rationalization of the respondent's own attitudes or behavior.* Even if we make the interpretation that replies about "other people"

- - - - - - - - - - -

*Daniel M. Wilner, Rosabelle Price Walkley, and Stuart W. Cook, Human Relations in Interracial Housing, p. 104. University of Minnesota Press, Minneapolis, 1955.

- - - - - - - - - - -

represent, in fact, the respondent's own feelings, the conclusion seems inescapable that some sort of change has occurred which leads people to believe that willingness to accept Negro neighbors is the "correct" answer and to shift their replies about <u>their own reactions</u> in this direction, whereas thirty years ago they felt free to express openly their opposition to mixed neighborhoods.#

- - - - - - - - - - -

#The tendency to ascribe more "prejudiced" attitudes to others than to oneself appears in studies concerned with many aspects of interracial behavior. For example, in the Gaffin study reported in the previous chapter, each respondent was presented with a list of fifteen occupations, from shoe shine boy and waiter to doctor and judge, and was asked, first, whether he thought "most of his friends would rather have a white or a Negro take care of them" in each of the occupational capacities or whether it wouldn't matter to them. He was then asked to go through the entire list again telling whether he himself would rather have a white or a Negro take care of him or whether it wouldn't matter to him. For all but one of the fifteen occupations a higher proportion said that it "wouldn't matter" to <u>them</u> than that it "wouldn't matter" to most of their friends.

An interesting relationship appeared when these answers were examined in the light of the individual's own "prejudice score" (derived from a different set of questions). Individuals who were classified as "least prejudiced" or as "intermediate" in prejudice tended to say that whether they were taken care of by a white or a Negro would make less difference to them than to their friends. Those who were classified as "most prejudiced" were more likely to describe their friends as having the same reactions as themselves or as being less concerned about whether they were taken care of by a white or a Negro.

- - - - - - - - - - -

In his study of a changing neighborhood in Detroit, Kerckhoff found misjudgment of the <u>intentions</u> of other people. Many respondents were assuming that, as one put it, "We'll probably be the last frogs in the pond pretty soon; almost all the other white people are planning to move." But if the respondents' statements to the interviewers about their plans were taken as indicating their real intentions, it was not true that "almost all the other white people" were planning to move. True, a number of white families had already left the neighborhood, selling their houses to Negroes, and others were in the process of doing so. Of the 52 residences in which interviews were conducted, 12 were occupied by Negroes and 11 more were in the process of being sold, presumably also to Negroes; when these sales were completed, slightly less than half the dwellings in the sample would be occupied by Negroes. But of the white families in the other 29 houses included in the study,

16 told the interviewers that they intended to stay in the neighborhood, and the remaining 13 said they had not decided whether to stay or leave. Kerckhoff raises the question whether the behavior of the white families would be influenced if they realized that a considerable number of other white families intended to stay in the neighborhood; would they be more likely to stay then than they would be if they assumed that "almost all the other white people" were planning to move?*

- - - - - - - - - - -

*Richard K. Kerckhoff, "A Study of Racially Changing Neighborhoods," first draft, pp. 48-49; Merrill-Palmer School, Detroit, November 1956; unpublished.

- - - - - - - - - - -

Apparent misjudgment of the attitudes of others has been reported in specific incidents as well as in opinion surveys. In Waverly, Iowa, for example, the manager of a small Federal housing project refused to admit a Negro Air Force captain, on the ground that the other tenants (all white) would object. When this became known, 15 of the 19 white tenants signed a petition to admit the Negro family. The case was brought to the attention of the community through newspaper stories, and the Negro family was offered a house in the "best" residential district in the town, and moved in.* If we assume that the manager's stated reason for refusing an apart-

- - - - - - - - - - -

*David Loth and Harold Fleming, Integration North and South: Progress Memorandum, p. 23. Fund for the Republic, New York, 1956.

- - - - - - - - - - -

ment was his true one - that is, that he really believed the other tenants would object - the sequel demonstrates that his estimate represented a gross misjudgment of the attitudes of other people. Even if we assume that his statement about the objections of other tenants was only an excuse to cover his own unwillingness to admit the Negro family, it seems likely that he was unaware of the preponderance of opinion in favor of admitting them.

The expectation of opposition is not always illusory, however. In instance after instance, there are reports of white owners who have entered into negotions to sell their homes to nonwhite families receiving protests - pleading, angry,or

threatening - from neighbors. We have come across no published reports of instances in which a white owner debating whether to sell to a nonwhite family has been encouraged by his neighbors to do so. Such cases, if they exist, would of course be less likely to be publicized; nevertheless, it seems likely that they have not often occurred.
